LON FISHER.

Hudson Gun Club.

JERSEY CITY, N. J., May 7.—The appended scores were made to-day at the traps of the Hudson Gun Club, under conditions that were ideal for trapshooting. Event No. 2 was for the Du Pont trophy, and resulted in several of the boys returning perfect scores with their handicap allowance. The Western Cartridge trophy event also had a number of perfect scores, and in the club prize event, No. 4, there were Durkee, Gille, J. Williams, Strobel and Dr. Groll who scored the limit, 6 points.

High gun for the day was shared between Billy Emmons and Carl von Lengerke, with an average of 83 per cent., Jack Williams being the runner-up with 80 per cent.

Our next shoot takes place on May 21, just a few days before the New Jersey State shoot, and it will be a good opportunity for those who are going to take part in this tournament, to get some practice at good fast birds, thrown from expert traps. Everybody welcome at our grounds.

SECRETARY.

Sikeston Gun Club.

SIKESTON, Mo., May 6.—Practice club shoots are held every Tuesday and Friday at 1 P. M. Visitors cordially welcome to participate.

Out of 50 pigeons shot at, the following scores were made Friday, May 5: Dan McCoy 43, Bert Mitchell 41, H. A. Smith 40, L. R. Bowman 40, Clem Marshall 39, E. C. Matthews 39, W. H. Tanner 38, Dr. D. E. Sawyer 35, Wm. Leslie 28, C. H. Yanson 27, W. E. Derris 18.

320 STRAIGHT — 129 SRAIGHT

W Some Very Classy Shooting Done On The Herron Hill Gun Club Grounds, With W

WINCHESTER

"Leader" Shells, Regular Stock Loads.

At a complimentary shoot given for him by the Herron Hill Gun Club of Pittsburg, on April 26th, Lester S. German broke 320 "Straight." The targets were thrown full fifty yards and at regulation angles.

At the same shoot Mr. G. E. Painter, the well known and skillful amateur, broke 129 "Straight," beating the ground record.

Messrs. German and Painter both used Winchester "Leader" Shells—regular stock loads. Their exceptionally high scores add another stone in the colossal monument of proof that Winchester Shells are the peers of all others for uniformity, pattern and speed.

The Spring Tonic For Shooters Is WINCHESTER SHELLS

Trap in California.

BERKELEY, Cal., May 1.—*Editor Forest and Stream:* The thirty-ninth annual trapshooting season of the California Wing Club opened at the new grounds at Stege on April 2 with twenty-seven shotgun experts present. During the balance of the season there will be one meeting each month, with a total of seven. The membership of the club is now thirty, and according to the rules of the club the limit is forty. Several applications for membership have been received and the outlook is that the list will be full within a short time. The club enjoys the distinction of being the oldest wing shooting club in the United States, and in times gone by some of the leading marksmen of the world have shot over its traps. In the medal race during the first meet no one made a straight string, seven shooters grassing eleven birds, these being Clarence Haight, E. L. Schultz, R. C. Reed, A. J. Webb, Fred Munday, George Thomas and N. L. Nielsen. Clarence Haight, C. J. Ashlin and R. C. Reed made straight scores in the purse race at 12 birds. Haight had the best average for the day, securing 23 out of 24 birds. The second meet of the season was held on April 23, and a large number of shooters were on hand. The wind was high and worked against perfect scores, but the shooting was good in spite of the adverse conditions. In the medal contest Clarence Haight, Tony Prior and C. J. Ashlin secured 12 birds and nine others got 11 each, but in the afternoon in the purse event 11 was the best any one could do. Future meetings will be held on the first Sunday of each month.

Phil B. Bekeart dedicated the new trapshooting ground at the Presidio on Saturday, April 22, by firing the opening shot, auspicious for the success of the recently formed Exposition City Gun Club, for the clay pigeon was pulverized in proper style. Bekeart has the added distinction of cracking out the first stright score on the new grounds.

The honor of firing the first shot was awarded after spirited bidding by different sportsmen present. J. G. Heath, E. Hoelle, Henry Nelson and J. S. French were the next bidders to shoot, in the order, and each shooter qualified by a break. Emil Holling and Al Cook also broke straight scores.

The club's opening shoot came off Sunday with a large attendance of powder burners. C. H. Lancaster's score of 19 in the fifth event was the best record for the day. Cold, cloudy weather obscured the background, and a strong wind kept down the scores.

Many of the shooters had not indulged in blue rock shooting for some time. A noticeable feature is the large percentage of new names in trapshooting circles. Most of the new men shot very clever scores. One feature Sunday was a team shoot for a luncheon. The winning team, under Armorer Price, scored 164 targets against a total of 161 targets by E. Holling's men.

The officers of the club are: W. B. Sanborn, President; W. J. Golcher, Vice-President; E. Hoelle, Secretary-Treasurer; J. A. Cook, captain; Geo. Thomas, W. H. Price and J. Hervey Jones, Directors.

The first live-bird shoot of the Santa Clara Gun Club was held at Santa Clara, April 23. Another club shoot is billed for May 7. The trout streams of that section kept down the attendance to five men. It is probable that two of the club members will take up the challenge of Feudner and Stelling for a live bird match. The opening events were three 6-bird and one 4-bird match. Arquez and Cadwallader made the straights in the 6-bird races, Perry and Cadwallader scored clean in the 4-bird event. The pigeons trapped were a lively lot and weather conditions were favorable. Three of the shooters were noted shots at the Garden City Gun Club shoots some years ago.

Bodie Smith and other members of the Transportation Club, of Frisco, are reported to be sponsors for a proposed blue rock gun club, the members of which will shoot clay pigeons one Saturday afternoon every month at the Golden Gate Gun Club trap grounds, in Alameda. This innovation has the indorsement of many prominent local trap shots and will no doubt receive generous encouragement.

San Rafael sportsmen have recently organized the Blue Rock Gun Club. The club's trap grounds will be established in Schuetzen Park.

The officers elected for the ensuing year are: Roy Prescott, President; Joseph Rydeburg, Vice-President; H. De la Montanya, Secretary-Treasurer; Joseph Rydeburg, Joseph Taggiano, Roy Prescott, P. Pedrotti and Robert Provine, Executive Committee.

GOLDEN GATE.

New York State Tournament.

THE fifty-third annual State shoot will be held at Syracuse, N. Y., June 13, 14 and 15, under the auspices of the New York State Sportsmen's Association, and Secretary Hookway sends us details of the shoot as follows:

The New York State Sportsmen's Association is a State affair. It includes a membership of over 100 gun clubs. No individual or club gets any benefit from the State shoot. Proceeds are devoted to protection and propagation of game and passage of reasonable game laws. The prizes have been given on account of this, as all money in the end is returned to the cause of outdoor gunning. Contributors in the end get the benefit of their donation. Our merchandise event is a feature of its kind. Many of our gun clubs have donated prizes. One gun club gave a $350 piano. This event is the source of revenue for the association, and in time this State shoot should be the leader of all shoots. We had 150 entries last year, and with open sweeps we expect 300.

Syracuse is one of the best centers for trapshooting in United States. Members of the Onondaga Gun Club, whether officers of the State Association or not, assist, and that fact alone means, as it always has, that the shoot will be a success.

Guns, ammunition, etc., forwarded to W. E. Hookway, 725 East Water street, Syracuse, charges prepaid, will be delivered to grounds. The same grounds of 1909, near yacht club, will be used this year. Shoot will be run under Squier money-back system, which all gunners understand. You cannot lose much if any under this system. Events under conditions and rules of the Interstate Association.

For the first time, sweeps are to be thrown open to the world, and if it proves a success, they will be in the future. We invite everybody.

PROGRAM.

Monday, June 12, practice day; shooting begins at 1 P. M. Eight events at 15 targets, entrance $1.50 each, including targets; money divided Rose system 4, 3, 2, 1.

Tuesday, June 13, first day; shooting promptly at 9:15. Ten events at 15 targets, entrance $1.50 each; events Nos. 11, 12 and 13, 20 targets, entrance $2 each; additional entrance $1; daily average for N. Y. S. shooters only. Money divided Rose system—20-bird events, 5, 4, 3, 2, 1; 15-bird events, 4, 3, 2, 1. Targets 2 cents in all entrances. Optional sweeps each event.

Wednesday, June 14, second day; shooting 9 A. M. Ten events at 15 targets, entrance $1.50 each; additional entrance $1 for Squier money-back system. Event 11, merchandise shoot, handicap, 50 targets, entrance $5, for New York State residents only. Optional sweep $3. Event 11 is a manufacturers' agents event, entrance $1.

Thursday, June 15, third day; shooting at 9 A. M. Ten events at 15 targets, entrance $1.50 and additional entrance $1, same as second day.

Event 11 is the Dean Richmond trophy, for three-man teams residing in same county within State. Each man to shoot at 25 targets. Divided 50, 30 and 20 per cent., class shooting. Optional sweep $3 for all.

Event 12, Greater New York cup, 50 targets per man, entrance price of targets, or $10 per team. Divided 40, 30, 20 and 10 per cent., class shooting. Optional sweep $3. Residents outside State may shoot for optional sweep entry.

During the entire shoot an extra trap will be run for double shooting. Entrance, price of targets. First prize, single trigger Smith gun; second and third prizes, suitable to be selected later. Highest straight scores take them. Enter as many times as you like.

Optional sweeps will be run in connection with regular program as follows: Contestants who have entered the regular events may also enter optional sweeps by paying $1.00 additional for each event each day. No target money will be deducted from entrance. Division of money, 40, 30, 20 and 10 per cent., less than 20 entries; more than 20 entries, 30, 25, 20, 15 and 10 per cent, class shooting. Squier money-back system does not apply to optional sweeps.

Hotels in Syracuse are the Vanderbilt, Yates, Warner and the new Onondaga, very good, reasonable in price, excellent cuisine. The yacht club house is a large, suitable building, excellent lunches to be obtained at all times.

The officers of New York State Sportsmen's Association are: John H. Hendrickson, Jamaica, N. Y., President; Willard E. Hookway, Syracuse, N. Y., Secretary-Treasurer. The Tournament Committee consists of Hulbert W. Smith, Syracuse, N. Y.; M. E. Corfield, Utica, N. Y.; J. L. Talcott, Buffalo, N. Y.; A. E. Conley, Cohocton, N. Y.; C. G. Blandford, Ossining, N. Y.

Chicago Gun Club.

CHICAGO, April 29.—No doubt the heavy rain which came down most of the morning and the threatening conditions of the afternoon kept many of our members away who might otherwise have come out to the opening of the summer season.

Barto put up good scores all the way through, getting 24 out of 25 in a practice event, 46 out of 50 in event No. 1, and 48 out of 50 from 20yds. in event No. 2. Sharp took second place in the practice event with the score of 23, while MacLachlan, Merrill and Barnes each broke 21.

Sharp "copped" first place in event No. 1, with a score of 47, Graham tying with Barto on 46. C. E. Shaw landed second place in the handicap with 46 from 19yds. Merrill took third place in the handicap event with a score of 44 MacLachlan scoring 43.

Merrill made a straight 25 in the next event. MacLachlan put up the best score in the event at 25 pairs, breaking 37, while Merrill broke 36 and Sharp scored 34.

MacLachlan shot a frame of 25 while sitting on the fence at 30yds. and he smashed 20 of them into smithereens.

The many friends of our well-known member, Richard Merrill, will be pleased to hear that he has returned from Texas and will be with us quite often in the future.

*Event No. 6 was at 25 pairs.

April 30.—Although the weather was disagreeable for the first Sunday of our summer season, several heavy showers coming down during the morning and one at noon, twenty-four shooters concluded to take a chance on shooting between showers and all were well pleased with the results of the afternoon's shoot.

In a practice event at 25 targets, Flewelling and Sharp each went straight, Roll and Cutler each breaking 24, while Shrigley, Merrill, Thwaite, Emery, Silver and Taggart each scored 23.

First honors in club event No. 1, at 50 targets, class shooting, all 16yds. rise, were divided between H. Thwaite and Geo. Roll with scores of 49, Merrill being next in line with 48, while Shrigley, Sharp and Emery each made a 47. Flewelling, Dessert and Miss Anna Rieker each broke 46, while Thomas, Cutler and Silver were only one target behind, each making 45.

In event No. 2 at 50 targets, distance handicap, Thwaite carried off the honors of first place with a score of 48 from the 18yds. mark, Eck, Sharp and Emery were hot after him with scores of 47, Eck breaking his from 19yds., while Sharp and Emery stood at 18yds.

Geo. Roll brought down 46 from 20yds. and C. W. May made the same score from 16yds., while Kammerer was next in line with 45.

Event No. 3, at 25 targets, 16yds. rise, resulted in a fine lot of scores, Flewelling, Roll, Merrill and Dr. Robb each going through the frame without a miss, Eck and Crooker only dropping one target, while Thwaite and Taggart each scored 23, Seelig, Sharp and Miss Rieker returning scores of 22.

Dr. Robb took first place in the fourth event with a score of 24, while Taggart was second with 23.

Thwaite seemed well satisfied with his work to-day—142 out of 150 is going some.

Roll was right on his mettle, losing only six targets out of 150.

WM. F. MERKLE, Supt.

Kansas State Tournament.

HUTCHINSON, Kan., May 1.—The Kansas State Sportsmen's Association held their annual tournament, under the auspices of the Hutchinson Gun Club, on April 27, 28 and 29. There were some seventy-five shooters present, and wtih very few exceptions, shot in every event during the three days. Wm. Veach was high amateur with 419 out of 450. E. W. Arnold second with 415 and H. Dixon third with a total of 406. In the professionals Ed. O'Brien was the winner of premier honors by scoring 425; W. H. Heer 422, second, and F. G. Bills, 414, third. H. F. Gray, of Leon, won the State championship on shoot-off with 48 out of 50. Scores:

Hudson Valley Rod and Gun Club.

GLENS FALLS, N. Y.—April 29 we held our fifth annual registered tournament, and it proved to be a success in every way. The Squier money-back system was used to advantage in our one day shoot, and proved to be as good here, as it could have been in a two or three day

J. A. R. ELLIOTT EATING BLUEBERRY PIE.

THE WAY VISITORS CAME TO THE SHOOT FROM ALBANY AND AMSTERDAM.

AT TRAP NO I—TREASURER BROWN SHOOTING.

day shoot. Both our boys and the visitors were very much pleased with it. A glance at the scores, which are appended, will show conclusively how well the system held the fellows for the entire program. This is very gratifying to both the club and the office force.

Forty shooters took part in the tournament, many from Amsterdam, Albany, Troy, Schenectady, Utica and Mechanicsville being seen on the firing line. The day was as nearly perfect as it could be, so that scores, as a rule, were good. A slight wind in the afternoon got under the targets and fooled some of the boys; but on the whole, there was little about which one could complain. The double event proved to be a good drawing card, and more than one shooter made a good start only to find a lot of ciphers in his score about the time he had waded half way through. Warnick's 18 out of a possible 20 was unbeatable, however, and he carried home the cup, although Witt was a close second, having 15 birds chalked up to his credit.

Seventeen targets were put up in the merchandise event at 25 targets, added target handicap, and the shooting was lively. For some unaccountable reason many of the best here met their Waterloo. The first prize, a handsome gold watch was carried home by Bowler; Witt copped the leather traveling bag; and the many other valuable awards were divided among the lucky men.

George Ginn and W. Harold Adamson were in their accustomed places, and handled the office work in fine shape.

J. A. NORTON, Sec'y.

Lester German Smashes the Record

To show their appreciation of his visit to Pittsburg, the Herron Hill Gun Club put on an impromptu shoot at their grounds on April 26. The program called for 100 targets. Mr. German shot a few practice targets, and started in with an unfinished run of 27; he then went through the five 20-target events without a miss, and as he was breaking targets in splendid time, the eleven other contestants persuaded him to go on for a record. Without any fuss, he went ahead breaking string after string of 20s straight until he drew a high one on his 321st target. The breeze down the island gave this target an ugly jump upward, and he undershot it.

Three hundred and twenty straight is a new record for the Eastern and Southern States. No score like this has ever been made in Pennsylvania, and it is nearly 200 targets better than any score ever made in Pittsburg.

G. E. Painter also set a new amateur ground record, shooting along with Mr. German. He broke 129 without a miss,, and had several other runs of 90 or better. He broke 98 out of 100 in the program, making him high amateur for the day.

All who were there will vouch for the fact that the targets were thrown between 45 and 50yds., and the angles were fully up to requirements.

Shooting conditions were perfect. The light was good, and up to the last 40 targets there was hardly a breath of air blowing. The scores:

Targets:	50	50	100	20	22p	12p
German	50	50	100	20	41	..
Kelsey	49	49	99	..	34	..
Young	47	47	..	..	..	21
De Lackso	44	44	..	..	..	19
Wampler	39	42	..	..	..	..
Davidson	36	44	..	..	..	..
Rahm	40	37	..	..	34	..
Louie	39	33	..	..	..	..
Bishop	32	29	..	..	..	..

Starting in 1904, Lester German took up the target game, and from the start the training he had in shooting them over the pan marked him for a comer in this new game. During 1905 he won quite a number of first averages, but in 1906 he cleaned up all the amateurs starting at the Grand American. Then he quickly followed by winning the amateur average at the Eastern Handicap, Virginia State shoot, Atlantic City, and the big Cincinnati shoot, where he defeated both amateurs and professionals. This was his last appearance as an amateur. He then shot as a Du Pont man, winning the Du Pont trophy from 20yds., defeating a field of 200 of the country's best shots.

At Cleveland, April 2, he set a new mark on double targets, breaking 96 out of 100. On Oct. 17 he won the Paul North trophy. In this race only the ten high professionals of the United States were eligible.

During 1910 Mr. German broke 100 straight or better fifteen times, breaking 222 at the Southern Handicap at Columbus, Ga. This was the longest run made in any Interstate Association tournament last year.

So far this year he holds the long-run records, breaking 156 and 252 straight at Galveston, Tex., breaking the entire last day's program without a miss.

Starting in at the New York Athletic Club shoot, Mr. German won high professional average and repeated this performance at Baltimore and at the Keystone shot at Philadelphia.

The Fred Macaulay Business Men's Gun Club.

NEWARK, N.J., May 3.—Nineteen gunners faced the firing line in the weekly shoot of the Fred Macaulay Business Men's Gun Club, held yesterday afternoon over the club's traps. While the weather was not exactly ideal for trapshooting, the marksmen turned in very creditable tallies. During the afternoon exactly 2850 white targets were thrown from the traps.

Chris. Feigenspan was high gun of the day. Out of the 220 birds that he fired at, he was credited with a kill of 205. Neaf Apgar and Louis Colquitt were the only gunners who were credited with a perfect string of 25 kills. B. M. Shanley, Jr., J. Thompson and Frank Mihlon shot well.

SEMI-SMOKELESS

Again proves its Superiority over other Rifle Powders, of whatever kind.

In the final shoot-off of the Inter-Club Matches, under the auspices of the National Rifle Association, the Rocky Mountain Rifle Club Team of Butte, Montana, won from the New Haven Team, with the wonderful score of

992 out of a possible 1000

A NEW WORLD'S RECORD.

This remarkable shooting organization is composed of the following members: T. E. Booth, Roy E. Tisdale, F. A. Anderson, J. W. Crawford, Hans Holmes, John A. Donovan, C. George Westphal, Louis Flagler and Joseph Morris— men, who by their skill and nerve have won the admiration of all rifle shooters from coast to coast. The individual targets made in the final match tell the story eloquently.

R. E. TISDALE,	200
T. E. BOOTH,	199
F. A. ANDERSON,	198
HANS HOLMES,	198
J. A. DONOVAN,	197
	992

In this series of matches the Butte Team did not suffer a single defeat; this is the SECOND SUCCESSIVE YEAR they have won the .22 CALIBER TEAM CHAMPIONSHIP OF THE U. S. In the two years they won 23 out of 24 matches, using exclusively

Peters .22 Cal. Ammunition

Thus in the most important .22 Caliber Competition of the year, SEMI-SMOKELESS CARTRIDGES are convincingly shown to be more accurate and more uniform than any others; they are very clean and may be fired indefinitely in the finest rifle barrel without cleaning and without injuring it; they have a record of achievement which has never and probably will never be equalled.

Ask Your Dealer for PETERS Semi-Smokeless Ammunition and do not accept Imitations or Substitutes.

The DuPont Gun Club.

UNDER date of May 3, Secretary T. E. Doremus, of the Du Pont Gun Club, writes us from Wilmington:

"I am inclosing two pages from this morning's News, of Wilmington, Del. They will indicate to you that the Du Pont Gun Club is still on the map. It is our desire to make the club the biggest and best in the country, and to give the Wilmington shooters and any who may desire to enjoy an afternoon's sport with us, the very best shooting at the lowest cost. Yesterday we let a contract to one of the local builders for an addition to the club house, to cost somewhat over $2,000. We believe this will give us an up-to-date house, with conveniences for all. The addition is to have a second story porch with a grand stand on the second story; this to accommodate the ladies, who enjoy watching the shooting."

The illustrations in the News are most interesting and bear witness to the enterprise and sprightliness of the Delaware shooters. Even though the peach crop of this State is on the decline, they certainly raise big shooters, as shown by the picture of Louis Koerner, "the big man" at the score. We make some extracts from the News's article:

Organized but last November, the Du Pont Gun Club has come in the short intervening time to be one of the foremost sporting organizations of the city, and now holds a rank with many of the large gun clubs of this section of the country.

Although the prosperous gun club was organized by employees of the E. I du Pont de Nemours Powder Company, it was formed for the purpose of arousing greater interest in trapshooting in the whole community, and its membership is not limited to the employees of the powder concern. Of the 382 members of the club, 120 are in no way connected with the Du Pont Company.

The new organization has received much encouragement from the Du Pont Company as a whole, and from its individual members. The company has furnished the grounds at New Bridge, just beyond Rising Sun, across the Brandywine, and has erected for the club on the ground a cozy little club house. The whole outfit cost in the neighborhood of $4,000, and includes three traps and a pistol and target range with five targets.

The club holds its regular shoots every Saturday afternoon, commencing at 1:30 o'clock. Each week four silver spoons of a handsome design and engraved with the name of the club, are offered for the winners of the four classes, and in addition special events and ties left over from the previous Saturday are shot. T. Coleman du Pont has given $200 each year for five years for the purchase of prizes and the T. Coleman du Pont merchandise event is shot off each week.

A prize of $50 has been offered by Eugene du Pont, which will be contested for throughout the remainder of the season. The contestants, to be eligible, must have shot at 25 targets 20 times; their ten best scores are selected and high man wins. A double-barrel shotgun was offered by the manufacturers of the Fox gun, the contest for which will end at the close of the present month. As in the Du Pont event, this will also be won by the man getting the highest mark in totaling his ten best scores at 25 targets, excepting that it takes only ten scores to qualify instead of twenty, as in the Du Pont shoot.

In order that business men may be given a chance to take part in the trapshooting, a regular Thursday afternoon shoot is held, the scores made in this to count the same as those in the Saturday shoots.

Non-members of the club pay one cent apiece for the targets, while the members are charged 15 cents for 25 targets, in addition to the cost of the shells, which makes the cost of the sport very low.

All scores made at all the shoots are carefully recorded in the books of the club and percentages of the ability of each man figured out for use in handicap shoots.

The Du Pont Club officers are as follows: President, William Coyne; Vice-President, P. S. du Pont; Second Vice-President, Major W. G. Ramsay; Treasurer, P. E. Garrett; General Secretary, T. E. Doremus; First Assistant Secretary, W. A. Joslyn; Second Assistant Secretary, Lieut. Frank Harkins.

WILMINGTON, Del., May 7.—T. W. Keithley was high man at the weekly shoot on the grounds of the DuPont Gun Club yesterday. He broke 24 out of 25 targets and won in Class A of the T. Coleman du Pont merchandise event. He is in good form, having won two first prizes in succession in this event with scores of 24.

The winners in ties made the previous Saturday were: Class B—Dr. A. Patterson, 20 out of 25. Class C—William Coyne, 20 out of 25. Class D—L. W. Crawford, 17 out of 25. H. W. Lobb, with a score of 23, won the shoot-off in Class B from ties made April 22 and 29.

The competition for the Fox gun trophy terminates this month. The rivalry for the prize is especially keen.

The scores yesterday, other than that of Mr. Keithley, were:

Class B, 20 out of 25: J. A. MacMullens, W. M. Hammond, W. A. Joslyn, William Coyne, Dr. Stanley Steels, Dr. A. Patterson, H. Winchester.

Class C, 18 out of 25—R. C. McCardle, C. C. Gerow, J. W. Anderson, Jr., C. E. Springer, H. P. Carlon.

Class D, 15 out of 25: S. J. Newman, S. G. David, S. B. Trott, Dr. H. H. Darlington, J. E. Miller, W. Mathewson.

The scores, at 25 targets each, were: H. H. Lukens 23, Dr. C. R. Jefferis, Jr., 19, J. A. MacMullen, 20, L. C. Lyon 12, Eugene du Pont 22, H. W. Bush 17, Clyde Leedom 17, S. J. Newman 15, A. H. Lobb 23, J. J. Magahern 19, C. C. Gerow 18, F. H. Megaw 8, W. M. Hammond 20, S. G. David 15, W. Edmunson 18, A. G. Reilly 12, S. B. Trott 15, Victor du Pont 3d 21, W. A. Joslyn 20, A. J. Curley 3, T. Pennington 19, J. B. McHugh 24, Dr. H. H. Darlington 15, R. C. McCardle 16, J. E. Miller 15, J. W. Anderson, Jr., 18, G. Godwin 19, H. T. Reed 14, J. T. Roherson 22, S. G. David 17, C. E. Springer 18, William Coyne 20, W. F. Jensen 17, T. W. Keithley 24, Dr. H. Betts 9, J. C. Ewing 14, David Lindsay 21, G. A. Wilson 5, E. B. Wilson 7, W. Mathewson 15, L. W. Crawford 17, S. Tuchton 21, H. P. Carlon 18, Dr. S. Steele 20, Dr. Bullock 21, Dr. A. Patterson 20, W. B. Smith, Jr., 13, D. J. Dougherty 16.

Interstate Gun and Rifle Club.

DARBY, Pa., May 7.—A small but select field of Interstate Gun and Rifle Club members participated in the monthly shoot, held yesterday at this place. Anderson was high man with 45 breaks out of his 50 birds, followed by Gaines with 43. The scores:

Anderson	45	Williams	37
Gaines	43	Jackson	31

Hyde Park (Ohio) Gun Club.

MAY 6 was an ideal Spring day, the first really pleasant Saturday we have had in this section for many weeks. The attendance was fair, but not what the delightful weather warranted. Holoday, after a couple of warming-up events, got down to business, and finished with 95, which included a run of 54 straight. Irwin did not strike his gait until he had tried a little practice, and even then he fell down a little, scoring several targets less than usual in the 100. De Mar was not in so good form as last week. In his first event he missed only one target, but then fell down in the next two, finishing with a little over 89 per cent., instead of up in the 90s. Welsh left his gun at home, not expecting to get to the grounds. His score was the result of using a strange gun, and not lack of skill. Dr. Phillips is still able to break a few, but does not get time for sufficient practice to keep in shape. Jenkins got out just in time for a couple of events, and after a bad experience in his first event, he began to find them, but could not get his average where it belongs. Frohliger seldom does his best at the start. To-day he improved in each succeeding event, and was going a nice pace when the shooting ended. Schaefer could do nice work if he would devote a little more time to practice. He is also making good on the revolver range. Sampson came out late, getting into one event and then shooting alone. He broke 88 per cent. of the 50 targets he shot at, and promises to better that by a number of targets at the Northern's tournament.

Sunbury—Selinsgrove Tournament.

SUNBURY, Pa., May 6.—The sixth annual tournament was held on May 4 and 5, at Rolling Green Park, with some forty shooters in attendance. The weather was good and a fine meeting was had. Conley topped both amateurs and professionals with a score of 282 for the two days; Herrold, 277, in second place, closely followed by Schlichter with 276. Sked was high professional with 280. Scores:

Klotz	150	111	150	110

In addition to the regular program there were also shot six extra events, which aroused a great deal of interest. The most exciting of the specials was the three-man team cup race, which tied at 68 by Harrisburg No. 2 and Sunbury-Selinsgrove No. 1. In the shoot-off, Harrisburg won by the score of 66 to 63.

Harrisburg No. 1.		Lykens.

Shoot-off of tie:			
Harrisburg No. 2.		Sunbury-Selinsgrove No. 1.	
Keller	21	Siegfried	22
Wilson	22	Herrold	19
Brewster	23—66	Howell	22—63

The prizes—three cups, a cup for each man of the winning team—were beautifully engraved, and were appreciated by the men.

Each day in the specials a Baker gun was given as a prize, at 25 targets, handicap. The first day it went handily to Hoy, of Milton. But on the second day there was a battle royal, four men making straights, including Herrold, the scratch man. In the shoot-off Herrold and Howell (handicap 1) again made clean scores, this making 50 straight for Herrold. When they shot again the betting was in favor of Herrold, as he has been victorious in so many shoot-offs; but Howell stood the strain the better and won by three targets.

The miss-and-out was entered by seventeen shooters, and resulted in straights by three shooters, viz.: Herrold, Worden and Schoffstall.

The doubles were also well entered and ended in quite a surprise, Snyder, a member not shooting this year, ringing up 14 out of 10 pairs, and walking off with first money.

All in all, the men were well pleased with the Squier money-back system, there being no complaints and many hoosts.

J. W. SCHOFFSTALL, Sec'y.

Princeton Defeats U. of P.

PRINCETON won the intercollegiate target match from the University of Pennsylvania, Saturday morning, May 6, at the Clearview Gun Club by a score of 214 to 181. Each gunner shot at 50 targets, with five men to a team. Scores:

AMERICAN BIG-GAME HUNTING

BOONE AND CROCKETT CLUB SERIES

Edited by George Bird Grinnell and Theodore Roosevelt

A thoroughly stimulating book dealing with American big-game hunting, East, West and under the Arctic circle, including every phase of sport with the rifle. "American Big-Game Hunting" is a compilation of the experiences of some of the most widely known sportsmen in America. Among the sketches are: The Story of the Buffalo, Capt. Geo. S. Anderson; The White Goat and His Country, Owen Wister; Old Times in the Black Hills, Gen. Roger D. Williams; Coursing the Pronghorn, Theodore Roosevelt; After Wapiti in Wyoming, F. C. Crocker; In Buffalo Days, George Bird Grinnell; Blacktails in the Bad Lands, B. Rumsey.

Forest Preserves and Game Refuges are also considered. Aside from the surpassing interest of the narratives, the book is invaluable for referenc. Cloth, heavy paper, library edition, richly illustrated.

Postpaid, $2.50

The Angler's Workshop

RODMAKING FOR BEGINNERS

By PERRY D. FRAZER

A unique work, bringing the science of rodmaking up to the very moment and epitomizing the knowledge and the experience of experts for the guidance of the average man. The evolution of bait-casting principles has made Mr. Frazer's book supersede all previous publications on the subject.

Every angler—young or old—who is fond of adapting his rods and tackle to his own ideas of what they should be, will find in this book a large fund of information gathered by the author in years of study, experiment and practical experience in fishing, tournament casting and at the work bench. He theorizes and speculates not at all. He tells "the how" of everything connected with rodmaking in a way that makes results certain. All explanations are simple and easily followed.

Separate chapters are devoted to each of a half dozen types of bait-casting rods; to tarpon, surf and light salt water rods; bass and trout, salmon and tournament fly-rods. Complete specifications of well known types are given, and the chapter on split bamboo rodmaking is the most comprehensive treatise on the subject ever published. Indispensable in the angler's library.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid, $1.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

When writing say you saw the ad. in "Forest and Stream."

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring.**

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER
SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the $28 gun the peer of any $50 gun on the market. Upwards to $1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N.Y.

JOSEPH DIXON CRUCIBLE CO. JERSEY CITY, N. J.

HITTING *vs.* MISSING

By S. T. Hammond ("Shadow").

Cloth. Price, $1.00.

Mr. Hammond enjoys among his field companions the repute of being an unusually good shot, and one who is particularly successful in that most difficult branch of upland shooting, the pursuit of the ruffed grouse, or partridge. This prompted the suggestion that he should write down for others an exposition of the methods by which his skill was acquired. The result is this original manual of "Hitting vs. Missing." We term it original, because, as the chapters will show, the author was self-taught; the expedients and devices adopted and the forms of practice followed were his own. This then may be termed the Hammond system of shooting; and as it was successful in his own experience, being here set forth simply and intelligently, it will prove not less effective with others.

FOREST AND STREAM PUBLISHING COMPANY

MY FRIEND THE PARTRIDGE

S. T. Hammond. A delightful reminder of crisp autumnal days in the covers. It tells of sport with the noblest of game birds, the habits and habitat of the ruffed grouse, with just the right touch of reminiscence and personal experience. Cloth. Illustrated. 150 pages. Postpaid, $1.00.

FOREST AND STREAM PUBLISHING CO.

Western Pennsylvania Trapshooters' League.

Highland Club the Champion.

PHILADELPHIA, Pa., May 7.—Highland's victory over the S. S. White and Haddonfield teams, with the sudden surprise handed out to South End of Camden by the Meadow Springs, enabled the Edge Hill men to win the Trapshooters' League championship yesterday afternoon with a total of 17 points, and an actual breakage of 2602 targets. The Whites finished third in the race, with 13 points, while Meadow Springs beat out Haddonfield for fifth place by 2 points, 11 to 9. The points scored and targets broken follow:

	Points.	Broken.
Highland	17	2602
South End	15	2555
S S White	13	2490
Meadow Springs	11	2491
Haddonfield	9	2359

Highland, by consistent team shooting, broke a total of 434 targets, beating the Whites by 17 birds and the Haddonfields by 40 birds. The clear, warm weather was a tempting inducement for the gunners, and with very little wind and a perfect working target, there was no excuse for the men who made poor scores. High totals scooped the field, and two men managed to break 49 out of their 50 birds. Kahler, of the Highlands, and Griffiths, of the Whites, were the honor men. Halloway, of Haddonfield, broke 48. Scores:

Haddonfield.		S. S. Whites.	
Kahler	49	Griffiths	49
Tansey	47	Sidebotham	46
Franklin	47	Beyer	44
Bender	46	Ford	42
Pflegar	43	Robinson	40
Crothers	43	Cantrell	40
Perry	41	Hand	40
Herman	40	Severn	39
Landis	39	Fontaine	39
Wolstencroft	39—434	Alexander	38—417
Haddonfield.			
Pedlow	34	E Tomlinson	41
Bergen	31	Webster	40
Remers	39	Muller	37
Halloway	48	Strafford	39
F Tomlinson	42	Peacock	43—394

The scores made by the gunners who failed to qualify for their respective teams follow:

Highland—Lindsey 37, Clark 36, Davis 31, Wentz 38, Lee 35, Ringgold 39, F. Meehan, Jr., 21, Du Pont 33, Harkins 38, T. Meehan 37, Aiman 38.

S. S. White—Hinkson 33, St. Clair 37, Watson 32.

Haddonfield—Lutchstern 31.

The shoot on the Meadow Springs grounds will likely be protested. After the South End Club had finished shooting and led Meadow Springs by a score of 436 to 435, Stone appeared at the traps late, and his score was counted by Meadow Springs, giving the latter club a victory by a score of 437 to 436. The matter will be settled by the League.

To encourage good work, Meadow Springs offered spoons for the high guns, Slear and Greene being the lucky ones for South End, and Murdock capturing the honors for Meadow Springs.

In addition to these prizes, the South End Club had offered silver cups for the members making the highest totals in the six League shoots. These were won by Frank J. Hineline, of Camden, with a total of 261; Fred Slear, of Collingswood, N. J., also captured one for his total of 256, and the other went to Edward Cordery, of Hammonton, N. J., who was just one target behind with 255. Scores:

Meadow Spring.		South End.	
Murdock	46	Greene	46
Sloan	44	Slear	46
Hogan	44	Tomlin	45
Warren	44	W Pechman	45
Hillpot	44	Chalmers	44
Stone	44	Hineline	43
J Emerson	43	Fleming	43
Hall	43	Wakeman	42
Dr Pierce	43	W L Cross	41
Kinchner	42—437	H Anthony	41—436

The scores made by the gunners who failed to qualify for their respective teams follow:

Meadow Springs—Clegg 40, Loley 23, G. L. Emery 33, Gerhard 35, E. B. Garrett 31, Keenan 28, A. Moore 40, W. J. Moore 41, Pierce 26, Free 39, Fenn 37, Henry 42, Renner 37, Chandler 38, Wiley 42, Hewlett 21, Coyle 38, Marden 37, MacAlonan 35, McAvoy 38, W. Williams 42, Gideon 33, Haggerty 32, King 42, Woodward 33, E. G. Garrett 28, Wills 40, Serfass 41, G. Smith 41, Mack 35, Kirsch 35, John 42, Stinger 41.

South End—Cordery 39, Newkirk 31, Goodfellow 32, Butler 30, E. Halloway 27, Anthony 35, Taylor 33, J. Marple 36, J. Murphey 36, W. Johnson 32.

Kahler the Winner.

PHILADELPHIA, Pa., May 7.—The amateur target championship tournament run under the auspices of the Highland Gun Club for the Class A, B and C men came to a conclusion yesterday afternoon at Edge Hill, with Kahler winner of the Class A; Franklin in Class B, and Wentz in Class C. The conditions of the tournament were: Three shoots for a total of 360 targets, 120 per shoot; class shooting, with a 16yd. rise. In addition to the diamond watch fob donated for the winner of each class, he was also rewarded with a $25 cash prize, which, with the money events in all three shoots more than made it worth while for a gunner to compete. Kahler yesterday broke 114 of his 120 birds, which, with the scores of 114 and 112 made in the other two shoots, gave him a total of 340 breaks out of his 360 targets. Jesse Griffith, who outshot Kahler yesterday by 4 targets, finished second for the three shoots, having grassed 335 out of his 360. Tansey got a final count of 332 and Landis 322. On the entire day's program Griffith led the entire field with 145 breaks out of 150.

Franklin won the B trophy. He broke 107 yesterday, which with his scores of 100 and 111, made in previous events, enabled him to beat out F. Mathews, of Trenton, by a bird, 318 to 317. Pflegar finished third with 310.

Wentz won the Class C trophy with 296 smashes, breaking 96 for his final test yesterday, and an even 100 in the other two shoots. Scores:

Class A.

									Total.	Grand Total.
Griffith	24	25	19	20	15	15	14	13	118	145

Analostan Gun Club.

WASHINGTON, D. C., May 7.—The Analostan gunners held a very successful shoot on May 1. Twenty-three marksmen faced the traps and good scores were the order of the day. George L. Lyon, the popular trade representative, was a visitor, and gave a splendid exhibition of how to break targets. He scored 97 out of 100 in the singles, and broke 13 pairs without a miss. Following are the scores:

	Shot at.	Broke		Shot at.	Broke
C L Lyon	100	97	F P Holt	100	66
Phil Steubener	100	93	W W Barnes	80	67
M D Hogan	100	93	J M Green	75	57
Wm Wagner	100	90	Frank Kahrs	70	40
Dr A V Parsons	100	88	C S Wilson	65	38
Dr W Monroe	100	87	E Dufour	50	49
R H Leight	100	83	Miles Taylor	50	47
R P Hawes	100	80	W M Willis	50	43
R T Bray	100	79	Wm Holmead	50	42
Geo W Peck, Jr	100	77	J T Moffett	50	35
Dr A B Stine	100	77	Dr B Taylor	50	27
Dr M Harrison	100	90			
Doubles:					
Steubener	20	17	Holmead	20	12
Wagner	30	22	Leight	12	7
Parsons	32	21	Hogan	20	10
Monroe	20	12	Lyon	26	26

Dufour won a leg on the Wagner medal, scoring 25 straight; he also won the spoon in Class A, breaking 49 out of 50. W. M. Willis won the spoon in Class B, scoring 42 out of 50. R. H. Leight won the spoon in Class C on 31 out of 50. Frank Kahrs won it in Class D, breaking 31 out of 50, after a shoot-off with C. S. Wilson.

The shoot on May 6 was well attended. The trap spring broke after the second event had been started, and after being replaced with a new one, 80yd. targets were thrown. My, but they were hard; but for the fun of it the trap was not changed, and of course the scores tumbled, as will be seen by the following:

C B Wise	100	75	Geo Talbot	70	32
W D Monroe	100	88	H Keller	65	53
Dr M Harrison	120	94	M D Hogan	65	47
Dr A V Parsons	105	82	W W Barnes	50	48
J A Drain	105	75	Dr E M Funk	50	43
J M Green	100	62	Miles Taylor	50	42
H S Vandegrift	100	61	E Dufour	50	40
C S Wilson	80	64	J A Brown	50	37
Dr A B Stine	75	64	G W Peck, Jr	50	33
Wm Wagner	77	58	H B Farnham	50	39
F R Holt	75	38	Dr B Taylor	55	30
R T Bray	80	51			
Doubles:					
Funk	22	19	W W Barnes	20	13
Dufour	24	18	M Taylor	20	13
Wagner	42	30	Parsons	20	13
Talbot	20	15	Holt	20	15
Stine	20	13	Drain	44	24
Keller	40	26	Bray	26	14

Dr. W. W. Barnes won a leg on the Wagner gold medal, scoring his 25 straight.

In the Western Cartridge Co. trophy event at 10 pairs the scores were as follows: Funk 18, Wagner 16, Holt 15, Talbot 15, Keller 15, Barnes 13, Drain 13, M. Taylor 13, Dr. Stine 13, Dr. Parsons 13, Monroe 12, Bray 11, Dufour 15.

Mr. Geo. W. Peck, Jr., having resigned as captain of the club, Mr. Everett Dufour was nominated to fill the vacancy and was unanimously elected.

Mr. T. Haze Keller, Jr., spent the afternoon with us. He said that during all his travels over this country he had never seen a swifter target thrown, or one that went quite so far.

Mr. E. M. Funk spent the afternoon with us. He is an old member of our club and the boys were glad to see him.

Clearview Gun Club.

DARBY, Pa., May 7.—By outshooting Shuster after two extra events were shot to break the tie existing between the former and Bonsall, the latter won the opening shoot of the summer series now being conducted under the auspices of the Clearview Gun Club, which was shot here to-day afternoon. The conditions called for 50 targets per man, dead bird added handicap, with all scores of 50 and over to be counted for the trophy. All ties are to be shot off at 25 extra targets, with half of the original handicap counting in the totals.

A big field entered for the first shoot, and high scores were in the majority. Bonsall, Paulson, Bevan, Shuster and Dalton, all by reason of their liberal handicaps, tied for the high honors, 50 or better. Bonsall was the best actual score in this bunch, for he cracked 44 of his 50 birds, having a handicap of 7 to reach the 50 score. Harry Fisher, who shot from scratch, broke 45 of his birds. In the first shoot-off both Bonsall and Shuster outshot the rest of the tie men from their heels, but in the second shoot-off Bonsall snatched the honors from Shuster by breaking 23 to the latter's 17. Scores:

Bonsall	7	51	Ferry	8	44
Paulson	13	51	Babcock	10	40
Bevan	15	50	Ullman	12	40
Shuster	15	51	Raymond	0	43
Dalton	15	51	Bockius, Jr.	0	39
McCullough	7	47	Crawford	0	37
Bockius	7	47	Hill	0	37
Elwell	9	46	McMorris	0	28
Fisher	0	45			
Shoot-off:					
Bonsall	3	25	Bevan	7	22
Shuster	8	25	Paulson	6	21
Dalton	7	23			

Second shoot-off: Bonsall 25, Shuster 17.

Siwanoy Country Club.

MOUNT VERNON, N. Y.—Herewith are the scores made at our shoot April 29:

	Shot at.	Broke.	Per Cent.
F W Valentine	120	95	79.1
Dr Knapp	70	49	70.
C B Holmes	180	130	72.2
J G Wintjen	60	40	66.6
W W Thorpe	150	77	73.3
H V Morgan	95	59	62.1
W Thorpe	130	90	69.2
G A Wylie	150	80	76.1
H J Smith	140	74	52.8
Z S Offutt	60	52	86.6
W E Barnard	110	81	73.6
Wooster	85	56	65.8
L Rauch	50	42	85.
W N Wylie	50	39	78.

On Saturday, May 6, besides the regular weekly shoot, the second contest for the Du Pont trophy took place. Scores, at 50 targets:

W W Thorpe	8	38	Z C Offutt	6	42
L Rauch	5	44	W Thorpe	9	44
G A Wylie	5	35			

In the shoot-off of the tie L. G. Rauch won.

Scores of regular weekly shoot:

	Shot at.	Broke.	Per Cent.
W W Thorpe	80	51	63.7
L Rauch	90	69	76.6
G A Wylie	115	81	70.4
Z C Offutt	115	92	80.
W Thorpe	115	81	70.4
Prof. Hill	85	32	37.6
W M Wylie	70	52	74.2
Dr Barnard	65	44	67.7

Lorain Gun Club.

LORAIN, O., May 8.—Last Friday was an ideal day for trapshooting and a fair-sized crowd was on hand at the range. Several out-of-town guests were present. Among them were Chamberlain, of Columbus; Krupp, Keubler and Zim, of the Sandusky Gun Club. Several close events were shot during the afternoon. Chamberlain taking high honors with a score of 145 out of a possible 150. For the local club members, Murray did the best shooting with a score of 91 out of a possible 100.

There is more enthusiasm shown at every meet, and the range promises to be a popular place for those who enjoy trapshooting. The big tournament to be held here on July 20 will be the feature of the event of the season, and already great preparations are under way for the entertainment of the large number of cracks expected.

Friday's scores follow:

	Shot at.	Broke		Shot at.	Broke
Chamberlain	150	145	J P Traxler	100	85
Krupp	150	137	Hall	25	22
Keubler	150	119	E B Gilbert	75	64
Zim	150	115	Gifford	100	77
Cliff	125	96	Canalos	75	59
Murray	100	91	Wadsworth	50	37
Black	100	89	Connolly	25	16
Williams	100	87			

J. P. TRAXLER, Sec'y.

Eastlake Gun Club.

WILMINGTON, Del., May 7.—Eastlake Gun Club members made the following scores for the Du Pont trophy yesterday, 25 targets per man: J. Springer, Jr., 25, W. Fincher 25, L. Beatson 25, H. Black 24, L. Pike 24, R. Coffin 24, E. Potter 23, C. Haverbeck 23, K. Davis 22, W. Jones 17, H. Jones 16.

The scores in the regular club shoot were as follows: R. Coffin (shot at 25), broke 22, H. Black (35) 25, W. Fincher (40) 25, L. Beatson (75) 49, J. Springer, Jr., (60) 36, F. Quigley (25) 15, T. Gentch (25) 14, C. Haverbeck (25) 11, H. Jones (10) 8, G. Lightkep (25) 6, W. Jones (10) 4.

The PARKER GUN Again a Winner!

On January 11-13, 1911, The "OLD RELIABLE" PARKER GUN, shot by Howard D. Bates, of Ridgetown, Ont., again won the Grand Canadian Handicap at live birds, killing 25 straight and 9 in the shoot-off, from the limit distance of 31 yds. Mr. Bates shot at 54 birds during the tournament and killed them all. THIS IS SOME SHOOTING!

ESTABLISHED 1802 **Wilmington, Delaware**

Northern Kentucky Gun Club.

The first of the series of money-back tournaments of this season was held on May 7, and was voted a big success, the best of which the club has given so far since they placed the event on their regular program. The day was perfect for the sport, and good scores were not scarce. Twenty-seven shooters entered and shot in all the events, and there was a large crowd of spectators. Dr. L. W. Shouse gave good satisfaction as referee. W. Keefer acted as scorer. The office work was in charge of Elmer Lamb, who made his debut here as cashier, and he proved to be a good one, having the moneys figured out promptly, and all shooters paid off within a few minutes of the close of the last event. Supt. Taggart made a very good squad hustler, and was busy in various ways during the day.

The shooters were served a fine dinner at noon in the club house, to which all did full justice.

The money-back system again proved its value. The purse amounted to $69. Seventeen of the shooters were obliged to present claims in sums ranging from 15 cents to $8.20, to reimburse them for their losses, the surplus being used for the high average trophy, a handsome cut-glass bowl.

Among the out-of-town shooters present were J. S. Ritt, E. M. Stout, Moller and C. Fellers, of Circleville, O.; Frank Alkire, of Williamsport, O.; F. Bruns, Williamstown, Ind.; C. C. Williamson, Muncie, Ind.; Messrs. Turrell and Francis, of Harrison, O.; Wm. Webster, of Columbus, O., and Ed Cain and Ike, of Dayton, O.

The high average trophy was won by Webster on the score of 142, or 94.66 per cent. Felix, of Madisonville, O., shot a close race with Webster for first place in the first six events, being tied on 86 out of 90, but in the next two events he went to pieces and lost out. J. A. Payne, one of our best local shots, finished in second place on 139. Then came Bruns and Williamson with 138 each. Woodbury shot a fair race all through, and in the ninth event dropped into first place all by himself with 15 straight, and it surely paid him well. In the last event he was second alone, and that brought his winnings up to a respectable figure, and took him out of the money-back class. Frank Alkire did not put up the score we expect from him, but got back into form for the last four events, but it was too late to do him much good. E. M. Stout often shoots a better race than he did to-day, but he took his medicine cheerfully, as usual, and smiled, like the game sportsman he is. Ike is one of the few old-timers, of Dayton, who still remain in the game, but he does not put up the old-time scores now by a good many targets. Dameron shot very well, considering that he has not been able to do any shooting for a long time owing to ill health; 88 per cent. is a mark that many amateurs would like to reach and keep up. Luverne had too much on his hands to really do his best, and the work prevented him from getting into the special event, much to his disappointment. Ed Cain had a string of 14s, but unluckily he sandwiched in a few lower scores that kept him down in the list much below his usual place.

Every one was disappointed at not seeing the genial Lon Fisher, of Columbus, on the grounds, but at the last moment he was prevented from coming. We will look for him at the next shoot, on the first Sunday in June. Hammersmith was over with several of the Cincinnati boys, but did not quite reach the 90 per cent. class. He was boosting for his money-back shoot, which will be held on May 21, and he ought to have a big attendance. McArdle started out with a straight, and divided first money with Moller, the only other one to break them all in the first event. The pace was a little too hot for Mac to keep up, though he did well in one or two other events.

The program consisted of ten 15-target events; total entrance $14; purse in the first five events divided Rose system, 5, 3, 2, 1; and percentage system, 35, 30, 20 and 15 per cent., in the last five. Shooting was started at 11 o'clock, and the last event was finished about 5 o'clock. Everything moved smoothly, but the shooters were a little slow getting to the score during the first part of the program. Later in the day Supt. Taggart got after them, and there was no more trouble. As soon as the regular events were concluded, a special event at 25 targets, $1 entrance, distance handicap, was started with twenty entries. The trophy was a large cut-glass vase, and was won by C. C. Williamson on a score of 24 from the 18yd. mark. Voige and Welch, from 16yds., and Webster, Payne, Sampson and Hammersmith, all at 18yds., tied for second place on 23.

At the last weekly trophy shoot the darkness prevented Keefer and Woodbury from deciding the tie between them, so they agreed to settle the matter by to-day's score. It was a close race, Woodbury winning by one target with 122 to 121.

The club's next trophy shoot will be held on May 15, and on the 21st a number of the members will visit the Cincinnati grounds to help swell the attendance at their money-back tournament. There will be a live-bird shoot on May 11 for the purpose of selecting the team which will shoot the team from Pennsylvania on May 15, at the grounds of the Crystal Lake Gun Club, Ryland, Ky.

Gouverneur Rod and Gun Club.

Gouverneur, N. Y.—The Gouverneur Rod and Gun Club had its birth on April 26, with a membership of forty paid in members. The field selected for the club's operations and practice is on the old golf grounds on the Laidlaw property, just on the outskirts of the village. The members expect to make some great records during the season, and in the fall enter contests with Watertown, Ogdensburg and Massena. The officers chosen are: President, Charles H. Anthony; Vice-President, Frank Starbuck; Secretary, Dwight Bacon; Treasurer, Herbert Holmes. Field Captain, Jerome Payne.

Barnstorming in the South.

CHATTANOOGA, Tenn.—An enthusiastic crowd of spectators and twelve amateur contestants gathered at the grounds of the Chattanooga Gun Club on the afternoon of May 1 to meet Messrs. Fred Gilbert, C. O. Le Compte, Chas. A. Young and A. M. Hall, who were visiting and shooting with the club on that occasion, and in spite of a stiff wind witnessed some very high class shooting indeed, as the finish showed Messrs. Gilbert and Young tied on 94 out of 100 for first place, with Le Compte close up with 90. Messrs. Oswald Rothe, A. E. Pooler and John Hibbett's, of the local club, put up some very creditable scores, and led the amateurs in the order named.

At South Pittsburgh, Tenn, the next day, the same delegation, reinforced by Messrs. W. O. Le Compte and P. B. Plummer, turned in a nice average score of about 95 per cent, the order in which they finished being: C. A. Young 98 out of 100, F. Gilbert 96, W. O. Le Compte 95, C. O. Le Compte 94, P. B. Plummer 91. Mr. Hall, not joining in the contest, his place was very creditably filled by Billy Le Compte.

On this occasion a crowd of two hundred spectators and fourteen amateur shooters was present. Dr. Lassiter and Mr. Will Lea, of Bridgeport, Ala., turned in the best scores, while Mr. J. B. Phillips and John Coffelt lent everything in their power toward making the occasion the pronounced success that it was.

At Sweetwater, Tenn, May 3, the first real excitement of the trip began, when it was discovered that Manager Le Compte (Farmer) had really succeeded in checking the baggage properly and had finished his argument with the gate-keeper. Each of the squad now left—for Billy Le Compte had deserted us settled himself comfortably or otherwise to enjoy the trip up from Chattanooga, when suddenly Fritz Gilbert was struck with an idea. Now this may seem incredulous, but nevertheless it is a fact, and when we reached Sweetwater it had grown to such proportions that he could not contain it any longer and had to divulge it to the crowd. Now, Fatty had read in the paper where Frank Gotch was billed for a wrestling match at Knoxville on the night of the day on which we were to shoot there, and thinking to "put one over" on his old friend, likewise gain the distinction of being the only living man to make Gotch "take water," so to speak, sent him a challenge to wrestle him one fall for $100, provided Gotch would shoot him a match at clay targets for $200; and with that famous smile on his face which might mean anything from "that's good," to "I guess that'll hold you for a while," turned to old man Le Compte and announced that he was ready to go to the shooting grounds.

Sweetwater has as pretty a place to shoot as could be wished for, and though the two expert traps caused quite a little trouble during the program, on the whole, the 300 or more spectators and fifteen amateurs enjoyed one of the most pleasant afternoons of the entire trip, and witnessed some excellent shooting, which resulted in another tie on 96 out of 100 by Gilbert and Young, while Plummer came next with 90. Though none of the amateurs completed the program, the shooting of Mr. J. L. Brown and J. G. Johnson, both of the local club, was very creditable indeed. Mr. T. B. Guthrie and John Bradley had charge of the shoot and added greatly to the pleasure of the squad while in their city.

The squad reached Knoxville in good time and high spirits, each and everyone eager to learn the answer to Fritz's challenge; but there was "nothing doing." No word or message awaiting us, and we all left for the shooting grounds feeling much elated over the prospects of "Fatty's" "getting away" with it.

At Knoxville there were twenty-seven shooters, and though the number of spectators was hardly as great as on the two previous days, yet about 150 or more enthusiasts were present and enjoyed the sport to the limit. One feature of this shoot, different from the others, was that nearly every one of the amateurs completed the program, and quite a number competed in the event at 25 pairs. Howard Van Gilder, of the local club, though suffering somewhat with a troublesome tooth, managed to land high amateur with a good 90 per cent., with C. A. Burks and Sanford Burnett close up. Gilbert led the field with a nice 94. per cent., with C. E. Goodrich, of Chicago, who joined us at Knoxville, second with 91. C. A. Young had the misfortune to break his gun after having dropped but one target in 60, and could not keep up the excellent work he has been doing all this spring, and landed third professional with 89.

After the regular program was completed an extra at 25 pairs was pulled off, and it was while returning from the last round of this event that a messenger boy approached Gilbert and handed him a note. Quickly we all gathered around him, anxious to learn its contents, for we knew it was from Gotch; and this is what we read:

"Fred Gilbert, care Gun Club: Your conditional challenge received. I will accept same gladly, provided we wrestle first.—Gotch".

The train left for Morristown, and we caught it.

A deceptive background at Morristown made the shooting awfully hard for most of us, though the Wizard of Spirit Lake did not seem to notice it, while Goodrich and Young both took care of themselves in good shape. Gilbert on this occasion turned in the great score of 98 out of 100, with Goodrich 93 and Young 92. Plummer, Le Compte and Hall finished in the "also rans."

Hugh Mims and Joe Hill looked after the arrangements and did some very nice shooting, though W. S. Murphy, of the local club, with 85 per cent., led the amateurs and received the applause and congratulations of the one hundred or more spectators.

If there is a more enthusiastic bunch of shooters or cleverer lot of gentlemen than compose the Johnson City Club, I have never shot with them, and with Messrs. J. A. Slaughter and W. H. Cressman looking after the arrangements the week's "barnstorming" wound up in a blaze or glory, with Fred Gilbert the Big Blaze. Of the thirty odd shooters, he led the bunch with a duplicate of his score yesterday at Morristown, another fine 98 out of 100. Chief Sparrow Young was next with 94, and Goodrich third with 93. Dr. Rhea, of Bristol, and Messrs. Williams and St. John, of the local club, all three turned in good accounts of themselves in front

SPECIFY FOR REGULAR USE—

the powder you insist upon to make the best scores.

You naturally refuse to take chances when you realize that competition is going to be close.

Why take chances in losing any of the keen sport that might be yours if you are always careful to use the powder you know is best.

Dead Shot Smokeless

holds the world's record for accuracy.

Yet it combines lightest recoil with the highest velocity.

This means that you have more to show for a day's shooting—with less fatigue and nervous strain.

Shotshells loaded with this powder are to be found at any dealers. Ask for them.

THE NARRATIVE OF A SPORTSMAN

INTER-OCEAN HUNTING TALES

EDGAR F. RANDOLPH

A series of hunting reminiscences of rare charm for the sportsman and for the wider circle which delights in true tales of outdoor life. With none of the high coloring and exaggeration which give a false note to so many hunting stories, Mr. Randolph's book is never lacking in interest.

He covers the field of sport with the rifle, east and west, drawing a vivid word picture of life in the open, subordinating his own exploits to the main incidents of outdoor experience, giving much valuable information on camp life, hunting and the habits of wild game, and continually delighting the reader with the freshness of his viewpoint.

This book will strike a sympathetic chord in the memory of every big-game hunter of experience and will prove of real value to the novice who is planning an excursion into the wild.

Cloth, 170 Pages. Richly Illustrated. Postpaid, $1.00.

A Classic for Sportsmen

AMERICAN BIG GAME IN ITS HAUNTS

Boone and Crockett Club Series

Edited by GEORGE BIRD GRINNELL

An invaluable work not alone for the sportsman, but for the student and lover of wild life. Treats of big game preservation and protection in the broader sense; tells of the habits, habitat and life history of the larger wild animals; touches upon the problem of the public forest domain, and is rounded out by interesting hunting reminiscences by such leaders in the fraternity of big-game hunters as Madison Grant, Paul J. Dashiell, George Bird Grinnell, Jas. H. Kidder and W. Lord Smith. Bound in cloth, library edition, heavy paper, richly illustrated, 497 pages.

Postpaid, $2.50

UNCLE LISHA'S SHOP

Life in a Corner of Yankeeland. By Rowland E. Robinson. Cloth. 187 pages. Price, $1.25.

The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evenings and dull outdoor days "to swap lies."

FOREST AND STREAM PUBLISHING CO.

of the rest of the amateurs, and so with a good, kind feeling in their hearts for all the clubs that have entertained the squad during the week, farewells were said and the train for the Southern Handicap pulled out.

CHICKAMAUGA.

Camden Gun Club.

CAMDEN, Ark.—The two-day registered shoot of the gun club on the 4th and 5th had an attendance of twenty-six. Chatfield and Warren tied for amateur high gun on 271, and Mermod scored 279 for the professionals. The State Championship medal was won by Joe Chatfield, 47 out of 50, and J. W. Myars took the State handicap trophy with a tally of 48 out of 50. Scores:

Genesee Gun Club.

ROCHESTER, N. Y., May 7.—The Genesee Gun Club held its scheduled shoot to-day at the rifle range. The weather was beautiful. But the conduct of the bluerocks was shameful. Numerous visitors watched the boys shoot and enjoyed the sport immensely. But their presence sent chills through the members. The club will this month lay new walks and improve the place. The scores follow:

Rifle Range and Gallery.

Fixtures.

June 3-4.—St. Louis, Mo.—Second annual combination tournament, Missouri State Rifle Association. C. C. Crossman, Sec'y.

Indoor Championship Matches.

THE eleventh annual indoor championship matches of the United States Revolver Association were held contemporaneously at Portland, Me.; Boston and Springfield, Mass.; Providence, R. I.; New York; Brooklyn; Newark and Red Bank, N. J.; Philadelphia; Cincinnati, Warren and Youngstown, O.; Louisville, Ky.; Pinehurst, N. C.; New Orleans, La.; Chicago, and Belleville, Ill.; Duluth, Minn.; St. Louis, Mo.; Lawton, Okla.; Globe, Ariz; San Francisco, Oakland and Los Angeles, Cal.; Portland, Ore.; Seattle, and Spokane, Wash.; Culebra, Panama; Zamboanga, P. I.

The contests were with three classes of arms—target revolver, pocket revolver and target pistol. The matches were shot on Standard American targets, the bullseye being 2.72 and the 10-ring 1 12 inches in diameter. The distance was 20yds., indoor, by artificial light.

The pocket revolver match was restricted to weapons of a maximum weight of two pounds; maximum length of barrel, 4 inches, and minimum trigger-pull, 4 pounds. Twenty-five shots were fired in five strings of 5 shots each, within 30 seconds per string, starting from the word of command "Fire." The possible in this match was 250.

The target revolver and the target pistol contests were deliberate aim matches, one hour being allowed for the firing of 50 shots. The possible in these matches was 500.

There were over 230 entries. The first five men in each match will be awarded medals emblematic of national championship honors, as follows: First, a gold medal; second, a gold and silver medal; third, a silver medal; fourth, a silver and bronze medal; fifth, a bronze medal.

The scores of these championships, together with the caliber of arm and ammunition used, were given last week.

The Philadelphia Rifle Association.

PHILADELPHIA, May 6. The weekly competitions of this Association were shot to-day. The fine weather brought out a greater number than any day since fall. There were present President N. Spering; Range Master H. A. Dill, Secretary R. L. Dubbs, H. Reeves and his friend Mr. Mahl, J. G. Schnerring, Dr. Palmer, Dr. Davis, Dr. Given, Mr. Forbes and his son Donald, and Williamson. Dr. Dubbs made a good score in both the Brockmeyer and club pistol matches with a 93 in each.

Record match, 200yds., rifle: M. Forbes 153.

Offhand match: J. G. Schnerring 217, 212, 211, 210, 208, 207.

Brockmeyer (Schuetzen): J. G. Schnerring 212, 210.

Honor target, 3 shots: Williamson 59.

Offhand match: Williamson 223, 211, 208, 206, 202.

Brockmeyer (Schuetzen): Williams 211, 195.

Military Match A: N. Spering 43, 40; Dill 40, 44, 43, 41, 40.

Brockmeyer (Military): H. A. Dill 43.

Military Match B: Dr. Davis 42, Dr. Given 41, 38.

Brockmeyer (Military): Dr. Davis 42.

Pistol match, 50yds.: Dr. Dubbs 93, 91, 82; Dr. Palmer 89, 86, 86, 85, 82.

Brockmeyer (pistol): Dr. Dubbs 93, 85, 81.

Naval Academy Team Wins.

ANNAPOLIS, Md., May 6.—The Naval Academy rifle team won from the aggregation of the National Guard of the District of Columbia this afternoon by 2134 to 2090. The match was at 200, 600 and 1000 yards with the slow fire, and 200 yards with the rapid fire. At the first two of these the guardsmen led, but the midshipmen passed them by doing much better work at the 1000 yard range and with the rapid fire.

Midshipman Saunders was high gun of the match, with 186 points out of a possible 200, and Capt. Heidenreich, of the District team, was second with 183. Summary:

	Rapid Fire			S. F.	
Yards:	200	500	1000	200	Total.
Naval Academy	507	552	538	537	2134
Dist. of Columbia	523	555	507	507	2090

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener Tumbler Bolting Safety.—Of course you are convinced that the Greener Side safety is a sine qua non of the perfect gun, yet to make assurance doubly sure your gun should be fitted with an internal or "tumbler bolting" safety, operated automatically and entirely independent of the shooter's volition. A safety that will safeguard the user of the gun and his companions against all risk of accidental discharge.

The Greener Tumbler Bolting Safety is almost human in its ingenuity, yet consists of but two limbs operating in such a manner that it is a mechanical impossibility for a Greener gun fitted with this safety to be fired unless the triggers are actually pulled. Should the locks by any mischance jar out of bent, the "silent sentinel" checks the fall of the tumbler instantly and effectually. Should the tumbler through dirt or other cause fail to go properly into bent, the safety prevents its fall upon the cap. When the trigger is pulled voluntarily, a projection of the trigger blade depresses the rear end of the Safety, lifting it clear of the tumbler's path and permits the gun to be fired in the usual manner.

Look at the drawing, it explains the simple working of the device exactly, of course you will have this safety fitted to your new Greener gun. *Catalog free*

American Duck Shooting

By GEORGE BIRD GRINNELL

No single gunner, however wide his experience, has himself covered the whole broad field of duck shooting, and none knows so much about the sport that there is nothing left for him to learn. Each one may acquire a vast amount of novel information by reading this complete and most interesting book. It describes, with a portrait, every species of duck, goose and swan known to North America; tells of the various methods of capturing each, the guns, ammunition, loads, decoys and boats used in the sport, and gives the best account ever published of the retrieving Chesapeake Bay Dog.

About 600 pages, 58 portraits of fowl, 8 full-page plates, and many vignette head and tail pieces by Wilmot Townsend.

Price, library edition, $3.50.

Are You A Gunner?

Do you love to follow your good dog over the fields in search of quail or chickens, or to struggle through swamp or along thick grown hillside, expecting to hear the roar of the ruffed grouse or the twitter of the fall woodcock? If so, you should have this new book.

AMERICAN GAME BIRD SHOOTING

By GEORGE BIRD GRINNELL

(New—Just Published)

This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys.

The first part of the volume is devoted to a description of the various species and their habits—the way in which they live their lives.

The second part of the book is devoted to upland shooting and treats of the methods by which all the upland birds are pursued and taken. The chapter "Aids to Shooting" describes the clothing, guns, and loads and dogs that the gunner may profitably use; while the last section of the book treats of the shooting of the future and the efforts to rear our native quail and grouse in domestication.

The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full page portraits of different game birds and hunting scenes, with a number of cuts in the text.

Cloth. About 575 pages. Price $3.50, net. Postage 25 cents.

This book is of inestimable value. It contains the genuine hunter-naturalist facts given in the most entertaining and interesting style.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK CITY

Seventeen Year Locust.

THE New York State Educational Department has issued the following circular:

The periodical cicada or seventeen-year locust, after seventeen years underground, is due to appear in the Hudson valley, May 20, or a little later. It is stout, about an inch long and easily recognized by its resemblance to our common dog-day cicada or harvest fly, from which it is readily distinguished by the red eyes and wing veins and the black dorsum of the abdomen. So much of popular interest attaches to this species that E. P. Felt, the State entomologist, desires to enlist the services of a widely scattered volunteer army of observers. The information secured will be compiled for a subsequent report, due credit being given each contributor. Observers will make the work easier by giving information concerning the following points, prefixing each statement with the corresponding numeral. It is suggested that statements be confined to those points concerning which trustworthy information can be given.

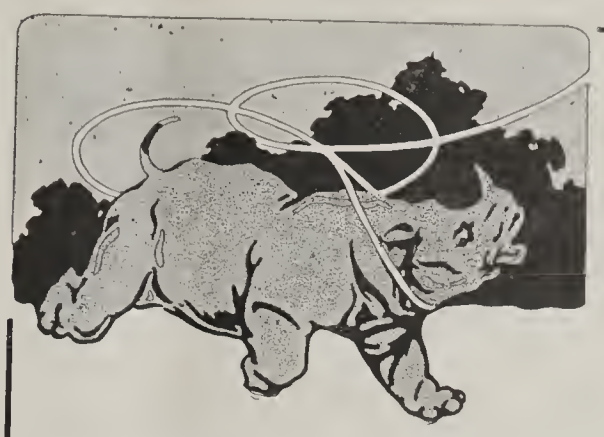
1. Locality. Give name of the nearest post-office, village, town or city.
2. Give the size of the infested area.
3. Give the approximate direction and distance in miles from the above named place.
4. Give the miles east or west of the Hudson River.
5. Give the date of the first appearance of the cicada.
6. Give the date when the last cidada was seen.
7. Give the date of the first cry or song of the male.
8. Give the date of the last cry or song of the male.
9. State the relative abundance of the insect, using such adjectives as millions, very abundant, abundant or scarce.
10. Was the ground honeycombed with holes in places?
11. What is its abundance compared with 1894?
12. Has the insect failed to appear in any locality where it occurred in 1894?
13. Were above ground chambers or huts observed?
14. What was the extent of injuries following oviposition?
15. Were any mammals, birds or insects seen preying on either the nymphs or the adults?
16. Were any cicadas affected by fungus—the broken bodies of old males being filled with powder.

Add any information which may prove of special interest.

OLD HUNTER'S AMBITION.

A UNIQUE character, whose life in many respects was a parallel to that of Cooper's famous Leatherstocking, passed away recently when James Stephenson died in the house in Summit township, Washington county, where he was born seventy-four years ago. He never left his home without his old rifle and hunting was a mania with him. Early in life he formed an ambition to find 100 bee trees before he died. He found his ninety-ninth tree several weeks ago and before he succumbed to heart failure he was trying to locate the tree that would crown his record.

Stephenson was a pioneer of Washington county. His father was born in Berkley county, Virginia, on a plantation adjoining that of that of George Washington.—Pittsburg Dispatch.



An account of the famous

Buffalo Jones

Expedition

by

GUY H. SCULL

With Introduction by

THEODORE ROOSEVELT

LASSOING WILD ANIMALS IN AFRICA

LAST year Colonel C. J. Jones, or "Buffalo Jones" as he is popularly called, headed an expedition to East Africa to prove that our western cowboy could rope and capture the savage beasts of that country. In the face of ridicule from experienced British hunters and in spite of the terrific climate and the scarcity of game, he and his men succeeded in taking by rope alone most of the great East African animals, including wart-hog, eland, hartebeest, giraffe, rhinoceros and lion.

The story of this hunting is thrillingly told by Mr. Scull. *Illustrated with 32 photographic reproductions from moving-picture films.* *$1.25, net, postpaid $1.37.*

Col. Roosevelt states in his Foreword: "No hunting trip which ever took place in Africa was better worthy of commemoration."

A TENDERFOOT WITH PEARY

By GEORGE BORUP

The young Yale Athlete, the "kid" of the Peary Expedition, had the "time of his life" north of the Arctic circle, and tells his story in breezy language that will make readers sit up and chuckle.

The author tells of exciting hunts; wild chases by belligerent muskoxen, unwilling to look pleasant while being photographed; the indispensable but very human Eskimos and their squaws; the superb scrapping dogs; the sports, jokes, griefs and triumphs of the battles with the eternal ice, with many little details we have all wondered about.

$2.10 net; postpaid $2.27.

Rhymes of The Stream and Forest

FRANK MERTON BUCKLAND

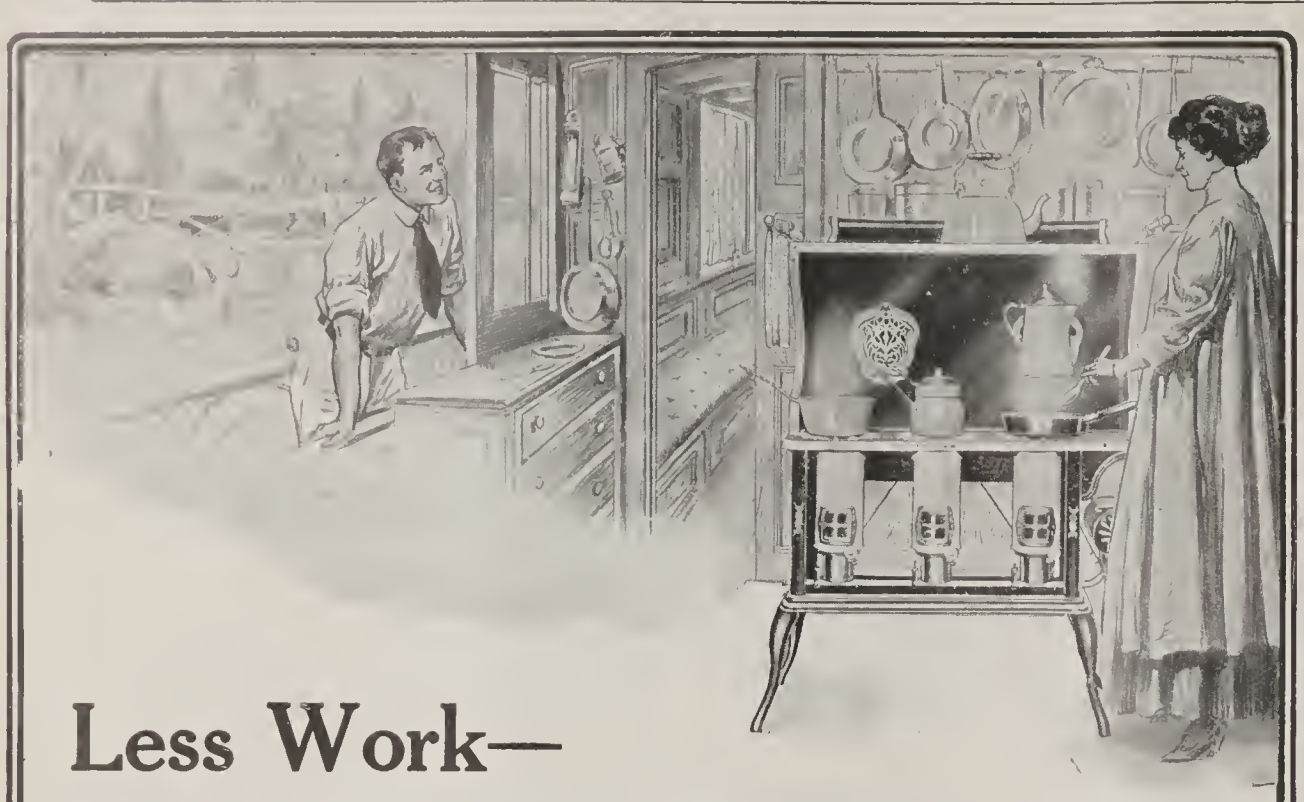
One of the freshest, most delightful collections of outdoor verse offered for many a day. They are the outpourings of a spirit which loves nature, the woods and streams and growing things, and appreciates its charms.

Mr. Buckland's verse has a charm that is at once rare and delightful. This book will appeal to every outdoor man or woman, and particularly to the "Brethren of the Angle."

Its form is as attractive as its pages, closely simulating the appearance of the standard fly-book, printed on heavy laid paper with ornamental border designs of trout flies, pocket for clippings, and blank pages for copying or individual composition. It is just the thing for the den, for the pocket, or for a gift to the friend who loves the big world out of doors.

Postpaid, $1.25

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY



Less Work—
More Vacation Hours

Good cooking for sharp appetites, in the house-boat—bungalow—camp, with a New Perfection Oil Cook-Stove. The perfect stove for summer in the home—cottage—anywhere. Easily portable. It broils and roasts, and, with the New Perfection Oven, bakes and roasts perfectly. Intense heat concentrated at the burners—nowhere else—kitchen not overheated.

Convenient, cleanly, economical. Fuel obtainable everywhere. No smoke—no odor. No wood to chop—no coal to carry.

The New Perfection Cook-stove is made with one, two or three burners, with long, turquoise-blue, enameled chimneys. Handsomely finished throughout. The two—and three—burner stoves can be had with or without a cabinet top, which is fitted with drop shelves, towel racks, etc.

Building Motor Boats and Managing Gasolene Engines are discussed in the book

HOW TO BUILD A LAUNCH FROM PLANS

A complete, illustrated work on the building of motor boats, and the installing, care and running of gasolene motors. By Charles G. Davis. With 40 diagrams, 9 folding drawings and 3 full-page plans. Price, postpaid, $1.50.

The author is a builder and designer of national reputation. All the instruction given is defined and comprehensive; 40 diagrams, 9 folding drawings and 3 full-page plans. That portion of the book devoted to the use and care of gas engines should be most carefully perused by every individual who operates one. The book is well worth the price asked for it.

FOREST AND STREAM PUBLISHING CO.

THE PISTOL AND REVOLVER.

By A. L. A. Himmelwright, President U. S. Revolver Association, Director New York State Rifle Association.

A handy pocket-size volume of 157 pages of practical information covering the entire subject of Pistol and Revolver Shooting. This work is strictly up-to-date, including the latest development in smokeless powder; the 1908 Revolver Regulations and Practice of the United States Army, the United States Navy, and the National Guard; the Annual Championship matches and Revised Rules and Regulations of the United States Revolver Association, etc. Besides being a useful, practical hand-book for the experienced marksman, the work will also prove particularly valuable for beginners.

Contents: Historical: Arms—Military, Target, Pocket Ammunition; Sights; Position; Target Shooting; Revolver Practice for the Police; Pistol Shooting for Ladies; Clubs and Ranges; Hints to Beginners; Selection of Arms; Manipulation; Position and Aiming; Target Practice; Cleaning and Care of Arms; Reloading Ammunition—primers, shells, bullets, powders, reloading. Appendix—Annual Championship Matches of the U. S. Revolver Association; Rules Governing Matches, etc. Records of the U. S. Revolver Association.

In three styles: Paper, 60 cents. Cloth, $1.00. Full morocco, $1.50. A liberal discount to military organizations and shooting clubs on orders of ten or more copies.

TRAINING *vs.* BREAKING

Practical Dog Training; or, Training vs. Breaking. By S. T. Hammond. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, $1.00.

FOREST AND STREAM PUBLISHING COMPANY

TEMPERATURE OF OCEAN.

SIR JOHN MURRAY called attention to the fact that the temperature of the ocean is changing. The Atlantic deeps are colder now than at the time of the Challenger expedition, thirty-five years ago, and there is apparently a cycle of this change in the north Atlantic.

In the North Sea the spawning grounds are distinctly the places of current from the Atlantic, and for the different fish correspond with the degree of salinity of the water. What the season for this is has not yet been determined, but it is important from the food of man standpoint to know where the fish are to be found and why the places to which they resort change.

The different fish select spawning grounds, and they distribute themselves from a given center, this having been determined by means of marked individuals.

Another interesting story was the means of telling the age of the fish. The otoliths, or as they are popularly called earbones, can be used for this purpose on much the same principle as the trunk of a tree gives evidence of its growth. In both there are rings, one for each year. The scales of certain of the fishes give similar indications. The herring may grow to eleven or twelve years. By the width in the earlier rings the fish may be located as to spring or fall hatch. Further than this there is evidence of certain years being better for the propagation of fishes than others. The catches of a number of seasons point to 1904 as a prolific year, and the fish born in that year formed an important portion of the catch till within a year or two.

The sea is crowded with life. So minute are the forms that nets of hardly greater coarseness than a silk pocket handkerchief are used, it having been found that what were formerly considered to be fine nets caught less than 2 per cent. of the actual life in the water through which they were taken. The surface growth—plankton it is called—consists of plants and animals, and these require food just as any other plants and animals do. "The surface of the sea is a great floating meadow," said the speaker, "and there is more vegetable matter in it, including to the depth of a hundred fathoms, than on any meadow or forest tract on land."

He suggested that it might be possible to cultivate the ocean by furnishing to the water, perhaps by means of sewage, some lacking elements, so that certain places might be made attractive to food fish and be economically valuable. He noted further how at the meeting of cold and warm currents the life is particularly abundant. One such place is off the elbow of Cape Cod, and there the plants and animals congregate. These small plants are the fundamental food supply not only of the surface larger organisms, but of those at all depths below.—Boston Transcript.

A VETERAN FISHING CLUB.

WHAT is claimed to be the oldest fishing club in Allegheny county is the Chubby Fishing Club, of the Northside, says the Pittsburg Post. This club was organized about thirty-six years ago and is limited to thirty-six members. Each year the club spreads its tents in a cool and shady retreat on the shores of Lake Erie. Last year the club sojourned on the banks of Rocky River, one mile from Cleveland.

Among the many good features of the Chubby Club's annual outing is the fact that the members are always accompanied by their wives and children. With such efficient chaperons it is no wonder that the members always succeed in keeping out of mischief. There is never a dull day in camp, as plenty of amusement and entertainment is afforded, since each member is a musician and they always take their instruments to camp with them.

The officers of the club are: J. H. Smith, President; F. J. Munn, Secretary, and Christ. Theroff, Treasurer.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

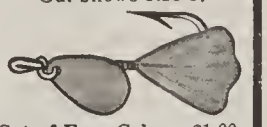
THE WONDERFUL "COAXER" TROUT FLY!

ALMOST ALIVE. NEVER LOSES ITS SHAPE. FLOATS ANYWHERE.
"My guide said, 'these trout don't take flies.' I got 24 on the 'Coaxer.'"
"Caught a 15-inch brook trout on the 'Coaxer'—that's the record here."
"I get 17 speckled beauties before breakfast that averaged 12 inches."
"I have caught over 400 trout on one little 'Coaxer' fly."
"I found my little boy catching croppies with it to beat the band."
Trout Size, 6 colors, $1.35; 12, $2.60. Bass Size, 6 colors, $1.65; 12, $3.25.
Send Stamp for Booklet of Bass Baits, etc., in colors. W. J. JAMISON, 2751 POLK ST., CHICAGO.

NEW JAMISON TROUT SPOON
Cut shows size 6.



Set of Four Colors, $1.00.
Made on 2, 4 and 6 hooks.

CATCHES MORE FISH—Stops waste—Saves little fish—**THE WILLIAMS BARBLESS HOOK**—English needle point—No mechanism—Highest quality flies $1.60 per dozen—Bait hooks 30c.—Used by world's best Anglers—Write us.

THE "MILAM" "The Frankfort Kentucky Reel"

For 72 years ingenuity and skill have concentrated upon the "Milam" Reel, which is offered to the angler as the best one in existence. 'Tis supremely good and appropriately beautiful. Ask for booklet.
B. C. MILAM & SON, Frankfort, Ky.

FISHERMAN'S JOURNAL
A handsome cloth bound note-book for anglers. A valuable addition to the kit of every fisherman. Contains spaces, under appropriate headings, for full details of fifty fishing trips. Keep a record of your trips and catches for future reference and comparison. For sale in New York at Brentano's, sporting goods and tackle houses, or direct from the author, ELMER R. GREGOR, 105 East 70th St., New York City. Price $1. Postpaid, $1.06.

BEAUTIFUL SWANS, FANCY PHEASANTS,
Peafowl, Cranes, Storks, Ornamental Geese and **Ducks,** for pleasure and profit. Also **Deer, Rabbits, Monkeys, Angora Cats, Parrots, Canaries** and all kinds of pet stock. Send 10c. for illustrated descriptive circular. **WENZ & MACKENSEN,**
Dept. HJ. Pheasantry and Game Park Yardley, Pa.

Going after trout—after bass—after muscalonge—after tarpon?

Philadelphia's Sporting Goods Headquarters
We've every fisherman's needful—for salt and fresh water. And at prices that will please you. *Write for Catalog "D"* and give us an idea of your needs. Often we have interesting specials.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

WATER STORAGE.

THE Association for the Protection of the Adirondacks in its efforts to preserve the State forests, has gained an important point. Assemblyman Edwin A. Merritt, Jr., who represents the water storage interests, has agreed to accept as a substitute for his own amendment to Article 7, Section 7 of the New York State Constitution, the concurrent resolution of Senator Burd.

This provides that the State may take forest or private lands, after public notice and hearings, for water storage purposes, but such reservoirs as may be built can only be constructed, owned and operated by the State. It may dispose of water so impounded, but beneficiaries shall pay a reasonable sum to the State therefor. It may use water in producing light, heat and power for State use or for sale to municipalities. Senator Burd's resolution also embraces an amendment to Section 8, but the amendments constitute additions to Sections 7 and 8 and do not change those sections in other respects.

The proposal to limit the area to be flowed to 3 per cent. of the entire State preserve has, we believe, been agreed to, but the proposition to include provisions for private camps on public land is not favored, and is therefore not mentioned in the pending resolution.

THE PUBLIC LANDS.

BY its unanimous decision, announced two weeks ago, the Supreme Court sustained all the rights of the United States Government in its control of the public lands.

Ever since the first establishment of the forest reserves, some States, counties, communities and individuals have shown themselves here and there hostile to reserved lands, presumably because they believed that the Federal Government was interfering with their rights, and was likely to take away from them something which they had always felt belonged to them—for no better reason than that it appeared to belong to no one else.

More than nine years ago, in connection with a bill introduced by Mr. Lacey, authorizing the President to set aside game refuges, Attorney General Knox, when consulted on the subject by Mr. Lacey, offered an opinion which in substance agreed with the decision recently rendered by the Supreme Court. This decision declares in effect that the statement of the constitution, "Congress shall have power to dispose of and make all needful rules and regulations respecting the territory belonging to the United States," means just what it says. This declaration applies to the lands, to the forests which grow on the lands, to the streams which flow over the lands and the power produced by these streams.

Naturalists and big-game hunters who are anxious to see game refuges established on the public lands may feel encouraged by this decision of the Supreme Court. It seems to point to a time when such action will be taken as shall give us game refuges—sources of supply for wild life—in many sections of the land.

TROUT AND FOREST FIRES.

COMMENTING on the effects of the forest fires on trout two years ago, we referred to the washing of wood ashes into water courses by heavy rains which quenched the fires, and the loss of trout that followed. In view of the fact that this statement was widely commented on at the time, it is of interest to learn that in New Zealand this form of water pollution is recognized and deplored. Many bush fires, says the Auckland News, have been raging, and anglers in the Stratford district report a heavy mortality among the trout, the result, it is thought, of the prevalence of bush fires along the banks of the streams, and the consequent pollution of the water with ashes.

When the water in brooks is reduced through drouth to isolated pools, the effects on trout of severe forest fires in the vicinity may be immediate, for trout require as pure air, even if not in such quantities, as dry land creatures. If a heavy rain falls, and the light ashes are carried into the landlocked pools, the trout may be killed before the water has risen sufficiently to flow and become partially purified of the lye.

In ordinary fires in the average season this danger may not be acute, but in seasons of severe drouth, accompanied by destructive fires covering wide areas, it probably is very destructive to fish life in the way described. In the Northwest last autumn, when the conflagrations were beyond control, numbers of trout were actually boiled in their native element.

THE Lower House in Connecticut has recently passed a bill establishing a close season for two years on upland game birds. This action is opposed to the report of the committee, and the measure will probably be modified or killed in the Senate. The vote is interesting, however, as indicating the way in which the Connecticut representatives feel about this matter and encourages the belief that there will be no extension of the wildfowl shooting season at this session of the Legislature.

STORIES OF AIGRETTES.

STORIES freely circulated recently by persons supposed to be interested in the millinery trade in this city state that the aigrettes so largely used in women's hats come chiefly from Venezuela and are made up of shed plumes collected from the ground in the heronries where the white herons rear their young.

It is well understood that the shed plumes of white herons gathered as stated have slight commercial value compared with those taken from the living bird. They are known as dead feathers and are worth only one-fifth or one-sixth as much as those stripped from the freshly killed bird. The death of the parent birds means the starvation of the young, and the collection of the plumes is, therefore, doubly destructive.

A plume hunter now residing in New York has sent to the National Association of Audubon Societies a letter describing the methods of plume collecting in Venezuela as he practiced them from 1896 to 1905, inclusive. To the truth of his statement he has made oath before a notary.

The statements that the aigrettes now used are made of shed feathers is reported to be based on a letter written by a certain Mayeul Grisol, declared to be a naturalist and explorer sent out by the Museum of Natural History in Paris. These statements being quite incredible, it seemed worth while to find out who this man really is, and what his standing. Accordingly, Dr. Henry Fairfield Osborn cabled to Paris, April 20, and on April 22 received from the Museum of Natural History of Paris a cablegram saying that Mayeul Grisol was unknown. There is a Mayeul Grisol who is an entomologist, but he is not known to be connected with any ornithological institution, nor to be an authority on birds.

The millinery trade of New York is trying hard to secure the passage of the Levy bill, but their efforts should not be successful.

THE New York Senate finance committee on Friday last reported favorably the bill of Assemblyman A. E. Smith, of New York, appropriating $50,000 for the protection of the State forests from fire. It was advanced to third reading. In order to be prepared for possible fires during the present dry season, State Forester Pettis has appointed fifty-eight fire wardens. Governor Dix himself guaranteed the payment of the salaries of these men, pending action by the Legislature. The Governor has also issued a proclamation warning all persons of the danger of being careless with matches and campfires in the Catskills and the Adirondacks during the present drouth. Locomotives of trains passing through the State forests are burning oil, and protectors are on the lookout for fires, so that preventive measures are well in hand, but extraordinary vigilance is asked for.

THE SPORTSMAN TOURIST

With the Louisiana French

Impressions of a Northern Sportsman After a Two Weeks' Sojourn on the Prairies

By SYDNEY G. FISHER

WISHING to enlarge the experience of a young pointer dog as well as my own, I took a trip last winter in Southwestern Louisiana, where the vast marshes and the rice and sugar plantations lie; where Evangeline and her friends settled when they were driven out of Nova Scotia by the British Government nearly 200 years ago; where Joe Jefferson, the actor, had a delightful winter home in the midst of a vast acreage of fertility; and where, among other curious things, is the one spot where the plant that produces tobasco sauce is raised on a small island.

Distances illimitable, endless vastness of marsh, level prairies and the shoal waters of the Gulf shifted in and out by the winds, somewhat oppress and weary the eye of the Northerner accustomed to more varied scenes; but when we leave the nerve-racking railroads and begin to conquer the vastness with our own or horses' feet, the weariness changes to inspiration. The bland climate is invigorating, and to rest beneath the liveoaks after severe exercise and watch the intense semi-tropical sunlight and experience the profound stillness was the most delicious of pleasures. It is a land for out-of-doors life, and if I could have kept away entirely from villages and towns, my happiness would have been complete.

The Louisiana horse—the native one, of course—is a study, and I parted with him with regret. Small, allied to the bronco and the cayuse that we know in the West, he is more compact, lighter, prettier, I think, and without the cayuse Roman nose. I saw only one or two instances of the cayuse head and face. The Louisiana horse seemed to me like what I have always pictured the original mustang to have been that we read about in those books that delighted our youth forty or fifty years ago. His gaits are excellent, and the distance killing singlefoot, jog-trot—dance really—and the easy lope, can be sustained in a way that is rather unusual, I think, in other places. In this respect he is much the superior of the native horse of the Kissimee cattle prairies of Florida, with which I have become familiar in recent years.

The Louisiana native specimen can live and work on grass, and many of them do not know how to eat corn or oats. Four or five years ago they could be bought, I was told, for $10 apiece, and now the price is $30; so surely does the automobile and the trolley car raise the price of horses. There is an attitude and swing in the way they start on their gaits that seem to imply endless generations of distance killers; a sort of pathetic acceptance of the fact of those vast spaces to be overcome and a grim determination to face them to the death.

I have seldom been in a place where saddle horses were so numerous and used by young and old at all hours of the day and night. "Lend me your horse a minute," ("Pretez moi votre cheval un moment") a man will say to another in the streets of Abbeville. The rider will swing out of the saddle and his friend will mount and the shoeless hoofs will patter away over the soft street on some errand at the other end of town. In the balmy evenings groups of three or four people would often ride their horses, slowly single-footing, up and down the main street, gesticulating and talking, usually in French, for that is the language of the country. "All old Louisiana people," I was often proudly informed, "speak French."

There was a touch of foreignness in it; a reminiscence, too, of Asia, for the nimbleness and lightness of the horses and the easy seats of the riders were not exactly European. It was very strange and pleasing, this old world touch on the edge of the advancing rush of American civilization. It was faint; you just caught it; and it is destined, I suppose, to be overwhelmed. Those who would see any of the old ways of Abbeville must visit it soon.

In my shooting excursions among the farms and plantations most of the people spoke French alone. A negro laborer was more apt to answer you in English. Taking the population altogether, both rural and urban, the majority in this particular region seem to speak both French and English. One of my acquaintances, a descendant of one of the Germans who were among the settlers of Louisiana, spoke only English, and he told me that neither his father nor his grandfather had spoken French.

The first fact that impressed me was the cooking. It was French and excellent, and even in that rural community your digestion was safe. Indeed, it was improved, and I recommend the region to our long suffering millions who, in spite of their high intelligence, comprehend neither the chemistry of fire and food, nor the chemistry of their own stomachs. I consulted the commercial travelers—there are few better judges of gastronomics—and they told me that their experience invariably was, excellent cooking, neat service and cleanliness in the French villages, and in the English—well, let us not print it. I had one or two experiences of the contrast.

In the old French inn at Abbeville, surrounded on both stories with deep verandas, the landlord himself banged at your door at seven in the morning and asked if you would have coffee, and if you said yes, it was handed in at once—powerful stuff, black as your hat, for these French have strong nerves. By the way, that man was about the only landlord I have ever seen in America. Of course, I have seen hundreds of hotel proprietors and hotel clerks, but he was a landlord. He attended to everything; the inn was individualized; it was his inn of which you were the guest.

The building was rather old and shabby, but after a very short experience of the methods I found myself lying down and rising with an absolute confidence in the cleanliness, and a very delightful gratification of my taste for certain old-fashioned "unprogressive" decencies and amenities. The dining room was really charming and not a place from which you fled. I have had many a horrible experience of diet and beds in my rural wanderings and sporting trips of the last twenty years, so that this Louisiana instance amazed me with delight.

The farming land I found owned, occupied and tilled by white people. It was not the frequent Southern case, growing, I fear, more and more common of negroes occupying and working the land, and the whites all huddled in the towns and villages whence they rule the negro tenants economically and politically. It is a process which, if logically continued for many generations, will presumably increase the blacks and diminish the whites until there is a vast dark-skinned population occupying the land, ruled by the military force and intellect of a very small white minority, as in the British West Indies and in India; indeed, this condition has already been largely reached in the black belt of Alabama and Mississippi. How far it will spread is one of our problems.

It will be many a long day before it reaches Southwest Louisiana. The negroes there are not very numerous, and a most respectable looking competent set—a strong contrast to the very African looking hordes of half savages I saw in the black belt a year ago. One cannot help wondering, when he sees these striking differences among the negroes in different parts of the South, whether it is caused in any way by the parts of Africa or tribes from which the negroes were originally brought, or whether it

is merely local conditions, soil, climate and the sort of life they have been leading for the last hundred and fifty years.

Very little I presume can now be learned about the tribes or origin of the different importations of slaves. Some attempts have been made, and I have read the essays and articles, clever enough, but their authors could obtain only very indefinite information. One of their ideas that has always interested me was that many of the slaves were tinged with Arab blood, and that the efficiency and intelligence of certain of our negroes could be accounted for in that way. The Arabs penetrated far into Africa. There are tribes there of mixed Arab and negro blood; the slave traders were often Arabs. For many years I have helped pay the wages in Virginia of a very competent negro whose face, every time I look at it, reminds me of Bedouins I have seen on camels along the edge of the desert in Egypt.

Possibly the French manage the negro particularly well. They handled the Indians well in Canada. In Southwest Louisiana they ho'd the black man down with the same positiveness that binds him under the Anglo-Saxon of Alabama. While I was in Abbeville a white man without provocation assaulted a very respectable negro sitting in a chair and the negro got to his feet and knocked the white man down. The negro was arrested, and at least one white witness of the affair was ready to give evidence in his favor, but the negro was afraid to make a defense and allowed himself to be fined. The white witness who told me the story saw, I suppose, an inquiring look in my face. "I would not volunteer my evidence," he said, "for I did not want the name of trying too hard to help a negro against a white man."

The French will, I think, be the last white people from whom the rising flood of black population will economically force the occupaney and cultivation of the land. I was struck with their fondness for farming; their contentment and attachment to it. Who would not be content, some one may remark, with cultivating that rich land? But I think it is more than that. The life seems to suit them, especially their women. They are gayer, brighter, more appreciative of their situation than the Anglo-Saxon whose family is apt to break away at the first opportunity and rush to town. Worse than that, the Anglo-Saxon family is often whining, discontented and miserable until the opportunity comes.

It was really a great addition to the pleasures of sport to stop for a few moments at a farm house with the stairs to the second story curiously built on the outside, and find the women lively, healthy, undyspeptic, speaking their beautiful old language with that courteous smile that belongs with it and has followed it to the delta of the Mississippi.

Cannot those pinched, narrow faces, that lack of interest in their surroundings of sunshine, woods and fields, the perpetual life indoors, the tastelessness, the drawling voice, be abolished from the rural descendants of the Anglo-Saxons in America, so that we sportsmen can be refreshed with something more than a drink of water from the well? It ought to be very easy. It is largely a question, I think, of digestion and cooking, and getting rid of certain ideas about the advantage of ignorance, dirt and slovenliness which came in with the old tobacco-chewing Jacksonian democracy eighty or ninety years ago. The condition of those very depressed elements of the population in some of the older Southern States, the so-called crackers and others, is not due to the climate, or the hookworm, or the locality, but to use one of their own phrases, to certain fool ideas that their ancestors got into their heads one hundred years ago; and, by the way, a young South Carolina physician has recently put forth some very enlightening statements on this subject.

It hardly proves the superiority of our Anglo-Saxon brain when we accept country life so discontentedly and turn it over at the first opportunities to negroes and foreigners. There are of course regions where it is not so bad; it may be passing away, but there is a great world of it still left.

I was struck with the neat, well fitting working clothes of the men on the Louisiana farms, and often the pretty taste in colors. The whole thing in short was French. What a wonderful thing is race. How sure, at times, its transmission of qualities. Disraeli used to say it was the only true thing in history. "Blood will tell," I was constantly saying to myself, and I had before me the additional instance of the young pointer, Saxon, who, with the blood of the Rip-Raps and the Jingoes surging in his veins, was proving himself in the field as cool and steady as a deputy sheriff.

Those level prairies with distant clumps of trees and buildings enhanced the French effect. They were very much like scenes in France, and with a little effort of your mind you could make them more so. If you closed your eyes a little so as not to see the cursed wire fences, you began to dream of things four thousand miles away and expect a bottle of *vin ordinaire* at those low buildings on the far horizon. When the haze was on the prairies I have really seen a very close resemblance to the background of the Angelus.

That dark rich soil, too, is like fertile France, but far richer than France ever dreamed of being. It is marvelous. A plantation can be turned from raising sugar cane to raising rice, and huge crops of both. Enormous crops of rice, sugar cane, corn, cotton and tobacco can, in some instances, and at certain times of year, be seen growing side by side. The descendants of Evangeline and her friends, I take it, have now no complaint to make against the British cruelty that brought them from Nova Scotia.

I met workingmen who owned farms from which they received rent and worked at their trades, so to speak, at their leisure. One of them, a carpenter, very politely took me out to his farm to shoot over it. There was a very pleasing obliteration of social lines, very little feeling about rich and poor, or yellow journal talk about millionaires, because all belong to one class, the prosperous. They assume that a stranger is a man of property like themselves and looks at the world from their point of view. It was as fine an instance of successful American democracy as you ever find. The French certainly handle the idea well.

In this respect there was a resemblance to the West, to that very frank Western democracy, unconscious obliteration of social distinctions that I have found in the Dakotas, Nebraska and Western Minnesota; in fact, there is a strong tinge of Western influences in this part of Louisiana. You have crossed the Mississippi, and, just as in Texas, the West comes in with its hustle, its broad-minded energy and its up-to-date farm machinery, which the French all have and seem to use with admirable skill.

How did we Northerners acquire what we believe to be a fact as much as we believe in the law of gravity, that the Southerners are lazy people and that white men cannot work in the South except in winter? It is the greatest nonsense in the world. I suppose we got it from reading about depressed localities in the older Southern States, the swamps of the Atlantic seaboard, the crackers and the clay eaters. The old rice swamps in Georgia were and are, I suppose it must be admitted, rather bad and malarious places in summer time; but to apply this very limited information to the whole South, to the vast territories of Alabama, Mississippi, Louisiana and Texas, or even to the Western Carolinas and Georgia, is very stupid and altogether unworthy of our distinguished Northern enlightenment.

I was brought up as a boy on abolition civil war literature and I have no protest to make against the work we did in those days, but there were troops in the Southern armies called the Louisiana Tigers; our Northern artists drew pictures of them based on the crackers and clay eaters. I can remember them well, wild looking half-starved devils, shiftless, lazy, hard drinking, good-for-nothing, we were told; but they would fight like fiends. During my two weeks last winter in what our good books have called "the malarious and enervating influences of the States bordering on the Gulf of Mexico," as I watched the energy and the vigorous well nourished bodies of the handsome people, I often thought of the old Louisiana Tigers and wondered where I could find some of them, or some of the other lazy, enervated, fighting devils we read about.

The Abbeville region, where I was, is not, I presume, strictly within the delta of the Mississippi, which is a term confined more properly to the water passages by which the great river now enters the Gulf; but geologically it seemed to me that I was within the sweep of the ancient work of the river and saw the remains of its old methods of carrying off the stupendous water floods of the North. The whole region at times of great rains becomes saturated like a sponge with water which greatly increases the fertility of the rich dark soil. As this water drains off, as of old, through thousands of pores into the Gulf, it forces back the salt water for miles. Then as a dry time succeeds, the strong brine of the Gulf returns and sometimes forces its way fifteen miles up the Vermillion River to Abbeville.

The Gulf of Mexico, I understand, once extended far up the Mississippi Valley, as a sort of bay or estuary, covering with water and muddy shoals what we now call Louisiana, and as vast floods for thousands or hundreds of thousands of years poured down whole principalities of mud and alluvial soil, Louisiana and its rich level prairies were gradually built up in the estuary which had long been at the mouth of the Father of the Waters.

What a grand cruising and exploring ground that estuary must have been, with its swarming life of birds, monstrous reptiles and fish in the waters, and wondrous animals along the shoals

and shores. With the tropical sun shining on that rich mud one can imagine that the very first forms of life as distinguished from matter were here hatched from heat and slime and wriggled into the light to people the world. They must have slipped from matter to mind somewhere and why not here as well as anywhere. I suppose it would have been quite out of order for the Creator to have brought us on the stage a few ages sooner, so that we could have taken a cruising and camping trip in the old Louisiana estuary and hunted the mammoth, or the earlier pterodactyl or the dinosaur. I suppose man was unworthy of such hunting grounds, which were fit only for the gods themselves.

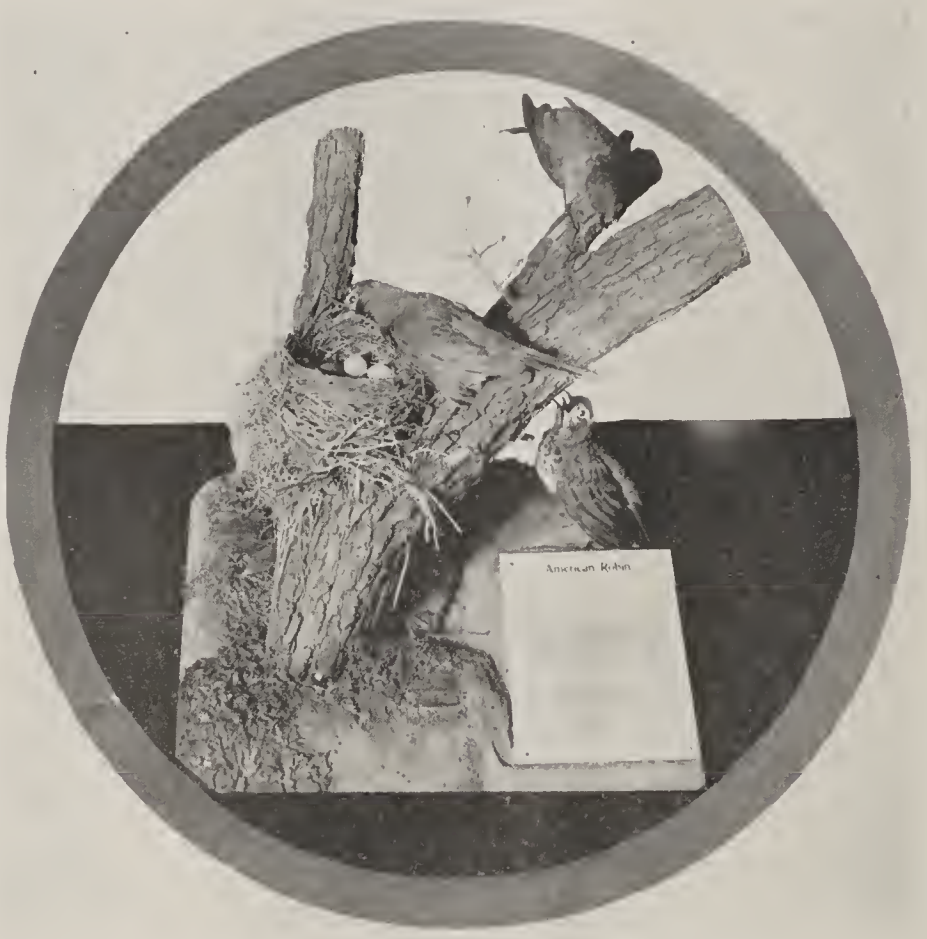
All this of the far geologic past is preliminary to saying that one indication of the swarming life of the old estuary is that the remains of it have continued to live there or migrate there periodically down into our own time. The great flights of wildfowl, which for thousands of years followed down the great valley to the estuary, continued their habit as the estuary filled up, and their lessened numbers can now be found every year feeding by millions along the delta and the waters and bayous of the Gulf. Only a few years ago they fed by millions on the now cultivated prairies which I visited this winter. Further north, where not driven away by habitations, they feed along the swamps and networks of bayous which fringe the Mississippi and help carry off its waters in its passage through Louisiana.

These swamps are still the refuge of the black bear and deer. Fur-bearing animals, the mink, otter, raccoon, now becoming extremely valuable, are found almost everywhere in the less settled parts of the State along the water courses. It is surprising to reflect that Abbeville, where I stayed, and which is near north latitude 30 and only a short run from the tropic of cancer, is the seat of a fur trade, as many years ago were villages and towns in frozen Canada nearly 2,000 miles to the north. The statistics of the furs brought into Abbeville from the neighboring marshes run up into thousands of dollars every winter.

Over the drier portions of the State suitable to them, quail have flourished in numbers which I think must have exceeded the fabulous quantities of them found in the Yadkin Valley and the Tar River regions in North Carolina some years after the Civil War, when the Northern sportsmen first discovered that paradise and invaded it. In short, the old geologic conditions which have given Louisiana her wonderfully rich soil, have also enriched her with wild game in excess probably of any other State in the Union. As a mere food supply it has been and still is of enormous value to her people. They have largely lived upon it for nearly 200 years, and recently when it was being so rapidly diminished they saw that here was a natural resource which deserved to become a matter of conservation just as much as timber and mines.

Investigations were made, the amount of game killed in certain counties estimated and the quantity was prodigious and almost unbelievable. A strong game commission was appointed and a gentleman placed at its head, Frank Miller, who I am proud to say is originally from Pennsylvania. I called on him at his offices in New Orleans and with a special map before him he gave me a rapid lecture which filled me with information I could hardly have obtained in years from other sources. I have to thank him for advice and suggestions which largely added to the pleasures of my trip.

He appears to be leading the supremely happy life of a man inspired by an idea of public service. Hard worked indoors with innumerable details of the passage of legislation, superintendence of wardens and the conservation of the oyster and fishing interests as well as of the game, he is adding millions to the wealth of the State and is making a real working department of what is, I fear, in most of our States, a mere sham if not worse.



ROBINS IN THE IOWA HISTORICAL DEPARTMENT MUSEUM.
Showing plan of grouping birds.

From my observation of the prairies I am inclined to think that his laws are enforced, for it is easy to have good game laws on the statute book, but quite another thing to enforce them. Best of all, the planters and farmers seem to be on his side. They are glad to be relieved of the reckless market hunters that swept up their game without a thought of the future; glad to have the sympathy of the State Government in protecting their land. They have begun to forbid and to limit hunting on their lands. But I found that in most instances where any of them had once made up their minds that, though a barbarian in language, I was nevertheless not a market shooter, the situation became easy enough. My uncivilized accent of "Permettez moi chasser sur votre place" was received with a tolerant smile, and a wave of the hand gave me the cane fields and the cherokee hedges.

In one or two instances I was asked not to hunt a certain part of a plantation where the coveys had already been much cut up, and I of course gladly complied. The people are, on the whole, I am inclined to think, in favor of the bag limit of fifteen quail a day, which has been made the law, and if this line of education can be continued, and they will abandon the unsportsmanlike habit of shooting quail on the ground and get rid of the whole silly idea of making and breaking records and getting more than the game hog that was there before; in short, acquire a pride in quality and method rather than quantity, our friend, Frank Miller, will rest easier and will be able to leave some of his harassing labors indoors and go out among his own game. I felt rather ashamed at times to have him work so hard in the office while I was enjoying the fruits of his labors on the prairies.

But at last I left them and recrossed the mighty Mississippi just above New Orleans. It seems a small stream now when one reflects on all its work in the past. But it was very impressive that beautiful day, though the railroads have bereft it of steamboats and barges. It was rolling solemnly along by itself, crumbling its banks as though it would take Louisiana out to sea, swirling in its eddies the rich mud and soil that it has been bringing down for ages through the Missouri from the great plains of the Dakotas and Montana, bearing logs, trees, stumps and the remains of human handicraft which tell the story of its adventures, and piling all out into the Gulf, until some day, I suppose, it will fill that up also.

I thought of Daniel Webster's remark when they asked if he had ever seen the famous junction of the Mississippi and the Missouri. "Yes," he said, "but there is no junction. The muddy Missouri seizes the clear Mississippi and carries it captive to New Orleans." I must go back some day, cross it again, return to the good French people and pass out beyond the prairies to the pine timber lands along the Calcasieu and Sabine rivers; and Saxon says he is ready to go at any time.

Book Exchange.

No doubt there are many of our readers who possess old books, and others who would be glad to possess them, and we are, therefore, making a special place in our advertising columns, which may be called a book exchange, where those who wish to purchase, sell or exchange second-hand books may ask for what they need, or offer what they have.

NATURAL HISTORY

State Museums of Natural History.

ATLANTIC, Iowa, May 10.—*Editor Forest and Stream:* We of the Central Western States, where there are no large cities, grow weary of waiting for things to materialize in the way of preserving an adequate record of the natural history of the section. There are numerous small museums in connection with educational institutions that are making the most of the means at hand, but we are living in hope that some day an institution may arise that will be able to gather material for a creditable display of the natural resources of our own sections.

In this respect no doubt Iowa is fairly typical of the States in the Middle West. I have been interested in the only institution of the kind, since its beginning in a small corner of the basement of the Capitol. It has been developed as a kind of side line in connection with the State Historical Department, which now occupies an imposing building of its own across from the State House. The founder, the late Charles Aldrich, received little encouragement for many years and worked away without funds to gather what material he could to preserve intact the history of the commonwealth. Now and then someone would present a specimen of some rare bird, or interesting creature from some other department of natural history. Thus there gradually grew up a miscellaneous collection of birds, mammals, reptiles, insects and various other things, but without any semblance of order. These were crowded into the same rooms with the files of newspapers, autographs of prominent people, old letters and similar articles whose only value lay in their historical association.

This condition continued for years. After what seemed interminable delays, the Legislature was at last prevailed upon to make an appropriation for a separate building for the historical department, and it was removed from the cramped quarters of the Capitol basement to a home of its own.

About nine years ago, when Thompson Van Hyning was placed in charge of the museum, that department first received special attention. He had definite ideas of what a museum should be, and began to bring order out of the chaos that had hitherto existed. From the fact that the museum has always been last to receive a portion of the appropriation and the funds have never been sufficient, he has worked under most trying conditions. Most of the time he has had no assistant, nor has he had sufficient funds to properly care for the material within reach, to say nothing of securing necessary specimens to complete groups of rare species. The museum was, and is still a side line with the historical department, with little hope of being allowed to grow, so long as the main show needs the available funds.

PRAIRIE DOGS IN THE IOWA HISTORICAL DEPARTMENT MUSEUM.
Showing plan of grouping mammals.

While conditions have not been favorable, still the museum is making a remarkable showing, considering the handicaps under which its curator is compelled to work. A large number of sportsmen and nature lovers co-operate in providing specimens and thus a collection is being gathered that otherwise would be impossible. Mr. Van Hyning has started to make a series of groups of the mammals, showing the male and female, with a reproduction of the habitation. The birds, both adults and young, are shown, as well as the nest and eggs. As far as known it will require groups of seventy-eight species to complete the mammals native to the State, and three hundred and fifty-four species of birds. Add to this the reptiles, fishes, mollusca and insects, and then consider that it must be built up in connection with the civil history of the State, and with limited funds, and it looks like a hopeless task. Unfortunately, none of our wealthy men has turned his attention to the possibilities of building museums.

While it would seem that a State as rich as ours might well undertake to provide a museum, something on the line of The American Museum of Natural History, such an occurrence is most unlikely. It would seem, however, that every State should provide a local museum of its own natural resources, and spare no expense to make it complete. Already many of the mammals and some of the birds native to Iowa have been exterminated within its borders, and in order that they be represented in its collection, specimens must be brought from abroad.

Mr. VanHyning is advocating a series of educational museums of which each city school shall have a part. The pupils under this plan would assist in gathering specimens which would be sent to the central State museum for preparation, and duplicate specimens would be exchanged. In this way, according to his idea, instead of encouraging the destruction of natural objects, the tendency would be toward conservation. Further than that, thousand of interesting and valuable objects, instead of going to destruction as is now the case, would be gathered and preserved and thus be of inestimable value.

Those who live in the vicinity of large cities like New York and Chicago, will of course have no cause for complaint on this score, but States like Iowa, Nebraska, Kansas, and the Dakotas need the help of every sportsman and nature lover to strive for a State museum of natural history that shall preserve, in proper form, the native fauna and flora in connection with such other objects as properly belong in a museum of this kind. Personally, I am hoping to see the day when the Iowa Historical Department shall confine its attention to the civil history of the State, and the natural history portion shall be given a separate organization and a building of its own, with sufficient funds to make a creditable display of the resources of this section.

I have no criticism to offer concerning the Historical Department as now constituted. The board of trustees has difficulty in making the funds go round, and inasmuch as the curator of the institution, Mr. Harlan, is a historian rather than a scientist, it is to be expected that his first interest shall be with the department under his immediate charge.

Frank C. Pellett.

Philadelphia Zoological Society.

The annual report of the board of directors of the Zoological Society of Philadelphia was read at the annual meeting of the members and loan holders of the society April 27. It shows that the society has a total of 1,770 members, and that the admissions for the year, outside of 175,000 tickets issued to the Board of Education for the admission of teachers of the public schools, was 171,577. The gate receipts were substantially the same as the previous year, but were reduced by a street car strike.

The number of animals exhibited in the garden were 2,196, and of these a large number were shown there for the first time. There were many additions to the collection by purchase and by gift. The experiment of keeping certain animals from the tropics, and which are supposed to require artificial heat, without this heat during the winter, and to some extent out of doors, was continued. A male Siberian tiger from Vladivostok and a lioness, together with two young baboons, from North Africa, were so treated and remained in good health and condition. The pages dealing with the diseases of animals are of very great interest.

The report contains feeling resolutions in memory of the lamented Arthur Erwin Brown, whose connection with the society had lasted thirty-four years. No body of men could miss him as does the Philadelphia Zoological Society, yet everywhere his co-workers in science lament his death.

Births in Zoological Parks.

To most people few things are more interesting than living animals. This is the reason why the menageries which are often the side show of the circus are usually crowded by small boys and their parents. In zoological gardens where there is more room and animals are more numerous and are shown under conditions more nearly approaching those of nature, there is never any dearth of visitors.

An interesting feature of such collections is the breeding of wild animals under conditions which, at best, are highly unnatural, and the fact that animals breed and sometimes breed freely in such collections is of course a strong tribute to their excellent condition, and so to the good care which is given them.

In the Zoological Park at New York the birth rate during the year 1910 as shown in the detailed report of the society, which has just been distributed, was very satisfactory, but among the deer and the bears the births were so numerous as to embarrass the director, and in several collections it was found necessary to prevent breeding in order to keep from overcrowding the accommodations. Among the mammalian births were four axis deer, one sika deer, one hog deer, three fallow deer, six Eld deer, three Barasingha deer, six red deer, one Altai wapiti, seven elk, two white-tailed deer, two mule deer, one Congo sitatunga, one nylghai, six American bison, one white goat, two Persian ibex, two Himalayan tahr, two aoudads, one mouflon, two peccaries, two hyrax, two grizzly bears, three hybrid Russian-brown bears, one litter timber wolves, one litter coyotes, one litter black-back jackals, one litter Egyptian porcupine mice, four ring-tailed lemurs.

Besides this there were no doubt hatched a number of birds, of which we see no record.

Equally interesting is the list of birds in the Philadelphia Zoological Garden, taken from its report dated April 27, 1911. This includes besides four monkeys of different sorts, four pumas, nine raccoons, one American bison, five Indian antelope, one white bearded gnu, two aoudads, one elk, two sika deer, three white-tail deer, one guanaco, one lima, one Bactrian camel, two collared peccaries, one black-tail wallaby, two American flying squirrels, Swinhoes and Amherst pheasants, one wood pigeon, three gulls, three night herons, four mute swans, six Canada geese, together with blackduck, woodduck and redheads.

N. Y. Zoological Society Meeting.

The annual spring meeting of the members of the New York Zoological Society was held at the Zoological Park, Monday, May 15.

The day was beautiful, the park looking its best, and there was a large attendance of members and others. The members of the society were much impressed by the national collection of heads and horns, to which has just been added the head of a square-mouthed rhinoceros killed by Colonel Theodore Roosevelt in Africa and by him presented to the society. The mounting of the head had only just been completed by James Clark, the taxidermist of the American Museum of Natural History.

Tea was served in the Administration Building, which is reserved for the exclusive use of members and their guests.

During the afternoon a meeting of the Zoological Society's Board of Managers was held, at which were announced further donations to the Society's Endowment Fund, $10,000 each from Lispenard Stewart and James J. Hill, and two gifts of $500 each from other sources. This increases the endowment fund to $280,000.

Dr. Chas. H. Townsend, who has just returned from the Albatross expedition, which he conducted with such signal success, was present at the meeting and reported briefly on what had happened. The collections of mammals, birds and reptiles which he made contain many interesting specimens. About fifty novel lizards were captured alive and brought back and are now in the park. The story of the elephant seals was retold. Great collections in botany were made. Lower California, being essentially a cactus country, the botanical collector secured many extraordinary forms, some of which are new.

A great deal of deep sea dredging was done and there were discovered in the Pacific a number of low forms of life hitherto supposed to be peculiar to the Atlantic ocean. On the Albatross was a worker in plaster who took molds and casts of many of these deep sea animals so soon as they were brought on board. Full color and form notes were also taken, so that now for the first time we shall be able to see these specimens as they actually look in life, and not as they appear, shriveled and shrunken, after having been for several years in alcohol.

Dr. W. T. Hornaday referred to plans—not yet to be announced—for increasing the collections. New bear dens are in course of construction, and other important building is being done.

GAME BAG AND GUN

Give the Boy a Chance.

I was twelve years old when my father allowed me to take his 16-gauge Haymarket-made gun out all alone. It was in the days of the muzzleloader. I had been educated in field etiquette ever since I could toddle. In fact, when too small to ford the streams, I can remember my father carrying me pic-a-back over them, and it was the delight of my immature years to retrieve the game.

Father used to take me along in order to familiarize me with the use of firearms. The art—I place considerable accent on "the art," of carrying, loading, handling he so carefully drilled into me that it became a part of my makeup. The amount of pleasure a healthy boy derives from anticipation is only limited by his appetite and adaptability to his surroundings.

There are a great many of the older boys in the same boat, I imagine, else why do so many climb to the sanctity of their dens, to gingerly waft the fly-rod back and forth over some imaginary stream, during the close season, keeping meanwhile a sharp lookout for any interruption, which, if it occurs, is referred to the fact that they were examining the wrappings. How is that, Amigo; were you ever caught like that and made to feel like a setter dog who had been caught drawing a point on sparrows?

I stayed up rather late the night before, packing my decoys and lunch, and giving a few final rubs to my stub-and-twist barrels, for we used to brown our barrels those times, and very pretty they looked, too; besides, they were less conspicuous in the sunlight. The decoys were golden plover, the finest decoys I ever saw. They hang in festoons now, in my den, and like the buffalo, they are things of the past, but they speak volumes to one who has seen and therefore knows. I take them down occasionally and examine the shot holes and recall the shots that the old muzzleloader and I made, when we were young—when we were young, remember; but the old Glass-house grounds, the Three Square Pond—Maple Island Pond—Great and Bound Creek ponds and the Great Island ponds have been all drained away and the p'antive cry of the plover, the wary note of the yellow-leg and the call of the curlew echo no more over miles and miles of beautiful meadows where once they revelled in countless thousands.

It was late in September and the black-grass crop had long been harvested—I was up at 2 A. M., and had the old coffee-pot boiling without waking any of the household. The night hung dark over all, and the stars shone like diamonds in the sky as I shouldered my sack of decoys and started for my duck boat, rocking gracefully on the gentle swells of the outgoing tide two miles and a half away. Crickets chirruped and occasionally a night hawk sailed over calling his shrill "peent" before taking his usual earthward tumble.

There are some who would call this lonesome, but I never found it so. I always had the night wind, the soughing of the tide, the gentle ripple of the water under the prow of the boat, and the thousand and one night sounds for company. Everything lay in inky darkness at the float where the snug little duck boat rode like a feather, but I knew every inch of the way and had her out in the channel in a minute.

She was fitted with rowlocks, but I never used them—I ran a nine-foot spruce oar out of the hole in the stern and sculled or punted to my favorite grounds. The scull-hole was leather-lined and the only noise to be heard was the ripple of water under the prow as I steadily forged the light craft through the flood.

My favorite grounds were four miles away and I generally reached them just as the heavy blackness lightened along the horizon, where an hour or so later the sun would rise. The boat was pulled ashore and made fast and then there was a half mile of tramping through meadow grass and water and the old Three-Square was reached.

The decoys were immediately set out and then I waited for daylight. An excellent opportunity is offered the student of nature if he be of an observant disposition and an early riser and hie himself away to the meadows to await the coming of day. Here he may see the larva of the dragon fly develop and also see how they devour the horseflies and mosquitoes. I have watched them for hours at a time. They sidle up to the victim almost imperceptibly and finally grip him, then deliberately bite through the neck, allowing the head to fall, while they make their repast on the contents of the thorax. Another interesting feature was a colony of muskrats. I have watched them gamboling for half a day—my blind was an old muskrat house with brush shoved down around the edges. In the spring and summer—for nobody thought of the perniciousness of shooting them—it amused me a great deal to watch the old black duck with her ducklings sporting in the water.

She always fought shy of the muskrat locality. It was great fun to see a little fledgling climb on his mother's back and take a ride. Nobody would think of shooting the mother away from her fledglings. In the summer time any quantity of soft-shelled crabs could be picked up along the sedge of the pond.

The first suggestion of daybreak was the dawn breeze—first a mere sighing, then a gentle undulation of the sedge, then a ruffling of the water, creating a miniature surf around the foot of the blind—and then the low soughing that continued until 11 A. M.

The skyline had been pink for a half hour, the fleecy clouds floating lightly in the clear air—taking their coloring from the rising sun. Millions of dewdrops sparkled on the waving grass and finally the sun's rays shot across the level meadows like so many arrows. With the sunlight came the swallows—countless hordes, pitching and sailing, this way then that—now lightly touching the water, again fanning my face with their wings as they sailed close over the blind. Many a one have I intercepted by holding up a piece of brush just as he passed over, and after smoothing his head, allow the frightened little chap to flit away faster than he came.

Sheets of foam dashed high in air half a mile away, where the waves pounded the mossy banks of the bay—resembling snow-drifts, just visible over the tops of the meadow grass. White-winged yachts heeling over to the breeze sped down the bay, looking like sea gulls. Suddenly the air was filled with music—the flute of the yellowleg coming down the wind. On they came—away out over the bay, only a speck in the sky, but I knew that in a few seconds the surface of the water would be alive with color. Answering the call, in less time than it takes to tell it, twenty yellowlegs hurtled by down wind. Holding my fire, for the right moment had not arrived, I uttered a couple of low flutes, which they heard—for on reaching the lower end of the pond, they came back slowly against the wind, pitching and plunging, with legs dangling preparatory to alighting. The two flutes were to allay anything suspicious which they imagined they saw in the decoys, such as too many with their tails to the wind, or some that were too shiny, or any of the hundred and one things that birds see and men do not. Just as they bunched over the decoys, three feet up, I fired my right, getting six down, and as two crossed flight at the end of the pond, the left dropped both. I called, reloading meanwhile, and as they got over their fright and same sailing along on the far side of the pond, I made a long shot with the right, getting two and a straggler with the left.

On the Tremley grounds—a bunch of fifteen yellowlegs came in when I had the 16-gauge with me. I got four with the right and three with the left. Calling and reloading, I bagged the entire fifteen in five shots. Two gunners hearing the continuous fusilade, came over from the river. One of them asked, "What'd y'u git, sonny?" I showed him the birds, fifteen yellowlegs in prime condition—as fine a bunch of birds as any man would care to carry home. The inquirer looked long and fondly at them, and finally his hand stole into his pocket as he asked what I intended doing with them. I told him "Eat them," whereupon he said, "What, the whole fifteen?" "No, but I never sell anything I kill." He looked at me—kindly, I thought—and then, well, maybe he had a boy at home or he had a vision of his own boyhood, for he laid his hand on my head and said, "All right, son, I guess I'll go along."

I liked that man right there, and I offered him the birds as a gift. The look came back into his eyes again, but he thanked me and said he guessed he'd "try to get some himself across the river." I shot on those grounds for fifteen years, but I never met him again. I liked him a lot.

About eleven o'clock the flight slowed down—it usually does and holds slow until three P. M. I pulled out my lunch, and while eating, noticed a small speck in the sky. It grew larger and came down slowly toward the decoys. It must have been 120 feet up when I fired. It came straight down and landed at the foot of the blind. I simply reached out for it and found I had killed a dowitch. It was the last dowitch I killed; in fact, it was the last I ever got the chance to kill. A dowitch is rather a pretty bird, with his red breast and a back that seems like a combination between the back of a woodcock and that of an English (Wilson) snipe. It is a peculiar bird; it seems to lose sight of the gunner when it sees decoys. I once knew a market hunter who, when nine dowitches alighted in his pond, got up deliberately and circled his pond until the birds huddled into a compact mass, then opened with an 8-gauge and gobbled them all at the first discharge. These men were dangerous not only to the game, but to other legitimate sportsmen, and we kept them away from our grounds all we could.

I got more yellowlegs that day, and just at sunset added three willets to the bunch. The scull home, the walk to the house and the dinner mother gave me when I arrived were things long to be remembered. Often during the long winter nights do I think of these days and live them over again and again. Such life taught self-sufficiency. I am thankful that I lived to know a phase of life that is vouchsafed to few. The shoulder breadth, the erect, alert carriage; the muscular arms, browned by exposure, come to me now in visions, and I thank nature for casting my lot where she did.

It is pleasant to say, "I have seen and therefore I know!" What a satisfaction to look back and know that "we have seen!" It moulded our character and made men of us.

Daily I meet little chaps on the street who can tell almost anything about an automobile or the latest thing on the theater bill boards, but not one who can tell what those birds are, which, from five in the afternoon till almost daylight, are flying over the city calling "peent" so sharply and dashing earthward every little while; yet any boy who has seen will tell you at once that they are bullbats or nighthawks.

And yet, the city boy is not to be censured; he has not had the chance. I say, give the boy a chance; give the girls a chance. Because nature intended them to perform less arduous labors, it does not follow that they must perforce be cut off from these pleasures. Let the girl be a clean-minded tomboy while she may, for all too soon her added years will bring their cares and troubles. Close association with nature produces cleaner minded boys and girls. One reason is because of the lesser opportunities for contamination. Such women mothered the men who made this country what it is and have offspring who inherit these same likes and dislikes, thus tending to keep alive that indefinable something which produces the men who do things—men to be relied upon in times of need. The hunter spirit is the warrior spirit.

The narrow shouldered, pale-faced, old-looking young men one frequently meets in the city are rarely the product of the woods and fields. The city boy should have a chance; the country boy makes his, because it is right under his nose. Sometimes a thrashing follows his "chance making," but the memory of that is not half as lasting as what went before. I was fortunate in that my father had guns of his own, and then he knew. Let the city boy get out with a country cousin and it is surprising how quickly he "catches on." This goes to show that the instinct is there; it simply requires opportunity and quickening.

Give him a show. From the time of the French and Indian war to this writing, the issue of our family all tended to the male side, but in the present instance that order is reversed and my family consists entirely of girls—I never lived with so many women around me in all my life, but it is fine, only they spoil the old man, I'm afraid. Long before they could walk or talk they knew the difference between a fly-rod and a driving whip, and click reels played music a great part of the time. HACKAMORE.

New York Legislature.

ALBANY, N. Y., May 15.—*Editor Forest and Stream:* The Assembly has passed these bills:

Assembiyman C. W. Phillips' bill relating to taking pheasants; also Assemblyman Patrie's, in relation to the taking of suckers in certain waters of Greene and Schoharie counties.

Assemblyman Evans', relating to the open season for deer in the town of Neversink, Sullivan county.

Assemblyman Evans', relating to eel weirs in the Delaware River.

Assemblyman Hoyt's, relating to driving fish in Dutchess county, and to nets in the Hudson and Delaware rivers.

Assemblyman Pierce's, in relation to spearing fish in Silver Lake.

Assemblyman Evans', relating to skunk farms.

Assemblyman Gurnett's, relating to the open season for trout in Seneca and Keuka lakes.

Assemblyman Pierce's, relating to the taking of hares and rabbits in Wyoming county.

Assemblyman Shortt's, relating to the open season for hares and rabbits in Richmond county.

Assemblyman Wende's, relating to lake trout and whitefish.

The Senate passed:

Assemblyman Manley's, relating to the open season for trout in Oneida county.

Senator Roosevelt's, relating to taking quail in Ulster and Dutchess counties.

Assemblyman Bridenbecker, of Herkimer, has introduced a bill amending Section 104, reducing from $20 to $10 the fee, in addition to the clerk's fee of fifty cents for non-resident hunting licenses. The bill was put in by request.

Assemblyman Gurnett, of Schuyler, has introduced these bills:

To provide each person procuring a hunting license with a copy of the forest, fish and game law as amended to date. The bill provides for the printing of sufficient additional copies of the law for distribution as provided in the bill.

Increasing from 30,000 to 67,000 the number of copies of the compilation of the forest, fish and game law, as amended, which must be printed after the adjournment of each Legislature. It increases from 100 to 400 the number of copies to each Senator and from fifty to two hundred the number to each Assemblyman.

The Assembly has passed the bill of Senator Emerson, relative to fishing through the ice in Lake George.

Opossum Farming in Australia.

WE have been hearing of fur farms now for lo these many years, but a good share of what we hear is rather general, and consists of instruction by people who have never managed a fur farm of how to raise furs for profit.

Lately this subject has been taken up in Australia where, owing to trapping and to destruction by poisons intended for rabbits, the opossums are growing scarce, and in some sections are approaching extinction. It is said that in disdricts where opossums are most abundant, men by trapping and hunting can often earn as much as $200 a month during the winter—say for five months of the year. It is, of course, understood that the Australian opossums are very different from the American animal; they are of many sorts and produce valuable fur.

A. S. Le Souef, Director of the Zoological Gardens at Sydney, has contributed to the last number of the Agricultural Gazette of New South Wales—a government publication—an interesting article on the possibilities of opossum farming.

He believes that every eucalyptus tree on Australian farms can be made productive by providing food for opossums, and that for every good sized gum or eucalyptus tree the income of the farm might be increased by about fifty cents. He suggests that small boxes, each large enough to hold one animal, might be p'aced in the trees in accessible positions, that the opossums would use these to sleep in during the day time—for they are nocturnal animals—and that they could be caught and examined during the day in the boxes.

It would not be necessary to fence in the animals on ordinary farms, but if this were found to be necessary, an inexpensive three-foot tin fence would be enough. Certain details are given by the author in the following language:

The recent rise in the price of furs has brought into prominence various Australian animals which have skins suitable for ornamental muffs, stoles and rugs. The best of these are the Tasmanian wallaby, the rock wallaby of New South Wales, the black and white variety of the native cat, and the two larger species of the opossum. The opossums are by far the most important, for not only do they carry the most valuable fur, but they feed on the leaves of the eucalyptus tree, and so are not detrimental to man's interest, as meat or grass-feeding animals are. The two kinds are easily distinguished by their ears, the silver-gray or common opossum having long ears, while the mountain or black opossum has short ears. The former is distributed all over Australia and Tasmania, being generally found in the plain country, while the short-eared opossum is found on the highlands of Eastern Australia and on the islands of Bass Straits. It is the larger of the two and has the most valuable skin.

Opossums mate about April, and one young one is brought forth about June. They mature in twelve months and will breed the first year. Their principal food is the eucalyptus tree, but they will also eat the leaves of many other trees, shrubs and plants. They lie up during the day in holes in the trees and also in logs and come out to feed at night.

Great variations occur in the color and texture of the fur, ranging from black to light gray

and from dark brown to rusty red, and they are sometimes white. As a general rule the females have less red on them than the males, but they are a little smaller. The Tasmanian opossum is nearly always a handsome rich brown. The short-eared opossum is dark gray or black, while the long-eared or common opossum from the inland districts is light gray or more or less rusty red.

The fur of specimen from the cold mountain regions and Tasmania is dense and silky. Those from Western Australia are smaller and frequently brown and have fine silky fur, while others from the islands off the south coast of Australia, from the mainland in the State of South Australia, and from the northern territory, show further differences.

Seeing the high prices that the skins of these animals are fetching, it behooves our farmers to give them very careful attention and to breed them on commercial lines. The usual method of killing all that can be caught should be discontinued. A breeding stock should be established, and only the surplus sent to the sales. Thus every tree will become productive by providing food for the animal which will find a ready sale at a remunerative price, and the income of the farm or station will be inincreased by several shillings for every good-sized gum tree on the place. The opossum is a quiet, inoffensive little animal and very easily caught, since he will readily enter an ordinary drop-door trap if baited with a lump of pollard or a piece of bread. A simple method of keeping stock would be to place a number of small boxes, large enough to hold one individual, in the trees in an accessible position. The opossums would be glad enough to use them to sleep in during the day, and could be caught and examined at any time required. A proportion of one male to three or four females would be the most economical number to have, and a little observation would show how many could be kept on any given area.

Exclusive farming would pay best on the highlands in the southeast of New South Wales, in the Gippsland district of Victoria or in Tasmania, for the heavily timbered country would enable the maximum number to be carried per acre, and the skins produced would command the highest market price. It certainly would be an advantage to grow such cheap crops as kale or maize for the animals, and to plant saltbush and paspalum wherever they would grow. This would considerably increase the carrying capacity of the land. Although opposums drink water, they are often found far distant from it, and seemingly live for months without a permanent supply. Probably the green leaves give all the moisture required.

The Use of Game.

Seattle, Wash., March 23.—*Editor Forest and Stream:* You know my opinion as to game protection and game preserves and my plan for game and fur propagation under private management if properly protected. I must differ with the view held about a scramble for animals.

Take beaver, for example. Very few people know how to catch them alive and handle them for breeding. Besides, most of the so-called wild beaver are already on ranches and land owned by farmers who are interested either in getting rid of them or in holding them for their increase. As it is now in most States, the law does not permit the catching of the beaver, but landowners do this, law or no law, because they have a right to protect their property if they do not want meadows flooded or irrigating ditches drained. They should be allowed to catch these beaver alive or let someone else do so for propagating purposes.

YOUNG COYOTES IN NEBRASKA.
Courtesy William A. Bartlett.

The same reason applies to most of the game animals in the neighborhood of the great game preserves — parks, National or State. Extra strong fences are required to keep the animal from getting into the hay stacks let alone the ranchman's fields or pastures where the game is driven from its winter range by starvation, owing to the enormous increase. The surplus game should be devoted to some human benefit, should be used for food, and ranchmen who would care to go to the trouble and expense should be encouraged in its domestication for profit. Very few would care to try the experiment, though Colonel Pickett used to tell me a story of a man he knew who raised elk for meat and fed his hands on it.

I do not think there would be any money in rearing antelope except in a very few places and under very favorable conditions. We know that most animals can be domesticated, and I believe can be made profitable both on public and private game preserves. Elk could be made profitable on small ranches, and then there would not be an argument that the right to domesticate game was in the hands of the rich only. If favorable legislation is desired, the law must be made popular and agreeable to the mass of voters, because in the West where most of the parks and preserves will be, there will be the new order to consider, and any unpopular law will be soon revoked by the people.

The Yellowstone National Park ought to sell a few thousand elk until the number is down to about the capacity of the park to support, and game going out—becoming the property of the States they enter—should be protected to a certain extent from indiscriminate slaughter. The loss is not so much in the number of animals killed and secured by hunters as in the number wounded by inexperienced and excited persons that are never found, that become food for coyotes I am inclined to believe that 50 per cent. of the game lost gets away only to die or suffer.

Let us by all means have laws to encourage the domestication of game and not its indiscriminate slaughter. I do not believe in increasing the size of the parks to afford food and winter range for the game as it increases, because the settling up of the country has changed all old conditions. Rather distribute the increase, either by sale or gift, to parks or to individuals who capture them themselves.

The surplus beaver and other fur of the parks could be treated in the same way. As to trapping under Government control outside the park, I take no stock in it whatever, as I have very little respect for the ability of the State or Government officers who usually have such things under their charge. We see enough of it under the game wardens of Montana. When appealed to by individuals as to summer killing of game, they would not make any move whatever. It is many years since I have tried to get some law passed to protect the individual in the domestication of fur and game that I have about give up trying to do anything. I tried to get Montana and Washington to do something, but without result. A foolish law introduced in Montana would, if passed, make a State game preserve a lot of summer range for cattle and sheep, where the elk would not find anything to eat in winter, and that too without any protection except on paper and to no surveyed boundaries. The State will not fence it and it will do little good. Wyoming has a State game preserve that was made, it is said, to keep the gunners from adding it to the Yellowstone National Park, and it is called a winter range. There the snow falls deeper than in the Yellowstone National Park and hardly an animal attempts to winter. The country where the Southern herd used to winter is mostly taken up by ranchers, and outside ranges are pretty well fed

off by stock. The fight will be to get the members of the Legislatures to encourage the domestication of game if possible. I am afraid my patience is exhausted when it comes to that.

T. E. Hofer.

[When our correspondent says that he has "very little respect for the ability of State or Government officers who usually have such things under their charge," he goes too far. Most men are slack and careless, and of officials—State or Federal—a considerable proportion regard a Government job more or less as a sinecure, where pay is to be drawn and no special work is to be done. On the other hand, there are not a few officials who throw themselves into their work heart and soul, and do the best that they can with the means at their power. Sweeping condemnations of this kind will not help along game protective work. Each case should be taken up by itself and decided on its own merits.—Editor.]

Changes in California Laws.

Berkeley, Cal., May 10.—*Editor Forest and Stream:* During the session of the State Legislature recently closed over 120 bills pertaining to game and fish matters were introduced and a number of these were passed by both Houses. Some have been vetoed by Governor Johnson, but enough have received his signature to make the work of this Legislature quite notable. Prominent among the measures passed were the "blanket" fish and game bill and the game district bill, both of which were explained in a recent issue of Forest and Stream. The Fish and Game Commission is now preparing to issue in card form the changes that have been made in the game laws, and in addition to naming the six game districts of the State and the opening and closing seasons will give the following synopsis of the game laws now in force, showing what is unlawful:

To hunt birds or animals without having procured a hunting license.

To have in possession doe or fawn skins.

To take or kill at any time does, fawns, antelope or mountain sheep.

To take or kill any wild pheasant, swan, bobwhite quail or any imported quail, pheasant or wild turkey.

To shoot between a half hour after sunset and a half hour before sunrise.

To fish for any trout from an hour after sunset to one hour before sunrise.

To trap or hold any protected game or birds of any kind without having procured written authority from the commission.

To take, possess or destroy nests or eggs of any birds.

To ship game or fish in concealed packages without the shipper's name and address.

To buy or sell trout less than one pound in weight, or striped bass less than three pounds in weight. Domestic raised trout excepted.

To take trout, black bass, except with hook and line, or to ship or carry trout or striped bass out of the State.

To fish for a profit without having first secured a fishing license.

To fish for salmon, shad or striped bass with nets Saturday and Sunday.

To take fish in any way within fifty feet of a fish-way.

To take or kill meadow larks, robins or any other non-game birds, excepting bluejays, English sparrows, sharp-shinned hawk, Cooper's hawk, duck hawk, great-horned owl or California linnet.

To export or have in possession dried shrimps or shrimp shells.

To use any animal as a blind, other than a dog, to approach any wild duck or waterfowl except geese.

To have in possession any dressed catfish less than seven inches in length.

To take yellowfin or spotted fin croaker or any California whiting, also known as surf fish, except with hook and line.

To mutilate any lobster, crab or crawfish so that its size could not be measured, or to sell any lobster, crab or crawfish meat not in the shell.

To fish through the ice for any fish.

To kill or have in possession any beaver.

To use fyke nets except for catfish.

To buy, sell, offer for sale, barter or trade at any time any quail, grouse, dove, pheasant, sage hens, snipe, ibis, plover, rail, deer meat or deer skins. Domestic reared pheasants are excepted.

To have pismo clams less than thirteen inches in circumference or to take more than 200 in one day.

To take black bass or trout in nets.

To use any two or three mesh trammel nets after Jan. 1, 1912.

To take fish with nets in Cache slough or any of its tributaries, and in Napa River or any of its tributaries.

To fish with nets in Santa Cruz harbor, except for bait.

To take game or fish from one district into another when the season is not open in both districts.

To use more than one dog to the person for hunting deer. If a hunting party is composed of one or more each hunter may use one dog.

Golden Gate.

New York Spring Duck Shooting.

Jamaica, N. Y., May 11.—*Editor Forest and Stream:* My attention has been called to the fact that recently there was sent broadcast throughout this State a circular letter, headed "New York State Sportsmen's Association, Office of Secretary and Treasurer, Syracuse, N. Y.," and signed by William E. Hookway, Secretary and Treasurer, calling upon the sportsmen of the State to urge their respective Senators and Assemblymen "to exert their influence that the privilege of shooting ducks for Long Island to April 1, under Senate bill 9 and Assembly bill 2, be extended to entire State, and that they see a bill is introduced to that effect."

As president of the New York State Sportsmen's Association I feel it my duty to call the attention of sportsmen and the public in general to the fact that this notice was sent out without any authorization whatever on the part of our association, and I take this means of repudiating the same.

At a meeting held last December at Syracuse for the purpose of discussing the game laws, our association placed itself squarely on record as opposed to all forms of spring shooting, and Mr. Hookway was fully aware of this fact, for he acted at such meeting in his capacity of secretary. John H. Hendrickson, President.

New Massachusetts Laws.

Though the Massachusetts Legislature has not yet adjourned, a number of game and fish laws have been enacted, some of them peculiarly interesting.

Absolute protection is put on the heath hen until 1916, and the buying, selling or otherwise disposing of, or having in possession any part of the same is punished by a fine of $100 for each bird or part thereof.

The Hungarian, gray or European partridge is protected, except that breeders rearing these birds artificially under written permission from the Commissioners on Fisheries and Game may sell or have them in possession at any time of the year for purposes of propagation.

Absolute protection is continued on the wood-duck until the 1st of September, 1916.

The trapping, netting or snaring of game birds or waterfowl or attempts to trap, net or snare them, and the killing them by swivel guns, artificial lights or by the aid of motor boats, or boats propelled by any other means than by sails, oars or paddles is forbidden.

The open season for hares and rabbits continues from the 15th day of October to the 1st day of March. Hares and rabbits not taken contrary to the laws of Massachusetts may be sold at any time. Rabbits that have got into holes or stone walls or under ledges may not be removed, nor may they be trapped, snared, netted or taken with a ferret under such conditions; but farmers and fruit growers may trap rabbits in box traps at any period of the year, provided they can show the hares or rabbits have injured crops or trees.

Wild ducks may not be shot during the time between two hours after sunset and two hours before sunrise.

A bag limit of fifteen has been placed on black ducks, only that number being permitted to be killed in one calendar day.

The use of scented baits on the premises of another without the consent of the owner of the premises is forbidden.

The use or possession of live decoys for hunting waterfowl is forbidden in the county of Nantucket.

The law providing for hunters' certificate of registration has been amended.

Ruffed grouse and woodcock may be killed only between the 15th day of October and 15th day of November of each year, both dates inclusive. These birds may not be bought, sold or offered for sale or otherwise disposed of. They may not be transported beyond the limits of the Commonwealth.

A Lucky Cougar Hunter.

C. E. Ordish returned to Libby Monday from a lion hunt on Pipe Creek and brought with him the hides of three fine lions with the heads attached. Mr. Ordish has a bet with C. C. Cobb, of Kalispell that he will send him twenty lion hides this winter.

So far Mr. Ordish has sent in eleven hides and says that he has all kinds of time to spare and as many more lions in sight. During the last four years he states that he has captured and killed with two dogs seventy-four lions. On this last hunt Mr. Ordish had lassoed one of the animals that had been treed, but it chewed the lariat in two and had to be shot. —Spokane Herald

Maine Game Commission.

THE last report of the Commissioners of Inland Fisheries and Game for the State of Maine has just been issued. It contains more than one hundred pages and many interesting facts and statistics.

The recommendations of the commissioners merit special attention. One of these advises a material reduction in the present bag limit for a day of fifteen partridges, woodcock and ducks. This change should undoubtedly be made. On the other hand a trapping recommendation made by the commissioners should not be made. The present law provides that the commissioners shall remove beaver that are doing damage to timber lands on complaint of the landowners, while the commissioners believe that they should be permitted to declare an open time on the townships where such damage is being done, the trapping to be open to all licensed trappers. It is far better to have the commissioners trap the beaver by means of their own force of men rather than to permit the public to trap the fur. Of course the commissioners' view of the matter will be far more popular than this.

The commissioners recommend a law to encourage artificial fishculture and wild game farming, an excellent recommendation. They advise a law making a limit for the number of game fish that can be taken in a day. This is needed because persons will sometimes catch several hundred very small trout, and still keep within the twenty-five-pound limit.

Colored plates of the so-called Hungarian partridge and of the mallard—drawn by Allan Brooks—with an account of that species from Ora Willis Knight's "Birds of Maine," adorn the volume.

Game in Montana.

HENRY AVARE, State game and fish warden of Montana, in his biennial report, says in part:

There has been a healthy sentiment growing among the citizens of the State favoring the protection of game and the enforcement of the game laws. In a few isolated communities the old rules of ruthless slaughter of deer and elk prevailed a few years ago, but this sentiment has undergone a marked change by reason of local opinion of settlers publicly expressed or has been stifled by one or more successful prosecutions of flagrant violators. In the selection of deputies it has been my aim to select good, conscientious men, who would perform their duty without fear or favor and play no favorites. Of these there are fifteen to cover the twenty-eight counties of the State, or approximately two counties to a deputy, and Montana counties, even the smallest, are larger than some of the Eastern States, so that it may be readily understood that it is impossible for any deputy to always be in the right place at the right time to make arrests for violations. However, the number of convictions and amount of fines collected is largely in excess for 1909-10 over that for any two previous years.

Violations of the game and fish laws from Dec. 1, 1908, to Nov. 30, 1910, total 227 and convictions 180, the fines imposed amounting to $7,867 50. The arrests for fishing without license number fifty-seven, and hunting without license forty-five. Selling elk heads during the six months' period from Dec. 1, 1909, to May 31, 1910, number nineteen violations of the law, most of the arrests representing residents of Park and Gallatin counties, where range the greatest number of Montana elk.

Licenses and permits issued during 1909: Resident citizen hunting and fishing licenses, 44,815; general non-resident citizen hunting and fishing licenses, 89; limited non-resident citizen hunting and fishing licenses, 23; non-resident citizen fishing licenses, 1,202; general alien hunting licenses, 3; limited alien hunting licenses, 24; alien fishing licenses, 126; guides' licenses, 40; taxidermists' licenses, 22; shipping permits, 445; total for year, 47,789.

Income of the State game and fish warden's office for 1909, $48,105.43; for eleven months, 1910, $53,276.52.

"Large numbers of deer," says Mr. Avare,

A CHANCE FOR COMPARISON.
Africans Carrying a Hippo Head.

"have fallen beneath the bullets of hunters during the seasons of 1909 and 1910. At present the limit per person annually is three. This is a larger number than is allowed in any other State and I believe the best interests of the game require that the number be reduced to two per person annually, and those two be of the horned variety. In many States only horned animals may be killed. Here we have no restrictions, and frequently I have had the unpleasant experience of viewing the remains of a thirty-pound fawn recently before slain by a hunter. I therefore favor an amendment to our present laws, reducing the limit of deer per person annually from three to two animals with the above restrictions as to age and sex.

"On account of the needless waste of our game fish by some campers I would recommend a limit of twenty-five pounds of trout per day to the fisherman with a total of fifty pounds to be the limit in possession of a fisherman at any one time, and all trout caught under six inches to be returned to the water; the custom of fishing trout through the ice to be prohibited."

Deer and Elk Set Free.

THE forest fires, which for a week or two have been raging in the woods of New England and New York last week, invaded a portion of Sullivan county, in the latter State, and, after destroying much property in the towns of Lumberland and Forestburg, on Sunday, entered the large private game preserve of C. W. Chapin.

Fire fighters were engaged in large numbers and at high wages, but it seemed impossible to check the course of the flames. The fire ran through the park in a broad swath, and it is said that bears and wildcat were seen to climb the fence at various points and escape. When it became apparent that the preserve would probably be all burned over, Mr. Chapin gave orders that the fences be torn down in order that the deer and elk might escape. This was done.

The preserve covers an area of about ten square miles and was inclosed by a woven wire fence ten feet high. At last accounts the fire was still burning and threatened many large estates owned by wealthy New York men.

A large number of deer and elk are believed to be at large in southwestern Sullivan county, and the work of recovering any portion of them will be difficult.

Old Books.

Editor Forest and Stream:

I was much interested when your Book Exchange was established and have just been fortunate enough to procure through it—replying to the advertisement of Captain A. N. Macnab—half a dozen desirable books, two or three of which I have been wanting for some years. I shall continue to watch this column in the hope that I may succeed in getting hold of other good things.

Captain Macnab's letter to me, which was received about the same time with the books, said: "It surprises me that the readers of FOREST AND STREAM do not patronize the Book Exchange to a greater extent. I was of the opinion that, when the above department was established, there would be constant calls for scarce Americana."

I believe that as time goes on FOREST AND STREAM readers will more and more come to realize the value of this Book Exchange, and that through its medium many interesting volumes may be brought to light and may find their way into appreciative hands. READER.

Ancient Canoes Found in Scotland.

ANOTHER ancient canoe has been found near Lochmaben, at the same place as the other was found a few weeks ago. It is made of black oak, but is not in so good a state of preservation as the first. One side and part of the other are gone. It was discovered in about five feet of soil at the excavations being carried on in connection with the making of a new rink at the Kirk Loch. The canoe is 13 feet in length, and at the broadest point is 2 feet 8 inches, and is 15 inches in depth. —Anglers News.

All the game laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

SEA AND RIVER FISHING

Catching a Record Tampico Tarpon.

MONDAY morning we decided to fish at the mouth of the Tuxpam Canal, and at 6 o'clock we were merrily chugging down the river in the Tal Vez, towing our fishing boat in our wake. To our great disappointment the tide was just beginning to flood, and although as a rule the ebb tide is the best for fishing at the canal, we were encouraged to try our luck by the jumping of countless small fish, indicating that there were probably larger fish in pursuit. This proved to be the case, for we had not made more than a couple of turns across the ripple at the mouth of the canal when something struck my husband's hook with terrific force, running some distance with the line before it could be checked. There was no jump when the strike came, and of course we concluded that it could not be a tarpon. "It is a shark, señor; it is a shark! Have a care that he does not break your line!" shouted Apolonio, our boat boy, and started to row up the canal in the hope of gradually tiring the creature out or of towing it to shallow water where possibly we could get rid of it.

We had rowed in this way for several minutes when, to our surprise, the head of a tarpon suddenly came out of the water and shook itself, trying to get free from the sharp something that was pulling at its jaw. Then, for the first time, it seemed to realize that it might be in some danger, and out spun the line for 200 feet, both the drag and the thumb brake being absolutely powerless against the strength of that magnificent rush. Then the fight began. My husband threw all the leverage possible upon the rod and began to pump it up and down. The tip bent and straightened, and inch by inch the reel took up the slack as it was gained. When the tarpon got within about fifty feet of the boat, or nearly up to the double line, the tension gave a little, a signal that he was going to jump. The leap was sidewise and not more than a foot and a half from the water, quite unlike the quick, perpendicular jump of the tarpon, but it was sufficient for us to see that he was of extraordinary size. This was the only jump that he made throughout the fight.

Just after the jump my husband, who was very anxious for me to experience the sensation of catching a very large tarpon, insisted upon my taking the rod for awhile. "Now pump him," he said, and pump him I did with all my strength, with the result that instead of gaining anything it merely inspired him for another rush and off he went with all the line that had previously been gained. My thumbs felt as if they were breaking, particularly the one on the brake, but I was not willing to give him up until I had regained some of the lost ground. I started to pump again, throwing all the weight I could upon the rod to get the tip up and taking in line little by little as I lowered it. The muscles in my arms began to ache insufferably, and after getting in about fifty feet of line I was obliged to give him up again. Once more before he was finally conquered I worked upon him for a few minutes, but I found that eventually I could not respond to my inexorable companion's instructions to "pump him."

So it went. Time after time he would be almost on to the double line, and then apparently with no diminution of strength off he would rush, making the reel sing and the thumb brake splutter feebly on the wet line. After almost an hour of this kind of warfare he seemed to tire slightly and changed his tactics. Instead of rushing away with the line and exhausting his strength, he turned with his head directly away from the boat and lay still, making it almost impossible to pull him in any, and giving him an opportunity to rest. However, in this way he laid himself liable to having his nose pulled out of water, and when this had happened a few times, the noble fish had to yield himself a little to the ceaseless pull of his enemy.

By this time we thought that he was sufficiently under control to take out to the river, where we could find a place to land him and measure him and turn him loose, so we worked him down to the mouth of the canal. The deeper water of the river seemed to give him fresh life, and he made several superb rushes before we could finally land him on the beach. We pulled him up with the utmost care in order not to injure him, as it is our custom to turn our tarpon back, but one of his gills had been cut by the hook. We measured him roughly with the oar and our boatman and a crowd of spectators who had gathered on the bank exclaimed that he was seven feet and a half long, maybe eight feet. This did not excite us particularly, as we did not then know what the record tarpon measured. It might have been eight or nine feet as far as we knew, and we were chiefly concerned in saving the life of the valiant fighter. We had him put back in the river, but when we saw that the blood from his gill was staining the water, we knew it would be more humane to take him out than to have him torn to pieces by sharks.

The body of the beautiful silver king was carefully placed in the bottom of the boat and covered with damp newspapers to prevent the sun from tarnishing his scales, and we towed him back to the wharf. There he was borne by two men to the hotel. We went down to La Barra for lunch and fished in various places in the afternoon and arrived at the hotel at about 6 o'clock. Imagine our surprise when we saw a crowd standing around our tarpon as he lay in state in the patio of the hotel. A friend of ours came up beaming: "Congratulations, Billy," he said; "you have broken the record." This was the first we knew of it and it partially consoled us for causing the death of an innocent creature. The holder of the former record lives at Tampico. He is Mr. Wilson, the British Consul at that place, and after dinner he came over to help us measure our catch and to offer his congratulations. His record tarpon was seven feet two inches in length and weighed 202½ pounds and is at present in the British Museum in Liverpool. Our record is three and one-half inches longer and thirty pounds heavier and is to adorn the office of the Hotel Southern as a challenge to all who may fish there to "beat it if they can."

This measurement of seven feet five and one-half inches was made from a line drawn between the tips of the tail to the end of the nose with the jaw closed. Length from the longest tip of tail to the jaw when open is seven feet eight inches; girth, forty-seven inches. Tarpon rod used is seven feet in length with 200 yards of twenty-seven thread Irish linen line, regulation wire leader, hook and reel.

A. D. McLAREN.

Short Gills in Trout.

U. S. BUREAU OF FISHERIES, Tupelo, Miss., May 8.—*Editor Forest and Stream:* Adverting to the inquiry of Robert B. Lawrence concerning short-gilled trout in FOREST AND STREAM of May 6 will say that the trouble is not a disease, but a deformity, or rather a malformation, and that otherwise the fish are healthy and not unwholesome. I am reminded of an amusing occurrence at the Bozeman, Mont., hatchery in this connection. The employes were taking eggs from brook trout one cold day in November, when one remarked: "Here is another 'jewfish, the second I have stripped to-day." "What do you mean by jewfish?" asked another. "These short-gilled trout," he replied. "But why call them jewfish?" the other man persisted. "Because they have circumcised gill covers." I may add that if not circumcised they are circumscribed.

JAMES A. HENSHALL.

KALAMAZOO, Mich., May 9.—*Editor Forest and Stream:* In your issue of May 6 is a query by Mr. Lawrence, regarding diseased brook trout. I beg to state from the description that the fish are not diseased and are absolutely good for table use.

Fish of the trout family having inflammation of the gills—which is the same as tuberculosis in warm-blooded animals—very rarely survive to make fish large enough for table use.

Trout with defective gill covers are very common. One of the best known foreign fishculturists attributes this condition to fungus in the fry stage. I can state absolutely that it is caused by continual in-breeding, and it occurs only in a small way where care is taken to get new blood every year.

In my twenty-five years' angling I have frequently caught trout with one or both gills bare and numerous other monstrosities.

ALBERT ROSENBERG.

British Tournament.

At a recent meeting of the British Amateur Fly- and Bait-Casting Club, it was decided to hold a tournament this season. The dates, July 21 and 22, are tentative. Cups similar to those adopted by the Anglers' Club of New York, will be given as first prizes. The old rule of ounce-per-foot has been abandoned and the American five-ounce rule for fly-rods adopted. This allows three-quarters of an ounce for a metal reelscat.

Anglers' Club of New York.

The sixth annual fly- and bait-casting tournament of the Anglers' Club of New York was held May 11, 12 and 13 in Central Park. It opened at 2 in the afternoon of Thursday, was continued at the same hour on Friday, and occupied all of Saturday, the twelve events cast off furnishing anglers with a variety intended to—and which evidently did—please all classes.

Weather conditions were favorable in the main. The first two afternoons were very warm, with a southeast wind, but on Saturday the wind was from the west and northwest, and cool, though gusty. Light tackle events were interfered with, therefore, and the distances in the salmon and heavy fly-rod events cut down in consequence, but the scores made were on the whole excellent. It must be remembered that New York men have little time and few opportunities to practice before an important tournament, and with most of them the only preliminary practice had was a hurried outing along some trout stream. A determination to do one's best casting is commendable, but thorough practice is better, particularly in accuracy events and in the surf, salmon and unlimited fly events, where muscles should at least be supple if not strong.

Another handicap is the lack of time to arrange for and carry out the innumerable details connected with a tournament of this sort. Usually the hard work falls on two or three men who happen to be good natured, but who are also fond of casting, and who are of course badly handicapped by a multiplicity of demands on their time and strength. This time the committee consisted of John L. Kirk, Chairman; E. M. Gill, Walter McGucken, W. N. Hardy, E. B. Rice, R. J. Held, N. S. Smith, H. C. Henderson and Edward F. Todd. It acquitted itself creditably, but special reference must be made to the superb fly-casting of Walter McGucken which, under the trying conditions, was wonderful, and called out praise from every one. The club's secretary, Jason G. Lamison, was on the platform throughout the tournament, and did not find time to cast.

Formerly the club had a practice platform on the Pool, but it was in a place where it attracted too much attention, particularly from little folks, and it was blanketed by trees, making favorable casting difficult. Tournaments were held on Harlem Mere, a favorable place generally so far as the elements were concerned, but so public, that during afternoons the presence of the reserves from one or two police stations was necessary in order to keep the horde of spectators from pushing those in the front ranks into the lake. These were people who had no interest in the sport, but came out of curiosity and crowded away men and women who were really fond of angling and anglers' competitions.

Van Cortlandt Park, where the national tournament was held two years ago, is inconvenient, and the south side of the big lake in Central Park, where last year's tournament was held, is a place of contrary winds. This year the park department very generously granted to the club permission to erect a platform on the west side of the big lake off a rocky point out of the way of small boats and safe from the visits of small boys who have a way of falling into the water, with more or less serious consequences. A rustic bridge leads to the platform, and a gate which is kept locked turns all persons away save those who practice casting. While open to the public, those who wish to use it must procure a key. This keeps little folks from playing on the platform and falling from it. The prevailing wind during the casting season is from a southerly direction, hence it is favorable for the casters, who face north or northwest, while west winds are broken up more or less by trees and houses not far away, so that easterly winds alone are very unfavorable. The surroundings are as beautiful as they are restful to tired men, and in case of rain there is shelter and a place to leave tackle in one of the park houses nearby. Overlooking the platform is a natural stone platform where there are benches for spectators, and more find space along the shaded shores.

A STUDY OF THE POSITIONS ADOPTED BY THREE EXPERT FLY-CASTERS.
Walter McGucken (left), R. J. Held (center), and George La Branche (right), casting in the distance event with five-ounce fly-rods.

The club's practice of making separate classes, so that beginners can receive encouragement as they gain skill, while the experts must strive diligently to gain and hold their places, is an excellent plan and one that meets with the approval of all classes. Even the handicapping on the records of contestants, which is always unfair in that it is based not on what a man can do under average conditions, but on what he has done under favorable conditions, is considered as good a plan as any, for it encourages beginners, and in the long run is fairly satisfactory.

The features of the first afternoon's casting were the splendid average of 130½ feet, made by A. Jay Marsh, of the Orange Rod Club, with quarter-ounce weight, and George La Branche's

score of 92 feet with a four-ounce fly-rod.

On Friday E. M. Gill cast 85 feet with a five-ounce fly-rod. It was an excellent performance in view of the fact that he is just graduating from the novice class.

On Saturday Edward B. Rice scored 260 feet in the surf event and averaged 222.6 feet, which was far below his best form and was due to lack of practice.

H. M. Horton made an excellent showing in the bait events, winning in the 175-foot half-ounce class for distance, and taking second place in the half-ounce accuracy event.

A. Jay Marsh's best score in the half-ounce distance bait event was 209 feet, and he won the accuracy event with same weight with only 15 demerits.

Hiram Hawes, the rodmaker, cast 113 feet 1 inch in the event for heavy single-hand fly-rods, and 135½ feet in the salmon fly event. He is one of the veteran casters, and was greatly pleased that he had journeyed all the way from Canterbury, Conn., to attend the tournament, for he exceeded his own records in both events.

The first prize in each event was a handsome cup, and other prizes were merchandise.

The results in detail follow:

THURSDAY, MAY 11.

Event 1—Distance bait-casting with quarter-ounce weights, open only to those who had never cast further than 130 feet; average of five casts:

	Feet.		Feet.
H. M. Horton	117 5		
J. L. Kirk	102 4	E. F. Todd	94 2

Open to all amateurs:

		Best Cast. Feet
A. Jay Marsh	136 5	149
R. J. Held	104 2	146
H. M. Horton	97 2	115

Event 2—Accuracy bait-casting with quarter-ounce weights at 60, 65, 70, 75 and 80 feet, 15 casts in all:

	Demerits		Demerits
A. Jay Marsh	37	R. J. Held	48
G. M. L. La Branche	44	E. B. Rice	55

Event 3—Trout fly-casting for distance with four-ounce rods—70-foot class:

	Feet.		Feet.
Walter McGucken	82 0	A. B. A. Bradley	72 5
R. J. Held	81 5	W. A. Metcalfe	72 0
E. B. Rice	75 0		

Open class:

G. M. L. La Branche	92	R. J. Held	80
J. L. Kirk	88		

FRIDAY, MAY 12.

Event 4—Trout fly-casting for distance with five-ounce rods—70-foot class:

	Feet.		Feet.
C. H. Higby	69	E. F. Todd	68

Eighty-five-foot class:

Perry Frazer	84 6	E. M. Gill	80 0
J. L. Kirk	84 6	C. H. Higby	74 6
N. S. Smith	84 6	W. C. Metcalfe	74 0

Open class—ties in above decided in this class:

E. M. Gill	85 0	R. J. Held	79 0
Perry Frazer	84 0	N. S. Smith	79 0
J. L. Kirk	81 0	Walter McGucken	77 6
G. M. La Branche	81 0		

Event 5—Dry-fly casting for distance with five-ounce rods; five minutes' time allowance and best cast in five to count:

	Feet.		Feet.
R. J. Held	69	W. C. Metcalfe	50
George La Branche	61	E. M. Gill	43
Walter McGucken	61		

SATURDAY, MAY 13.

Event 6—Dry-fly casting for accuracy, delicacy and style for a cup presented by the club's president, George La Branche; three targets, placed 35, 40 and 45 feet from the platform, five casts at each; Won by Walter McGucken. The entries numbered nine.

Event 7—Surf-casting for distance with 2½-ounce weights, two-handed rods and linen lines strong enough to lift a dead weight of ten pounds one foot off the ground, average of five casts to count—200-foot class:

	Average.	Best Cast.
W. Muller	164.0	209
A. R. Hanners	123.4	145
E. B. Towne	91.2	133
M. Adler	73.0	90
E. M. Gill	67.0	100

Open class:

Edward B. Rice	222.6	260
E. E. Spencer	205.8	237
W. Muller	193.6	235
R. J. Held	185.8	209
George La Branche	181.0	215
E. M. Gill	156.0	213

Event 8—Distance bait-casting with half-ounce weights, average of five casts to count—150-foot class:

	Average.	Best Cast.
A. R. Hanners	148.6	160
E. F. Todd	129.2	139

One hundred and seventy-five-foot class:

H. M. Horton	148.0	150
J. L. Kirk	131.6	150
M. H. Smith	123.4	165
A. R. Hanners	113.2	157
W. H. Zabriskie	108.2	166
C. H. Higby	Withdrew.	

Open class:

A. J. Marsh	184.4	209
R. J. Held	176.0	193
A. R. Hanners	154.0	175
M. H. Smith	121.2	140
W. H. Zabriskie	116.2	160
H. M. Horton	107.8	158
E. B. Rice	100.0	115

Event 9—Half-ounce accuracy bait-casting from a boat:

	Demerits.
A. J. Marsh	6 7 0 0 2—15
H. M. Horton	4 2 2 10 0—18
E. B. Rice	4 2 7 3 7—23
A. R. Hanners	5 7 4 5 10—31
E. F. Todd	3 9 15 2 5—34
W. H. Zabriskie	15 20 10 18 12—75

Event 10—Fly-casting for distance with any rod not longer than 11½ feet, best cast in six minutes to count—70-foot class:

	Feet.		Feet.
E. E. Spencer	74	Max Foster	72
F. C. Raynor	73		

Ninety-foot class:

L. L. Kirk	99	Walter McGucken	85
E. M. Gill	90	W. C. Metcalfe	75
Harry Friedman	87	William Watt	73

Open class:

Perry Frazer	101	R. J. Held	94
J. L. Kirk	99		

Professional class:

Hiram Hawes	113 1

Event 11—Salmon fly-casting with 15-foot rods, time six minutes, open to all, with handicaps:

	Record, Feet.	Best Cast.	Net Score.
Hiram Hawes	123 6	135 6	139 9
J. L. Kirk	109	120	131 6
Walter McGucken	81	104	129 6
E. B. Rice	100	110	126
George La Branche	118	115	122
W. C. Metcalfe	112	112	122
Perry Frazer	122	116	121
R. J. Held	132	111	111

Camping.

II.—CAMPING AFTER SOME EXPERIENCE.

Charlevoix, Mich., was our summer resort home, and from there we made trips that gradually became enjoyable and resulted in bass and trout fishing. Our first trip was out six miles to a lake of about ten acres with an abandoned log house near its bank. We carried hammocks for beds, milked the farmer's cows on their way home, adjusting with him afterward, and had a fine time. We had to tie the boys in the hammocks to keep them from falling out. Here we could keep warm and dry, the two actual necessities for endurable camping.

While there we learned two essentials in keeping fish alive. One was not to allow them to hang over the side of a quiet boat in the vicinity of turtles, which ate our fish; the other was not to tie them in the shallow water, as the heat of the sun either killed them or they became foul from lack of running cold water.

We planned a trip up the Jordan River for our first trout camping trip and arranged for two men to pole the boats up the rapid stream. One failing us, our captain undertook the task. He had purchased a new light trout rod, and after using it placed it along the gunwale of the boat, tip inside, but in puliing the boat up a rapid, the tip engaged with the bushes and the rod was ruined. Ever since then the captain puts his rod in its case when not in use. He became so tired from the unusual poling that he had to take a sleep of an hour or so before he could go on, and for about ten days his shoulders were so lame that he cou'd not get his hand to his hip pocket. He has never undertaken any extensive poling since. He thought to keep his trout alive by nailing a box with holes in it to a log in the water, but a thunder storm came on in the night and next morning the water was over the top of the box and the trout had gone. Since then he has always been on the lookout for rising water in a trout stream, always tying his boats and getting his camp high enough to be above high water line.

On another trip we planned to go into territory not familiar to us, and we left Charlevoix on a small steamer for the mouth of the Jordan River. Our boats were towed behind the steamer, which burned wood, and the wind being ahead, our boats were pitted with ho'es burned by the sparks and were nearly wrenched in pieces by the strain of the fast steamer. Ever after that we took our boats on board, finding that it is quite risky to tow them. We teamed across land to the Intermediate Lakes, a long chain of lakes abounding with fish. At our first camp on the lakes a mink investigated our butter jar left on the bank. The captain undertook to shoot him with a rifle, but missing, he took up a club, headed the mink off on his trail and got him. A trap was set for 'coons, but we found the farmer's cat in the trap, so we quit setting traps in the neighborhood of farms.

We teamed across country to the headwaters of the Jordan River, and fished down, returning by steamer to Charlevoix.

We found during these early trips that without a cook the captain had to spend about all his time cooking and washing dishes, so we decided to have a cook and have ever since had one. No one should go into the woods without a cook, because you can leave your camp

in his charge and have time to enjoy the trip.

We had some experience in passing through log jams that proved valuable in after years. In going up stream you must hug the shore so that your boat shall not be crushed between the logs, but will be pushed out on the shore by any ungovernable logs, and you must work the logs up river and hold them to get space for your boat, letting them gradually pass below the boat. You must keep in the boat or on the shore. Never stay on the logs, because you are liable to fall through them and be crushed. In going through a logjam down river you must pull the logs back to give you space, and if possible keep them back, and if the pressure comes upon the boat you must ease it up and get it upon the logs so that it will not be crushed or capsized, but always keep near the shore for safety to yourself in the event that the boat is upset or crushed, and also do not undertake to pass a logjam in deep water. If you should get under the logs in the water, deep or shallow, you would surely drown, but in shallow water you are not liable to get under the logs. The force with which the logs bear down in a swift river is beyond the strength of any fishing boat, and is death to any one who gets in the embrace of the logs.

WILLIAM H. HOLDEN.

Illinois Casting Club.

CHICAGO, Ill., May 8.—*Editor Forest and Stream:* The opening events of our club for the 1911 season took place on the 6th and 7th insts. under favorable weather conditions. The weather being ideal, no doubt sent a number of members to the lakes and streams. Though the weather was ideal it was necessary to cast the accuracy event on Saturday in the sun's glare, and while no very high scores were made, the average was very favorable considering the trying conditions.

Following are the scores made in the order as cast:

Weather clear, wind east, ten to twelve miles velocity on the 6th inst. during both events.

Accuracy bait, ½-ounce:

De Garmo	98.3	Hartley	98.3
Harstall	98.0	Linder	96.6
Asper	97.1	Hornstein	93.8
Bauer	97.3	Raney	98.3
Wehle	97.4	McFarland	97.3
Huntley	97.7	Humphreys	98.3
Heston	98.2	Kirk	95.9
Stanley	98.5	Pierson	98.6
Spencer	96.9	Eaton	96.2
Whitby	98.1	Tournier	97.4
Jamison	96.9		

Distance bait, ½-ounce:

	Average.		Average.
De Garmo	129⅔	Huntley	119⅗
Whitby	143⅙	Wehle	122⅖
Heston	18?⅘	Jamison	141⅘
Hartstall	70⅗	McFarland	136⅗

On the 7th inst. the weather was again ideal, the conditions for casting more favorable than the day preceding.

Weather during both events fair. Wind S.W.; velocity approximately eight miles.

Accuracy bait, ½-ounce.

Swisher	97.2	Barker	97.9
Kernaghan	98.3		

Distance bait, ½-ounce:

	Average		Average.
Kernaghan	117⅘	Swisher	93⅗

Accuracy fly:

Amman	99.3	Heston	98.4
De Garmo	99.8	Swisher	97.3

Distance fly:

Amman	97	De Garmo	90
Heston	83		

L. V. TOURNIER, Sec'y.

Fishing in the West.

BERKELEY, Cal., May 10.—*Editor Forest and Stream:* Although it was rumored some time ago that the members of the San Francisco Fly-Casting Club would not go to the Truckee River on the opening day of the trout season, as has been their custom for years, on account of high water, the first of May found a number of them on hand. Among those who made the trip from San Francisco were: H. B. Sperry, E. A. Mocker, J. B. Kenniff, T. C. Kierulff, James N. Gillett, F. H. Reed, W. D. Mansfield, C. H. Kewell, J. F. Burgin, C. P. Pomeroy, J. Harron, W. C. Murdock and B. G. McDougal. These anglers found conditions about as had been described, but all managed to secure a few fish. It is said the Truckee is now filled with large fish, due to legislation in Nevada, and those using bait made some good catches. However, the members of the San Francisco Fly-Casting Club are barred from bait-fishing and were compelled to be content with light baskets. E. A. Mocker made the best record for two days, securing twenty-six fish. Conditions on that stream are improving steadily, but it is not thought likely that it will prove really good until about the 1st of June.

The fish and game commissioners are keeping a close lookout this season for offenders and have already made a number of important seizures. Deputy Fish Comissioner A. F. Lea recently arrested Dr. Earl Kidwell, of Los Angeles, and Jack Perrazzo, at Cloverdale. These men had in their possession 810 trout, instead of fifty apiece. They had just returned from a trip to the Garcia River and had their catch cleaned and placed in pickle. They were taken before Judge Denny at Santa Rosa and fined $40 each, the trout being confiscated. Commissioner Lea returned fifty of these to each of the men and sent the balance to the County Hospital.

Manuel Cross, a deputy fish commissioner recently seized five cases of undersized bass shipped by A. Paladini, a San Francisco fish dealer, to a Portland firm. The shipment is in violation of the law prohibiting the shipment of this fish out of the State, and the owner is further liable as the fish were under size.

The announcement is made that fishing will be in order this season in the Big Meadows district, and anglers are now engaging accommodations at the new hotel erected there by the Great Western Power Company, which now controls this favorite trout fishing retreat.

The Capitola Light Tackle Club has changed its name to the Monterey Bay and San Francisco Light Tackle Club, and officers have been chosen as follows: President, E. A. Mocker, Capitola; Vice-President, W. W. Richards, Oakland; Secretary, E. S. Pomeroy, San Jose; Treasurer, Chas. H. Kewell, San Francisco; Directors, E. W. Hihn and J. O'Conner, Santa Cruz; O. M. Kiesling, San Jose; L. H. Gotthelf and Walter D. Burlingame, of San Francisco.

The members of the club will fish from Duxbury Reef to Cypress Point and prizes will be offered for the landing of salmon, sea bass, bonita and yellowtail. For landing salmon weighing over twenty-five pounds a blue button will be awarded and a red one will be given to those landing one weighing over fifteen pounds. A yellowtail weighing over twenty pounds will entitle the fortunate angler to a blue button, while one over ten pounds and less than twenty will mean the award of a red button. A fifteen-pound bonita wins a blue button, while a nine-pounder will entitle the angler to a red one. To secure a blue button in the sea bass class, the angler must take a thirty-pound fish, but a fifteen-pounder is good for a red emblem. In order to secure these buttons the fish must be landed in the presence of a club member. The securing of a button makes the angler eligible to club membership and also for competing for the numerous prizes offered. The tackle used must be a rod with a tip six feet or more in length, and not more than six ounces in weight, with a nine-thread linen line of twenty pounds tension.

Some News and a Little Gossip.

THE new schooner yacht Elena, built for Morton F. Plant, was tried on Narragansett Bay last Saturday. Under the guidance of designer Nat Herreshoff for a part of the time, and then by Capt. William Dennis, the yacht sailed from Bristol to Newport and back in light winds. The wind was S. E., which gave the yacht windward work down the bay. She started out with lower canvas and later set topsails. The rigging of course stretched and had to be set up frequently. As she drew further down the bay the wind freshened, and Elena heeling to her lines, sailed very fast, so that accompanying power craft had difficulty in keeping up with her. Off Gould Island she wore round and ran for home finishing about 2 o'clock in the afternoon. The yacht sailed without her centerboard, which was hung later in the week. She will be ready for commission next week and will make New London her home port for the tuning up sails she will have.

Corinthian, the Seawanhaka-Corinthian 31-rater built by Herreshoff, in her trial carried such a weather helm that changes have been made in her steering gear in order to give the helmsman better control of the boat. Sherman Hoyt was on board at the trial. Corinthian will be brought west next week, and on May 29 she will be on exhibition off the club house at Oyster Bay, when those members who have subscribed to the fund for the building of the yacht will be entertained at dinner.

Joyant, the 31-rater for Commodore William H. Childs, of the Indian Harbor Y. C., will be ready next week.

The two 31-raters built by Hodgdon Brothers at East Boothbay have been delivered to their owners. Italia, owned by George Lee, has been sailed to Marblehead and much admired there. She is much larger than the Class P boats of last season. Sayonara, built for Vernon F. West, of the Portland Y. C., was sailed to Portland by her designer, George Owen.

There will be the usual good racing on Buzzards Bay this summer, although two of the best of the Sonders have gone to Kiel. The others of this class and some new boats in the regular classes will make things lively. Between the Beverly Y. C. and the Sippican Y. C., of Marion, fourteen championship races for Sonders have been arranged, of which the Beverly club will hold eight. The Beverly Y. C. will during the season have ten races, two sweepstakes, an open regatta, a team race, an obstacle race, a special race and the Van Rensselaer cup race. In the morning of July 29 the annual water sports will be held off the club house. On Sept. 2 and 4 special races will be arranged for auxiliary catboats. The schedule is as follows: June 17, first club; June 24, second club; July 1, third club; July 3, special race; July 4, sweepstakes; July 8, fourth club; July 15, fifth club; July 22, sixth club; July 29, water sports in the morning and seventh club in the afternoon; Aug. 5, Van Rensselaer cup off Marion; Aug. 12, eighth club; Aug. 19, ninth club; Aug. 26, team and obstacle race; Sept. 2, sweepstakes; Sept. 4, open race; Sept. 9, tenth club. On June 24,, July 4, 8 and 22, Aug. 19 and Sept. 9, the Sonder boats will race in the regattas of the Sippican Y. C. off Marion. All the races of the Beverly Y. C., except that for the Van Rensselaer cup, will be sailed off Wings Neck.

The Corinthian Y. C., of Philadelphia, went in commission last Saturday. A race was sailed by raceabouts in the afternoon. Other races of a series for these boats will be sailed on May 20, 27 and 30. June 3, 10, 17, 24 and July 1. Commodore E. Walter Clark has appointed George Herbert Millett, fleet captain and Dr. Robert G. LeConte fleet surgeon.

William E. Iselin's new schooner Enchantress left Boston last week for City Island, where her furnishings will be put on board. The yacht will be tuned up on the Sound under the supervision of A. Cary Smith, of the firm of designers who drew the lines of the yacht.

The Atlantic Y. C. has scheduled ten regular regattas for the season. In addition the club will give several special races throughout the summer, the conditions of which will be announced later. As has been customary, the At-

lantic Y. C. will open the yachting year on Gravesend Bay. The first race of the season will be an open regatta for all classes of schooners, sloops and yawls to be sailed on Saturday, May 27. The season will end with an open regatta for Class M and below on Saturday, Sept. 16. John E. DeMund, M.D., is the chairman of the regatta committee, and his associates are Walter H. Sykes, Jr., and Carlos de Zafra. It is their intention to make the annual race week of the organization the most important in the history of the club. It has been customary to hold this fixture over Labor Day, but during the past few years the weather during the first of September has been miserable for yachting, so the club has decided to hold the week earlier this than in former seasons. The racing will start on Tuesday, Aug. 22, and will continue until Thursday, Aug. 24. This will give all visiting tars plenty of time to reach Sea Gate and return home without missing any of their regular club fixtures.

Indications point to more boats than heretofore starting in the race week this year. Horace E. Boucher, for the past few years chairman of the regatta committee of the Atlantic Y. C., is now holding a similar position at the Larchmont Y. C. It is the intention to awaken interest among Long Island Sound sailors, in the Gravesend Bay fixture and secure as many entries for the Atlantic race week as possible. In return, Dr. De Mund and his associates have guaranteed an unusually large number of lower bay boats for the big race week of the Larchmont club. In this manner the two most important sections of New York yachting will be brought together far better than in former years.

The most important feature of the Atlantic fixture will be the race for the Thompson trophy for Class Q boats. This trophy has been up for competition for several years and has done much to help the sport of yachting. As in former years, the Crescent Athletic Club will hold its Lipton cup series during the race week of the Sea Gate tars. The trophy is for Class S yachts. Already several new boats have been built for this division. The racing schedule for the summer follows: Saturday, May 27, opening regatta for all classes; Saturday, June 10, opening regatta for Class M and below; Saturday, July 1, open regatta for Class M and below; Saturday, July 29, open regatta for Class M and below; Saturday, Aug. 19, open regatta for Class M and below; Tuesday, Aug. 22, race week for all classes; Wednesday, Aug. 23, race week for all classes; Thursday, Aug. 24, race week for all classes; Monday, Sept. 4, annual regatta for all classes; Saturday, Sept. 16, open regatta for Class M and below.

According to the announcement made by the regatta committee of the Larchmont Y. C., the annual race week of the organization, the most important yachting fixture in Metropolitan waters, will start on Saturday, July 15, and continue over Saturday, July 22, giving the tars six days of racing. Series races for yachts of all the recognized classes will occupy the attention of the Corinthians on every day of the week with the exception of Tuesday, July 18. That day has been set aside for water sports and rowing. Unlike former years, the regatta committee has made no arrangements for motor boat contests.

During the winter, the Larchmont Y. C. joined the Yacht Racing Association of Long Island Sound. The move was made in accordance with plans drawn up by Leonard Richards, Commodore of the organization, and Horace E. Boucher, A. R. Schmidt and Butler Whiting, its regatta committee. The present officers believe in open races, and as a result a most attractive schedule has been arranged for the summer. The season will open with the annual spring regatta on Saturday, June 17. The race is open to all classes of schooners, sloops and yawls.

The next open race is the 32d annual regatta of the organization, which will be sailed on July 4. During the race, there will be sailed a contest for the famous Colt cup. The trophy is open for competition among yachts of Class B. Race week is the next feature that will occupy the attention of the Larchmont tars and then things will be quiet at the big Sound club until Labor Day, when there will be sailed the annual fall regatta of the organization. It also is an open race.

Although the regatta committee has arranged an interesting program of open fixtures, the members of the organization, who own boats of the Larchmont inter-club class, have not been forgotten, and three races are scheduled that should furnish the best of sport. The first contest will be sailed on Saturday, June 24, the next is scheduled to be decided on Saturday, Sept. 2, and the last of the series will take place on Saturday, Sept. 16. In addition to the races scheduled, there is a strong possibility of the big schooners sailing a special regatta under the auspices of the Larchmont Y. C. late in the season.

Race week, of course, is the most important feature of the program. This fixture without doubt is the most important yachting series held in the country. Unfortunately, this year, the big single-stickers of Class K are not going into commission, so the largest sloops expected at Larchmont are the yachts of Class L. The schooner class, however, is unusually fine this year, and these boats will more than make up for the loss of Winsome, Aurora and Istalena.

While the larger classes will be missing, indications point to the smaller divisions filling in a surprising manner. The regatta committee already is in communication with many clubs that have one-designed classes that heretofore have not raced at Larchmont, and answers indicate that the record for starters will be broken this year. Gravesend Bay will send practically its entire racing fleet to Larchmont, and in addition, the Red Bank Y. C. will be represented by its one-design class of 30-footers.

The schedule for the year is as follows: Saturday, June 17, spring regatta open to all classes; Saturday, June 24, race for Larchmont inter-club class; Tuesday, July 4, 32d annual regatta; Saturday, July 15, race week, open regatta for all classes; Monday, July 17, race week, series races; Tuesday, July 18, race week, water sports; Wednesday, July 19, race week, open regatta for all classes; Thursday, July 20, race week, series races; Friday, July 21, race week, series races; Saturday, July 22, race week, open regatta; Saturday, Sept. 2, race for Larchmont inter-club class; Monday, Sept. 4, annual fall regatta; Saturday, Sept. 16, race for Larchmont inter-club clas.

Put-In-Bay Programme.

THE secretary of the Interlake Yachting Association has issued a tentative program for the eighteenth annual regatta to be held at Put-in-Bay the week of July 16. On that day the yachts of the twenty affiliated clubs are due to assemble at the historic anchorage, although not all of them are expected until Monday noon. On Monday afternoon there will be a program of other sports and a band concert. The annual smoker and vaudeville takes place Monday evening at the Hotel Commodore.

The racing starts Tuesday morning at 8:30, when the first class of sail yachts, probably the 21-foot class, will be sent away, followed at five minute intervals by Class R, the veteran cruisers, 18-footers, 16-footers, veteran cruisers, 14-footers and catboats. The course is a nine-mile triangle for all but the 14-footers and catboats, these two classes sailing over a short course of four and one-half miles. In the afternoon at 2 o'clock the big speed boat races take place. These consist of scratch races for 26, 32 and 40-footers, and will be one of the racing features of the week.

Wednesday is entertainment day, although the sail yachts will have their usual races in the morning. The afternoon is devoted to the squadron sail, and inspection of the fleet by Commodore Winton and staff. In the evening the boats will be illuminated and there will be a reception aboard the new flagship, LaBelle, together with a band concert and general entertainment aboard all the assembled yachts.

On Thursday the other sports committee will hold forth in the morning with swimming, canoe and dinghy races and other aquatic diversions. In the afternoon the power boats will race. The big feature of this day will be the scratch events for the cruiser classes. The annual ball will be held in the evening at the Colonial pavilion.

The last day of the regatta is given over to sail yacht racees in the morning, the power boat races in the afternoon, and distribution of prizes and entertainment, which closes the regatta Friday evening. The annual program which is being prepared by the committee, of which Charles W. Mears, of Cleevland, is chairman, is to be issued this year a month before the regatta opens, and will contain, besides the program, racing rules and other information incident to the regatta, a complete history of the association since its inception in 1894.

Yachting on the Pacific.

BERKELEY, Cal., May 10.—*Editor Forest and Stream:* The yachting season opened on San Francisco Bay on April 31, and most of the clubs held cruises. The Corinthian fleet left its moorings at Tiburon early in the day and sailed to Sausalito where it maneuvered in front of the club house of the San Francisco Y. C. and exchanged salutes with that club. Following this the fleet sailed for Fort Point and later cruised along the San Francisco water front, attracting a great deal of attention. The return to Tiburon was made through Racoon Straits. The followings were the yachts that made the opening cruise of the season: Meteor, Commodore W. J. Hogg; Mischief, Vice-Commodore Ed. Convey; Yankee, C. E. Miller; Olga, J. E. Praig; Gypsie, C. D. Gresham; Magie, G. Kane; Presto, W. F. Stone; Vega, Carl Tornberg; Discovery, J. E. McFarlane; Mignon, G. V. Biber; Starlight, M. J. Ballard; Æolus, H. P. Dimond; Fulton G., Louis R. Holm; Alert, T. M. Kendall; Harpoon, H. E. Picker; Helen, Fred. Muhlner; Freda, T. F. Tracy, and Kathleen, F. C. Raymond.

The San Francisco Y. C. fleet remained at the Sausalito anchorage until after the Corinthian yachts passed in review, and salutes had been exchanged and then sailed to Presidio buoy and along the water front. Alcatraz and Angel Islands were encircled and the fleet then passed the Corinthian headquarters. The yachts of this club under sail were: Annie, Commodore Emmett Rixford; Seafarer, Vice-Commodore L. A. Norris; White Heather, C. P. Carruthers; Neva, J. F. Campbell; Surprise, G. W. Thomas; Amigo, J. F. Lanagan; Aggie, J. V. Coleman; Fleur de Lis, C. McCarthy; Caprice, A. M. Brown; Monsoon, F. G. Phillips; Mary, E. A. Clav; Challenger, W. G. Morrow, and Martha, J. R. Hanify.

The class flag regatta of the California Y. C., which was to have been held May 7, has been postponed until May 21, as a number of boats are not yet in commission. GOLDEN GATE.

A Roomy Small Houseboat.

A NEAT little house boat has been designed by W. Edgar John, of the Standard Marine Construction Company, of Philadelphia. The dimensions of this boat are: Length, 34 feet; length of house, 26 feet; breadth of hull, 14 feet; breadth of outside of runners, 18 feet; depth of hull, 3 feet.

The plans show the large accommodation which may be obtained on a boat of this type, and as a quiet way to spend a summer for those who have not the time to maintain a yacht a house boat would be hard to beat. The boat will comfortably sleep five persons. The top of the craft which is covered by a substantial awning, forms a very spacious place for lounging.

The boat is heavily built, with 3-inch yellow pine sides and two-inch bottom. The deck and side runners are of 1½-inch yellow pine, with 2 by 4 inch spruce floor beams, plate and studs. The bottom is fastened to 4 by 6 inch fore-and-aft stringers, with 5-inch galvanized spikes, while the sides are fastened to the upright studs with ⅜-inch galvanized rivets 8 inches long.

There are four windows on each side of the craft with diamond-shape panes of glass, which add largely to the exterior appearance of the boat. The headroom of the craft is 6 feet 6 inches, and the floor is raised 18 inches from the bottom of the boat. The interior finish of the craft is in green and brown burlap, with galley finished bright. Everything has been provided to make the boat habitable, and she is a good example of the box or scow type of house boat. While these boats, of course, are most efficient in smooth water, they will stand considerable sea without being too uncomfortable. The hull is equipped with chain plates, from which a chain bridle is fitted, to which is attached a mooring at the end of 150 feet of ⅜-inch galvanized chain.

Relics of the Clipper Maria.

Dayton, O., May 12.—*Editor Forest and Stream:* A recent article in the New York Times with reference to the famous old clipper Maria stated that she disappeared mysteriously in 1869 and no one to this day knows what became of her. If that is the case, I can throw at least some light on her mysterious disappearance, and also it might be of interest to know that her signal gun has been in my grandfather's, my father's and my own possession since taken off the Maria in 1870 and is now guarding my back yard.

My grandfather, Capt. Chas. S. Barkelew, known to many people who used the Hoboken ferries between 1875 and 1890 as "Capt. Barkelew," was in Commodore Robert L. Stevens' employ practically all his life and sailed the Maria for him for many years. In 1870, in partnership with my father, he purchased the Maria and she was entirely refitted with a different rigging, intending to charter her out for commercial purposes. It was at this time that the cannon was taken off and all the other fittings sold, but the cannon was stored in Hoboken until 1885. Maria made several successful cruises, but in 1874 she was chartered to go to Cuba, I believe, but never returned. My grandfather's belief always was that the crew threw the captain overboard and stole the boat. She was afterward positively identified in France on account of her peculiar lines and upon examination the steps where her original masts had stood were found, they not having been removed when her rigging was changed. At this time, 1870, my grandfather went to France after her, but by bribing the consul at the port where she was being held, she was allowed to get away before his arrival, and although heard of a couple of times afterward, there was no money left to go after her with. The cannon, ramrod and a few primers are all that is left of Maria.

Chas. S. Barkelew.

New Yacht for Southern Y. C. Fleet.

New Orleans, May 12.—*Editor Forest and Stream:* J. F. del Corrall, a member of the Southern Y. C., has just received a splendid new sailing boat and will enter it in the regattas this summer. The craft was built at Marblehead, Mass. The boat is 32-feet over all and has a draft of 3 feet and 6 inches. The boat was shipped here by rail from Boston. It is expected that this new craft will give the speedy Sinner a close race this summer. The regatta committee of the S. Y. C. is arranging the program for the summer, and will announce it soon.

Yacht Sales.

The Hollis Burgess Yacht Agency has sold the racing 25-foot sloop Tiger, owned by Chas. Platt, Jr., of Philadelphia, to George Carroll, of Boston, who will race her in class A, Interclub Association of Massachusetts, the coming season.

The same agency has sold the 37-foot gasolene launch Uncas II., owned by Mrs. E. H. Spaulding, of New York, to Richard Pope, of Waltham, Mass., who will use her in Boston waters.

Catboat for T. C. Hudson.

Theodore C. Hudson, former owner of the catboat Alice, has closed a contract with the Narragansett Bay Yacht Yard for the building of a 21-foot catboat. She will be designed and built at the Riverside shops, and while not intended primarily for racing she will comply with all the restrictions of the Inter-bay Cabin Catboat Association.

The new boat will have a 20-foot waterline, 9 feet 6 inches beam and 26 inches greatest draft. She will be a sturdy little cruiser with excellent accommodations for two people. The cabin will be finished in butternut, oak and mahogany, with bright deck. The contract calls for delivery July 1, and it is thought that Mr. Hudson will put her in some of the races in Class E as soon as she has been tried out.

Marblehead Racer for S. Cochrane.

Among the smaller craft at present under construction at the yards of the Luders Marine Construction Company, is a 36-footer recently ordered by Vice-Commodore Samuel Cochrane. Mr. Cochrane last year won the classic Bermuda race with his Eronel. The new boat will be entered in the Marblehead race and with the reliable and powerful Craig engine that is being installed should prove a worthy contender. The boat is of the raised deck type, with self-bailing cockpit aft, then an engine room with a companionway on the side to a lobby which divides the saloon from the motor room. The galley is forward. Ample sleeping accommodation is for four. Gasolene is to be carried in steel tanks in the cockpit, where it will be accessible and safe.

A 25-foot runabout is being built for Walter Freystedt, of New York City, for use on Lake Hopatcong. This model is a rather unique departure from the usually accepted speed boat hull. It has been devised by this firm after considerable thought, and is essentially a straight keel skipjack with a concave bottom. The crew and engine are located well aft of amidships, and with the fairly light construction that is being used and a 50-horsepower motor a good turn of speed is looked for.

A 32-footer for Albert Chesebrough will be launched within the next few days. This boat, Eltovar, powered with a 100-horsepower Sterling engine, is guaranteed to make 30 statute miles per hour.

Pawtucket Motor B. C. House.

The Pawtucket Motor B. C. is having built a novel club house, which is to be moored on the east shore of the Seekonk River. It is a big houseboat built on a coal barge, and when the house is finished it will give very comfortable quarters and can be moved at will. It is not expected that it will have to be moved though, and is to be allowed to settle comfortably in the mud. Motor boating has grown immensely at Pawtucket, and recently a club was formed and an indefatigable committee has found a site for the home and a house for the members.

While seeking for a new location for a building the members of the committee stumbled upon the old houseboat then lying on the East Providence shore, and after inspecting it, they conceived the idea of transforming it into a club house. The old structure was built upon a great barge, formerly owned by the Pennsylvania Railroad Company, and was used as a boarding house for laborers employed upon the East Side tunnel.

It is about 130 feet long by 30 feet wide. The first floor contained a lounging room, kitchen, dining room and a small office. The second floor is split up into about thirty sleeping apartments. The timbers had become water-soaked from their long contact with the water and mud. It had practically outlived its usefulness as a boarding house, for the hull required extensive repairs before it could be made watertight.

It was not suitable for a club house until many alterations were made. But the price for which it could be purchased made the proposition an attractive one, and as the club included within its membership skilled workers in the various branches, it was believed that the alterations could be made at a somparatively slight expense.

After the report and recommendations of the iommittee had been rereived members expressed a willingness to aid in the work. The old houseboat was purchased and plans were made for transforming it into temporary headquarters until the desired location for a permanent club house may be procured. Permission to anchor the houseboat near Cottrell's whart on the east shore of the river, within a few minutes' walk of the center of the city, was obtained, and after calking the seams in the hull the old craft was hauled up the stream one Saturday afternoon by a small fleet of oyster boats. It was warped into its position close to the shore just above the home of the Pawtucket Y. C.

The water-soaked hull forms an ideal foundation, that brings the floor of the superstructure on a level with the top of the retaining wall of the bank of the river. According to plans now formulated, practically all partitions will be ripped out of the interior of the structure. A complete set of new rooms has been designed, all of which will be sheathed up and suitably stained and painted.

A considerable part of the first floor will be devoted to a general club room or meeting hall. Adjoining this will be a smoking or card room, a dining room and back of these, on the city

end of the house will be the kitchen. Other rooms will be added from time to tome as the demand for them appears.

It is also planned to remove all windows and doors, which will be replaced by large bays and modern entrances. These will open upon a wide veranda which will extend around two sides of the building on the river side. This porch will extend upward from the floor of the hull to the top of the house, where the roof will be a continuation of the roof of the building. The covering of the porch will be supported by large columns.

The eaves of the roof on the other two sides of the building will be carried out at least two feet to take away the box-like appearance which the superstructure now has. The work of remodelling the old houseboat into a modern club house will be done gradually. The room for holding meetings of the club will be finished at once, but the rest of the plans will be carried out gradually during the spare hours of the members. In this way alterations which under other circumstances would be prohibitive because of the cost may be made at little expense.

The officers of the club are: Commodore, J. C. Whitman; Vice-Commodore, Euclide Herbert; Rear-Commodore, Joseph Tierney; Treasurer, W. O. Whipple; Secretary, Martin Hanley.

Conditions of Marblehead Race.

Conditions for the long distance cruising race from Huntington, L. I., to Marblehead, Mass., were announced yesterday by the Motor Boat Club of America, which will be in full charge of the event. It will be started from a line off the Chateau des Beaux Arts, and the finish will be at Marblehead, the exact finishing mark to be selected later.

The race is for cruising boats of not less than 30 feet over all, not exceeding in the greatest length 40 feet on deck and with a water line breadth of not less than one-fifth of the waterline length. The conditions interpret a cruising boat as one built and used for cruising with a raised deck or trunk cabin house and self-bailing cockpit. The cabin must contain sleeping, toilet, cooking and general living accommodations for crew.

Each boat must carry an optional amount of fuel in fixed tanks permanently piped and connected, together with a tender at least 10 feet long or a life raft, two anchors and all fittings required by the Federal regulations.

The rating and allowance will be calculated under the 1911 rules of the American Power Boat Association, of which the Motor Club of America is a member. The course will be figured as 240 nautical miles. The first, second and third prizes have been presented by the Motor Boat Club of America, the second prize to be awarded if four or more boats start and the third prize if seven make the start. A souvenir prize will be given to each yacht that finishes the course.

Boats must report to the Race Committee at Huntington for final inspection six hours before the start of the contest. Application for entry blanks and information should be made to F. N. Morley, Secretary of the Motor Boat Club of America, No. 37 Wall street, New York city.

The race will be started at 4 o'clock P. M., Friday, July 14.

Time trials for speed boats over a measured mile will be one of the principal events to be held during the National Motor Boat Carnival on Huntington Bay, under the management of the Motor Boat Club of America, beginning on Labor Day, Monday, Sept. 4. With the building of six boats for the elimination trial races to select a team of three American defenders for the British International trophy for motor boats, it is expected that one of the vessels will be able to make a new American and probably a world's record for the mile.

During the last New York motor boat show Mr. W. H. Fauber, inventor of the Fauber hydroplane, expressed the opinion that this year would see a record of a mile a minute established for motor boats, and that one or more of the American defenders now building probably would show such phenomenal speed.

Motor Boating at Pittsburg.

Motor boating in the United States has grown almost as phenomenally as automobiling, in view of the more restricted field for operations of the former. Nearly $7,500,000 capital is invested in the motor boat industry, and over 25,000 persons are employed in the building of boats, motors and accessories, according to the Pittsburg Dispatch. Motor boat plants are multiplying every year, and there is now a national representative body known as the National Association of Engine and Boat Manufacturers.

Motor boat shows lasting a week or more are now an annual fixture in New York, Philadelphia, Buffalo, Detroit, Montreal, Indianapolis and a number of other cities, while this spring saw the first thing in this line in Pittsburg, when there was a motor boat exhibit in connection with the automobile show in Duquesne Garden. This was so successful that the dealers will make it an annual affair.

Motor boat owners are no longer satisfied with small craft, and in some cases in the East they are building 150-foot boats, costing over $60,000 without furnishings. Philadelphia is probably undergoing the greatest motor boat boom of any city, particularly along the line of hydroplanes. Some strange craft are being evolved from the development and combination of the hydroplane, the air-propelled hydroplane and the hydro-aeroplane.

Pittsburg boatmen do not fear the coming racing season, however, as there are a number of fast boats here and many new speeders are being launched this spring. There is but one motor boat building concern, but it reports the biggest season it ever experienced, six new boats having recently been turned out in one week.

As to local motor boating history, there were steam pleasure boats on our waters many years ago. These were followed by naphtha launches, which in turn gave way to the gasolene engine propulsion type. About the first of these was Etta, with a three-horsepower engine, owned by J. B. Strawbridge, of Kensington, in 1896. From that date the growth was gradual but continuous until the past four years, when it has boomed.

Among the pioneer power boatmen who are still active in the game, perhaps none have done more to foster the sport than Charles Painter, H. S. Budd and Charles W. Ireland. The first club of this nature was the Pittsburg Y. C., and this was succeeded by the Pittsburg Launch Club, which was organized March 17, 1907, with fifty members, and was chartered in 1909. It has given many regattas at its boathouse, in the Allegheny River at Sixth street. It is a member of the National Power Boat Association and has over twenty motor boats.

The Ellsworth Motor B. C., of the Northside, with quarters near the Sixteenth Street Bridge, has a number of motor boats, one of the fastest being the Dittman Brothers' speeder, Two Brothers. The Lawrenceville Y. C., but recently organized, with headquarters at Forty-third street, already has over a dozen launches, and more will quickly follow.

The McKeesport Launch Club, which has just moved into new quarters, is an exceptionally active factor in motor boating and has given a number of regattas. Among its prize winners are Fred Lloyd's Hist II. and Christ Marquis' Christie.

Grey Wolf, of West Elizabeth, won several Pittsburg races last year, and J. R. Hill's Lady Jane, of California, Pa., is another speedy boat. Keystone Girl, of Springdale, is an exceptionally fast racing boat, and another Springdale speeder is Clytie. Much is expected of Wild Cat, of Verona.

At Oakmont there are now over fifty motor boats. The earliest boat of the present type in that pool was Rohibu, in 1905, owned by H. H. Rowand, W. Hill and H. G. Budd, the name being coined from a combination of the owners' names. The second was J. T. Anderson's Anna Marie, followed by R. A. Lee's Isabell and John Nell's 30-foot boat. Pressley Anderson's Okmoboco, of Oakmont, is one of the fastest and

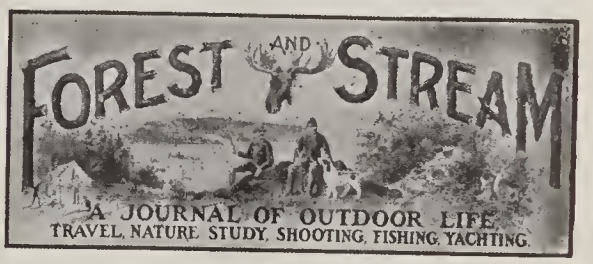
YACHT and BOAT SAILING
By the late Dixon Kemp
Tenth edition. Published 1904. We have a copy in fairly good condition, published at $12, which we will sell for $9.00.
FOREST AND STREAM PUBLISHING CO.



CORRESPONDENCE.
The Forest and Stream is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.
Subscriptions may begin at any time.
Terms: $3.00 per year; $1.50 for six months.
Canadian subscriptions, $4.00 a year; $2.00 for six months.
Foreign subscriptions, $4.50 a year; $2.25 for six months.
Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.
The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.
Inside pages, 20 cents per agate line ($2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line.
A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.
Transient advertisements must invariably be accompanied by the money or they will not be inserted.
Advertisements should be received by Saturday previous to the issue in which they are to be inserted.
Only advertisements of an approved character will be inserted.

FOREST AND STREAM PUB. CO.
127 Franklin St., New York.

best known of local speeders, and has won many races. Mr. Anderson will build a new racer with a six-cylinder engine, which is expected to show great speed. R. A. McCall, of Hulton is having a new hydroplane built, and half a dozen other speed boats are ordered at Oakmont, while Messrs, Snider and Barr and nearly a score of others will have new comfortable pleasure boats.

The largest and finest pleasure boats in Pittsburg waters are the two steam yachts, Mr. Rodgers' Troubadour, 97x13½ feet, and Mr. Painter's Wahneta, 82x8 feet. Of the gasolene-driven craft the largest is C. A. Van Dusen's boat, of the same name. It is a striking example of the comfort, convenience and even luxury to be had, and of the ingenious utilization of every inch of space, yet no crowding is apparent.

The boat is 54x10 feet over all and makes 16 miles an hour driven by a six-cylinder 100-horsepower aluminum engine. The forward cabin is 12 feet long, the engine room 10 feet, and the rear cabin 14 feet. Davits on the upper deck carry a small power launch. Electricity for lighting is manufactured on the boat, and it is perfectly equipped and adapted to extended cruising. On Dec. 28, 1910, Mr. Van Dusen, accompanied by his family, left Pittsburg, traveling down the Ohio and Mississippi rivers to Helena, Ark., where they spent some weeks hunting and fishing, returning home after a three months' trip. The C. A. Van Dusen cruised 4,000 miles on this trip, and it is said to be the only boat of its class which ever took such a long journey and returned under its own power.

The Van Dusen was accompanied by the Joe Scott, one of the two largest boats hereabouts, last summer, to Helena, where it was sold by Mr. Scott and will no more be seen in Pittsburg waters.

As to the fastest local boat, there is much diversity of opinion, but M. N. Vrydaugh's Rowena appears to have the best claim. It not only vanquished all local rivals, but proved faster than the Brer Fox II., the Cincinnati champion of the Ohio River.

Perhaps no local boat has won more races than R. C. Price's Sprinter, although Rowena and other newer boats are now crowding it out of first place. The Sprinter was built at Price's own boat works, is 30x3½ feet, and with a four-cycle 24-horsepower engine, covers a mile in 2½m., or at the rate of 24 miles per hour. Mr. Graff's Sport, a boat 30x4 feet, with a 60-horsepower engine, has shown a speed of 26½ miles an hour.

Other winners of races in past years are F. N. Murray's Sago, J. P. Kesler's Charlotte, the Gazelle, Tranter, Hornet, Fox I., Fox II., Hist I., Hist II., M. J. Gannon's Ellen S. K. M. Probst's Katy-Did is one of the well-known older boats.

A prominent boatman asserts that Pittsburg has one of the finest waterways of any inland city in the country with its three slackwater rivers, and it is to be hoped that time will soon come when our city can equal the immense motor boat regattas held by much smaller cities, such as Peoria, Ill., and Dubuque, Ia. Some owners contend that prizes for this branch of sport should be more valuable owing to the great initial investment for a racing launch and the expense and labor required in preparation for a race.

To Define Mufflers.

Commodore H. H. Melville, of the Motor Boat Club of America, has written Mr. W. A. Jupp, secretary of the Royal Motor Y. C., asking for an official interpretation of the rule relating to the muffling of engines in boats competing for the British International trophy. The American yachtsmen heretofore have been under the impression that the rules require that the engine or engines shall be effectually silenced, but in order to eliminate all doubt Commodore Melville is desirous of having the Royal Motor Y. C. pass on the question.

Sparks.

The 45-foot cruising motor boat, building for Loren P. Bradley at the Stamford Motor Company's works, is from designs by Morris M. Whitaker and not by Whittelsey & Whittelsey, as was stated. Mr. Bradley is a member of the New Rochelle Y. C. The yacht, which is to be named Mollie, is of the raised deck type and is to be fitted with a 4-cycle, 4-cylinder motor which will drive it 11½ miles an hour. The yacht is nearly finished.

Echo River, designed for scout service along the Ohio River and its tributaries, has just been put in commission. This boat was built by the United States Government and measures 40 feet over all. Echo River is a glass cabin cruiser and is equipped with a 60 horsepower T. & M. motor, which drives the boat from 16 to 18 miles per hour. The boat will be used by the Government for the inspection of interior waterways, particularly Green and Barren rivers, and has accommodations for four persons. Her final test was a trial trip of 399 miles to Mammoth Cave, Kentucky, and return, and the average speed was a little better than sixteen miles an hour with the surprisingly low gasolene consumption of only 62/100 gallons to the mile.

The Costa Rican Government coast guard boat Santa Rosa narrowly escaped becoming a total wreck on her last trip to Colorado Bar from Port Limon, Costa Rica. A huge wave threw her on a sand bar, and but for the experienced hand of her American skipper, Capt. Edward Case, she would have been battered to pieces in short order. Her engines never faltered, however, and Captain Case finally succeeded in backing off the bar and reaching port. Santa Rosa is equipped with two 36 horsepower Wolverine engines and has been in operation for over six years At the time of her delivery to the Costa Rican Government, she made the run under her own power from New York to Port Limon, and during the last stage of the trip was under way continuously for 150 hours without once stopping the engines.

A. H. Schmidt's new 50-foot Speedway motor yacht is ready for delivery. This boat will be used in the vicinity of Detroit.

Henry B. Joy's new 65-foot Speedway motor yacht is progressing rapidly.

Mrs. E. V. Z. Lane has ordered a 30-foot Speedway runabout for use on Saranac Lake.

The following steam yachts are having new Speedway yacht tenders built: Hiawatha, John B. Ford; Alicia, A. I. Dupont; Winchester, Peter W. Rouss; Kismet, F. S. Smithers; May, W. P. Bliss; Galatea, E. L. Ford, and the Zara, A. L. Stephens.

E. S. Woodward has ordered a 30-foot runabout for use at Ardsley-on-the-Hudson.

W.V. Kelley, of Chicago, is having a 32-foot Speedway runabout built for use at East Hampton, L. I.

A. V. Waring is having a 65-foot twin-screw Speedway motor boat built for use on Moosehead Lake, Maine.

Canoeing.

Eastern Division A. C. A.

The annual camp of the Eastern Division will be held on Lake Quinsigamond, Worcester, Mass., May 27 to 30 inclusive. We have secured the use of Blake Island and Wapiti Island which are handy to the Tatassit Canoe Club, and we want to make this a camp where the canoe will be more in evidence than it has been in most of the camps.

We have the support of the famous Tatassit Canoe Club of Worcester and other clubs on the lake and it is our ambition to make this a record camp for attendance and good fellowship. In order to do this we must have the co-operation of every club and every member. There are lots of members of the Eastern Division who do not come to our camps and I wish every one would make it a point to come to this year's camp and stay the full time if possible and bring some interested fellows with them.

Worcester is central and easy to get to by steam and electric cars, and ought to be the largest camp we have had for a number of years.

There will be something doing all the time, and in variety enough to suit all tastes.

The transportation committee chairman is John E. Bradley, Tatassit Canoe Club, Worcester, Mass. Take steam trains or electric cars to Worcester, Mass., and then take electric cars marked Lake Shore and get off at the Tatassit Canoe Club, where a launch will be in waiting. Mark all shipments of canoes, duffle, etc., as follows: "A. C. A. Camp, Worcester, Mass., care of John E. Bradley, Tatassit Canoe Club."

The camp being located on islands will make it more necessary than usual to use canoes in order to go and come at will, and it is the wish of your vice-commodore that the members will use their canoes as much as possible. The regular steamers on the lake will stop at the islands, and there will be a launch connected with the camp. Canoes may be hired at the lake, but it is hoped that members will send up their own canoes and outfits as far as possible, and make this a real canoe camp in practice as well as in name.

Tuesday will be the regular race day for the Eastern Division canoe championships and the list is as follows: War canoe; single, single blade; single, double blade; club four, single blade; club four, double blade; tandem, double blade; tandem, single blade. It is also intended to run an open sailing canoe race Sunday if enough canoes are entered to make an interesting race.

Hackensack Cruise.

The Hudson River cruisers, who started from Hermit Point at 10 A. M. May 7, to-day arrived at Nyack at 3 o'clock rather the worse for wear. The canoes and duffle were immediately carted to West Nyack and stored in a barn preparatory to making the run down the Hackensack River on May 13 and 14.

Seventeen men slept at Hermit Point over Saturday night, and were rudely awakened by some misguided enthusiast in time to greet the rising sun. At 10 o'clock the vice-commodore gave the word, and the start was made with the usual bustle and enthusiasm.

Near Alpine the state barge of Mayor Hopkins was observed, and his son forcibly captured to complete a crew. A stop was made at the lime kiln for lunch, and after a good rest, the trip was resumed. At Piermont dock a short rest was taken to enable the overheated men to take a swim, after which the final stretch to Nyack was leisurely taken.

Perfect weather made the trip most enjoyable, and those men who had shipped their canoes by freight, fearing head winds, were universally pitied.

The following men made the trip: V. C. Tims, E. V. Walker, A. and F. Von Dohln, D. Finn, J. Marshall, Frank and Fred Baldwin, T. Zuk, "Van" Hopkins, J. Molnar, A. and H. Berning, S. Holmgren, Baker, E. Kelly and H. Noah. Harry F. Noah, Purser.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—Jas. M. Castle, 8820 Germantown avenue, Chestnut Hill, Philadelphia, Pa., and Lewis Rushton, 324 West Duval street, Germantown, Philadelphia, Pa., both by Walter G. Sibley.

Central Division.—Raymond A. Duke, 1118 Wallace street, Wilkinsburg, Pa., by H. D. James.

NEW MEMBERS ELECTED.

Atlantic Division.—6217, C. E. Lakeman, 49 St. Nicholas Terrace, New York, N. Y.

REMINGTON UMC
TRADE MARK

SOUTHERN HANDICAP

Another Link in the Unbroken
Chain of Victories for

Remington-UMC Steel Lined Shot Shells

W. F. Laslie wins the Southern Handicap from 17 yards, shooting *Remington-UMC*.
J. Graham, Amateur High Average, 94.16%, shooting *Remington-UMC*.
This credits Mr. Graham with one win of the Columbus, Ga., Cup.
W. F. Hall, second, 92.16%, shooting *Remington-UMC*.
J. S. Young, third, 91.33%, shooting *Remington-UMC*.
J. H. Noel, fourth, 91.16%, shooting *Remington-UMC*.

W. H. Heer wins highest average of all targets shot at, breaking 568 x 600—98%, shooting *Remington-UMC*.
W. F. Hall wins the Bufort Hotel Cup for amateur doubles, breaking 87 x 100, shooting *Remington-UMC*.
W. H. Heer makes the longest professional run of 143, shooting *Remington-UMC*.
W. F. Hall makes the longest amateur run of 140, shooting *Remington-UMC*.

This sweeping victory for Remington-UMC starts another winning season for the shells that have won every Interstate Handicap for two years straight.

Remington-UMC — the perfect shooting combination.

Oct. 25-26.—Kansas City, Mo.—Big Four League's tournament. Dave Elliott, Sec'y.
Nov. 28-29.—Rising Sun (Md.) G. C. H. L. Worthington, Vice-Pres.

DRIVERS AND TWISTERS.

The date of the Spencer Gun Club's registered tournament, scheduled to be held on their grounds, at Spencer, Iowa, on June 14, 15 and 16, has been changed to June 28, 29 and 30.

The Analostan Gun Club, of Washington, will give an afternoon shoot on Decoration Day at 100 targets, included in which will be a merchandise event at 25 targets. There will be three classes—A, B, and C. Miles Taylor is the Secretary.

Secretary L. H. Schortemeier writes: "The Bergen Beach Gun Club will hold a holiday shoot on Decoration Day, Tuesday, May 30, beginning at 11 A. M. The regular June contest will be postponed from June 13 to later in the month (of which due notice will be given) on account of the New York State Sportsmen's Association tournament taking place on the same day at Syracuse."

Secretary-Treasurer Elmer E. Shaner makes official announcement as follows: "Pittsburg, Pa., May 13.—In accordance with a resolution adopted at the last annual meeting of the Interstate Association, I beg to advise you, that Mr. W. T. Laslie, of Tuskegee, Ala., was the winner of the sixth Southern Handicap, held at Charlotte, N. C., May 11. Mr. Laslie used a Daly gun, Remington Arms-Union Metallic Cartridge Co. shells and Du Pont powder."

Captain Charles G. Blandford sends notice as follows: "Open shoot of the Ossining Gun Club on Decoration Day, Tuesday, May 30, shooting to commence at 1 P. M. There will be five events at 20 targets, entrance 40 cents each; optional sweeps, $1. Class shooting, 40, 30, 20, 10 per cent. Distance handicaps, 16, 18 and 20yds. Targets thrown 45yds. Those entering in the optionals will be eligible for eight handsome prizes that are donated for high scores in the 100 targets; ties draw lots for choice. A cup will be given the shooter making high score who enters for targets only. Professionals are cordially invited to shoot for targets only. Shells for sale. No postponement on account of rain. Trolley direct to grounds, fare 5 cents. Two sets of traps will be used."

Westchester Country Club.

THE annual trapshooting championship of the Country Club of Westchester was run off on the club grounds on Saturday, May 13. Mr. Watson broke 182 out of 200, missing only three in his last 90. He was closely pressed for the honors by D. I. Bradley, whose total was only one point less than the winner's. F. A. Hodgman was third with 180, and Stuart Scott, champion in 1909, fourth. Scores:

R B Watson	182	H H Benkard	169
D J Bradley	181	E I Low	169
F A Hodgman	180	M V Lenane	167
Stuart Scott	177	J F Barnes, Jr.	165
F H Schauffler	175	J C Ayer	164
F Hall	175	G P Adee	163
R M Owen	173	G G McMurtry, Jr.	160
M L Herrick	172	G F Nicholas, Jr.	147
C W Billings	172	G P McAlpin	131

Shoot-off for fifth place won by F. Hall.

Chicago Gun Club.

CHICAGO, May 6.—This was a beautiful day, and the twenty-one shooters enjoyed the afternoon immensely. Most all of them put up fine scores.

May 7.—The second annual interstate team shoot and individual championship was held here to-day. The day was ideal for target shooting. Chicago Gun Club team No. 2 carried off the honors in the team race with a total score of 471 out of 500.

Individual honors went to H. Wehmhoefer, of Beecher, Ill., who made the fine score of 99 out of 100. A. H. Amman, the professional made a clean sweep by going through straight. Barto, Shaw, Thomas and Tom Graham each scored 96 out of 100. L. K. Cushing, of the South Shore team, broke 95.

WM. F. MERKLE, Supt.

Bergen Beach Gun Club.

OUR regular monthly contest took place on Tuesday, May 9, beginning at 1 o'clock. No special contests were scheduled for this day, but our enthusiastic member, Mr. Medler, sprung a little agreeable surprise by offering six prizes for competition in one of the old-style, gun-below-the-elbow contests. Three fine watch fobs were the first trophies, one for each class; the others went to the next high scores in rotation. Mr. Dannefelser added more prizes for the lowest scores, and both the event and the method of awarding the prizes created great interest, hilarity and some good-natured badinage. The interpretation of the old rule, gun-below-the-elbow, by each member participating, would have caused some 50 per cent. of the targets scored to be marked lost. Some of the boys had never shot these rules, and as the scores show, probably would not care to do so again. Owing to an early summer shower, the shoot went along rather sluggishly, compared to the vim and dash usually displayed at our contests. Conditions were good for perfect scores, and no less than four were made, one each by Kelly, Vanderveer, Medler and Suydam. John Hendrickson took the watch fob in Class A with a 22; Ad. Suydam in Class B with 20, and Westhall in Class C with 21, at 18, 17 and 16yds. rise respectively. John Martin took a pair of shooting glasses with 21. Schorty, a fishing tackle book with 20, and Kelly shot out Morgan, Nash and Jackson for a vacuum bottle. Bergen, Vanderveer, A. Kissam and Selg took the low prizes with 8, 7, 7, and 5 respectively. Scores as follows, the first event being the gun-below-the elbow shoot, with the distance handicap; all the rest were shot at from the 16yd. mark:

WINCHESTER

Shotguns and "Leader" Shells Score

98% for 400 Targets

And Outshoot a Big Field at Charlotte

J. R. TAYLOR

When a man breaks 393 out of 400 targets under the conditions prevailing at the Southern Handicap Tournament, it means skill plus a perfect shooting gun and load. J. R. Taylor, with a Winchester Repeating Shotgun and Winchester "Leader" Shells, made this great record at Charlotte, winning High Professional Average for the meet. Mr. Taylor's performance outshone all other shooting at this tournament and demonstrated once more that

THE HARDER THE TEST THE SURER A W VICTORY

The DuPont Gun Club.

WILMINGTON, Del., May 14.—A large number of prominent marksmen attended the weekly shoot on the grounds of the Du Pont Gun Club yesterday. A. B. Richardson, of Dover, son of Senator Richardson, one of the best-known shooters in Delaware, and former State champion, made a good score. He broke 23 out of 25. He is regaining his form, and it is expected, will soon challenge William M. Foord, of this city, for the amateur championship.

Edward Banks was high man, breaking 94 out of 100. Eugene du Pont broke 25 straight, and was the winner in Class A; S. G. Davis and W. Mathewson tied in Class B, each breaking 19 out of 25. The men in Class C, each breaking 16 out of 25, were: J. A. MacMullen, W. E. Husbands, S. Tuchton, I. Turner, W. A. Casey and C. C. Gerow.

The men in Class D, each having scores of 11 out of 25, were: F. Harkins, J. W. Anderson, Jr., Dr. Horace Betts and Dr. H. Patterson.

Lieut-Gov. John M. Mendinhall was one of the visiting shooters. State Senator Frank P. Ewing won a silver spoon offered to the visitor making the highest score. He broke 17 out of 25. A. E. Millington, of Toronto, made a score of 16 out of the same total.

The winners in the ties shot off from last Saturday were: Class B—W. A. Joslyn and Henry Winchester, each tied at 22. Class C—H. P. Carlon 17. Class D—S. G. Davis 17.

The complete scores of the day follow: C. C. Gerow 16 out of 25, George F. Lord 15, J. A. MacMullen 16, D. A. Grier 15, F. Megaw 13, Edward Banks 23, F. Mathewson 18, T. E. Doremus 22, F. Harkins 11, W. E. Husbands 16, Dr. H. H. Darlington 8, W. F. Jensen 10, S. G. Davis 19, J. J. Magahern 17, A. B. Richardson 23, S. Tuchton 16, J. B. McHugh 20, A. H. Lobb 17, H. M. Caldwell 4, H. Wilson 12, F. H. Pennington 12, F. P. Ewing 17, W. Mathewson 19, D. J. Dougherty 20, W. M. Hammond 15, J. M. Mendenhall 5, C. H. Niece 1, A. E. Millington 16, H. T. Reed 15, Wm. Wood 10, E. M. Hoopes, Jr., 13, J. W. Anderson, Jr., 11, T. W. Keithley 23, S. J. Newman 18, Dr. Stanley Steele 18, Clyde Leedem 15, C. D. Prickett 21, Dr. Bullock 7, Dr. H. Betts 11, J. C. Cannon 9, H. Masters 13, I. Turner 16, David Lindsay 18, H. P. Carlon 17, W. J. Siner 1, R. L. Conner 14, H. M. Gray 11, Thorpe Martin 13, W. A. Casey 16, S. B. Trott 11, W. B. Smith, Jr., 9, Dr. A. Patterson 11.

The Southern Handicap.

The Interstate Association's Sixth Southern Handicap tournament was held at Charlotte, N. C., May 9, 10 and 11, under the auspices of the Charlotte Gun Club.

Practice Day, Monday, May 8.

Seventy-five entries were received for the practice day events, the program calling for a total of 100 targets, four 15 and two 20 target events. The Weather Man was handing out a brand labeled "inclement," frequent showers during the afternoon, helped dry up the dust, but by no means dampening the ardor of the shooters blazing away at the elusive targets. With the drizzle came the wind, and made the targets irregular, causing them to do all manner of "dippy" stunts in their flight, and had the shooters guessing at times. Shooting started as advertised on the program, at 1 P. M., and although mere practice events, competition for the honor and accompanying glory was keen and spirited throughout. Fred Gilbert, displaying old-time form, led the field a merry clip, and landed the honors with a 99 scored to his credit, with Charles G. Spencer, another of the "post-graduates," a close second with but one less break scored than the leader, while four, one amateur, (C. C. Bates, of Charlotte, N. C.), and a trio of "pros," Lester S. German, Fred G. Bills and H. D. Freeman, were tie on 97 broken targets, each for third honors. Of the amateurs, Harry W. Kahler, of Philadelphia; Charles Nuchols, of Charlotte, N. C., and R. L. Spotts, of New York city, tied for the second honors, each of the trio smashing 96 targets out of their respective 100, with C. G. Wescot, of Leesburg, Fla.; J. S. Young, of Chicago, Ill., and E. R. Alexander, of Tuskegee, Ala., tie for third high amateur honors, each scoring a 94 out of their respective quotas.

The totals of practice day follow, four 15 and two 20 target events; total 100 targets:

J E Crayton	91	G T Newman	74

First Day, Tuesday, May 9.

Promptly at 9 A. M., Manager Shaner, after a short talk regarding the rules governing the Interstate Association tournaments, started the twenty-one squads off on their journey down the firing line, and the sixth annual Southern Handicap was on. The weather was ideal, a summer-like day, and very favorable to high scores; but it was not long before the wind from the west began to hold the targets down and had quite a few guessing as to where they were shooting, as at times the targets were very flunkey. A light shower at noon did not stop shooting, but with it came more wind, and at intervals these puffs from the west would cause the targets to do all manner of stunts, and shooting was anything but easy. A short intermission was announced at noon for luncheon and was appreciated by the shooters. The opening day's program called for ten events at 15 targets each, a total of 150 targets, and a battle royal was on for the coveted high average honors for the day, five tying on 146 breaks each for first honors, namely, J. S. Young, the Chicago amateur, with John R. Taylor, H. D. Freeman, William S. Heer and Charles A. Young. Jay R. Graham, of Chicago, a well-known amateur, finished a good second with one less break scored, or a total breakage for Graham of 145. Fred G. Bills, Lester S. German, Homer Clark, Charles G. Spencer, J. S. Day, Fred Gilbert, Walter Huff, all tied on 144 breaks for third honors. Of the amateurs, J. S. Young and Jay R. Graham finished first and second, with Charles Nuchols, of Charlotte, N. C., third, and W. T. Laslie, of Tuskegee, Ala., finishing third and fourth with 143 and 142 breaks scored respectively. The special double target event at 25 pairs was shot after the regular events were finished, and had a large entry. Despite the high wind, which made double target shooting difficult, Lee Moody, from Bessemer, Ala., surprised the crowd by carrying off the honors with 45 broken out of his 50 targets, Lester German, the professional, finishing second, and Fred Gilbert, also a professional, third with 44 and 43 broken targets scored, respectively.

The scores of the first day follow:

J E Crayton	134	H Clark	144
J T Skelley	141	J H Dreher	138

Second Day, Wednesday, May 10.

To-day the Weather Man was on his good behavior, and was demonstrating a brand "summer-like" that met with the hearty approval of the devotees of the target shooting game in attendance at the second day show of the sixth annual Southern Handicap. Old Sol certainly did make it hot, and with ideal weather favoring the shooters, high scores resulted. One hundred and three entered the second day's program events, which was keenly contested from the start at 9 A. M. until the last shot was fired, about 3:25 P. M., and a grand race was on during that time for the day's high average honors.

J. R. Graham, of Chicago, Ill., one of America's leading amateurs, got busy early in to-day's shooting and smashed targets one after the other with great precision, no matter what direction, they all looked alike, and after smashing 134 straight, fell down on a right-quartering target that spoiled a prospective long run. On looking over the files of scores, it was found that a run of six straight remained over in the first day's scores, which made Graham's run 140 straight, which wins for the Chicago amateur another Du Pont long run medal. Graham finished his quota of 150 targets for the regular day's program with a total breakage of 149, tying J. R. Taylor, the professional, for the day's high average honors. H. D. Gibbs and W. H. Heer, both "pros," finished second and third with 148 and 147 targets scored respectively. Of the amateurs, Graham was high, with John Noel, of Nashville, Tenn., who was the winner of the 1909 Pacific Coast Handicap tie with C. G. Wescott, of Leesburg, Fla., both finishing their century and a half of targets with 144 breaks each scored, with W. F. Hall, of Waynesboro, Va., and Harry Kahler, of Philadelphia, tie on 143 breaks for third place. The special double target event had sixty-eight entries, and saying there was a hot race on for the honors would be putting it mildly, as it seemed the ideal weather conditions had the devotees of the target-smashing on edge, and some classy shooting resulted. The twenty-five pairs of targets had Fred Gilbert, the expert, leading the field with 49 broken, with Fred G. Bills, also a "pro," a close second, with but one less break scored to his credit, William Heer finishing third with 47 targets scored. Of the amateurs, W. F. Hall, of Waynesboro, Va., carried off the honors by smashing 46 targets, with Jay Graham, of Chicago, second with a 45 scored to his credit.

The scores of the second day follow:

J E Crayton	140	H Clark	144
J T Skelley	137	Dr H Dreher	138
C G Wescott	144	A B Winfield	131

Third Day, Thursday, May 11.

Ideal weather conditions again favored high scores for the third and last day of the sixth annual Southern Handicap to-day, and as the devotees of the shooting game in attendance were keyed up for the final effort, the Southern high scores ruled throughout the day's events, and competition was keen and spirited. A fluky wind at times during the day had the targets doing stunts in their flight, and caused some guessing. In the first part of the day's program, 100 targets, 16yds. rise, shot prior to starting the big feature event, W. F. Hall, of Waynesboro, Va., an amateur, tied German, Day and Spencer, paid experts, for the honors, each of the quartette smashing 99 out of their respective 100, with V. Cate, of Macon, Ga., and W. T .Laslie, of Tuskegee, Ala., amateurs, tie with Taylor, Freeman, Heikes, professionals, for the second honors, 98 breaks being scored to their respective credits. Jay Graham, of Chicago; E. A. Alexander, of Tuskegee, Ala., and Harry Kahler, of

Philadelphia, were tied for third place with one less break scored:

Southern Handicap.

The big event, the sixth annual Southern Handicap, had 100 entries, of whom one, W. T. Laslie, of Tuskegee, Ala., shooting from 19yds., outshot the classic field of both amateurs and professionals, Laslie breaking 94 out of his quota of 100 targets, while Harry Kahler, the Philadelphia amateur, at 21yds., with W. H. Cochran, of Bristol, Tenn., tied W. E. Carpenter, of Columbus, Ga., the latter two shooting from 16yds., the trio each scoring 93 breaks. H. S. Welles, at 21yds., was high professional, in the handicap, with 93 targets:

	Handicap.	Targets						Total.

W. T. Hall, of Waynesboro, Va., won the Hotel Buford trophy for the amateur scoring highest in the special double target events, 50 pairs of targets, Hall breaking 89 out of his century.

Of the professionals, Taylor was high gun in the 400 targets, 16yds., with a total of 393 breaks; Heer finished second, tying Freeman, each with 390, and German third with 389.

Of the amateurs, Jay Graham, of Chicago, was high with 391 broken targets, J. S. Young, of Chicago, finished second with 382, and Harry Kahler third with 379. J. R. Graham won a leg on the Columbus, Ga., cup, out of 600 targets, including singles, doubles and the handicap event, Graham leading the amateurs.

The handicap committee for the Southern Handicap was constituted as follows: D. A. Edwards, Union City, Tenn.; C. H. Waddell, Columbus, Ga.; Lee Moody, Bessemer, Ala.; C. C. Bates, Charlotte, N. C.; and W. R. Winfree, Lynchburg, Va.

The office force was composed of Messrs. Annette and Castleman, of the Du Pont Powder Company, and Mr. Jacob Martin, of Charlotte.

Four Ideal-Leggett traps were used, and they were kept in perfect condition by Mr. Charles A. North, of the Chamberlin Cartridge & Target Co., Cleveland, O. The traps worked to perfection, and gave Mr. North little or no trouble.

The Squier money-back special fund amounted to $910.80, of which sum $457.80 was used to pay back losses, leaving a surplus of $453. The surplus money was divided among the high gun amateurs as follows: J. R. Graham, $49.83; J. S. Young, $45.30; H. W. Kahler $40.77; W. F. Hall, J. H. Noel and C. G. Wescott, $34.73 each; V. Cate and Chas. Nuchols, $24.91; P. G. Hillman and R. L. Spotts, $20.38 each; W. T. Laslie, L. J. Leavy and W. R. Winfree, $13.59; J. H. Dreher, $9.06; E. R. Alexander, C. C. Bates, U. R. Brooks, Jr., J. A. Blunt, J. E. Crayton, W. H. Cochran, D. A. Edwards, T. H. Fox, W. M. Griffith, C. W. Hobbie, G. F. Heidt, Henry Jones, M. B. McKinnon, P. E. Osborne, T. G. Proctor and H. L. Winfree, $4.53 each.

TAR HEEL.

Audubon Gun Club.

BUFFALO, N. Y.—Fine weather and traps working in perfect order, combined to give the members of the Audubon Club a very enjoyable afternoon yesterday.

The main interest centered in what was the final shoot for the challenge trophy, held by George Fish, of Lyndonville. The secretary had sent out special invitations to all whom he thought might be able to stop Fish from winning in straight heats, and quite a few responded, but none could hold him. His shooting in this event, which began about two months ago, was something phenomenal, as he made his first win against a field of ten by breaking 48 out of 50. In the next shoot, Covert, the challenger, was beaten, 45 to 42. Then Talcott challenged, and they tied at 43, and in the shoot-off Fish won, 23 to 21. For the fourth shoot, Covert was again the challenger, and was again beaten by four birds. Fish broke 44. In the final yesterday, eleven men entered, and all were in pretty good shooting form, as the scores indicate. President Cox, being the high man in events Nos. 3 and 4, was the one to try conclusions with Fish, but to no avail, as he was beaten just as handily as the others, but by an exceptionally high score, Fish having broken 48 to Cox's 42.

The trophy now becomes the personal property of Mr. Fish, and will no doubt find a place in his cabinet.

President Cox was doing his best shooting prior to the special match, and broke 58 out of his first 60, also winning Class A Badge with a straight score, and beating out for the point W. H. Smith, who was also straight. Jack Reed won the Class B, but had to have all that he broke, as several in Class B were right behind him.

Charles Rogers, of Lockport, was again the winner of Class C, and if he keeps up his present gait will not only have a fair chance of beating out Dr. Burke, who has five wins, but will also graduate in Class A, as his shooting in the special match and handicap events shows.

C. F. Lambert and F. S. Wright each broke 19 from the 21yd. mark, and in the shoot-off, Wright won.

The committee in charge of the Decoration Day shoot will soon issue the program. An interesting shoot is bound to take place.

Northern Kentucky Gun Club.

THE live-bird shoot held on May 11 was the most successful event of the kind which the club has given this year. The day was very warm, until the latter part of the afternoon when a short, but severe rainstorm, with lightning, lowered the temperature to the comfort point. There were more than the usual number of screamers in the lot of pigeons, which, on the whole, was better than the average. A lot of pure white birds were trapped toward the close of the shoot, and nearly every one proved to be a sitter, but when they did start, some of them developed speed which took them safely away. The shoot was given for the purpose of selecting members of the team which will go up against the Pennsylvania cracks on the 15th. There were eleven men entered in the events, and several of them stayed until the supply of birds was exhausted. M. Johnson acted as referee and scorer. In the regular events, Dr. Gould was high with 19 out of 20, his 12th bird getting away. Koch and Schreck were second with 18 each. Koch and Walker killed all their birds in the second event, but each lost one dead out. Payne, Schreck and Gould also scored 9 birds, and shared in division of first money. Walker was not in shape to do his usual nice work, as he was suffering from an attack of rheumatism. When in physical trim, he is a hard one to beat. In the first miss-and-out, Payne and Fleischman had a battle royal. Six started in the race, but all dropped out except these two, Schreck staying with them until his tenth bird, one of the hardest propositions trapped during the afternoon, which fell dead just over the boundary. The other two kept it up until each had killed 13 birds, and the purse had a quarter left in it, when they decided to quit and toss for the money. Fleischman won. J. Payne and Schreck led the bunch, the former with 37 out of 40, and the latter with 36 out of 39, or 92 per cent. each. Koch also shot in good form, missing but 4 birds out of 32.

Practice, 5 birds:

Koch	11111—5	Schreck	22222—5
Osterfeldt	22111—5	Payne	02212—4

Eastlake Gun Club.

WILMINGTON, Del., May 11.—Seven men made perfect scores yesterday afternoon at the Eastlake Gun Club shoot, breaking all of the 25 birds shot at. A number of shooters were out for the sport. The scores made were:

Du Pont trophy, 25 targets: J. Spring, Jr., 25, W. Jones 25, W. Fincher 25, E. Potter 25, C. Haverback 25, H. Jones 25, H. Black 25, R. Gray 24, W. Gray 23, R. Coffin 19, K. Davis 18, L. Beaston 16.

Regular club shoot: R. Gray (shot at 25) broke 20, C. Haverback (25) 19, H. Black (25) 19, J. Spring, Jr. (40) 29, R. Coffin (25) 17, W. Gray (25) 17, K. Davis (25) 15, W. Jones (15) 9, D. Poffenberger (25) 13, F. Quigley (20) 12, E. Potter (15) 11, L. Beaston (20) 12, W. Fincher (20) 10, H. Jones (20) 8.

The club will hold an all-day shoot on Decoration Day. It will begin at 9:30 A. M. and continue all day.

The Grand American Handicap.

THE Interstate Association's Twelfth Grand American Handicap Tournament, the premier shooting event of trapdom, will be held at Columbus, O., on the grounds of the Columbus Gun Club, June 20 to 23, inclusive. The official program, just to hand, states:

The Grand American Handicap tournament has been so organized and perfected in every department that (besides being competitive) it has been a great school of instruction for club officers and members who desire to hold tournaments of their own in an up-to-date manner; consequently, the tournament has become so well known, and its prominence so generally conceded, that an extended introductory notice is unnecessary. However, we can assure our patrons that the twelfth annual event will, like its predecessors, be a success. The same standards followed in the past—the securing of the greatest benefit to the greatest number—will be adhered to. They have heretofore given satisfaction, and will undoubtedly do so in the future. As in the past nothing was left undone that could add to the pleasure and comfort of contestants who, year by year, attend the Grand American Handicap Tournament, so in the futule will the management work diligently for the same end to meet equally any new conditions that arise.

This year's tournament will be conducted on the same equitable lines as has characterized the previous tournaments. Each contestant will be the recipient of every attention and just consideration, consistent with the fairness that has always been a feature of the Interstate Association's events. The program, in the main, follows the policy adopted by the association in respect to its Grand American Handicap tournaments. The competition, however, has been broadened by the addition of a double target championship contest for amateurs and professionals. This will determine the question of individual excellence at double targets under scratch conditions and accepted auspices.

The selection of the Columbus Gun Club's grounds as the scene for the tournament calls for no special comment. The experience of 1908, when the Ninth Grand American Handicap tournament was held on these grounds, fully warranted their selection for the big event in 1911. There are ample accommodations for 500 contestants, should the weather prove stormy, and the appointments are the equal of those of any other trapshooting grounds. The experience gained by the Columbus Gun Club in handling the 1908 Grand American Handicap tournament has been put to good use, and it is fully expected that this year's tournament will run as smoothly as any of its predecessors.

CONDITIONS GOVERNING THE GRAND AMERICAN HANDICAP.

One hundred targets, unknown angles, handicaps 16 to 23yds., high guns—not class shooting. Five hundred dollars ($500) added to the purse. The number of moneys into which the purse will be divided will be determined by the number of entries.

Entrance money $10, the price of targets being included.

The winner of first money is guarantcel $1,000 or more. If first money falls below $1,000, the difference will be made good by the Interstate Association. In addition to first money the winner will receive a trophy, presented by the Interstate Association.

Regular entries must be made on or before Saturday, June 10, 1911, and must be accompanied by $5 forfeit. The remaining $5 must be paid before 5 P. M. Wednesday, June 21. Entries mailed in envelopes bearing postmarks dated June 10, will be accepted as regular entries.

Penalty entries may be made after Saturday, June 10, up to 5 P. M. Tuesday, June 20, by paying $15 entrance—targets included.

An entry is not transferable, and entrance money cannot be withdrawn after entry has been made.

All entries must be made on application blanks, and they will be received by Elmer E. Shaner, Secretary-Treasurer, the Interstate Association, 219 Coltart avenue, Pittsburg, Pa.

DIVISION OF MONEYS.

The purses in all events the first day will be divided according to the Rose system, ratio points 8, 5, 3, 2. High guns win—not class shooting.

The purses in the Preliminary Handicap, the Grand American Handicap, the National Amateur Championship, the National Professional Championship and the Double Target Championship will be divided according to the high gun system as follows:

1 to 10 entries, two moneys—60 and 40 per cent.

11 to 20 entries, four moneys—40, 30, 20 and 10 per cent.

21 to 30 entries, six moneys—30, 20, 15, 13, 12 and 10 per cent.

31 to 40 entries, eight moneys—25, 20, 15, 12, 10, 8, 5 and 5 per cent.

41 to 50 entries, ten moneys—22, 18, 14, 11, 10, 8, 5, 5, 4 and 3 per cent., and so on, two places being created for each additional ten entries or fraction thereof up to two hundred and fifty.

The committee on handicaps is constituted as follows: Frank G. Fuller, Mukwonago, Wis., Chairman; D. A. Edwards, Union City, Tenn.; G. V. Dering, Columbus, Wis.; C. H. Newcomb, Philadelphia, Pa.; Elmer E. Shaner, Pittsburg, Pa.

With the utmost confidence it is predicted that this committee will not fall below the estimate that has been placed upon it.

The committee will meet at Columbus, O., Saturday, June 17, but handicaps will not be announced until the next day.

THE PROGRAM.

Monday, June 19, practice day. Four events of 20 single targets each, and one event of 10 double targets, entrance $2 per event, at 9 A. M., and four events of 20 single targets each, and one event of 10 double targets, entrance $2 per event, at 1 P. M. Rose system 8, 5, 3, 2. Sweepstakes optional. Squads will not be divided into sections this day.

First day, June 20, Tuesday. Five events of 20 targets, $30 added to each, entrance $2 each. Open to amateurs only. Manufacturers' agents, paid representatives, etc, may shoot in the above events for "targets only."

Second day, June 21, Preliminary Handicap, open to amateurs only. One hundred single targets, $7 entrance—targets included, handicaps 16 to 23yds., high guns—not class shooting, $100 added to the purse. The handicaps contestants receive for the Grand American Handicap will govern in this event. The number of moneys into which the purse will be divided will be determined by the number of entries, as is fully explained above. The amateur contestant who makes the highest score will receive a trophy, presented by the Interstate Association.

If you want to take part in the Preliminary Handicap, you must make entry at the cashier's office, on the shooting grounds, before 5 P. M., Tuesday, June 20. Penalty entries will not be accepted. An entry is not transferable, and entrance money cannot be withdrawn after entry has been made.

Manufacturers' agents, paid representatives, etc., may shoot in the above event for "targets only."

Third day, June 22, Thursday, the Grand American Handicap, open to all. Conditions explained above.

Fourth day, June 23 Friday.—National Amateur Championship, open to amateurs only. Two hundred single targets, unknown angles, $20 entrance—targets included, 18yds. rise, high guns—not class shooting, $200 added to the purse. In addition to first money the winner will receive a trophy, presented by the Interstate Association.

National Professional Championship, open to professionals only. Two hundred single targets, unknown angles, $20 entrance—targets included, 18 yds. rise, high guns—not class shooting, $100 added to the purse. In addition to first money the winner will receive a trophy, presented by the Interstate Association.

Double Target Championship, open to all. Fifty double targets, $10 entrance—targets included, 16yds. rise, high guns—not class shooting, $100 added to the purse. In addition to first money the winner will receive a trophy, presented by the Interstate Association.

Shooting will commence at 9 A. M. sharp each day.

The Interstate Association trapshooting rules, as revised in 1909, will govern all points not otherwise provided for.

No guns larger than 12-gauge allowed. Weight of guns unlimited. Black powder barred. Targets will be thrown about 50yds. Price of targets (2 cents each) included in all entrances.

The Interstate Association reserves the right to refuse any entry.

The standard bore of the gun is No. 12, and in the handicap events all contestants will be handicapped on that basis. Contestants using guns of smaller bore must stand on the mark allotted to them.

The Interstate Association reserves the right to select two cartridges from each contestant (to test the same for proper loading), the selection to be made at any time when a contestant is at the firing point.

In case entries are so numerous that darkness or other cause prevents the finish of any events the same day they are commenced, the management reserves the authority to stop the shooting at any time it may deem it necessary. In this case, weather permitting, the shooting will begin, where left off, at 9 A. M. sharp the next day.

"Shooting names" will not be used at this tournament.

There will be no practice shooting allowed before the regular scheduled events are shot each day, nor will there be any preliminary events shot.

The Interstate Association Tournament Committee and Secretary-Treasurer will pass upon all complaints in con-

nection with the tournament that are made by contestants. Complaints may be made to any member of the tournament committee, who is present at the tournament.

With the exception of ties for first place in the Preliminary Handicap, the Grand American Handicap, the National Amateur Championship, the National Professional Championship, and the Double Target Championship, all ties will divide. Ties that are shot off will be at 20 targets per man, and the original distances contestants stand at will govern..

It is requested that entries for the Grand American Handicap at targets be made in ample time to permit the sending of receipt, and for it to reach the maker of entry prior to his departure for Columbus. All entries must be accompanied by the maker's full name and address.

A good substantial lunch will be served at the club grounds each day for 50 cents per person, and also a lunch à la carte at reasonable rates.

Guns, ammunition, etc., shipped by express must be prepaid and sent to the Columbus Gun Club, Marble Cliff, O. Mark your own name on the box, that goods are shipped in, and it will be delivered to the shooting grounds without charge. Shipments on which charges have not been prepaid will positively not be received.

All standard factory loaded shells will be for sale on the grounds.

There will not be any reduced railroad rates. The lines identified with the Central Passenger Association refuse to grant reduced rates unless an attendance of one thousand or more is guaranteed.

The Palefaces.

Boston, Mass., May 10.—The second shoot for the month of May on the Paleface grounds was held here to-day, and while a small attendance, some very lively and exciting events were the result.

The east wind, which was in evidence during the entire afternoon, was easily the master of the situation, only one of the contestants seeming to be able to get anywhere near his usual scores, and then one event did the business, with the result of a tie for the high honors.

In the race for high average with two such sterling shots as Frank and Clark in a tie, naturally the shoot-off was looked to with a good deal of interest, and when the end was reached, both had the same score. Lack of time prevented the usual 25-target shoot-off, and other 15-bird race was agreed upon with Clarke this time the winner. Geo. Hassam, with the only full score, captured the added-target race, with Wigglesworth in second place. Scores:

Clarke	91	Steele	81
Frank	91	Burnes	80
Hassam	88	Charles	78
Wigglesworth	87	Lockwood	62

One hundred target race:

Hassam	12 100	Wigglesworth	8 95
Frank	0 91	Clarke	0 91
Steele	8 89	Burnes	8 88
Charles	8 86	Lockwood	12 84
Keller	20 82		

May 12.—A special Paleface shoot was held to-day, just as an excuse to get Fred Stone and the bunch started on a shooting fest, and it certainly proved the goods and attracted fourteen shooters from the various gun clubs of this vicinity. Every one was naturally glad to see Fred himself, as this well-known trappist has a host of friends in Boston that think his trips usually are too far apart, and to be favored with two visits in one season is just right from the Paleface standpoint.

Frank and Hassam were the offenders to-day in the average line, and tied up after a strenuous battle during the first five events, and it was up to the Candy Kid's last target to make it a tie.

Charlie Marden was only two targets away, and ended the race with the last two events clean. Scores:

Frank	14 14 19 14 14 17	82
Hassam	14 14 18 14 14 18	92
Marden	12 14 17 12 15 20	90
Clarke	14 13 16 12 14 18	87
Burnes	13 13 20 12 12 17	87
Stone	13 14 17 13 13 16	86
Charles	13 9 16 13 12 17	80
Smith	12 14 14 8 12 18	78
Peirson	12 12 17 11 10 16	78
Keller	8 9 12 9 12 16	66
Pollinger	8 9 13 9 6 15	60
Hardy	7	...
Houghton	6 10 10	...
Town	9 5 8	...
Ordway	7 9 11	...

Trapshooting on the Coast.

Berkely, Cal., May 10.—The trapshooting season is now under way around the Bay, and not a Sunday passes but that a meet is held by some of the clubs. The opening meet of the newly formed Exposition City Gun Club was held on May 7, at the splendidly equipped trap grounds in the Presidio Military Reservation. About forty persons took part in the shoot, but the erratic winds made high scores almost impossible. The best work was done by S. Sims, Tony Prior and Ed. Schultz. This gun club held a meeting recently at which the following officers were elected: President, W. B. Sanborn; Vice-President, W. J. Golcher; Secretary and Treasurer, Emil Hoelle; Directors, W. H. Price, George Thomas and J. H. Jones.

The third shoot of the season of the California Wing Club took place May 7, at the new grounds at Stege, and was well attended. The result of the day's shooting was to place C. A. Haight in the lead for the club medal race. In the three shoots held, he has missed but one bird. In the afternoon purse event there were five straight scores made, the winners being W. W. Terrill, M. O. Feuder, J. B. Lee, C. C. Nauman and A. J. Webb. Eleven others missed but one bird each.

Golden Gate.

His Best Book

MY FRIEND THE PARTRIDGE

By S. T. HAMMOND

This delightful presentment of the glories of Autumn days with gun and dog in the crisp New England woods in search of the noblest of native game birds, which has already delighted thousands of readers of Forest and Stream, is now ready for delivery in book form.

Mr. Hammond knows his upland coverts as no other writer of the day. He makes no empty boast when he calls the partridge his friend, and, moreover, makes his every reader a friend of this splendid bird. He succeeds in a rare degree, not only in describing the ruffed grouse, its habits and habitat, and the pleasures of its pursuit, but in surrounding his reader with the very atmosphere of the leaf-scented autumn woods. Mr. Hammond's book is a welcome addition to the library of sport.

Cloth. 150 Pages. Illustrated. Postpaid, $1.00

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring.**

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER
SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the $28 gun the peer of any $50 gun on the market. Upwards to $1,000. Send for free catalog and get Lefever wise.

WILDFOWL SHOOTING.

By William Bruce Leffingwell.

Illustrated, 373 pages. Price in cloth, $1.50; half morocco, $2.50.

Containing Scientific and Practical Descriptions of Wildfowl: Their Resorts, Habits, Flights and the Most Successful Method of Hunting Them. Treating of the selection of guns for wildfowl shooting, how to load, aim and to use them; decoys and the proper manner of using them; blinds, how and where to construct them; boats, how to use and build them scientifically; retrievers, their characteristics, how to select and train them.

FOREST AND STREAM PUBLISHING CO.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., May 6.—The writer, jealous of his reputation for veracity, feels some hesitancy in submitting the appended scores, being sure he would question their accuracy, or the conditions under which they were made, if reported by another. But they record the plain truth, and the targets, which were missed were seen to pass the stakes at 45 measured yards. An analysis shows that sixteen men, shooting at an aggregate of 1865 targets from 16, 18 and 20yds., broke 1640, or 90.85 per cent. There were two straight scores of 25 at 16yds., two at 18, one of 50 at 18, and no less than seventeen straight 20s at 16yds.; and yet there have been days when practically the same squad couldn't find anything that looked like a straight score. The column of percentages, set out for convenience of the reader, shows that Barr and Hess were perfect in practice, and Lewis in the cup race; that Parry was equal to the fast pace he has maintained of late. Yet no less than six men were looking backward to see if he were coming. Dr. Britton, whose skill and grace at the traps lured me into the game forty years ago, responded to the call of favorable weather and led in practice, also posting 48 in the cup event. The summary is full of interest to the reader. We hang it up for our friends to read and emulate its showing.

Parry, 18	46	92			

*Professionals:

May 13.—At our last shoot a squad of fast young folks in charge of a seasoned veteran, ran away, and as they were going out of sight, looked around to see if their Uncle Tom, who usually leads them, was coming. We have to report that soon thereafter one of them might have been heard to exclaim, "There he comes," and a little later the bunch muttered, "There he goes." The figures shown below speak eloquently—98 out of 100 in practice, and 47 out of 50 in the cup race. In practice Britton was second with 58 out of 60; Edmonson next with 99 per cent. broken. Scores:

Practice:

	Shot at.	Broke		Shot at.	Broke

Britton	46	Edmonson	43
Neighbors	39	Short	40

The Galion (Ohio) Gun Club.

THE registered tournament of the Galion Gun Club on Wednesday, May 10, was a great success in great many ways, and forty-two shooters participated in the day's pleasure. The grounds of the Galion Gun Club are very nicely located in suburbs of the town, and a fine meadow with a carpet of green met the eye of the shooter as he looked out over the trap. The Galion boys had things well arranged, and made it pleasant for all the gentlemen in attendance. Many expressions of pleasure at having been present were heard as the shoot came to a close. A large number of Ohio cities were represented among the attendance, and the scores were closely bunched, as the results will show. The interest, however, was keen, and closely watched until the close. The Galion Gun Club is to be congratulated on having such a nice attendance.

The shoot was cashiered by Mr. Luther Squier, and the same gentleman, in addition to his many duties in caring for the office, quietly walked away with the high professional average. The first high amateur average was won by Will Webster and Bert Cooper, of Thornville, O., tying with 139 each; second high amateur by Frank Hulsizer, of Utica, O.; third high was a tie between Mr. Doolittle, of Cleveland, and Mr. Mason, of Galion. Mr. Hirth, of Galion, O., was tie for second high average. Fourth high average was tied for by H. E. Smith, of Columbus; Gambell, of Galion, and Mowery, of Utica, O.

From what could be gathered from the talk of the shooters at this tournament, the attendance at the Ohio State shoot will be unusually good from northern Ohio. This event should become one of the most popular given throughout the year. No pains should be spared to make the Ohio State shoot exceedingly attractive from every possible standpoint. The Columbus grounds certainly afford splendid accommodations, and all the facilities for pulling off a big shoot. With the hearty co-operation of the Ohio State Trapshooters' League members, it can be made very attractive. Scores:

Call	139	Webster	139
Clancy	137	H E Smith	135
Cooper	139	I Penn	132
Ledgett	132	Hopkins	133
Bissinger	124	Everett	129

L Squier	140	Baker	58

Analostan Gun Club.

WASHINGTON, D. C., May 14.—The following scores were made by the members of the Analostan Gun Club yesterday. They are creditable, considering the conditions. A strong wind prevailed, and the targets were thrown between 60 and 70yds.:

	Shot at.	Broke		Shot at.	Broke
M E Harrison	125	97	Dr S Cockerille	60	51
W D Dulaney	100	81	Miles Taylor	50	40
Dr H P Cobey	100	81	J E Jackson	60	26
P Steubener	100	81	F Molt	80	48
Dr A B Stine	100	80	Geo Talbot	50	40
Jas M Green	125	79	C S Wilson	50	39
Robt T Bray	100	60	W M Willis	50	34
G D Kirk	100	76	E Dufour	25	20
R P Hawes	100	63	Dr B Taylor	25	20
Dr A Parsons	80	61	F Kahrs	25	19
Wm Holmead	65	46	Mr Hurd	50	27

The shoot at 10 pairs of doubles had scores as follows: W. D. Dulaney 15, Dr. A. B. Stine 9, Robt. T. Bray 14, Dr. A. V. Parsons 13, W. Holmead 11, Felix Molt 7, Geo. Talbot 13, Everett Dufour 12, Mr. Hurd (shot at 6) broke 5.

The shoot for the Wagner medal, 25 singles resulted as follows: Talbott 23, Parsons 22, M. Taylor 22, Steubener 21, Dr. Taylor 20, Cockerille 20, Dufour 20, Dulaney 20, Cobey 20, Stine 19, Kirk 19, Kahrs 19, Holmead 18, Green 17, Harrison 16, Wilson 16, Felix Holt 17, Willis 16, Hawes 15, Bray 15, Jackson 13.

The club will give an afternoon shoot on Decoration Day at 100 targets, included in which will be a merchandise event at 25 targets. There will be three classes—A, B and C.

MILES TAYLOR, Sec'y.

Dublin (Ohio) Gun Club.

DUBLIN, O., May 12.—Our registered shoot came off in fine shape yesterday. Luther Squier, of Pittsburg, Pa., set the pace for the professionals at 121, but was overtaken on the last quarter by B. Call, of Coshocton, O., for first place at 133, followed closely for second by R. W. Clancy, of Chicago, Ill., at 131. W. R. Chamberlin said his scores would have been better if Luther had kept still. Fred Shattuck was here to demonstrate a new cartridge. H. E. Smith was high amateur with 124, followed closely by W. Webster for second at 121. L. Fisher said those targets darted worse than the ducks used to do on Buckeye Lake, but got 120. Dr. Van Fossen says let her blow, the harder it blows, the better the scores.

The programme comprised 150 targets, all shooting through except F. Le Noir, who shot at 120.

Ira Krupp	105	H W Price	94
H E Smith	124	A C Blair	112
S P Davis	109	W Webster	121
W W Coffman	112	B Wing	116

R W Clancy	131	T G Barstow	108
B Call	133	F Le Noir	73
F Shattuck	99		

N. J. DOMINY, Sec'y.

Hyde Park (Ohio) Gun Club.

There was an unusually small attendance at the shoot on May 13, in spite of the almost perfect weather conditions. At times the wind was a little troublesome, but Holaday shot a 92 per cent. gait, finishing in first place on 46. Irwin gave him a good race, and was only 3 behind at the close. A break in the trap prevented as many targets being trapped as usual, and the last few rounds were over the old set of expert traps. Several of the members will visit the Cincinnati grounds at Latonia to get a line on the traps before the money-back tournament, to be given on the 21st. The shooters are all talking Grand American, and there is sure to be a big bunch go to Columbus from here.

Targets:	15	15	20	Total.
Holaday	15	14	17	46
Irwin	12	15	16	43
Schaefer	8	8	12	28
Frohliger	10	11	14	35
West	12	9	15	36
Sampson	10	13	12	35

Independent Gun Club.

PHILADELPHIA, Pa., May 14.—Dr. A. L. Westcott was the star performer in the monthly shoot of the Independent Gun Club yesterday afternoon at Holmesburg Junction, capturing the handsome silver and cut-glass trophy, but not until he had been forced to the limit of his skill as a trapshooter. The event was at 100 targets in five strings of 20, with dead bird handicap added. When the figures were all totaled up it was found that there were four ties—Wakeman, Judson, Westcott and Cook. In the first shoot-off, 25 targets, the four tied again; in the third Westcott won by a very narrow margin from Cook.

There were five spoons offered besides the principal prize that served to keep the shooters up to their best efforts. Scores:

Edwards	9	85	Johnson	14	99
Lindley	12	94	Firth	23	89
Wakeman	12	100	Taylor	25	46
Judson	10	100	Hinkson	23	83
Anderson	14	87	Watson	0	71
McKean	12	97	H George	8	95
Hoffman	16	82	J H Kelly	0	73
J Davis	20	85	Felix	9	78
Westcott	15	100	Ford	11	91
Cook	10	100	Murray	10	94
Tansey	7	97	Norris	0	14
Newcomb	2	95	Oliver	5	96
Wolstencroft	13	90	Kahler	2	55
Pratt	12	89			

Shoot-off: Judson 21½, Westcott 24¾, Cook 23½.

Doubles: Class A—Newcomb (0) 14, Oliver (0) 9. Class B—Anderson (2) 10, McKean (2) 17, Edwards (2) 17. Class C—Wakeman (4) 16, Lindley (4) 15. Class D—Hoffman (6) 16.

Columbus Gun Club.

COLUMBUS, O., May 13.—Roundy Chamberlain was high gun Saturday afternoon at the traps, with 92 out of 100. Shilling won a point on the Du Pont trophy. This makes a tie with H. E. Smith and Capt. C. C. Carson, each having two wins. The ties will be shot off next Saturday. The next monthly shoot is May 20, with a program calling for 150 birds, losses guaranteed. All one can lose is $3. Webb broke 48 out of 50 from 21yds.—fine shooting. Jessup and Ward were welcome visitors. Whisner, Jr., shot his first targets. With some practice Daddy will have to look out. Fisher broke 22 out of 24, shooting doubles. The shoot at doubles last Thursday was well attended; quite a few of the local boys were here. About all the money came to Columbus. H. E. Smith won first average; Webb, second; Fisher, third; Dr. Van, fourth—not bad for the Columbus Gun Club.

	Shot at.	Broke		Shot at.	Broke
G Smith	120	96	Webb	50	48
Shilling	90	74	Jessup	75	54
Roundy	100	92	Rink	25	13
Hume	130	101	Whisner, Jr.	15	8
Whisner	110	80	Fisher	40	37

Hall	60	49			

LON FISHER.

League Trophy Shoot.

THE members of the Philadelphia Trapshooters' League who have broken 42 or better in any one League shoot and competed in four of the six matches will shoot for two gold trophies on June 3 over the traps of the S. S. White Gun Club, at Holmesburg Junction. The program calls for 100 targets in five events of 20 targets each; sliding handicap, from 16 to 21yds..

The official standing of the clubs in the Trapshooters' League race, which closed a week ago, as announced by Secretary W. E. Robinson, follows:

	Points.	Broken.
Highland	17	2602
South End	16	2555
S. S. White	13	2490
Haddonfield	10	2355
Meadow Spring	10	2484

Registered Tournaments.

PITTSBURG, Pa.—Tournaments registered with the Interstate Association during the week ending May 15:

July 6-7.—Chatham (Canada) G. C. W. D. Elliott, Sec.
Aug. 15-16.—Laurel (Miss.) G. C. Charles Green, Pres.
Aug. 16.—Westminster (Md.) G. C. Geo. E. Baughman, Sec'y.
Sept. 4.—Longmont, (Colo.) G. C. H. C. Keef, Cashier.
Sept. 6.—Wellington (Colo.) G. C. H. C. Keefe, Cashier.
Sept. 7.—Ft. Collins (Colo.) G. C. H. C. Keefe, Cashier.
Sept. 14-15.—Cincinnati (O.) G. C. H. S. Connely, Sec'y.

ELMER E. SHANER, Sec'y-Treas.

Lansdale—Royersford.

ROYERSFORD, May 13.—In the third and deciding match race between Lansdale and Royersford gun clubs here to-day the Lansdale team nosed out a victory by 10 targets. Both teams shot well, and 42 was the lowest score made. The scores:

Lansdale—J. Rogers 48, C. Swartz 48, T. Swartz 47, F Henry 47, Clark 46, Bender 46, Lamborn 45, D. Shultz 44, F. Shultz 43; total 461.

Royersford—H. Buckwalter 48, M. Nettles 47, E. Emmers 46, C. Beidman 46, F. Ziefiler 46, A. Buckwalter 45, E. Christian 45, W. Trumbauer 43, W. Chard 43, M. A. Freed 42; total 451.

The PARKER GUN Again a Winner!

On January 11-13, 1911, The "OLD RELIABLE" PARKER GUN, shot by Howard D. Bates, of Ridgetown, Ont., again won the Grand Canadian Handicap at live birds, killing 25 straight and 9 in the shoot-off, from the limit distance of 31 yds. Mr. Bates shot at 54 birds during the tournament and killed them all. THIS IS SOME SHOOTING!

New Model 27 **Marlin** *Repeating Rifle*

The only gun that fills the demand for a trombone ("pump") action repeater in .25-20 and .32-20 calibers.

Shoots high velocity smokeless cartridges, also black and low pressure smokeless. Powerful enough for deer, safe to use in settled districts, excellent for target work, for foxes, geese, woodchucks, etc.

Its exclusive features: the quick, smooth working "*pump*" *action;* the wear-resisting *Special Smokeless Steel* barrel; the modern *solid-top* and *side ejector* for rapid, accurate firing, increased safety and convenience. It has *take down* construction and *Ivory Bead* front sight; these cost extra on other rifles of these calibers.

Our 136 page catalog describes the full *Marlin* line. Sent for three stamps postage. Write for it.

AMERICAN BIG-GAME HUNTING

BOONE AND CROCKETT CLUB SERIES

Edited by George Bird Grinnell and Theodore Roosevelt

A thoroughly stimulating book dealing with American big-game hunting, East, West and under the Arctic circle, including every phase of sport with the rifle. "American Big-Game Hunting" is a compilation of the experiences of some of the most widely known sportsmen in America. Among the sketches are: The Story of the Buffalo, Capt. Geo. S. Anderson; The White Goat and His Country, Owen Wister; Old Times in the Black Hills, Gen. Roger D. Williams; Coursing the Pronghorn, Theodore Roosevelt; After Wapiti in Wyoming, F. C. Crocker; In Buffalo Days, George Bird Grinnell; Blacktails in the Bad Lands, B. Rumsey.

Forest Preserves and Game Refuges are also considered. Aside from the surpassing interest of the narratives, the book is invaluable for referenc. Cloth, heavy paper, library edition, richly illustrated.

Postpaid, $2.50

Markets for Firearms.

The following information concerning the use of firearms in Panama is furnished by Consul-General Alban G. Snyder:

There are no restrictions on the importation or sale of revolvers and shotguns, but a permit is required to carry them, which is granted by the alcalde of any town. The import duty is 10 per cent. ad valorem.

The ownership of revolvers is common to a certain extent among the natives, but more noteworthy among the Americans. All calibers are popular among the Americans and better class Panamanians, but the poorer classes buy a cheap grade imitation Smith & Wesson, made in Belgium and Germany. The favorite American revolvers sell, according to caliber, at from $14 to $21.

No particular type is used by police officers. They furnish their own revolvers and invest as little or as much as they feel inclined.

The laboring classes of this republic would probably be interested in a moderate-priced but effective single-barreled shotgun.

Vice-Consul A. W. Lithgow, of Puerto Plata, furnishes the following information concerning the use of firearms in the Dominican Republic:

While the importation and sale of revolvers and cartridges are prohibited by law, they are used in general by all classes. The types best known here are two American brands, one of which is automatic. The caliber preferred is 9 and 12 millimeters. These are the revolvers supplied to the police. The presidents of city councils place all orders for municipal police supplies; and the Minister of Interior, Santo Domingo City, for the government police force.

A permission, costing $12, must be obtained from the Minister of Foreign Affairs, in order to import shotguns. The import tariff for single-barreled shotguns is $3 each. Trap or target shooting is not indulged in here, but hunting is to quite an extent.

There is a considerable demand for a moderate-priced shotgun among families who shoot the woodpecker,, which destroys the fruit and cocoa trees, and among the better class of people for pigeon shooting.

Consul Franklin D. Hale reports as follows concerning the almost prohibitory laws dealing with the import and use of firearms in Trinidad:

It is not lawful, according to the ordinance of March 16, 1909, for any person to use, carry, or have in his custody or possession any firearm without a license, which costs $4.86 annual for each pistol or rifle, and $1.20 for each gun.

To sell or deal in firearms, or to carry on the trade of gunsmith, requires an annual license costing $4.86. Such dealer cannot sell a firearm to any person without seeing the person's license, under a possible penalty of $240.

The import duties are as follows: Muzzleloading and air guns, $1.20 each; all other guns, revolvers, rifles, and pistols, $2.40 each; cartridges, loaded $1.20, and unloaded, 60 cents per 1000; gunpowder, about half a cent per pound.

The price of revolvers ranges from $5 to $20, those most in demand costing from $6 to $8. Those most in use by the people and for sale by dealers are the Smith & Wesson. Colts, usual of .38cal., are used by the various departments of the government. There is considerable hunting in the rural districts.

There is practically no demand for high-priced guns, those called for ranging from $8 to $10 in value.

In answer to an inquiry, Consul Frederic W. Goding, of Montevideo, furnishes the following information concerning firearms in Uruguay:

The only restriction on the importation of firearms and ammunition into Uruguay is that the Minister of War shall be notified of their entry on stamped paper, costing 52 cents, which causes a delay of only, at most, a few days.

The duty on revolvers is 56 per cent. on a valuation of $5.70 each. The most popular revolvers are two American brands, which retail for $15.50 upward. The .32 and .38 caliber, short-barreled nickled, are most in demand in the cities, and the long barreled in the country.

For two or three years an American company here has been pushing the sales of new firearms by advertising, but as the arms are little known, their efforts have not been very successful.

Single-barreled sporting rifles are valued at the customs at $8.30, double-barreled at $14.50, and pay duty at the rate of 56 per cent. on such valuation.

During the open season small game shooting is very popular, hence a single-barreled shotgun at a moderate price should sell well.

Vice-Consul-General John W. Dye furnishes the following information concerning the use of firearms in the Genoa district of Italy:

Revolvers are almost universally owned, though not commonly carried, except by those who, on account of their work or business, need some special means of protection. The only legal requirement in reference to the importation, sale, or use of revolvers is the possession of a permit or license by the owner to carry arms. This permit may be obtained of the local chief of police, upon presenting proper reasons for the need, and paying in advance the fee of about $2.45 for the year.

No special type or make of revolver enjoys a monopoly in Genoa. In the shops are to be seen all types and makes of Italian, Belgian, French, German, and American revolvers and automatic pistols. These vary in price as much as they do in design and quality. The price usually paid is about $5 to $8 for the ordinary weapon. It is, however, noticeable that very large revolvers are sold, the popular size being the .32cal. The barrels are usually of the short bulldog type. The cartridges are mostly Italian and French, with a preference for the latter.

Live pigeon shooting is indulged in to some extent at Quarto, a suburb of Genoa, and there is a rifle range in one of the nearby valleys. Shotguns are quite commonly owned by the well-to-do class of men, but very few by the poor. The type of gun most popular is a small, light, double gun, with or without hammers, usually 12-gauge, and costing from $25 up. There is very little demand for a single-barreled, low-priced gun.

Consul Charles M. Caughy, of Milan, furnishes the following information concerning the use of firearms in his district:

Before a person can legally carry a revolver he must make application to the public authorities, and if permission is granted, he must pay an annual license of $2.45. The import tariff on revolvers is 68 cents each, regardless of size or quality. There is a large sale for revolvers, but among the lower classes the knife is the favorite weapon. The most popular revolvers is the Veledog, the .22 and .32 caliber, costing $5.40. The revolvers used by the police are manufactured specially for the government.

There are no restrictions on the importation of shotguns, but a license costing $2.45 must be secured to enable a person to carry one. The import duty on shotguns is $2.90 per gun, regardless of quality. A single-barreled shotgun would not be popular here.

In answer to an inquirer seeking extension for American trade in firearms in Italy, Consul Chapman Coleman, of Rome, furnishes the following information:

The use of the revolver, apart from certain classes, such as soldiers, policemen, etc., privileged to bear them by virtue of their calling or profession, is restricted to those persons who, upon submission of satisfactory evidence of trustworthiness, have secured permits to do so, issued from police headquarters and for which an annual fee of about $2.45 is exacted. Upon the importation of revolvers and other firearms for hunting and defensive purposes, there are no restrictions other than that the importer must be a regularly licensed dealer in the articles and must, upon withdrawing the same from the customs, exhibit a certificate of license issued by the office of public safety.

The prevailing prices for revolvers to consumers range from about $2 for a low grade of weapon of domestic manufacture, to about $15 for an excellent article; the average price for a good, serviceable revolver would be from $6.00 to $7.00.

There appears to be no special type of revolver or automatic pistol enjoying a monopoly of public favor, a great variety of types being in use, among them American types. The caliber for the police revolver is 12

millimeters, and is manufactured, as is also the military weapon, by the Italian government. The prevailing caliber for revolvers in general appears to be from 5 to 8 millimeters. The metallic cartridges in use here appear to be substantially the same as those employed in the United States.

For import and use of shotguns, licenses for dealers, and permits for users and restrictions are the same as for revolvers. It is not believed that a highly efficient, but moderate-priced, single-barreled shotgun would appeal to any but the poorer class; peasants are sometimes found equipped with such guns.

Consul-General Henry Bordewich, of Christiania, reports as follows concerning the use of firearms in Norway:

People are not allowed, without special permit, to carry revolvers in Norway, but there are no restrictions as to their importation and sale.

The import duty on revolvers and parts of is 53.6 cents per 2.2 pounds. Some people carry revolvers here, and the weapons are quite commonly kept in the homes; the makes and caliber vary quite widely. No special type is having a monopoly. The police carry revolvers, of Norwegian make as a rule.

The import duty on guns of all kinds and parts thereof is 26.8 cents per 2.2 pounds. Trap and target shooting, also hunting, are practiced to a considerable extent, and a moderate-priced single-barreled shotgun should find a market here.

Highland Gun Club.

MINEOLA, L. I., May 13.—W. F. Simonson won a special shoot at 100 targets, held under the auspices of the Highland Gun Club here to-day. The marksmen shot in strings of 20 targets a man, and the winner had a total of 85. The scores: W. Simonson 85, J. F. Simonson 83, W. Bennett 82, W. Silkworth 80, N. A. Kelsey 78, F. Isaacs 76, O. Keppler 72, F. C. Carnwell 70, E. Lynn 69, E. Tubbs 69, C. Cornwell 67, J. Nohwec 64, Dr. Cleghorn 62.

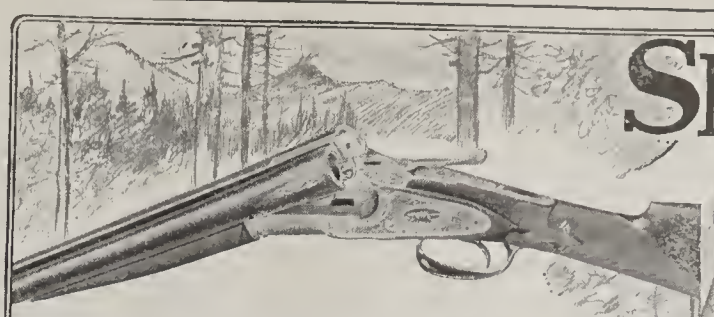
Special shoot, 100 targets: W. Simonson 94, W. Silkworth 93, F. Isaacs 89.

AMONG THE SANDHILLS OF JUTLAND.

IT was a relief, after leaving Copenhagen and enduring for a couple of hours the close atmosphere of a railway carriage, to breathe the bright, fresh evening air of Jutland. After a time we began to hear the deliberate and solemn thunder of heavy billows on a sandy coast, and ere long we reached the fisherman's house, situated on a little flat among the sandhills, where my companion and I were to put up, says Snowfly in the Field. The "stue," or common room, was low ceilinged, with heavy, smoke-stained rafters, and it was to all intents and purposes furnished from the cabins of vessels which had been shipwrecked on that dangerous coast. After a substantial meal, "kaffè-punsch," a form of liquid refreshment composed of strong black coffee and "braindevirn" in equal parts, became the order of the evening, and it was past midnight before we got to bed; but the roll of the surf in the stillness had a most soporific effect, and we slept like tops.

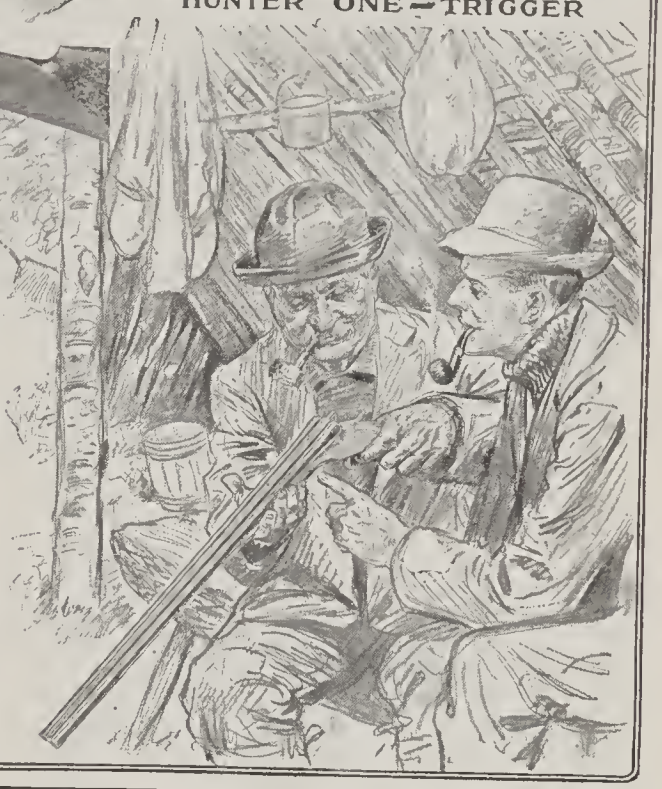
Owing to the prevalence of westerly winds, we were informed by the natives that we might expect to find most partridges among the sandhills nearest the sea, and we were not long in discovering that this information was correct, for on proceeding thither the following morning there were plenty of traces of their presence visible. To get within shot of, or even to see, a covey was another matter in the wilderness of sand amid which we were wandering. Having succeeded in reaching the top of one of the highest ridges, from which it seemed a look round could be obtained, I soon saw my dog drawing on birds on the opposite side of a deep hollow; but by the time I got to the place after a struggle through the intervening sand he had disappeared over another ridge. Shortly I caught a glimpse of a covey rising about 100 yards off, and back came Joe, with excitement, disgust, hope, and various other feelings expressed in the action of his tail.

A few more experiences of the same kind followed, and it became borne in upon me that pursuing "störrs" among the Jutland "klitter" was work which was not only uncommonly hard, but also requiring an infinity of patience. At last a piece of luck. On surmounting one of the innumerable ridges that ran in every conceivable direction, I found myself looking down into a little circular hollow, some forty yards in diameter, at the bottom of which there were a little cover in the shape of heather and



SMITH GUNS

HUNTER ONE-TRIGGER



THE simplicity of construction of a Hammerless Smith Gun appeals to all sportsmen. A novice can quickly take it down and put it together. It is this simplicity of mechanical construction that has made it so popular—that has given it undisputed leadership.

IT IS this simplicity, too, that prevents it from ever shooting loose. That is absolutely impossible in a Smith Gun. The longer you shoot a Smith Gun the tighter it gets—it is *self-adjusting*. Our handsome, new lithographed Catalogue explains this more in detail. Ask your dealer for it, or write us direct—*today*.

That Catalogue will also tell you all about the very latest Hammerless Smith Gun—the *20-Gauge Hunter One-Trigger*. The *Hunter One-Trigger* attachment is the greatest improvement in gun-making for more than half a century. The new *20-Gauge* is just the finest gun that can be made at the price. Simply *all gun and no frills*. Weighs only 5¾ to 7 lbs. As a well-informed sportsman you ought to know about it.

THE HUNTER ARMS CO., 90 Hubbard St., Fulton, N.Y.

THE NARRATIVE OF A SPORTSMAN

INTER-OCEAN HUNTING TALES

EDGAR F. RANDOLPH

A series of hunting reminiscences of rare charm for the sportsman and for the wider circle which delights in true tales of outdoor life. With none of the high coloring and exaggeration which give a false note to so many hunting stories, Mr. Randolph's book is never lacking in interest.

He covers the field of sport with the rifle, east and west, drawing a vivid word picture of life in the open, subordinating his own exploits to the main incidents of outdoor experience, giving much valuable information on camp life, hunting and the habits of wild game, and continually delighting the reader with the freshness of his viewpoint.

This book will strike a sympathetic chord in the memory of every big-game hunter of experience and will prove of real value to the novice who is planning an excursion into the wild.

Cloth, 170 Pages. Richly Illustrated. Postpaid, $1.00.

FOREST AND STREAM PUBLISHING COMPANY, 127 Franklin Street, NEW YORK

The Angler's Workshop

RODMAKING FOR BEGINNERS

By PERRY D. FRAZER

A unique work, bringing the science of rodmaking up to the very moment and epitomizing the knowledge and the experience of experts for the guidance of the average man. The evolution of bait-casting principles has made Mr. Frazer's book supersede all previous publications on the subject.

Every angler—young or old—who is fond of adapting his rods and tackle to his own ideas of what they should be, will find in this book a large fund of information gathered by the author in years of study, experiment and practical experience in fishing, tournament casting and at the work bench. He theorizes and speculates not at all. He tells "the how" of everything connected with rodmaking in a way that makes results certain. All explanations are simple and easily followed.

Separate chapters are devoted to each of a half dozen types of bait-casting rods; to tarpon, surf and light salt water rods; bass and trout, salmon and tournament fly-rods. Complete specifications of well known types are given, and the chapter on split bamboo rodmaking is the most comprehensive treatise on the subject ever published. Indispensable in the angler's library.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid, $1.

HITTING *vs.* MISSING

By S. T. Hammond ("Shadow").

Cloth. Price, $1.00.

Mr. Hammond enjoys among his field companions the repute of being an unusually good shot, and one who is particularly successful in that most difficult branch of upland shooting, the pursuit of the ruffed grouse, or partridge. This prompted the suggestion that he should write down for others an exposition of the methods by which his skill was acquired. The result is this original manual of "Hitting vs. Missing." We term it original, because, as the chapters will show, the author was self-taught; the expedients and devices adopted and the forms of practice followed were his own. This then may be termed the Hammond system of shooting; and as it was successful in his own experience, being here set forth simply and intelligently, it will prove not less effective with others.

FOREST AND STREAM PUBLISHING CO.

When writing say you saw the ad. in "Forest and Stream."

coarse grass, and there, within a dozen yards of where I stood, was old Joe, motionless. A nice lot of ten strong birds then rose, and of these I secured a brace, while another brace which were so obliging as to remain behind until I had slipped in fresh cartridges shared a similar fate. Immediately afterward I heard two other shots, which enabled me to determine my friends's whereabouts (of which for long I had been entirely ignorant) and the ultimate line of flight of the remainder of the covey.

Soon after I again saw Joe drawing on a slope so steep that he could hardly maintain his footing; then I made out the birds running on the bare sand a few yards in front of his nose. Before I could reach the spot they rose, swung back right over me, and I got a brace. Altogether it was curious shooting, but although the labor was strenuous and the results modest, it had its attractions. Overhead in the bright sunshine innumerable gulls—among them many of the great black-backed species—circled; every now and again through a coulisse in the world of sand, or from some point more elevated than the rest, a glimpse was obtained of the blue ocean, and ever to the ear came the thunder of the great rollers, as they rhythmically advanced and broke on the beach beyond.

To the unaccustomed one day of such exertion as is entailed by eternally scrambling up and down steep sandhills in anxious pursuit of feathered game is enough at a time, and the following morning, by a winding track through the dunes, we made our way inland, and soon stood on the confines of the sand and of the flat country beyond. The latter was more varied in character than pituresque, including as it did fields from which the ripe grain had just been removed, tracts of purple heath-covered moorland and bog, patches of regularly planted young mountain pines, with here and there a strip of potatoes.

We were not long in ascertaining that there was a fair lot of partridges, and of these due toll was taken, our enjoyment of the sport—and that of the dogs, too, no doubt—being considerably enhanced by the comparatively easy going. When put up, the coveys invariably flew off to the sandhills or took refuge in the nearest patch of pines, from which, being very dense and over a man's height, they were not easy to dislodge. Hares were by consent let off until late in the afternoon and we were homeward bound, otherwise the bag might have been rendered considerably heavier. Just before luncheon Joe pointed very steadily in a patch of bog myrtle and dwarf birch, and on our approaching the spot up got a nice lot of black game, three of which came to grief and a fourth got away damaged, to be picked up later on. Of these birds there were a few in the neighborhood, and, in spite of the inclement weather in spring, they had done very well, the coveys being large and the birds well grown and forward. We only came across two other lots, however, that day, and an old cock, which I got with an easy shot as he rose on the edge of some stubble where we were hunting for a wounded partridge.

An element of variety was introduced into our sport when in the afternoon we came to a couple of very reedy tarns connected by a slow-flowing stream. Here there were a good many snipe, although it was somewhat early for these birds, and in addition to three and a half couple of them we got three wild duck and several teal. Of the slain we would not have secured many, however, had it not been for my friend's setter, which retrieved admirably in the water, an element in which friend Joe, excellent dog as he is on *terra firma*, is no good at all. When we reached the sandhills again on our homeward way, a little before sunset, the sky had become overcast, there was a dead calm, and the thunder of the great rollers sounded louder than ever. Axel and Lars, our attendants, weatherwise natives both, were unanimous in prophesying bad weather. They were right; next day it was raining in torrents, and a north-west gale and a heavy sea were adding materially to the gigantic accumulations of sand on the west coast of Jutland.

SALMON FISHING

The Government of the Province of Quebec is prepared to receive offers for the lease for a term of three or of five years of any of the under-mentioned salmon rivers, flowing into the Gulf of St. Lawrence from the Canadian Labrador, namely, the

Rivière des ESQUIMAUX,	NATAGAMIOU,
BIG MECATINA,	DARBY,
LITTLE MECATINA,	KEKARPONI,
KEGASHKA,	NAPETIPI
MUSQUARRO,	COCOSHEPEE,
MUSQUANOUSSE,	BAY BRADORE RIVER.

Most of these rivers are known to contain salmon in great abundance, and all of them offer special attractions to those who love "the call of the wild," as well as abundant opportunities for original exploration.

A delightful summer cruise would be that from Gaspé or Natashquan (which are reached by regular steamers) to any of these North Shore Rivers; and until they are leased, permits to explore them and salmon fishing licenses can be obtained from the Minister of Colonization, Mines and Fisheries at Quebec.

Offers for leases to be addressed:

The Minister of Colonization, Mines and Fisheries
QUEBEC

FOR SALE

Estate of about 30,000 acres on James River.

Chesapeake & Ohio and Norfolk & Western railroads, in upper valley of Virginia; mountain and valley lands; elevation from 750 to 4200 feet; remarkably healthy; well watered; proximity and accessibility to centers of population. Its mineral, timber, fruit growing (several thousand acres suitable for apple orchards), grazing and agricultural lands; water powers susceptible of great and profitable development; exceedingly attractive landscapes and sites for homes; valuable also as a hunting and fishing preserve. Undoubtedly presents excellent and attractive opportunity for remunerative investment. Address WM. A. ANDERSON, Executor of Francis T. Anderson, deceased, Richmond, Va.

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener Treble Wedge Fast Action.—Many methods of uniting the top of the standing Breech and upper portion of the gun barrels have been introduced, but none are so strong and thorough as the Greener Treble Wedge Fast Cross Bolt, which has been proved by actual experiment to add enormously to the safety and wear of a gun.

At the famous London *Field* explosive trials of 1878, a special experimental gun was prepared by the editor of the *Field*, and the following extracts from his report are a remarkable testimony to the strength and efficiency of this device.

"to this action we had a little apparatus fixed as shown in this sketch, by this arrangement a piece of silver paper can be strained between the hook and the screw clip, attached to the barrels so that when any separation takes place during an explosion the paper breaks. We found that in Mr Greener's action no breakage occurred, using any charge of powder which the cartridge case could be made to hold with the bolt in position the paper remained intact up to the last."

In these experiments a charge of 65 grains of Schultze powder and 2 ounces of shot was used without causing the breech to "give" in the slightest degree

See that your new gun carries the Greener guarantee—Life-long satisfaction.

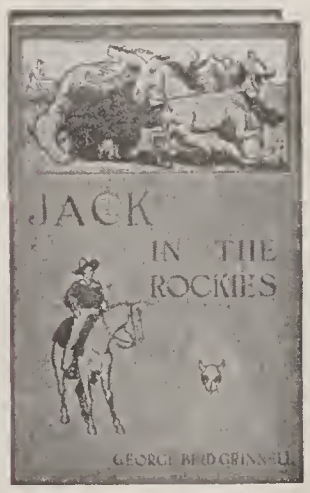
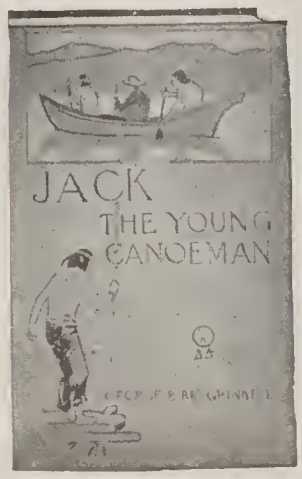
THE JACK SERIES

Best Books For Boys

By GEORGE BIRD GRINNELL





THE solution of the parents' problem of providing for the growing boy reading at once healthy and satisfying to his craving for action and adventure. In the Jack Books the longing of the normal boy for Western stories is gratified, the interest is absorbed and the mind is unconsciously led to phases of life that are elevating and instructive.

The books are the story of a young New York lad, sent to Stillwater ranch in the Rockies for his health, who becomes the companion of a veteran of the frontier. For each of six succeeding years he is led through new territory and experiences, accumulating much of the lore of plain and mountain, enriched with tales of the old West.

Ranch life, travel and hunting on the lonely plains, Indian camps, mountain climbing, trapping and canoeing are described. There is not a dull page, and the author manages to put much of the spirit of the West into his books. Jack is a real boy, and the books are stories for live boys—not lectures in disguise.

American Game Bird Shooting

By George Bird Grinnell

This new book covers the whole field of upland shooting in America as this field has never before been covered, and is intensely interesting and useful to everyone who uses the shotgun. It deals with the birds followed with dog and gun by the upland shooter, and describes the habits of the woodcock, snipe, all the North American quail, all the grouse and the wild turkeys.

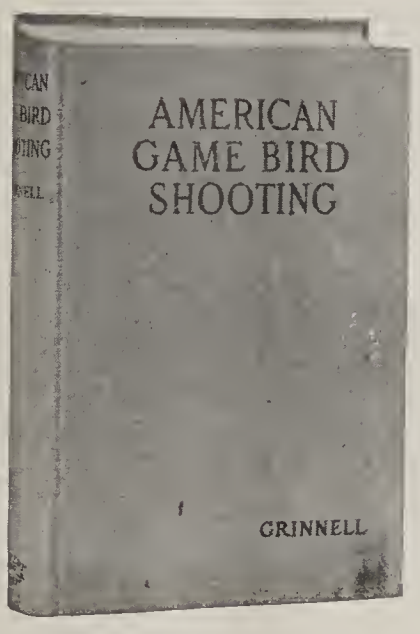
The completion of this book was a large task, requiring exceptional qualifications, knowledge and experience, and was never before accomplished by any other author.

It is the companion volume to Mr. Grinnell's book, "American Duck Shooting." Thus the two books cover the entire field of game birds taken with the shotgun, with complete description of their natural history features

"A very complete monograph for sportsmen and naturalists....with anecdotes, of his own and others....the book will be enjoyed not only by sportsmen but by the general reader."
—The Sun, New York.

"An important, thoroughly reliable and well written book; a work that will be read with interest and pleasure by sportsmen. The work is the first complete one of its kind."
—The Boston Globe.

"No book as good as this on the subject treated, nor so fully covering the field, has been produced." **—The Salt Lake Tribune.**



"This volume is especially welcome—a treat to every man who loves to tramp the uplands with dog and gun." **—Inter-Ocean, Chicago.**

"Each bird is taken up in turn, the best methods to hunt, the selection of guns and loads, clothing and dogs are set forth simply and fully."
—Baltimore American.

"It is, I think, a model of what such a book should be—but so seldom is. It is, indeed, much more than a treatise on field sports, for it furnishes such full and excellent life histories of the birds of which it treats that it should find a place in every library devoted to pure ornithology."
—William Brewster, Cambridge, Mass.

PART I. Describes in detail the ways of life of all the American Game Birds; woodcock, snipe, bobwhite, mountain quail, California quail, Gambel's quail, scaled quail and Mearn's quail; dusky grouse, Franklin's grouse, Canada grouse, ruffed grouse, all the ptarmigan, pinnated grouse, sharp tail grouse and sage grouse, and the wild turkeys.

PART II. Is devoted to upland shooting. Here are described at length and in detail all the various methods of taking all the birds mentioned above, and the various aids to shooting, such as guns and loads, dogs and clothing.

PART III. Deals with the shooting of the past and future; tells of the efforts to introduce foreign and native game birds to restock our covers, and of the successful attempts by Dr. Clinton F. Hodge to rear in captivity the ruffed grouse and bobwhite.

The volume is handsomely illustrated. There are colored plates of the ruffed grouse and the quail, made by America's greatest bird painter, Louis Agassiz Fuertes, and 48 other full page plates, most of them photographs from life, showing portraits of different species of birds and interesting shooting scenes. In the text are a number of useful and interesting line cuts. Everyone who delights in the outdoor life and rejoices in tramping the field and woods with dog and gun should possess this handsome volume, which speaks the final word on upland shooting, as its predecessor in this field did on wildfowl shooting.

Cloth. About 575 pages. Price $3.50 net. Postage 25 cents.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

THE OUTDOOR LIBRARY

¶ Seasonable Books dealing with every phase of the life in the Open. Handbooks of Sport. Books that make "roughing it" easy. Books for Fisherman, Hunter, Yachtsman, Canoeist, Camper, Nature Lover. Books of Travel and Adventure for Young and Old.

Whitney. Big Game, of Mongolia and Tibet, W. M. Rockhill. Hunting in the Cattle Country, Theodore Roosevelt. Wolf Coursing, Roger D. Williams. Game Laws, Charles E. Whitehead. Protection of the Yellowstone National Park, George S. Anderson. The Yellowstone National Park Protection Act. Head Measurements of the Trophies at the Madison Square Garden Sportsmen's Exposition. National Park Protective Act. Price, $2.50.

American Big Game Hunting.

The Book of the Boone and Crockett Club. Theodore Roosevelt and George Bird Grinnell, editors. Narratives of white goat hunting, elk hunting, old times in the Black Hills, prong-buck coursing, nights with the grizzlies, buffalo days, blacktails in the Bad Lands, notes on forest reservations and game refuges. Contributors: Theodore Roosevelt, George Bird Grinnell, Owen Wister, Winthrop Chanler, Col. Geo. S. Anderson, Col. Roger D. Williams, Archibald Rogers, F. C. Crocker, Dean Sage, and others. Cloth. Illustrated. Postpaid, $2.50.

Trail and Camp-Fire.

The Book of the Boone and Crockett Club. Editors: George Bird Grinnell and Theodore Roosevelt. Illustrated. Like its predecessors, the present volume is devoted chiefly to the great game and outdoor life of Northern America; yet it does not confine istelf to any one land, though it is first of all a book about America, its game and its people. Cloth, 353 pages. Price, $2.50.

Hunting Without a Gun.

And other papers. By Rowland E. Robinson. With illustrations from drawings by Rachael Robinson. This is a collection of papers on different themes contributed to FOREST AND STREAM and other publications, and now for the first time brought together. Price, $2.00.

My Friend the Partridge.

S. T. Hammond. An inimitable study of the noblest of our game birds, following the ruffed grouse deep into his haunts, detailing the experiences of more than 60 years in the field, throwing much light on the habits, life history and habitat of the game. A most delightful reminder of happy days with upland game. Cloth, 150 pages. Postpaid, $1.00.

Camp Life in the Woods.

And the Tricks of Trapping and Trap Making. W. Hamilton Gibson. Containing hints on camp shelter and bait receipts of the trapper, the use of the traps, with instructions for the capture of all fur-bearing animals. Illustrated. Cloth, 360 pages. Price, $1.00.

Jack, the Young Ranchman.

Or a Boy's Adventures in the Rockies. By George Bird Grinnell. Illustrated. Cloth, 304 pages. Price, $1.25.

Jack Among the Indians.

Or a Boy's Summer on the Buffalo Plains. By George Bird Grinnell. Illustrated, Cloth, 301 pages. Price, $1.25.

Jack in the Rockies.

Or a Boy's Adventures With a Pack Train. By George Bird Grinnell. Illustrated. Cloth, 272 pages. Price, $1.25.

Jack the Young Canoeman.

George Bird Grinnell. Illustrated. Cloth, 286 pages. Price, $1.25.

Jack the Young Trapper.

George Bird Grinnell. Illustrated, 278 pages. Price, $1.25.

Manual of Taxidermy for Trappers.

C. J. Maynard. A complete guide in collecting and preserving birds and animals. Illustrated. New edition. Price, $1.00.

My Sixty Years on the Plains, Trapping, Trading and Indian Fighting.

W. T. (Bill) Hamilton. The author was the last survivor of the old race of free trappers. Bill Hamilton was born in 1825, and was on the plains in 1842, trapper, Indian fighter, sign talker, trader, scout and guide so long as the old West survived. This book is the simple unaffected story of his adventurous life, more thrilling and full of personal interest than any romance. Cloth. Illustrated, 223 pages. Postpaid, $1.50.

Nursing vs. Dosing.

S. T. Hammond. A most practical book for the dog fancier, based largely on Mr. Hammond's observation that dogs, and particularly house dogs, suffer from too much medicine. Contents: Nursing, Cleanliness, Diet, Other Foods, Kennel and Exercise, Common Ailments, Diarrhea, Convulsions, Epilepsy, Distemper, Eczema, Need of Proper Care, Stomach, Vermin, Canker of the Ear, Mange, Nervous System, Colic, Worms. Cloth. Illustrated, 161 pages. Postpaid, $1.00.

Rhymes of the Stream and Forest.

Frank Merton Buckland. A charming collection of verse by an author who knows and loves nature well. A particularly pleasing gift for fishermen, closely simulating in form and ornamentation the standard fly-book. Cloth. Heavy laid paper. Sumptuously bound. Postpaid, $1.25.

Uncle Lisha's Shop.

By Rowland E. Robinson. Life in a Corner of Yankeeland. The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evenings and dull ontdoor days "to swap lies." Cloth, 187 pages. Price, $1.25.

The Still-Hunter.

Theo. S. Van Dyke. A Practical Treatise on Deer-Stalking. Extra cloth, beveled, 350 pages. Price, $1.75.

The Angler's Workshop. Rod Making for Beginners.

Perry D. Frazer. A complete, simple and thoroughly up-to-date work for the guidance of the amateur rod maker, carrying him from first principles through all phases of successful rod making. There is no theorizing or speculation. All terms are simple, and all kinds of rods and woods are treated of. Cloth, 180 pages. Four full-page illustrations, 60 working drawings. Postpaid, $1.00.

The Book of the Black Bass.

James A. Henshall. The standard work on the black bass, comprising a complete scientific and life history of the black bass, together with a practical treatise on angling and fly-fishing, a full description of tackle and implements, and general observations. Cloth. Illustrated, 470 pages. Postpaid, $3.00.

Men I Have Fished With.

Fred Mather. Sketches of character and incident with rod and gun from childhood to manhood; from the killing of little fishes and birds to a buffalo hunt. Illustrated. Price, $1.50.

My Angling Friends.

Fred Mather. A second series of "Men I Have Fished With." Cloth, 369 pages, with 18 illustrations. Price, $1.50.

Training vs. Breaking

Practical Dog Training; or, Training vs. Breaking. By S. T. Hammond. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, $1.00.

How to Build a Skipjack.

Complete plans and instructions for building a light draft sloop. Plans and directions easily followed. Cloth. Illustrated. Postpaid, $1.00.

How to Build a Knockabout.

A wholesome boat for all-around cruising and racing; 23ft. O. W., 10ft. beam, 26in. draft. Full working plans and drawings, with instructions for building. Cloth. Illustrated. Postpaid, $1.00.

Building Motor Boats and Managing Gasolene Engines are discussed in the book

HOW TO BUILD A LAUNCH FROM PLANS

A complete, illustrated work on the building of motor boats, and the installing, care and running of gasolene motors. By Charles G. Davis. With 40 diagrams, 9 folding drawings and 3 full-page plans. Price, postpaid, $1.50.

The author is a builder and designer of national reputation. All the instruction given is defined and comprehensive; 40 diagrams, 9 folding drawings and 3 full-page plans. That portion of the book devoted to the use and care of gas engines should be most carefully perused by every individual who operates one. The book is well worth the price asked for it.

FOREST AND STREAM PUBLISHING CO.

MALLARD ON THE CORNFIELDS.

THE scene before us is certainly not reminiscent or promising of ducks. At our feet the golden barley lies where it was cut, and at the end of the field a cart gives up its store to a growing rick, what time its fellow wanders slowly afar off, gathering in another mighty load. An autumn sun is sinking amidst a mass of color, the air is still, and the sky cloudless; we are in the midst of luxuriance and warmth, instead of the blizzards and biting winds we are wont to associate with the flighting of duck.

Out here in the open fields there is no hint of water; everywhere roots and stubbles or woodlands clinging to the hillside. One could almost wager that never a duck would come to such an apparently unlikely spot, but their visits have been noted, and it is one of the certainties of nature that they will come again. Yes, and this very night.

Right in the middle of the field is a small patch of weather-beaten barley still innocent of the scythe; here they will pitch in hopes of a feast that will last them almost to the coming of the dawn. That is their certain intent, but it is equally certain that not a bird will drop to feed so long as the gunner remains unhidden within shot of their meeting place. There is just time before the light fades to that degree of darkness which every sportman knows to herald the visit of traveling mallard for the building of a butt of fresh-cut barley. It is high when finished, and shuts one in all round; the lack of head-cover alone detracts from its perfection for the purpose, but there is not time for more, and as the last wagon rumbles home in the distance we strain our ears for a still more welcome sound.

For the moment nothing greets us but the chatter of squabbling partridges or the call of a flighting plover. A hare or two can be seen sitting up on the brow of the hill having a last search round before they start to feed; they look enormous in the dark blue light, and we are just wondering how close they will come to our hide when a distant cackle and quack comes floating toward us. Next moment a dozen duck swish into sight and come right over us forty yards up. We let them go, hoping they will come round again at a more killing range. A second and a third lot we let go on the same understanding, which none of them share, however, for they have seen us as we crouched; iron horses will not drag them back to the field, and they have vanished into the night. No more waiting for us; the next lot draws fire, and a single bird comes toppling down to the double discharge. A solitary mallard next pays us a visit, and is dropped just as he curved his wings downward.

For perhaps five minutes the air is charged with the whistle of wings; ducks seem to be all round us—now passing high overhead in large and wary companies, now swinging past us in smaller and more confiding lots. In spite of the firing, some still seem inclined to settle, and a neat right and left is the ending of a pretty stand. But we are loth to believe it. With straining eyes we peer into the starlit gloom; with ears intent we listen for the music of whistling wings. They come not, and there is nothing left but the pick-up, and the two dogs soon gather the half-dozen birds that are all we can claim to balance the empty cartridge cases. How many?—but that is telling; flighting ducks in a fading light are not always the easiest of marks, more especially when they have their suspicions of a hidden shooter. At any rate, we are well satisfied. We are conscious of no bad mistakes and one or two brilliant flukes. Who can ask more? The best bird that flies amid England's fairest scenery, and none to aid us in our work except a brace of dogs.

And now the moon is stealing up to light us on our way—fair, and round, and yellow—giving good promise that to-morrow will see the last of the harvest, and, alas! that the ducks will have to seek their food elsewhere.—Judge, in the Shooting Times.

Book Exchange.

Advertisements of old books which are out of print, or of second-hand books, for sale, exchange or wanted, will be inserted in FOREST AND STREAM at 20 cents a line. There are about 7 words to the line, and 14 agate lines to the inch.

BOB SAUNDERS, DEAN OF NEWFOUNDLAND GUIDES, AND MR. GIANINI'S SMALLEST CARIBOU.

Caribou Hunting in Newfoundland

By CHARLES A. GIANINI

THE sportsman of our Eastern States making his first visit to the caribou grounds of Newfoundland will probably find the country and conditions different from anything he has ever seen. He will find the land consists for the most part of hills and valleys, the former not very high and the latter shallow. This is covered in changing proportions with scrubby woodland, marshes and sandy, rock-strewn, moss-covered barrens. In some parts the forest predominates, but even in this and in high ground one finds marshes in abundance.

There is water everywhere. There are hundreds of beautiful unnamed lakes called ponds, and smaller ponds called flashets; some are connected by streams, and others not. After rains, as I discovered to my sorrow last October, the land is afloat and every caribou lead or path is a running brook. On the map some of the rivers look pretty big, but take them in dry weather — for sometimes it does not rain—they are shallow, rocky streams up which boats are only worked with great labor by lifting and hauling. As one of my men expressed it, "In low water we goes overboard like seals and pulls the boats up."

There are few trips after caribou but are commenced in boats of some sort—this, of course, does not apply to the men who camp along the railway in the vicinity of Howley or Goose Brook and pot the beasts as they cross in the southern migration; but while some may want to get away into the great central interior with canoes, others do not care to go so far, and a day's voyage on water with an easy pack into the "edge of the country" suffices and even then often results in good heads being obtained. Of course the man with the real hunter's instinct will want to get as far inland as possible where he will find no other hunters and the game unmolested, and this he can best do in canoes.

The all-important thing the sportsman will discover is that the deer are there—great caribou—not to be seen singly or only in spots of color as our deer, but in herds of anywhere from six to twenty in a band. If he should happen to see them when they are moving about or traveling he will see more caribou than he ever dreamed of. During the summer months they keep pretty well to the woods—the does and fawns by themselves, and the stags putting on fat and getting in condition for the rutting season and possibly chumming their few remaining bachelor days with other stags. In September they come out more in the open to feed and the stags will commence rubbing

the velvet from their horns, and apparently spoiling for a fight, try these new horns on sundry small trees and bushes. The end of this month finds the master stag collecting his wives, and the more does he can add to his harem the prouder he probably feels.

The rut lasts nearly all the month of October, and a wise Newfoundland law makes a close season from the 1st to the 20th of the month, for to shoot the foolish and crazy stags at this period would be anything but sport. I think the weather has some connection with the duration of the rut, for in many cases last November I saw stags still with the does—the weather being warm and sultry possibly accounting for this. The season is not one entirely of love making, for the master must be prepared to defend his property from any wandering or envious stag and sometimes he meets defeat and is driven off. The does apparently are indifferent as to their master—they will, during the progress of a battle royal, lie down and chew the cud and show absolutely no emotion if the original stag be routed. Young stags will be allowed to hang around the outskirts of the herd, but the master stag has his eyes on them all the time. You can usually see the young fellows as a rule on little rises or hills not far away, and where they can see everything going on. Sometimes, as I observed, a doe will evince a desire to visit the young stag, but the master with a few well directed prods of his antlers causes her to remain loyal.

It is claimed the stag does not eat in the rutting season, and I can readily believe it; he is too busy to feed. Then again his body shows this; those I obtained at the end of October or in early November were very thin, poor, and the meat uneatable. In September they have from two to three inches of fat on the back and loins, and a big fellow will weigh 600 pounds, but in about four weeks' time this has all disappeared.

After the rut they move about, and this is the season for the hunter to be afield and see the deer in numbers. A cold spell or snow will also start them moving. I found the caribou the easiest to approach for a shot or a photograph of any of our deer, and if the wind is right you can do almost anything with them. They seem to have no faith in their eyesight or else are very stupid, for a number of times I have used up my films and replaced same in the camera with deer a hundred yards or less away and watching me without their going off. And the time I got my best head four does came out within seventy-five yards and watched me stalk and kill the beast.

Their sense of hearing may be acute, but I saw no evidence of it, and several times we made noisy approaches without driving them away; however, the wind on this high country blows almost continuously and creates more or less noise, to which probably the deer become accustomed. What they lack, however, in their other senses they make up in their power of smell—let them scent a man and off they go with no great likelihood of stopping for a mile or so—even a man's track a day old starts them moving, and this means that a man in traveling about uses up considerable country in a few days.

It is not very often that a man is obliged to take long shots—my furthest was at 150 yards and because the game was disturbed, but most shots may be taken inside 100 yards. The Indians with their shot-and-ball guns refuse shots over forty or fifty yards. When you read of a man's shooting at and hitting in a fading light the forehead of a stag at three or four hundred yards, do not believe it; there was no occasion for the long shot. Distances I found are in many cases over-estimated up there; as, for instance, the distance from one point to another in a march; the height of trees; the width of rivers and the flattering estimate often made by one's guide of the length of your shot.

Many times my guide and I have lain and watched deer seventy-five to a hundred yards away, counted the points and passed on the quality of a stag's head and withdrawn without disturbing them. On several occasions they have seen us, but while they rose to their feet they did not run off. Twice I remember almost stumbling on old stags in scattered timber; the second one had heard us and was waiting for us to push into view, and even then he stood long enough for us to pass on his horns and I to refuse the guide's earnest request to "give he a gun."

The actual hunting of these great beasts is carried on in various ways and may be made easy or hard as the hunter desires. In August the horns are still in velvet so no one disturbs them then; but late in September the heads make grand trophies, though until the stags start chasing the does they are not much in evidence. Late October or early November is the time to see them in numbers and any man in the right country can make his selection. No one can expect to hunt caribou successfully in the woods, for such timber land as I saw consisted principally of small spruce, balsam and white birch and growing so close together that you could not see fifty feet ahead and the down and rotten trees made still-hunting a farce. A very easy way of getting your game is to have it come to you; that is, you select a camping site near some open ground having well traveled leads and keep a man on watch all the time either up a tree or on a lookout hill. When he reports caribou you crawl out and make your observations; if a stag and good enough, you shoot him; otherwise, you turn him down and return to your pipe and novel.

River hunting, as must be practiced along such streams as the Gander, requires quick judgment and quick shooting. The banks are well wooded until you come to the burnt country, and your only chance is when a caribou pokes out to wander along the shore or cross the stream. It is unlawful to kill deer in the water, so if you decide the head is one you want, you must act promptly and take him either before or after he crosses the river. But after all there is only one way that will appeal to the venturesome sportsman; he will try to get away in the country as far as possible from the beaten path and seek the game in its haunts. And he will have the grand satisfaction in securing his heads that he and not the game did the hunting. This method, dependent of course on the direction of the wind, will necessitate considerable traveling early and late and over a different line of country each day, for caribou will clear out of man-tainted country. This will take him to many interesting spots; great pink and white barrens covered with lichen-covered granite boulders and everywhere the reindeer moss, a lichen which forms one of the principal foods of the caribou; over extensive golden brown marshes studded with little gems of tree- or rock-encircled ponds. Or he will float on great lakes where few but the Indians have ever paddled, and it was on the shores of such a lake that the remnant of the original Indians, the Beothics, in disgust at their treatment by the white man, withdrew to themselves and perished to a man.

The pathway into this sportsman's paradise leads up winding streams where boiling and rugged waterfalls necessitate portages, and one never knows what game may appear at the next turn. Then he will stalk his game in vast solitudes where man seldom comes and only the beasts of the field and birds of the air call it home. It is said that the first trip a man makes to a new country he gets experience; the second time he gets his game; if this is so, then I am doubly fortunate, for not only did I get the former, which I will use to advantage on another trip some day, but I also got the game, and among my trophies was a forty-one point head, the best one brought into St. Johns up to the time I sailed for home. My three heads were obtained by very similar work, so the story of the capture of one will answer for all.

We were camped in the edge of a fairly large piece of woods stretching up from Deer—or as it is now known, Millais—Lake, and named after the artist-naturalist who camped there a few years ago and close by one of the many nameless ponds. To the north of us and running east and west was a low flat valley commencing over toward the famous Island Pond and terminating in a large marsh close by Millais Lake. Across the valley, which contained more or less scattered spruce and balsam, we could see on the far ridges immense marshes which looked white in the sunlight and which my man claimed was good deer country, so one day, after having beaten up all the nearer ground and turned down a dozen warrantable stags, we started early for the distant ridge. Saunders, with lunch bag and kettle slung on his back and ax in hand, led the way around ponds, over streams and up through the "tucks" and timber of the valley until after a bit we came in sight of caribou. These proved to be feeding does, but we watched them for some time in hopes of a stag being with them. Then we continued our traveling, and presently coming out on a marsh I saw what I took to be a rock, but a second glance made it a caribou, and when he stood up and looked at us he proved a stag. His horns looked pretty good to me, and I thought I could distinguish two brow antlers, but he showed signs of nervousness, so I had to shoot before I was really satisfied. Quickly resting the rifle against a balsam, I fired at the center of his breast. At this he ran and I fired again, dropping him to the shot. He fell with his nose buried deep in the moss and his hind legs stretched out behind and was dead when we reached him. While I was pleased at the workmanlike way in which I had killed him, my first shot, as I found on examination, ripping his heart; my second and unnecessary shot taking him in the spine—still I was disappointed and sorry when I examined him. I had made the mistake a

great many do, and after having refused shots at better stags, had fallen down to a pretty but small head of few points. He had run twenty-seven yards after receiving the first shot and I would very much like to know how far he would have gone had I not shot again. Later on another stag I obtained with a shot in the same vital spot ran about fifty yards before he staggered and fell.

These deer, like our other deer, can go a considerable distance after receiving a fatal wound and can carry a lot of lead before becoming sick; my largest stag took six shots from an extremely high power rifle before coming to a standstill; but these shots were distributed about him and none in a fatal spot. In a couple of my caribou under the skin I found buck and BB shot, showing that these deer had been shot at at some time by the Indians, for they are the only ones who use shotguns.

After we took some pictures of the fallen stag we removed the head and hanging it up in a tree, continued out travels. We saw a number of deer this day and in all five stags; one of them allowing me to take his picture, replace the film in the camera and take him again, and at no time did he move more than 150 yards away. Of course in this maneuvering the wind was right.

That evening I was to witness an example of a caribou's keenness of smell. On our return to camp I had left Bob to skin out the head while I went off to a barren hill not far away to try for some photographs of willow ptarmigan, and as I was sitting on a granite boulder I saw marching along between me and the camp five caribou, including a good stag. All went well until they came to my tracks, then they came to a sudden stop, up went their heads and off they bolted, first at a gallop and then a trot which soon carried them out of sight.

I have noticed great variations in the antlers of Newfoundland caribou; in fact, my three heads show this very plainly; one head is very much palmated, the beams as well being flat; another is of the round horn variety looking somewhat like a wapiti head, and my third and best one is a combination of the two, being heavy of horn and wide in palms. Some one has said, and with justice, that horns can be found in the island typifying every species of caribou, of which there are eight or ten.

Of course the desired head is one of fifty points, but I know of none to-day unless—and which I very much doubt—the one the Reed family of St. Johns possesses will figure up this number. A perfect forty-pointer is about the best a man can get to-day, and most sportsmen have to content themselves with thirty-pointers. Undoubtedly some big heads still roam the country—as evinced by the finding of dropped horns having twenty-five and more points—but these rare old fellows never seem to come to gun in their prime. I know of persistent hunters who have made repeated trips to the island; one got a small forty-nine-pointer, but he considered one of about forty-five points obtained on his fourth and last trip as superior; another, no less than Selous, the famous African hunter, had a forty-pointer to show for his best and the result of three trips; and again another man with three or four efforts could only claim a thirty-six-point head for his record.

From a Newfoundland point of view no head is a perfect one without the double shovels or brow antlers, and these often have the points overlap, resembling hands clasped in prayer. However, the majority of heads have only one developed brow or shovel, and the other a single spike. Another thing I discovered on the island—every little knob, excrescence or offer on a head is counted a point, so if a Newfoundlander tells you about a forty-five-pointer it is safe to boil it down to forty.

After all I find it is not the final killing of game that constitutes the great pleasure of the chase; it is to wander in the wilderness; to find, watch and study your game, and last and least of all to stalk and take your shot with either camera or rifle. It certainly is more of a sporting proposition to be able to stalk and make

PACKING A CARIBOU HEAD TO CAMP.
Photograph by W. J. Ehrich.

successful photographs of game than to shoot same, and there are more odds against you. Not only must the wind be in your favor, but also the light; then you must have fair weather, and I have found results at anything beyond fifty yards rather small and poor. And sometimes even your best efforts will only prove failures.

Then again your various camps will live long in your memory—what ever seemed better to you than after a hard wet day on the "mash" to tumble into camp tired and hungry to find a blazing log fire and Sandy with the soup and kettle boiling. What pleasant hours we spent in the evening lying on the fragrant balsam boughs, the soles of our feet toasting to the fire and the tobacco smoke curling about the roof of our leanto. And what yarns we listened to—Bob's adventures in the ice after seals, trapping in the fall or winter hunting for meat; Sandy's exploits as cook and guide with various expeditions or in the logging camps, or Jack's trials on the Labrador. What man that would not like to live over again some of his camps, even if the work was hard, the day unsuccessful and he had vowed as he wearily trudged home at night—"never again"?

In addition to the caribou, or deer, as the natives call them, and I have used the term irrespectively, you occasionally stumble on a bear or lynx, though the Indians gather in many of the former and keep the latter well trimmed down. They get most of their bears by watching the blueberry patches in burnt ground when the berries are ripe. The lynxes are easily trapped. Then you will find the beautiful willow ptarmigan in abundance and tame enough, so that you may pick their heads off with a rifle. On my trip a number of these birds found their way to the pot. In the proper season good bags can be made of the Canada goose, blackduck and yellowleg.

Of course, a day comes when you must strike camp and take your way out of the country, but even in our last journey down the river we were to see caribou—and one a great stag with a headpiece better than some I had, but I had to leave him for another day. Too soon comes the time to pay your men, say farewell and take the train for civilization.

Fur from New York State.

Edwin R. Roberts, of Glens Falls, Warren county, New York, devotes a considerable part of the winter to trapping. City people may well enough be surprised at the number of fur-bearing animals in their States, even in well settled sections.

During the past season Mr. Roberts took 700 muskrats, 93 skunks, 30 'coons, 28 mink, 20 foxes, 17 ermine and 1 otter, and he had out no more than seventy-five traps at any one time. The otter was taken in a wolf trap, and there was evidence, Mr. Roberts thought, that the animal's mate had endeavored to free him from the trap.

Most of the fur taken was by water sets and with live baits. Roberts makes a small pool by the waterside in which he places live bullheads, setting his trap close to the edge. Most of the mink and muskrat were captured in this way. He baits also with live chickens. He also uses a wire trap with two entrances and is applying for a patent on a wire trap with four entrances. The father of Mr. Roberts, now seventy-nine years old, has been a successful hunter and trapper, having a score of fifty-four bears to his credit. The son served his apprenticeship with the father. Young Roberts is about thirty years old, has been a guide in the Adirondacks and also has served in the U. S. Navy.

That the reputation of the State of New York as a fur-bearing district has not been entirely lost, says the Newark Union Gazette, and that that reputation, so far as Wayne county is concerned, is still being kept up, is shown by the fact that approximately $30,000 worth of furs were shipped to New York by one dealer during the fall of 1910 and so far during 1911.

Since the season opened last fall he has bought furs as follows: 50,000 muskrats, 10,000 skunks, 500 raccoons, 600 minks, 300 red foxes, 500 ermine, which make a total of over 60,000 skins. Undoubtedly this does not represent the entire catch, for there are probably other dealers.

In the International Game Reserve

By H. ANTISELL ALLEN

THE State of Minnesota and the Province of Ontario by mutual arrangement set apart each an equal amount of land for a forest and game reserve; Minnesota, the northern portion of the three eastern counties; and Ontario, the land bordering thereon which included Hunter's Island. The famous old Canadian canoe trail, on which the Canadian Government spent $35,000,000, runs through this reserve from Superior to Winnipeg.

On May 28, 1910, a party of six left Minneapolis for a trip through the aforesaid region. We went by the Great Northern Railway to Duluth and then took a Duluth & Iron Range train to Ely, the terminus of that line. There we found the sponson canoes and duffle which we had expressed from Minneapolis. Ely is one of the great iron mining towns of Minnesota, and each of the mines has a great hill of the hematite ore piled up awaiting shipment to the docks at Two Harbors. After dinner we engaged two drays to transport ourselves and our impedimenta to Winton, a lumber town on Fall Lake four miles from Ely. Winton is the real starting point. The afternoon was spent in breaking in three members of the party who were decided tenderfeet at canoeing.

Next morning we took breakfast at the lumber camp cook-house and started on the nine-mile paddle down Fall Lake to the outlet into Newton Lake. Before making the portage we caught enough walleyed pike in the rapids for dinner. The portage is about one-fourth of a mile long, and there is a well beaten path used by the fish company which operates a chain of nets along the International boundary and which has small tugs on Fall, Newton and Basswood lakes to transport their catch to Ely for shipment to Duluth.

At the Newton end of the portage there is a bear trapper's cabin built of logs. Its solitary occupant was not at home, but there was a pile of traps outside the door as evidence of his occupation. There was also a small garden containing radishes, onions, lettuce, etc., which was well fenced in to exclude the deer. Having made the portage, we started down Newton Lake to Pipestone River, a beautiful stream connecting Newton and Basswood lakes. A portage must be made here, as the stream has a considerable fall. There is a short path used by the Indians, but as we did not know about it, we followed the path over the bluffs which is used by the fish company, and it is a back-breaking one. Not having yet hardened our soft city muscles, we found the work sufficiently strenuous to require a rest after our exertions and therefore decided to camp in a glade 150 feet above the river.

Four-thirty the next morning found us at breakfast, for which we had excellent appetites. At this time we met Frank Savoy, the bear trapper whose cabin we had passed the previous evening. He was waiting for the fish tug to come down to help them across the portage. We inquired as to the fishing and he told us that he had the previous evening and that morning caught with rod and line, 157 walleyed pike. This will give some idea of the quantities of fish in those waters, and as the water is very cold, the fish are much more gamy than those further south. Here we entered Basswood Lake. This lake is thickly studded with rocky islands covered with noble pines. It has, however, many large stretches of open water which in high winds are dangerous—one party we heard of having been delayed four days by on-shore winds. Some idea of its size may be gathered from the fact that it has 1,500 miles of shore line.

Down Basswood we paddled about six miles to a portage across a neck of land into Big Basswood Lake. This portage saves about twenty miles paddling which would otherwise be necessary by continuing north in Basswood around by Government Point. This portage is an easy one of about 300 yards. A point in our travels that occurs to me is that no special mention is made of our meals. This omission is intentional, as they were so frequent that our itinerary would look like a series of menus were each described in detail. When about to embark after making this portage, a canoe suddenly appeared around a nearby point, and as it approached, proved to contain an Indian and his sixteen-year-old wife. They landed and the girl at once lifted a bundle from the canoe. The buck raised the canoe to his head and they were off across the portage, not, however, before the cameras had clicked twice. The speed and smoothness with which they moved made us city dwellers sit up and take notice.

Proceeding on our way, we paddled south, then east. Passing the hoist at the end of a four-mile logging road which takes the cut of a lumber company operating in the lakes south of the boundary from Basswood to Fall Lake, we then turned northeast, coming into the Big Basswood. There was a heavy northeast wind blowing, and the waves coming into the canoes nearly swamped us. This was our first taste of rough water, and as we used 17-foot sponson canoes, we found we could go in rough water where ordinary canoes would be impossible. Although heavy to carry across the portages the extra weight of these canoes may be put down as good life insurance. After crossing this lake, we reached the headquarters of the fish company situated on a small island just inside the United States line. According to the information received there, we could follow the International line which is blazed and could easily distinguish whether in the United States or in Canada; for, in the latter the forests are entirely untouched, while in the former everything is stripped down to bare rocks. Paddling three miles further, we camped on the Canadian side in a grand forest of pines. This was probably the most beautiful campsite we had. The pine needles were fully two feet deep and had to be dug away to that extent to get down to bed rock for our fire.

After an early breakfast next morning, we loaded the canoes for the last lap to Prairie Portage at the east end of Basswood Lake, passing many islands heavily wooded with pine. A deer was seen swimming across an arm of the lake, but too far away for a snap-shot with a camera to be effective. On an island close to the portage, there is an encampment of Indians. These Indians are not on a reservation, but are Canadian Indians outlawed by that Government on account of their active participation in the Riel Rebellion, and they are now living along the boundary on the American side. At Prairie Portage is a cook house belonging to the lumber company operating around Snowbank Lake to the south and maintained by it for the log drivers and steamer crew who tow the logs down to the hoist. This portage is a short and easy one over a path well beaten by the log drivers and is a link in the Canadian Government canoe trail. There was a crew of drivers here when we passed, and they were the last human beings we saw till we reached this point on our return journey. At the head of the falls here we had some good sport landing some very large great northern pike on our light casting rods. They afforded excellent sport, being very gamy and frequently exceeding three feet in length. Entering Birch Lake, we followed the south shore its full length, about five miles, to Carp Portage, which takes one to American Carp Lake. This is the western boundary of the lake trout fishing. Standing on the high bank of the stream, about thirty feet wide, which joins the lakes, we could see myriads of fish of several varieties—it is a marvelous sight and one that many fishermen have never seen. There were several that would weigh from 20 to 40 pounds each. We had been having fish on our menu so regularly that we made only a few casts to find out of they would bite—they would.

The way from American Carp to Canadian Carp is a tortuous channel through a maze of small islands, and is difficult to find, and from here on, to any but experienced woodsmen, the need of a guide is imperative. Canadian Carp is in Hunter's Island, the circumference of which is over 300 miles and which can be circled through chain after chain of lakes whose shores are clothed with forests of pine and cedar—primeval and solitary beyond compare. We had no guide with us and depended on our compass and sectional map of Lake county, Minnesota, which showed outline only of Hunter's Island and the lakes which bound it. We lost our bearings after entering Canadian Carp, and taking a wrong channel, went several miles out of our course, finally winding up at night at a dilapidated trapper's cabin with night and a storm approaching. The cabin, after a cursory examination, was unanimously pronounced impossible, as although apparently long deserted, we feared that a sojourn therein might prove otherwise. There were some old tepee poles still standing near on the only cleared space and around these we wrapped our tents and spent the night—the only wet one on the trip.

With the first faint streak of dawn we were up, and after an excellent breakfast, started on the search for the lost channel, which we were successful in finding, and after a paddle of about five miles through splendid scenery, we reached the head of Canadian Carp Lake, where is located Merritt's camp. This is a prospector's camp abandoned seven years ago, and is an ideal sport for headquarters for lake trout fishing, as one can reach from here many lakes in

which the fishing is excellent. The old bunk house which we used was in excellent repair, and we found many conveniences. The woods are alive with game and one can find moose and deer sign everywhere. There was a moose yard used the previous winter about 200 yards from the cabin.

Emerald Lake portage lies around a point back of the cabin and the lake is surrounded by high cliffs covered to their summits with mammoth pines and is a gem of beauty lying long and narrow, and as we saw it with the afternoon sun bringing out the glorious colorings of rock and forest and with several bald eagles soaring high in the air, adding a touch of life, we stood spellbound with admiration. It is a scene well worth many miles of travel. From this lake was taken fifteen years ago a lake trout 48½ pounds in weight. The story of its capture was told me by the man who caught it, an old prospector who has spent twenty years in this region, and is a most interesting character—Jim O'Neil, known far and wide as Jasper Jim. He caught the monster trout unassisted, from a twelve-foot birchbark canoe. Mounted, it is now in the University of Minnesota Museum.

From Carp Lake one can portage into the Man Lakes, which are a chain consisting of Little Man Lake, This Man's Lake, That Man's Lake and the Other Man's Lake—all wild, beautiful and full of trout. Weeks could be spent in this great wild country, where one feels with Wordsworth—that "Nature never did betray the heart that loves her."

We spent three days at Merrit's Camp, and then reluctantly turned our canoes toward civilization and retraced our course as far as the fish company's headquarters. "Headquarters" may give the impression of an elaborate plant, so it may be well to state that they consist simply of two shacks and an ice house on an island in Basswood Lake, as no fish are stored there, the catch being taken to Duluth weekly, as before mentioned. There were only two halfbreeds and their wives on the island when we were there. Instead of following our outward course from this place, we decided to go north on Basswood and around Government Point, which we did, turning west at the point and then south, finally reaching Newton Lake again after a paddle of about thirty miles. We camped that night on Fall Lake at the foot of the beautiful falls from which the lake derives its name, and about three miles from Winton. The next day we had our canoes, etc., hauled to Ely and took the train for home.

Our trip is now only a memory, but so pleasant an one that already meetings of the old crowd have been held and tentative plans have been laid for a return to the scenes whose appeal is so strong as to be irresistible.

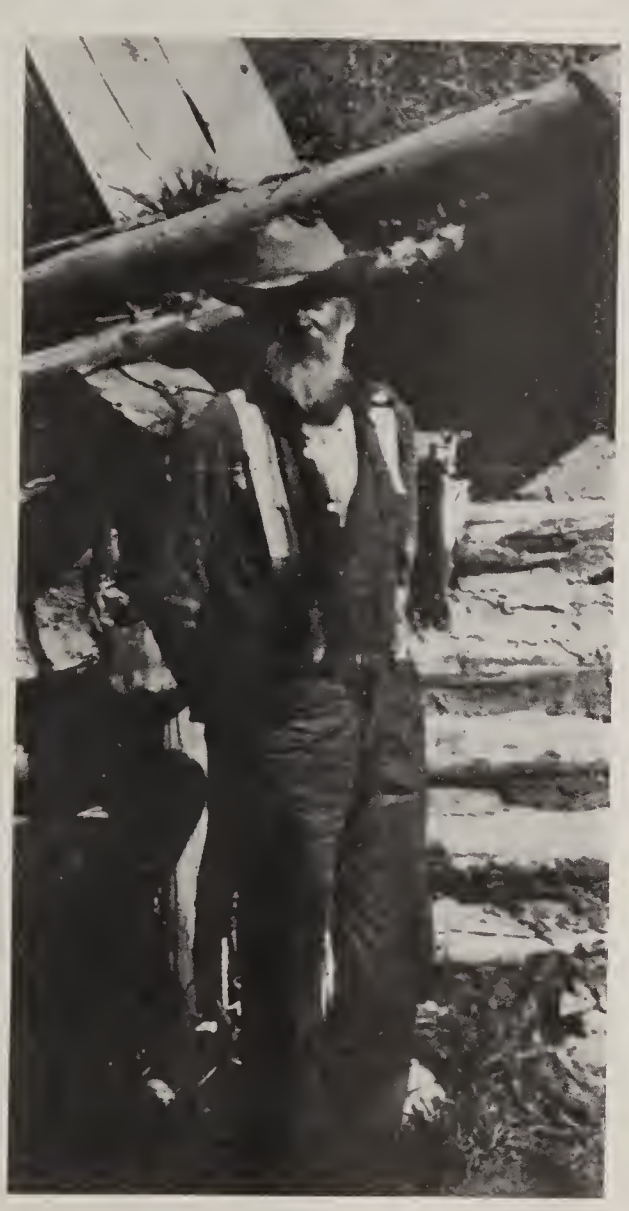
To those who in mind and body are weary of the din and turmoil of "the madding crowd's tumultuous strife" let me say, go to the good old woods, restful and peaceful, where every minute new objects of interest, of plant, animal and bird life present themselves; fill your lungs to the full with the pure pine-perfumed air, and after the night's sleep, made deep and dreamless by the vigorous exercise of the day, awake refreshed and unwearied, then when you return to duties of the city, you will have memories, the recollection of which will afford many pleasant hours of restrospection.

Uncle Jack

By W. B. S.

ANDREW JACKSON D. has lived by himself in a lonely cañon in Northwestern Wyoming since 1865. "I have seen," said he "five hundred Bannocks camped on that flat by the cabin," and in the old days elk and buffalo, antelope and deer, and even moose were almost at his door.

The cabin built of logs has two rooms and is so low that even a short man cannot enter it without stooping, and "Uncle Jack," as its owner is called, is a six-footer. The roof is of saplings, covered with a thick layer of dirt, and is, strange as it may seem, practically waterproof. The interior is lighted only by the door, when the weather permits it to be open, and by a single small pane of window glass, set in a hole cut between two of the logs composing the cabin walls. The only lamp is the cover of a tin can, filled with elk tallow, into which a strip of cloth has been stuck, and more often than not even this humble contrivance is wanting. Stove, there is none; for cooking and heating sole reliance is a huge open fire-place mou'ded of sand and baked to flint-like hardness. The yawning chimney, when the fire is out, lets in all outdoors, and the old water bucket frequently loses its bottom from freezing solid in a night. For temperatures in this region are almost Arctic, fifty and more below zero Fahrenheit being not unknown.



"UNCLE JACK" DAVIS AT HIS CABIN IN SNAKE RIVER CANYON, WYOMING.

All the chairs, tables, bed and the like are, of course, hand made and resemble Robinson Crusoe's, as does Uncle Jack's calendar, only instead of notching a post, Uncle Jack has a slate, on which every morning he writes down the date. He has no horse, and everything he uses he has to pack on his back, except in winter, when he has a rude sled on which he manages to bring home some pretty fair-sized saw-logs, which are bucked up into very presentable lumber to use in his mining. For this purpose, again like Crusoe, he has a saw pit, and many of his tools like Crusoe's are fashioned by his own hand by means of a forge and improvised anvil. On the whole, however, Uncle Jack is much more ingenious than his prototype, albeit he has not yet taken to making wicker or earthenware. But his hand-made rotary blower for the forge is probably beyond anything Defoe's imagination compassed.

His little placer proposition yields him barely a "grub stake" and he has often come near to starving, being reduced one winter to the necessity of eating up an elk skin suit of clothing. Poor as he is, however, he is as generous as a king and would share his last sour dough baking or anything else he had with any stranger who happened to find him. The last time I saw him by going far afield I killed him some wild meat, incidentally seeing thereby a lot of new country and pleasuring myself more than him, but he tried thereupon to force on me a two-ounce nugget and was actually grieved because more than suspecting it was all he had for flour, coffee and tobacco, with winter close at hand, I refused it. These are his only necessities, for salt he gets by going to a distant saline spring and boiling down the water.

It is impossible to convey to anyone an impression of the fineness of his spirit. Though nearly seventy, he never complains, never talks about himself or his troubles, always has a cheerful and helpful word. Distant neighbors to whom he entrusts his little nuggets and small commissions forget to return change and sometimes cheat him unmercifully, but resolute as the old man is, he never objects. "It's not worth bothering about," says old Uncle Jack.

Even the birds have learned his kindliness, and it is a fact that for three years past a confiding couple have built their nest inside his dark and lowly shack back of the door behind the little looking glass, which means of course that the door cannot be shut from the time the birds return in the spring until their brood is reared. It is an odd example of wild creatures' implicit trust, and Uncle Jack takes great pride in it. He calls them "pintos," a species no ornithologist would recognize.

A few years ago a married couple settled in the cañon about twelve miles from Uncle Jack's cabin. The husband died, and in bitter winter with the snow nearly six feet on the level, the old man would snowshoe there to cut the widow's

fire wood, and do little kindnesses for her and her young flock. He had an ugly stream to cross, dangerous to ford even in summer, too turbulent to freeze even in the severest weather. But he felled a tall spruce across a narrow place, making a bridge. One day while in midstream he slipped and went off into the rushing anchor ice. His coat caught on a limb, and the swift water held him under. By a fearful struggle he contrived to get his knife out of his pocket, cut himself loose and somehow got ashore. It was far below zero, he was lightly clad as usual, and seven miles from his cabin. It looked like death, but he happened to think of a hot spring, of which there are many in that country, and he made a dash for that, reaching it when, had it been much further, he might have perished. By it he dried his clothes and so got home, and the widow, who moved away in spring, has never known of the adventure to this day.

In February, when the snow lies deepest and the nights are coldest, the starving elk drift in, often in large bands. They are so thin and weak it is a wonder that any survive. But it is then that they are Uncle Jack's especial care. He shovels paths through the deep snow from their "yard" to fresh patches of willow, or to a hillside from which the snow has been blown by the wind, and he takes as much pride and joy in seeing some lordly though very feeble old bull at death's door pull through as ever that shepherd whose one lost sheep was found.

Long live Uncle Jack. For six months at least, through the long winter, he is cut off from all communication with his kind, and the possibilities contained in this situation are unpleasant to contemplate. Well he knows what they are, and he is sometimes urged to go back to civilization and comfort. But he steadfastly refuses; he would not be contented anywhere else after more than forty years, and he prefers his independence, and so some spring will come when the poor old man will "turn up missing" and his lowly cabin will be his tomb.

There is no poetry or fiction about this little narrative; it is all just as I have set it down. Uncle Jack is known to not a few. Only no words can picture the rugged worth and simple quaintness of his character. He is like a page out of Izaak Walton. I am tempted to apply to him the words that Robert Louis Stevenson wrote to Jules Simoneau, another dereliet, who died a few months ago in California: "From the bottom of my heart, dear and kind o'd man, I hold your good memory very close."

Camping

By WILLIAM H. HOLDEN

III.—GENUINE TROUT FISHING.

WHILE camping on the Jordan River our cook told us of a fine trout stream about sixty miles long, having a dam or two upon it, and being remote from civilization. He said that the trout were often 4-pounders and were abundant. His explanation as to how we were to manage the trip and get out of this wilderness was not very satisfactory, but we understood that by going into the headwaters by team we could work down the sixty miles in our boats and take a coasting steamer at the Life Saving Station on Lake Superior and thus get to the Soo. We decided to try it and thereupon had our boats equipped with fish boxes to keep our fish alive until we could get them into the fish rack at camp. Fish boxes in boats invariably leak, and after many trials we find that if the grain of the lumber does not cross the boat, but is upright, it will swell with the bottom of the boat and be less liable to leak. Even when thus carefully built the shrinking over winter has to be compensated for by caulking and wetting before the boat can be satisfactorily used.

We shipped from Charlevoix to St. Ignace and took the train to our station, seventeen miles from the headwaters, where we arrived at night at an old lumber camp in charge of a watchman who said we could sleep in one of the log buildings that had been cleaned, but one or two of our boys did not get rid of the fleas for several days, so we have never slept in an old lumber camp since then. Worse than fleas are apt to get upon you if you do that. We found the mosquitoes quite troublesome, and the river a mere creek with no indication of four-pound trout. We decided to go back, but on having a good night's rest and a report from the cook that he had seen a deer down the river, we decided to stay for a few days. We found the river full of logs left by a deficieney of water in the spring, and we fished through the logs and finally found an old raft in what was apparently the outlet of a slough, but as the volume of water coming out of it was about equal to that of the river, we decided to investigate.

We took this raft and our rods and went up the outlet a way and caught trout as fast as we could get them in. A rusty backwoodsman at the lumber camp had offered for $10 to show us a lake nearby in which we could catch plenty of large trout, but we were afraid to trust him. We supposed that we had found the place, and the next day we pulled a boat down river over the logs and into the outlet, and from there we went up a short distance and found a fine lake fairly alive with trout. To get them within reach we tied one end of the boat to a long fallen cedar and anchored the other end with a pole so that the boat would not move. After a short space the trout rose near enough to cast—we could only make short casts then—and as we fished with five flies we often caught five at once. With a moving boat but few trout could be taken. We fished there several times, and then moved our camp down to an open place in the river about five miles long.

We had taken camp cots along this trip, as the boys were afraid to sleep on the ground in this wilderness. The result was that we were very cold every night and had to put all the clothes and waterproofs under us to keep out the cold. Beaver were quite plenty, and our cook caught one to show the tenderfeet. We were very much interested. He cut a passage in the top of the dam, and set the trap in the pond at the cut and under water, attached to a floating evergreen with only the top left upon it. In the morning the beaver was found a short way from the cut, dead from drowning. We did not catch any more, as we did not like the idea of doing so when we had no need for them.

Deer were plenty and we shot at several, but did not get or wound any, as we were so excited when we saw them that we forgot our rifles until the deer had concluded to get out of sight. We always had plenty of fresh trout, as we kept them in a rack in running water, and had fish boxes in our boats to keep them alive until we could put them in the camp live rack.

We teamed around the logs, getting below them and floated down the rapid river to Lake Superior, where we took a coasting steamer for the Soo and thence home.

We learned to set up tarpaulins to keep off the cold north wind, both at our sleeping tent and at the camp-fire. We had not as yet learned to lay in supplies sufficient for our trip and had to get some from the life saving station at the mouth of the river.

IV.—HINTS AS TO COMFORT.

We had now become used to trips of several weeks' duration, and more familiar with our needs in the way of supplies, tents, etc. Our boats had proved their inadequacy, and we traded them for agates gathered by the life saving crew. We had new ones built that were longer and wider and that had live boxes in them with the door opening flat on the top so as not to be broken off when open, high enough to prevent the water from splashing into the boat or overflowing when the boat was heavily laden, and with a small hole at one side of the top, through which the trout could be put when the door was shut. We also learned that we could not sleep comfortably on cots when the nights were cold and used bough beds of balsam ends about eighteen inches long set from the head to the foot, the stub being stuck in the ground and laid nearly upright, logs at the head and foot and one on each side to keep the bed in place and the sleeper from rolling off. Such beds are warm and comfortable, but must be renewed at least once a week, or they become hard and musty. A rubber blanket must be put on top of the brush and under the blankets or dampness will give you a cold. Your tent should have the back pitched to the north to avoid the effect of cold winds, and the door should be kept open all night for fresh air.

With a party of eight or ten as we now had, including the help, we had three boats, eight tents or flies, kitchen fly, dining room fly, sitting room fly, supply tent, three sleeping tents for the sportsmen and one for the help. The tents should not be less than nine feet square, and if made to order be capable of being opened at both ends for air and comfort in hot weather, and all should be light, say eight ounce and have a fly at least two feet larger than the tent to keep off the rain. The supply tent will be too hot in the day time without a fly. We also have a stove for burning wood, which is set up at the rear of the kitchen fly, also a fireless cooker to keep butter and game in to be cool.

It can be used for a boiled dinner which will be ready on your return at night.

Our camp-fire is built with back logs three high, held in place by slanting stakes. The fire in front will then burn better if the wood is set up on end against the back logs, and the heat will be thrown out to where you are sitting. The places for the beds should be leveled and be laid upon before being considered completed, as you can then tell whether the ground is level; if not, you will not sleep comfortably. If your tent is leaky, wet your finger and lead the drop of water that comes through down the inside of the tent, and further leakage will follow it instead of dropping on you or your bed.

If you are cold at night do not try to stick it out shivering, but get up and get more bed clothes or partly close the tent door, and in returning to bed pull your blanket around your neck and roll back and forth to get the bed clothes close to your body. Wear a night cap. I have two, one lighter than the other, for variations in the weather. Take an electric hand light for use if you have to get up in the night, or are alarmed by some unusual noise, such as toads, rabbits or porcupines. Take and for a feeling of security keep your revolver outside of your bed and at your hand, but in its leather case.

When you get up in the morning put your night clothes after airing and your night cap and head net, if you use one, inside your pillow so that you can easily find them on retiring or on making a new camp after a trip. Have your rubber blanket large enough to cover the whole of the floor of your tent and with one side flannel, as the rubber is too cold to stand upon while dressing. Put your clothes at night on your chair or on something else and not on the floor, as dampness will thus be gathered and you will catch cold. If the mornings are cold, dress in bed as far as to get on your first coverings. If you enjoy a cold bath and recover your warmth as soon as you dry off, have a pair of rubbers and a warm bathing gown. Put this on after taking your bath and warm up at the camp-fire before dressing. Always put your slippers at the foot of your bed and near the door for use if you have to get up. Do not go out in your bare feet or in your socks.

If porcupines bother you, set a steel trap in the door of your supply tent to keep them out, or you will find them in the bread box or elsewhere to your discomfort. If you are nervous about sleeping with the tent door open, buy a roll of small mesh wire fencing about three feet high and twelve feet long and set it up at night around the front of your tent. It will keep out the porkeys and skunks; other animals will not come in. If a skunk gets in, do not be alarmed, but quietly slip past him and out of the tent without making any motion toward him. Get a lantern and set it, lighted, just inside the tent and move away. In a few seconds he will come out, as he will not stay where there is a light. If any of the party are in the tent they should remain quietly under their blankets until he has retired. Many skunks have been in our tents and we never had any odor left.

All the game laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

Newfoundland's Free Fishing

By W. J. CARROLL

THE Fish and Game Commissioner has about completed all arrangements for the placing of wardens and the protection of rivers for the current season. Every good salmon river in the island will be better protected this year than ever. The smaller rivers will also be looked after, but more attention will be concentrated on the larger rivers for the next few years, so that every river will be well stocked, will give the maximum of sport to the visiting angler, and connectively they will supply superior fish and fishing, and accommodate many more anglers.

Complaints have been forwarded from several quarters, as to conduct of anglers, who have erected lodges and wooden camps on the banks of certain good pools on the Grand River, and in other places. It appears from the information received that certain owners of camps resent the intrusion of visitors to the pools on which they camp to such an extent that it has become very noticeable and very offensive of late.

These camp-owners virtually claim riparian rights, that are against the law, and the board intends taking steps to correct this growing evil. As a first step, it is intended that every license issued to visiting sportsmen will contain a printed notice on the back of it, to the effect that no man has exclusive rights to any pool. Every angler can fish where he likes, even opposite the camp of any other angler.

Certain anglers have been complained of for monopolizing well-known good pools by keeping the best places, and when unable to hold those places themselves, they put some one else there, to keep off outsiders. For the present and the near future, the fishing in Newfoundland is absolutely free to all, and the commission intends to emphasize that point, in order that the inducements offered will be greater than those offered by any other country in the world.

There are certain well known, though unwritten laws, that regulate the conduct of anglers and the mutual courtesies due each to the other; and if one angler has just possession of a good place in a pool, the second-comer is not likely to throw across and tangle him up, but is bound to respect the right of the man in possession. But the latter must not be hoggish enough to monopolize a pool that would supply good sport for a dozen rods, and because he camps beside the brook, he must not get filled with the idea that it is wrong for another man to come up and throw out alongside of him, provided there is room and the fish are plentiful.

We are very democratic here and insist on equal rights for all. Very tempting offers for the exclusive rights to several rivers have been refused by the Government. We have rivers enough in the island well stocked with salmon and sea trout to afford splendid fishing, for not only the visitors who have been coming regularly for the last few years, but also for ten times that number. Some of the very best rivers in the island were not fished at all last year, while those contiguous to the railway line were in many instances over-fished by anglers residing at nearby hotels or camps.

When the new system of wardening has been more perfectly systemized, anglers will be more evenly distributed, so that crowding on the principal rivers will be avoided. In the meantime it is intended to emphasize the fact that all streams, rivers and pools are free to all-comers possessing licenses, and if the law does not give prescriptive rights to camp owners, it does not restrict their liberties or privileges, but puts all visiting anglers on an even footing.

If anything else were contemplated, we would have to follow the example of other countries, and instead of charging ten dollars for a license, we should be compelled to levy fees, the minimum of which would be in the neighborhood of one thousand dollars. Many camp owners have been reported as courteous men, willing and ready to share the sport with other anglers who, notwithstanding the fact that they are but flying visitors, have paid for their licenses and do not own a campsite or know any one who does, yet have just as much right to fish any and every stream as sportsmen who have been coming for years.

Thousands of Americans will regret the loss of the bonnie little steamer Bruce that for years did such grand service between the island and the mainland. The name of the genial Captain Delaney will suggest itself to every American who, for the first years she was running, made the trip across. Genial, careful, reliable, brave even to rashness, Captain Delaney guided the good ship night and day through storm and sunshine, through dense fog and almost impenetrable ice, and yet no accident ever happened ship or passenger. His successor, Captain Drake, was the same type of man, but owing to peculiar circumstances, the inability of a merely human machine to distinguish between an ice-bound shore and snow-covered, low-lying coast and drifting ice, he met with an accident that it was almost humanly impossible to avoid. His conduct in the crisis, though, showed his mettle. He acted consistently with the highest and best traditions of British seamen in such plight and landed his crew and passengers on a dark winter's night on a bleak forbidden coast without loss of life.

The steamer Invermore is now on the route pending the building of a new Bruce. The Invermore is a good comfortable ship, well fitted and well found, and visitors from the mainland may rest assured that their wants will be as well looked after and they can travel just as luxuriously on the Invermore as ever they did on the old favorite Bruce.

A curious happening is reported here, about a shallow pond in the neighborhood of St. John's. This pond was remarkable for the number of mud trout it contained. The past winter the water froze to the very bottom of the pond, and when the ice thawed, hundreds of splendid fish were picked up all around the shore. Some of them were reported in various stages of decomposition, and were unfit for use.

GAME BAG AND GUN

Old Fur Papers.

We are permitted to copy a bill and letter of eighty years ago, dealing with fur prices of that date. They have been loaned us by Mrs. Fannie Hardy Eckstorm, and are among the old correspondence of her grandfather, Jonathan T. Hardy, the father of the late Manly Hardy. Those of our readers who are trappers, or who are in any way interested in the fur trade, can hardly fail to find these letters of very great interest.

The papers are a bill in French from P. Tondut, of St. Pierre Miquelon to Jonathan T. Hardy for six fox skins, the most expensive of which—a black fox skin—cost $9. This is followed by the bill of lading and a translation of the bill rendered by Tondut. The letter from Barzillai Homes quotes prices of furs in Boston in 1835. Homes was a Boston fur buyer and his prices are interesting, compared with those of the day. The second item in Tondut's bill probably refers to cross foxes; chaudronniers, as Mrs. Eckstorm suggests, very likely means "inclining to reddish."

FACTURE à 6 Peaux de RENARD, chargées sur le Falcon, Capitaine Hatch, allant à Castine, à l'adresse de Mons. Jonathan T. Hardy, pour être realisées pour mon compte.

1 Peau noire	F.	45
3 dito chaudronniers .....@ 15/.....	"	45
2 dito rouges .....@ 4/.....	"	8
	F.	98

Dont je prie Monsieur Hardy de vouloir bien vendre au mieux de mes intérêts ou de les expedier à Boston, s'il croit en avoir une defaite plus avantageuse.

En attendant je le salue amicalement.

Tondut.

Je n'ai pu me procurer de peau de loutre ainsi que je l'avais promis à Mr. Hardy, mais j'espère être plus heureux ce printemps.

Tondut.

St. Pierre, le 3 Decembre, 1834.

SHIPPED, in good Order and Condition, by P. Tondut, of St. Pierre, in and upon the good Ship or Vessel called the Falcon whereof Wm. Hatch is Master for this present Voyage, now lying in the Port of St. Pierre and bound for Castine.

Viz.

1 Box J T H Six Fox Skins

being marked and numbered as per Margin, and are to be delivered in the like good Order and Condition, at the aforesaid Port of Castine (all and every the Dangers and Accidents of the Seas and Navigation, of whatever nature or kind, excepted) unto

Jonathan T. Hardy

or to his Assigns, he or they paying Freight for the said Goods———— with Average accustomed———In Witness whereof, the Master or Purser of the said Ship or Vessel hath subscribed to these Bills of Lading, all of this Tenor and Date; one of which being accomplished, the rest to stand void.

Dated St. Pierre this 3d day of December, 1834.

Wm. W. Hatch.

Bill of 6 fox skins shipped on the Falcon Captain Hatch bound for Castine to the address of Mr. Jonathan T. Hardy to be sold for my account.

1 black skin				F.	45
3	"	cross	@ 15 francs..		45
2	"	red	@ 4 " ..		8
				F.	98

Which I beg Mr. Hardy to kindly sell for my best interest or to forward them to Boston if he believes that he will have there a more advantageous sale.

Meanwhile, I salute him in a friendly manner.

Tondut.

I have not been able to procure any otter skins as I have promised Mr. Hardy, but I hope to be more fortunate this spring. Tondut.

St. Pierre, December 3rd, 1834.

Boston, March 9th, 1835.

Jonathan T. Hardy, Esq.:

Dr. Sir. I recvd yours of 14th inst. this day, and agreeable to your request send you a list of the prices that I am now paying for prime furs, viz. Prime Red fox, 7/6—X @ 15/; Otters, 5.50 @ 6$; Minks, 45c.; for large Salt water Minks, 50c.; Sables, 100c.; Fishers, 1.50; Lusevees, 1.50 @ 1.75—House cats if large & Black, 20c.; Common, 12½c.; Prime Bears, 3.50 @ $4.00; Cubs, 1 @ 2$; Mushquash & Beaver very dul sale. Should you send your furs to this Market I will alow you the highest prices for them. They ought to be hear in all April.

Yours respectfully,

Barzillai Homes, No. 100,
Milk Street.

Bobwhite.

Roanoke, Va., May 20.—*Editor Forest and Stream:* Little bobwhite is the best beloved of all the sportsmen in the sunny South, and a rare and exceedingly intelligent little fellow is he. In times that are past we had them in this county in thousands. I have netted them in the long ago, but we always turned from two to four pairs from each covey out for breeding stock, and for a long time they were as plentiful as ever, but when the mowing and reaping machines came into general use, the little fellows had to move from the cultivated fields, and after a few years instinct taught them to build their nests in the corners of the old rail fences so they would not be broken up.

The last nest I saw in the wheat field was when we were using the binder and cut to within a yard of it on the west, but the next time the machine came around I directed the driver to leave a space of about six feet. He did so, but it was all in vain, for I watched it for some time and they never returned. I have often left the grass and wheat standing, but have yet to see the first one return. It seems a little strange to me that they should be so particular when I once saw a guinea and a bobwhite nest together. I took a stick and rolled all the eggs out but one, to see what would happen next. Neither one ever laid in the nest again.

Bob soon becomes expert in the knowledge of hiding, so you will not have all the advantage if he has to take to wing, as all hunters know. In my hunting experience I have known only two coveys to turn this trick. Late in the season some years ago I found a covey on one side of a hundred-acre field. It was late in the season and they were as wild as the proverbial marsh hare. They flushed and flew a long way due south, turned to the left and flew almost as far north. I did not know this at the time. I looked for them, but could not find them, so I began to circle until I at last located them. Right here is where the cunning or instinct of the birds was shown. I made a few kills, then the dog pointed the mother bird. I made a clean miss, but I observed when she flew she had a crooked leg and could not draw it up, so I marked her down in some brush and briers and went right after her. I made another clean miss and she flew right back to the place where they first scattered. I called the dog and he pointed her again over a stump in almost bare ground, so I thought I would see the hoodoo before she flew. On looking I saw not one, but two birds within a couple of inches of each other. "Now," I thought, "I will see what you do this time." I advanced a step; up jumped the young cock bird and I downed him, but the crooked-leg bird did not bat an eye. I then flushed her and made a kill. I have often wondered whether she took the position by the young bird by accident. Her actions on being discovered would indicate that she knew I would shoot the first bird that got up.

With us they sometimes rear two broods a year. While plowing I have watched for several days at a time. The cock bird always has the older birds in his care and he is the most vigilant guardian I ever saw; never feeding so far as I could see, but perched on a clod, eyeing the surroundings for possible danger. The mother bird with the second brood kept near the others, but allowed no mixing with them; and such bird talk the young ones have. There are tramp birds in plenty, as I know, for I have found them one day and never saw them again.

In 1890 we had a very deep snow and I thought all the birds would die. I put out some oats near a spring branch and two flocks found it. They came every day for about ten days and it was worth while to watch them enjoy the feast. As usual one was always on guard. After the snow was nearly gone the birds left, and not a bird was found on my farm that year; tramps they were. In the nesting season bobwhite is always on the lookout for a scrap, and on first sight you would think he was the John L. of his kind, but he is a good bluffer. They chase each other up and down a couple of licks at the end of the beat, and they turn and repeat the tactics. I have watched them for hours. Unless some disease kills them there will always be birds in the mountains of this county. The law prohibiting the sale of game birds in Virginia for the last few years is showing decided results already. Referee.

The Flight of Wild Geese.

Chicago, Ill., May 18.—*Editor Forest and Stream:* In your issue of April 1, Percival Hicks writes interestingly upon this subject; not so much to advance a new theory as to show the fallacy of some already propounded. This is primarily directed at Hermit, but since his views and mine, as expressed, do not differ materially, I would like to attempt to show that his comparison of a boat and flock of geese might not be a good one. He says:

"It is well known to all sailors and water men generally that there is no place so unfavorable to a boat as the wake of a preceding craft."

This is true enough since the displacement, speed, etc., stir the water up generally, but applied to nature it is a different proposition, at least as touching the family of birds under discussion.

A vivid picture comes to mind now of a mother goose swimming along with her goslings grouped close behind, and indeed that is the common relative position while swimming. I feel positive that the goslings were suffering no inconvenience from position; in fact, such a sight is an example of absolute ease of motion. We all have seen ducks swim one behind another with no handicap. Fish swim in schools. Will anyone say the ones behind have the worst of it?

These things are right under our eyes and leave no room for guessing. Probably aeroplanes do perform "much better in undisturbed air." If undisturbed means calm air, so do geese. But I submit that since the example of one boat following another, so far as resistance is concerned, does not hold true in the example of the goslings following the goose without inconvenience. We cannot accept the comparison as applied to geese in motion in an entirely different element.

Percival West also believes that when the geese drop out of line from fatigue they occupy a lower altitude. He does not tell us why they could do better there. If the difference in altitude is only such as to make him "believe" they occupy a position below the level of the flock, the difference in altitude could not vary enough to affect the ease of flight.

Is it not natural to suppose that all of the geese would fly at such an altitude best suited to their comfort?

I do not pretend to know whether or not tired geese could rest up by flying within the triangle, but I remember the bicycle rider who hung up a record when he was paced by a train. The suction helped him along.

Dixmont.

[That the action of the two elements, air and water, on birds and boats respectively, cannot well be compared is understood, but in this connection the following instance may be of interest: On the Hudson River great fleets of canalboats and ice barges are towed to New York city daily by powerful tugs. "Catching a tow" is the common practice of small boatmen. Canoes are frequently seen immediately behind the last barges, where they remain without being made fast, held there by the suction set up by the flotilla. The flood tide is very strong, and the two tugs frequently whistle for the assistance of one or two other tugs, which range alongside the flotilla and push, but this strong current has little or no effect on the small boat that is drawn along by suction behind the tow. If left there, a small boat will drift best broadside to the current, but this is not a safe thing to do, since the suction behind the flotilla may capsize it under the overhang of a barge.—Editor.]

The Vanishing Shore Birds.

It is no news to gunners that shore birds are rapidly disappearing. Killed at all seasons of the year, exceedingly gregarious and decoying readily they offer an easy prey to any but the least skilled gunner.

What sportsmen do not know is the usefulness of many species of shore birds. Nine sorts of shore birds—some of them our most familiar peeps—feed on mosquitoes, and in the aggregate must destroy millions of larvæ. They eat also the larvæ of various species of horseflies and of the North American fever tick and so tend to protect horses and cattle. On the Western prairies shore birds—in common with a multitude of other animals and birds—devour the Rocky Mountain locust, from twenty-five to forty-eight of these insects having been found in a single stomach. The army worm, the cotton worm and cotton cut worm are all eaten by various shore birds, as are boll-weevil, the cloverleaf weevil and rice weevil and the pea weevil.

Upland plovers have been observed following the plow in the field and feeding eagerly on the different larvæ turned up in the freshly plowed soil. Besides this, they work in the garden, eating the grubs that destroy vegetables; while a Massachusetts man, near whose garden bred three pairs of spotted sandpipers, declared that he had many times seen them make faithful search there for cut worms, spotted squash bugs and green flies. It is certainly worth while for gunners, but especially for legislators, to consider the good done by these little birds, and to take action which will effectively protect them during their passage over the land and, if possible, will encourage them to remain and breed with us.

A letter recently printed in the London Field tells of the service in a turnip field of a flock of plovers. This is the lapwing, peewit or green plover, the bird made famous in one of the most familiar of all quotations, as getting himself in spring another crest. The correspondent says:

"Dr. Hammond Smith has conferred a benefit on agriculturists, and is to be congratulated on raising in your paper the question of the protection of the lapwing, peewit or green plover.

"The surprise is that farmers themselves do not take steps to protect a bird of such value to them—did they but realize it—in keeping down insect pests. No charge of damage can be brought against the plover, and it should be in some degree protected against the spoliation which goes on every spring for the purpose of providing a dainty for people who demand what is in season, but very few of whom would know whether the eggs before them were those of a plover, a gull, or some other bird.

"An instance of the usefulness of this bird came before me many years ago in my younger days when I used constantly to ride with an old friend who farmed his own estate.

"One day we were riding through a large field of turnips which was infested with wire worms. He had tried to destroy them in various ways without success, and was having the field dragged. When the men were at one end a flock of plovers settled down at the other. My friend ordered the men to leave and see what the birds would do, and as a result when the birds had been through the field not a wire worm could be found, and the crop was practically saved. From that day it was understood that anyone in his employment who was discovered either killing a plover or taking its eggs on any of his land would at once be discharged."

A Just Judge.

Montgomery, Ala., May 18.—*Editor Forest and Stream:* State Game and Fish Commissioner John H. Wallace, Jr., is highly pleased over the outcome of a case in Wilcox county, arising from the killing of a doe by Hon. B. M. Miller, judge of the Fourth Judicial Circuit of Alabama. Commissioner Wallace received the intelligence from county warden G. L. Alford, of Camden, to the effect that Judge Miller, while hunting, had killed a doe, whereupon Mr. Wallace instructed Mr. Alford to swear out a warrant against Judge Miller and to use every diligence in the matter of prosecuting him with the ultimate hope of conviction.

At the organization of the grand jury, Judge Miller charged the jury especially relative to infractions of the game and fish laws. The following from the Wilcox Banner discloses what occurred:

"The spring term of the circuit court of Wilcox county convened on Monday, May 1. The grand jury was charged by Judge Miller in his usual able and forceful manner. Milliard Jackson, of Pine Apple, was appointed foreman. There was an unique matter in the judge's charge that particularly attracted attention. Since the last court the judge himself had violated the game law by killing a female deer on a famous hunt in the game preserves of certain hunters of which he was one. The game warden had made an affidavit against the judge and had him placed under bond. The judge admitted killing the doe and commended the course of the warden in his upholding the law, and he expressed a desire to be indicted, and that he was anxious to pay the fine. He then applied in an apt and pertinent manner this particular case to the protection of human blood. If officers would be as diligent in the protection of human beings as these officers were in the protection of game, it would be better for society in general, and would probably tend to reduce the shedding of human blood. In other words, he appealed for a more wholesale sentiment on the question of law violations, particularly those of murder."

Commenting on the prosecution of Judge Miller and his attitude in the case, Mr. Wallace said:

"Judge Miller has attained the highest grounds possible for a patriotic judge to assume. His course is highly commendable and will have a superb moral effect, not only in Alabama, but throughout the entire country. He has evidenced the most exalted degree of patriotism attainable, and proclaims to the world that the law should not only be applied to the obscure and defenseless, but to those occupying stations of power and influence as well."

Protectionist.

Egret Plumes Worth Twice their Weight in Gold.

One of the most prominent and popular New England newspapers has recently come out editorially with the misleading statement that women, whose consciences may have troubled them for wearing bird plumage in their hats, will be relieved to learn that the aigrette is not obtained at the cost of the bird's life. This newspaper quotes the "Millinery Trade Review," which quotes a report made by a "naturalist" who has lived for twenty years in Venezuela, "the home of the egret," which he says is protected by the Government, and he repeats the old canard to the effect that its plumage is gathered during the months of the moulting season, the feathers being picked up from the ground or from bushes. He also says that Venezuelans would not think of killing the birds, and the statement is made also that the greater portion of the aigrettes used in this country are a Venezuelan product.

I know positively that egrets are killed to obtain their plumes. They are killed in the breeding season at a time when they are hatching their eggs and rearing their young, for that is the only time when they wear the plumes which form the aigrette of commerce. I have seen a considerable number of these birds killed just before the breeding season and the plumes were undeveloped. Furthermore, plumes that have been moulted, are damaged, for they are worn and soiled, and the only plumes valuable in commerce are those taken from the bird itself in the nesting season. This tale of plumes picked from the bushes is evidently a fabrication invented by the feather dealers or some so-called "naturalist" who is probably in the business of procuring the plumes "for revenue only." The editor might easily have learned the facts in the case by consulting any reputable ornithologist.

Less than a century ago, in the time of Audubon and Wilson, the egrets inhabited a great part of the United States. There were large heronries in the State of New Jersey, and many birds came into New England, although they were never common here. Even within the past twenty years they bred in great numbers in the West as far north as Oregon, and the Southern States swarmed with them during the early part of the last century.

In the winter of 1877-78, when I was first in Florida, great flocks of these birds were still to be seen everywhere along the lagoons, rivers and lakes of the southern counties of that State, and great heronries were located there, some of which produced annually many thousands of birds. Plume hunters were even then destroying the birds there. The country stores in Southern Florida had large bunches of aigrette plumes hanging above the counters. The hunters were paid twenty-five to fifty cents for each plume by the storekeepers, and to every plume was attached a piece of skin from the back of the bird that produced it. The bird had been killed and "scalped" to get its plumes.

When I went there ten years later egrets were growing rare. Now both species are nearly extinct in the United States. The parent birds were shot down while attending their nests or bringing food to their young, and the young were left in their nests to starve. If any one doubts this he can be referred to the reports of numerous ornithologists who have actually seen this work as I have. To-day aigrettes such as were bought of the Florida hunter at fifty cents each, now bring over eight pounds sterling per ounce in London or over twice the value of gold.

Venezuela is now the home of the egret, because the egrets of North America have been nearly exterminated. Those of South America will follow if the feather trade has its way. Laws fail to stop this atrocious butchery. There is no reason to believe that the Spanish Americans of South America will be able to protect these birds more effectively than the people of this country. The only remedy is to stop the sale of the plumes. E. H. Forbush.

A Southern Sanctuary.

New Orleans, La., May 2.—*Editor Forest and Stream:* President Miller and members of the State Game Commission have returned from Cameron parish where they made arrangements for large fish and duck preserves. It is proposed to utilize the old biological station building for wardens and those in charge of the preserves. Several lakes and ponds, embracing a number of acres, will be utilized in the preserve for breeding ducks and fish. The commission desires to protect the ducks as much as possible and encourage them to breed in this State and to protect them from the hunters. It is also proposed to raise several species of fish. The location of these lakes and ponds are ideal for the purposes intended. The biologic building was some time ago turned over to the commission by the State. The hunters in Louisiana want more places for the breeding of ducks as well as places for them to feed. It is the intention of the commission to plant a great deal of duck food in several sections for the ducks. It is thought the ducks will be encouraged to come to Louisiana earlier than usual and remain longer if they have good feeding grounds.

The Louisiana Game Commission will have the largest duck, brant and goose preserve in the United States when the offer of E. A. McIlhenny and C. W. Ward is accepted deeding to the State through the State 13,000 acres of swamp land absolutely and 37,000 acres for the period of ten years. The land is located on the west side of Vermilion Bay in Vermilion Parish near the Gulf of Mexico. In other words, the Game Commission will have charge of 50,000 acres of the finest kind of swamp land for ducks of every variety, geese and brant.

The location of the property is ideal, and thousands of ducks yearly make this place a breeding and feeding ground, and it has become noted for its fine game. It is not accessible to hunters except by boat. Commissioner Miller says the offer is the most liberal ever made to his board, and there is practically no doubt it will be accepted. The conditions are that no ducks, geese or other game are to be hunted or killed on this preserve, which is to be used by the birds for increasing their numbers.

When Dr. A. K. Fisher was here some time ago, representing the conservation of game department of the United States Government, he strongly urged the commission to take immediate steps to protect the ducks and geese, as if this was not done these birds will in time be exterminated. The Commissioner agreed with Dr. Fisher, but said the commission could do nothing, as it did not have a preserve of sufficient size, and it was not in a position to purchase any property. The liberal offer, therefore, of Mr. McIlhenny and Mr. Ward was received both with surprise and gratitude. Mr. Ward spends his summers in Michigan and his winters in Louisiana, is an ardent hunter and fisherman and is doing all he can to encourage the sport. He is a financier of prominence. Mr. McIlhenny is a manufacturer and resides in Vermilion Parish. Both are interested in birds. Mr. McIlhenny owns large interests on Avery Island, near the new duck preserve.

The opinion expressed by sportsmen here is that the big preserve will greatly increase the number of ducks and geese in Louisiana.

F. G. G.

New York Legislature.

Albany, N. Y., May 22.—*Editor Forest and Stream:* The Senate has passed the bill of Senator Fiero, in relation to hooking suckers through the ice in Ulster county.

Assemblyman Bush, of Chemung, has introduced a bill excepting honorably discharged veterans of the Civil War from the payment of the license fee required by the section for a hunter's license.

The Senate has passed Assemblyman C. W. Phillips' bill in relation to the taking of pheasants.

Senator Roosevelt has introduced a bill reducing from $25 to $10 the amount which must be paid by an applicant for a hunting license to the clerk countersigning and delivering the license in cases where the applicant is a non-resident of the State, an unnaturalized person or an alien.

The Assembly has passed the bill of Assemblyman Patrie, of Greene, prohibiting the use of ferrets in hare and rabbit hunting.

The Senate fish and game committee has reported favorably Assemblyman Brereton's bill relative to fishing through the ice in Lake George.

Governor Dix has vetoed Assemblyman Sullivan's bill in regard to open season for lake trout and whitefish. This bill is objected to for the reason "that it permits the taking of whitefish of whatever size, which in my judgment is most unwise."

Spring Shooting.

There is a great deal of agitation in Illinois now on spring shooting. It is being strongly opposed by real sportsmen. The contention is made that the game is unfit to eat in the spring because it is poorly flavored and tough, and very frequently waterfowl are infested with worms in the spring.

If the people of Illinois and other States are opposing the spring shooting of ducks and geese it looks like the hunters of North Dakota should be more directly interested, as this is the famous feeding and breeding ground.

The New York Legislature declined to legalize spring shooting on Long Island. Sentiment almost everywhere is against spring shooting—except in North Dakota—where a backward step was taken. It is not a record that can be pointed to with a great deal of pride.—Fargo (N. D.) Forum.

The Crime of the Modern Range.

I REMEMBER the good old days, the wild old days, the days of the buffalo, of the long horn steer, of the Indian and of the wild mustang.

In the good old days of the unfenced and unfurrowed West, now gone and gone forever, a man could turn a bunch of cattle loose to rustle and winter as best they could and not be guilty of a very serious crime.

Then every stream was unfenced, the brush and open springs furnished water and shelter, the range was covered with high native grasses with plenty of seeds that stood far above the average snow fall, and the cattle seldom suffered from lack of either food, water or shelter. Then in the winter storms they could drift for miles up or down a well-timbered stream until they found both food and water.

Once in about ten years a hard winter would hit us and the cattle would die, but then we were pretty sure of nine years of plenty, and the cattle business paid a fair rate of interest.

Those hard winters were really a blessing in disguise to some men who thoroughly understood all kinds of stock business, for those winters covered a multitude of losses. When the foreman or manager of an Eastern capitalized stock ranch had a silent partner in an adjoining State or Territory that would work brands and brand the calves of the tenderfoot stock company, the foreman when asked where his herd was could blame the hard winter and not get mobbed or shot. Our skins were rather tough then, and we did not view the matter as the traveling preacher has since taught us to.

We were young then, and it takes a young man for war, and an old man for reflection, and we are gradually getting older and consequently more enlightened or more chicken-hearted. In those days most of the dead stock seen in the spring after the worst winter would be some old cows, young heifers or young calves.

Now, all the old conditions are changed. Slowly but surely the rancher, the small stockman, the dry land farmer and the overflow from the East have encroached upon the once wild free range.

The old-time cow puncher, tired of night herding, of riding bucking bronchos and stove-up, stiff saddle horses over the badger holes and rough country, sees a spring of open water and a fine brush patch that he knows will be a fine place to keep a little bunch of stock. He takes up this place, that is the cream of the range country.

Then the sheep man comes along and takes up his 160 acres of the most favorable water and shelter. The sheep owner hires many men of easy conscience and reckless habits to take the best of the water and shelter—that which will prove of most benefit and profit to the sheep owner. The herder goes on a drunk and the sheep owner buys his homestead and birthright for a few hundred dollars. All these claims are soon fenced with barbed wire that is cattle and horse proof. Soon every stream, from its source near the setting sun to the wigwams of the pale-faces of the corn-raising East, is fenced with barbed wire, and the water and shelter and food—the long, seeded grass of the old range—are gone never to return.

Now comes the dry land farmer, and he is the limit, for he will argue that he can make a fortune raising winter wheat on 160 acres of hill land that in the old days would barely support a long horn steer, and so now with the shelter and the water, the summer range is about gone.

What folly, what belief in luck is it that prompts the range man of the present day to turn loose thousands of cattle to starve and perish upon the open prairie drifted up against barbed wire fences and mired in the snow of the deep coulée?

The small farmer with a small bunch of cattle, a small stack of hay and shelter and sheds is compelled to do things that makes his heart bleed. He cannot afford to feed and shelter stock owned by other people who will never reimburse him. In self defense he must drive all cattle but his own off on to the open range.

Big three and four-year-old steers have staggered into our sheds this winter which it is simply inhuman to attempt to drive away. I cannot afford to feed them, I cannot afford every day to commit crimes that would make a savage blush by beating, bruising and cruelly treating animals that can scarcely stand. The course of these large stockmen is unjust to the small man who wants to raise a few cattle and expects to feed and shelter them. He must spend a great deal of time with saddle horse and all means in his power to keep the big range man's starving steers from eating his hay and crowding his own cows and calves out of their legitimate shelter.

Is it not time that a man should be responsible to someone when he abuses the finer sensibilities of a whole community by having hundreds and thousands of staggering, famine-stricken, shelterless dumb animals roaming about bearing his brand and not a shed nor a pound of hay to help them?

A man who in a rage takes a club and beats a horse to death in some communities is taken in hand and sentenced to a term in jail that gives him plenty of time for reform and reflection. How about a man who condemns a thousand or several thousand of cattle to die of abuse and starvation?

Under the old condition it may have been just and profitable, but a young calf in two feet of snow and the mercury at 25 below zero was not the most pleasing spectacle.

Under present conditions there is no earthly justification for such work. To be compelled to live thus makes a man and his family a pack of wolves.

J. B. MONROE.

Sportsman's Day.

THE afternoon of Thursday of next week, June 1, has been denominated by the executive committee of the New York Zoological Society as Sportsman's Day, and members of the society are invited to the Zoological Park to view the National Collection of Heads and Horns in the Administration Building there on the afternoon of that day. The occasion is one that will be taken advantage of by many big-game hunters.

As recently stated, there is on exhibition there the great head of a white rhinoceros killed by Colonel Roosevelt, while among the African trophies of peculiar interest are the record pair of elephant tusks given years ago to the collection by the late Charles T. Barney. Hanging on the wall of the staircase is the extraordinary narwhal skull armed with a pair of long tusks. Usually only one of a pair of narwhal tusks is developed, the other being very short or not showing at all. In the hall is a partial albino muskox head, while in the crowded rooms above are many heads and horns of a multitude of game animals from all the quarters of the globe.

THE TOP RAIL.

ONE day while practicing wing shooting with a companion, he threw a target rather high, and as I aligned the gun I saw a glint of white beyond the target. Again, as the fragments of the broken asphalt saucer spread and fell, from among them a flash of white appeared like a tiny scrap of paper floating in the air. Then my companion saw it, and we watched it intently. Apparently it was a great swan bound for the Gulf of Mexico. A mile high and two miles distant, perhaps, still its slow and regular wing strokes could be seen quite distinctly after the eyes had become accustomed to the long focus.

Had a thousand swans passed over at that distance, I doubt if we would have seen them; for this one was observed only because the gun happened to be aimed at it. Thus hordes of migrants pass over us unseen, particularly at night, and only at long intervals and generally in an accidental way do we see those that pass over on the clearest day. A wedge of geese often looms large when one is looking at something else. Look away, then back, and at first they are difficult to find, but this done, the eye holds them readily until they are finally swallowed up in the distance.

* * *

IF a story from Louisiana be true, it proves once again the fallacy of shooting first and investigating afterward. It is said that John Davidson, one of a launch party on the Hanson canal, fired with a rifle at a box lying alongshore. It was a box of dynamite, and when it exploded, the launch was wrecked, one of its occupants, a young woman, killed and the three others injured, the shooter the least seriously of all. Property damage was more widespread and extensive. Shots of this sort never miss the mark, but those who fire them are seldom hurt.

* * *

I REFERRED not long ago to a camper who stammered. This reminds me of one of Norman Duncan's sea yarns, in which one of the fishermen is burdened with the name Moses Shoos. Moses asked a maiden to marry him, and she was willing, but when she tried to pronounce his name she was appalled, for she lisped. When she reflected that she would have to call herself Mitheth Motheth Thooth she hesitated, but as that was her first and only chance, she did not let a little impediment in speech prevent the wedding.

GRIZZLY KING.

FOREST AND STREAM
A JOURNAL OF OUTDOOR LIFE.
TRAVEL. NATURE STUDY SHOOTING. FISHING. YACHTING.

Published Weekly by the
Forest and Stream Publishing Company,
127 Franklin Street, New York.
George Bird Grinnell, President,
Charles B. Reynolds, Secretary,
Louis Dean Speir, Treasurer.

CORRESPONDENCE.

The Forest and Stream is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Terms: $3.00 a year; $1.50 for six months. Single copies, 10 cents. Canadian subscriptions, $4.00 a year; $2.00 for six months. Foreign subscriptions, $4.50 a year; $2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davis & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line ($2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line.

A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Transient advertisements must invariably be accompanied by the money or they will not be inserted.

Advertisements should be received by Saturday previous to the issue in which they are to be inserted.

Only advertisements of an approved character will be inserted.

The object of this journal will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.—Forest and Stream, Aug. 14, 1873.

AT ALBANY.

Governor Dix, in signing the Smith bill, has relieved protectors and sportsmen of an embarrassing dilemma. This bill provides that "if the open season begins or ends on Sunday, it shall be deemed to open or end on the Saturday immediately preceding such Sunday." The trout season in Southern New York opened on Sunday, April 16, last. Under the forest, fish and game law no angler who fished on that day could be punished, and in places where Sunday fishing is the rule, that was opening day. Elsewhere anglers were barred by sentiment, backed by the penal code, which forbids Sunday amusements.

The situation of the Bayne bill at Albany is very unsatisfactory. Called up on the afternoon of May 18, it was objected to by Senator Grady, of New York, in the interest of the more extended importation of foreign game. Introducer and objector were urged to try to agree on a changed form of the bill which should be brought in on Friday, but when it made its appearance on that day, it was so changed as to permit the importation of Hungarian partridges and Egyptian quail and the sale of imported game the year through. The purpose of the change is evidently to do away with Section 98, of the present law, which forbids the sale or the possession for sale of any birds coming from without the State, provided that such birds belong to the same family as those protected by the chapter.

Here is seen the fine Italian hand of the game dealer who has always had an active interest in game legislation affecting New York city. Persons objecting to this changed bill were advised that if they protested against the Bayne bill in its new form, a bill would be passed permitting the sale of imported game the entire year through, absolutely without restriction.

It looks, therefore, as if the Senate of New York State were determined to throttle the Bayne bill by so altering it that while its name may remain, its purpose will be quite opposed to that which it had in its original form. It will be well for sportsmen interested in the matter promptly to call the attention of their own Senators to this reversal of the bill's purpose.

On the other hand, comfort is to be had from the fact that Governor Dix has vetoed Mr. Sullivan's bill, which largely took away protection from the lake trout in certain districts and permitted whitefish to be taken of any size whatever. A more shortsighted and uneconomic act—one more hostile to the public interest—than removing protection from the whitefish could hardly be imagined. Governor Dix is entitled to the thanks of every citizen of the State for having promptly vetoed this measure.

If the Bayne bill is emasculated, let him veto that.

WILD LIFE IN SPAIN.

Few people are aware that to-day in parts of Southern Europe wild camels are found; or that the flamingo breeds there. Yet a wealth of wild life that is fairly astonishing exists to-day in the Iberian Peninsula. This peninsula, four hundred miles from east to west and from north to south, contains the greatest variety of territory from snow-capped mountains down through elevated arid steppes to vast stretches of marsh, sometimes flooded, sometimes baked and cracked by the sun's heat. Here are bears and boars, wolves and wild camels, ibex and chamois, red deer and wild bulls, bustards and flamingoes, with a wealth of wildfowl and of gallinaceous birds that is fairly astonishing.

The visitor to Spain passes by settled routes to the great cities, where he sees the art treasures left by the Moors and somewhat of the urban life of the Spanish people, but of the monte—of the vast territory of high prairie or the rough snow-capped rock piles of the four great mountain ranges that traverse the peninsula, he knows nothing. Nor does he know anything of the wild life so abundant in much of this unknown region, and so well hidden from all except the few who know where to look for **it.**

If wild life is abundant here, it is not because of the excellent game laws that have existed—for there seem to be no game laws that are regarded—but because in certain regions the population is extremely sparse, while in others the territory is controlled by great landholders who for one reason or another are willing to see that their land is protected. What would the American gunner think of the duck resort where, in a single morning, one gunner fired away over a thousand cartridges, or where two guns in three days could kill 437 ducks and 17 geese?

A few years ago the ibex was almost extinct in Spain, yet through the efforts of Messrs. Buck and Chapman, ably seconded by the great landowners on whose estates this wild goat ranged, so much protection has been given to it that now at six points in Spain there is a good breeding stock. Some proprietors of their own free will have ceded to King Alphonso XIII. the sole rights of chase on their territory, and guards have been selected from the very men who were the best—and so the most destructive—ibex hunters, and this fine species is likely to be preserved.

Of all this we are told by Abel Chapman and Walter J. Buck, in a recent account of "Unexplored Spain," whose earlier book, "Wild Spain," like this one, possesses a keen interest for naturalists and for sportsmen.

An exceedingly interesting report comes to us from New Orleans to the effect that two landowners have offered to deed to the State 13,000 acres of swamp land absolutely, and 37,000 acres for a period of ten years, to be used as a wildfowl refuge. The only conditions attached to the grant are reported to be that no ducks, geese or other game are to be hunted or killed on this preserve. The refuge referred to is on the west side of the great Vermilion Bay in Vermilion parish, Louisiana, is excellently adapted for a wildfowl preserve and should be the winter home of vast multitudes of fowl. That it will ever be a great breeding ground for ducks, geese and brant is not at all probable, yet some of the Southern wild ducks—relatives of the mallard and the dusky duck—will breed here and in constantly increasing numbers. Louisiana may be counted fortunate in that so useful a refuge has been offered her by public-spirited men.

It was reported from Chicago last month that landlocked salmon had been taken from Lake Michigan, and in order to be certain of the species, we requested Chicago anglers to forward a specimen to Washington for identification by the Bureau of Fisheries, and at the same time asked Dr. Barton W. Evermann of the bureau if records were at hand showing plantings of landlocked salmon in Lake Michigan or its feeders. His reply, printed elsewhere in this issue, is of much value.

Thomas Mott Osborne, who last winter was appointed by Governor Dix as Commissioner of Forest, Fish and Game of New York State, sent his resignation of that post to the Governor on Saturday last. On Monday of this week his resignation was accepted with regret by the Governor. Mr. Osborne said ill health compelled him to take a long vacation, and it is understood that he is going abroad.

Members of the Southern California Rod and Reel Club in a body attended the funeral of Louise Shaver, who was killed recently by a railway train while on a fishing trip with her husband, Roy F. B. Shaver, recording secretary of this Los Angeles club. Mrs. Shaver was very fond of sea angling, and was often seen with her husband on the water near San Pedro.

At the public hearing before the corporate stock budget committee on Monday of this week, Park Commissioner Stover asked for $1,750,000 for the rebuilding of the New York Aquarium in Battery Park, and $2,500,000 for the American Museum of Natural History. These sums are for permanent improvements during the next five years.

A White Woodcock.

In the middle of the seventies, while having a little chat with my father after lunch, a hotel proprietor, farmer and one of the best sportsmen and shots in our part of the country—Long Island—drove up to our house and asked me a peculiar question: "Would you like to kill a white woodcock?"

I looked at the man in surprise, then said: "Why don't you kill him, James?" for the man not only shot over all the country about his place, but frequently took in our covers as well.

My father, who was an old-time sportsman, a lover of good dogs and in his day a capital shot, winked at me, saying, "I have killed woodcock for over forty years, a number on my father's place where the Central Park lake is now situated, but have never seen an albino woodcock."

I asked my friend where he had seen this *rara avis,* and why he had left him without having a try at the bird? "I promised a man to cart some lumber to-day," he said, "and as I was crossing through your swamp on the way to my wood lot I flushed him and had a good view of the bird, as he was in fairly open cover, and I tell you he was white. So I stopped to tell you, as to-morrow he may be gone. So long, and good luck. I am sorry I am so busy, or I would go with you and show you the place where I put him up." Father, who was still keen on getting a woodcock when the chance offered, advised me to have a little run through the swamp, and I might have the luck to kill a bird or two. So I called Pete and Pan, picked a gun out of the rack and started for the location indicated by my sporting friend.

I had no sooner reached the lower part of the swamp than my Pan came to a stiff point, backed beautifully by Pete. I steadied Pan with a word and took a step forward, when up rose a fine woodcock which I killed. The dogs still stood on their point. At the next step I flushed another woodcock which I killed and it fell within a few yards of the first bird. I told Pete to retrieve, still standing where I had shot at the last cock. Pete moved about ten feet to retrieve, when he came to a stiff point, backed solidly by Pan. I stepped ahead of the dogs when I flushed another woodcock which I killed, not having moved ten yards from my first shot, standing in the same place. I called Pete to fetch. He moved forward a few feet and again pointed, Pan a few yards behind him solid as a rock. The thicket was fairly open. The trees were large, but there was a heavy undergrowth of green briers and swamp huckleberry bushes. Over Pete's first point I also killed the bird, making four woodcock in less than twenty minutes. There was no sign of anything white.

After the dogs had retrieved the birds, I started to investigate the swamp for my friend's wonderful bird. I had gone only about 200 yards, when up rose a white woodcock. He was so near me that I thought if I shot I would tear him and spoil his plumage. My heart gave a great throb as I saw him disappear through the tops of the big oak trees. I knew the swamp was narrow with open cover on either side. I felt quite sure of flushing him again further up where I might have a chance for a clean kill without damage to the bird. I worked the dogs carefully ahead for about 100 yards, when both pointed. I knew this must be the same bird and decided to take time and kill him cleanly. I moved into an open spot and flushed him. Up he went and at about forty yards down he went with not a feather ruffled.

He was mounted for me by John Bell, who said this was the only white woodcock he had seen. The bird on the wing looked absolutely white, but he had a slightly coffee-colored tinge down his back. Otherwise he was perfectly white.

Old Pete and Pan have long since passed over to the happy hunting grounds of the dog, where they may find, I trust, white woodcock galore.

Migrants in New York City.

New York City, May 19.—*Editor Forest and Stream:* For several years I have noticed the appearance of certain migrants in the City Hall Park during the spring. About the middle of April robins appear. These are followed a couple of weeks later by brown thrashers, accompanied, perhaps, by one or two catbirds, or redtails. These in turn are followed by thrushes and ovenbirds. Occasionally a fox or vesper sparrow appears, but not often. I think these are about all the migrants I have observed. The warblers seem to steer clear of us. Probably the skyscrapers scare them. Once a woodpecker, as if by accident, lit on a tree at the rear of the City Hall and remained there for a couple of days. Great was the excitement among the newsboys, and even sedate men of business would stand to gaze with more or less wonder at the little red-headed stranger, which, regardless of the crowd, kept up an industrious hunt for insects.

As to the birds on the green, striking though they are—especially the brown thrashers with their resplendent chestnut coats and aristocratic air—it must be confessed that they do not excite much attention. The fact seems to be that the average New Yorker thinks such things as birds beneath his notice. In the case of the woodpecker just referred to it was doubtless the acrobatic feats of the little stranger which attracted attention. However, if the arrivals in the City Hall Park were of a sufficient size to hold forth promise of something for the pot, I am inclined to think that the indifference of the average passerby would quickly vanish. Suppose, for instance, a plump wild turkey or goose were to be seen upon the green some morning. I am sure that the woodpecker demonstration would fade into insignificance before what would follow.

But though there are not many bird lovers downtown in New York, yet there are some, and to these the appearance of the beautiful spring visitors is always a signal to arrest their footsteps. Usually by the railing of the main green some one is to be seen feasting his eyes. As for his ears these he would fain feast, too, but it is not permitted him, as the birds never break into song. Their stop apparently is merely for a day to search for food; as soon as night comes they are off again. I confess I do not quite understand why they should stop in the midst of a great city in a mere spot of greenery when the wide country all around is free to them. Is it extravagant to suppose that they are the decendants of birds which built their nests in and about what is now the City Hall Park? We know that birds have a marked partiality, or fondness for the place of their nativity, and this may endure in their progeny as a sort of an instinct. It is worthy of note in this connection that the birds which visit us are always of the same species, so far as I have been able to observe.

The public indifference referred to has the advantage that it leaves the birds in peace. But this is rudely broken now and then by some prowling cat. I have seen a thrush stalked in broad daylight. On another occasion I was witness of an attempt to stalk one, which had rather dramatic accompaniments. In the center of the green was the beautiful innocent, quite unconscious of danger, while emerging from the shadow of the City Hall was a big gray disreputable-looking Tom with evident felonious intent. A crowd, attracted by the excited cries of some newsboys, quickly gathered all around the railings. It reminded me in a measure of the old Colosseum in Rome. Whether the participants at the spectacle would have turned down their thumbs (figuratively speaking) in case the thrush was killed I know not, but certain it is that no move was made to save the bird. However, it fortunately eluded the cat and in the prettiest manner possible; it seemed to be waiting for Tom to spring, and just at that moment took wing.

Generally the birds which visit the park—albeit denizens of the wild presumably—appear to be wideawake enough. That they may continue so, let us devoutly hope, and further that they will not forget to pay us their annual visit as "messengers of spring." Frank Moonan.

Chinese Pheasants and Bustards.

Consul General Samuel S. Knabenshue, Tientsin, writes to the Department of Commerce and Labor, saying:

"An inquiry comes from California for Chinese pheasants for breeding. This trade is carried on in Hankow and Shanghai.

"It might also prove worth while to try domesticating the bustard. This bird is very plentiful in the game markets here during the winter months. Those that I have seen on sale would weigh fourteen to eighteen pounds. The flesh is very well flavored, and when the bird comes to the table roasted, it cannot be distinguished from a turkey, except that it is dark meat. The bustard seems abundant in this part of China, and a good business might be done in the United States by importing the live birds and domesticating them as with the pheasants."

The Forest and Stream *may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.*

SEA AND RIVER FISHING

Salmonidae in Lake Michigan.

Bureau of Fisheries, Washington, D. C., May 12.—*Editor Forest and Stream:* In response to your recent request for information regarding the species of *Salmonidæ*, which have been planted in Lake Michigan, the following data have been gotten together.

The following tables record the plants of certain species of *Salmonidæ* other than lake trout and whitefish in waters tributary to Lake Michigan as shown by United States and Michigan State reports:

ATLANTIC SALMON.

Waters.	Date.	Number Deposited.
Calumet River, Ill.	May 12, 1874	17,000
Grand River	1872	3,250
Grand River	1873	1,500
St. Joseph River	1872	3,250
St. Joseph River	1873	4,500

Fox River, Ill.	Dec. 18, 1874	20,000
White River, Ind.	Dec. 16, 1874	16,000
Total		421,000

Grand total:

Atlantic salmon	136,250
Landlocked salmon	53,835
Chinook salmon	421,000
Steelhead trout	190,000
	801,085

So far as can be determined from the Government reports, together with those of the Michigan Fish Commission (Wisconsin reports not examined), the only species of *Salmonidæ* planted directly in the waters of Lake Michigan are whitefish and lake trout. In addition there have been plants of other members of the same family in tributary waters, included among which are the following: Atlantic salmon, landlocked salmon, chinook salmon, steelhead trout, brook trout, brown trout, black-spotted trout, Loch Leven trout and grayling.

Most of these plants are shown in the attached table.

I have seen a number of specimens taken in Lake Michigan, Lake Huron or Lake Erie, and believed by the captor to have been salmon of some sort. Everyone which I have seen, however, proved to be the steelhead (*Salmo gairdneri*). That species is the one which seems to do the best in those lakes. I have not seen any specimens of any of the other introduced species.

Barton W. Evermann.

Mr. Lawrence's Trout.

New York City, May 19.—*Editor Forest and Stream:* I notice in your issue of May 20, 1911, a communication from Dr. James A. Henshall in answer to my query in your issue of May 6. "Can you inform me whether artificially raised brook trout, which from the fact that the gills show beyond the gill covers—are evidently not in the best of health—should be avoided as food?" asserts "that the trouble is not a disease, but a deformity, or rather a malformation, and that otherwise the fish are healthy and not unwholesome."

In the fish referred to by me there was no sign of any malformation. The gill covers appeared to be perfect, but the gills extended a quarter of an inch beyond the depressions into which the gill covers would naturally rest, and to my mind showed an inflamed state of the gills, probably due to ill health. The fish were sluggish and poor fighters when hooked and were put into Carman's River in the late summer or fall of 1910. Those I took—some four or five—ran from a quarter to a third of a pound.

I am glad to be informed that whatever the cause of the trouble the wholesome qualities of the fish are not affected.

Robt. B. Lawrence.

Netting Unhooked Trout.

An article entitled "On the Tusket River," printed in Forest and Stream last summer, and written by Thomas A. Fulton, of this city, has called out from Vice Chancellor Eugene Stevenson, of New Jersey, a very interesting letter to Mr. Fulton, which we believe will be read with great interest by other anglers. Judge Stevenson says:

"I am much obliged to you for sending me Forest and Stream with your fishing letter from Nova Scotia, which has both interested and instructed me. I did not know that there was such a wilderness in Nova Scotia as you describe. The incident of your guide netting two trout when you had only hooked one has occurred in the experience of a good many fishermen; more frequently I think when the fish are getting ready to spawn. The hooked fish is followed around by its mate, and when the hooked fish is brought to the net, both are dipped up.

"Some years ago I was in a boat with Judge Bunn, of St. Paul, who was fishing the Nepigon River at Robinson's Pool, at the edge of a mighty rush of water. He was fishing—as I think most sensible Nepigon fishermen do, in such heavy water when the fish are large—with one fly only. He hooked a fine big trout weighing four or five pounds, perhaps more, and gradually got him out of the rough water, as his canoe was backed to the shore. The big fish's mate followed him or her into the still water where both were in plain sight, and it looked as if the mate was just about as tired out as the fish which had been doing the fighting. The guide without any difficulty, with one dip of the net, took up first the mate and next the fish on the fly, just as he would have done if there had been two flies with a trout on each. I have very often seen the mate follow the fish which I was playing, but never had both fish scooped up at the same time."

Early Bass Fishing.

The early black bass fishing at Greenwood Lake usually consists of tempting the nesting bass along the shallow shores to snap at a fly, minnow or small spoon cast directly into the nests. It is a shame to take them in this way, but there is nothing in the law to prevent it, owing to the fact that the bass season opens about a month too early to give the bass a chance to breed. When a fish is taken from its nest the eggs are either eaten by other creatures or die from lack of cleaning. A man who takes a fish in this manner is swinish, but there are lots of angling swine.

An effort to exchange live pickerel for live bass is being made by the Newark Bait- and Fly-Casting Club, which has leased the Fox Hills Lakes at Denville. Some of the members were up there recently looking over the grounds and water and they found many bass and pickerel, but it was agreed that no bass should be taken until after the spawning season, and that the catch per angler should not be more than five fish per day. The three lakes are under the care of a vigorous keeper and a supply of bait will be maintained during the season. Each member of the organization pays $10 per year for the privilege of fishing in the lakes.—Newark Call.

North Shore Casting Club.

Chicago, Ill., May 15.—*Editor Forest and Stream:* The scores for May 13 follow:

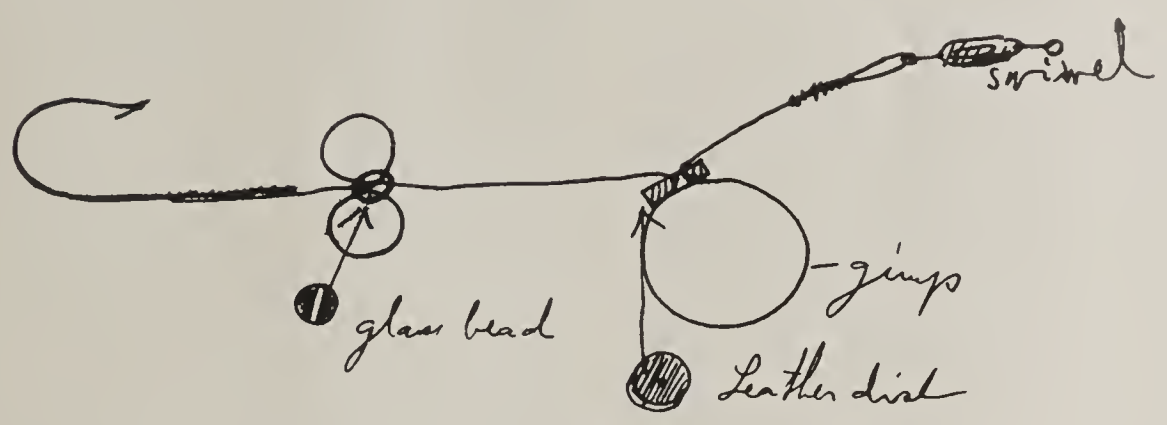
C. O. Dorchester, Sec'y-Treas.

For Better Fishing.

NEW ORLEANS, La., May 19.—*Editor Forest and Stream:* The Opelousas Gun and Rod Club was the host last week of a large party of visitors and experts who inspected Second Lake and other bodies of water near Opelousas, La., with a view of ridding the lakes of the growth of wild hyacinths. These hyacinths not only obstruct navigation, but they destroy the fish and are otherwise objectionable. It is proposed to adopt methods which will destroy this growth and to stock these lakes with the finest of game fish. It is thought the lakes near Opelousas are capable of producing thousands of the best fish and afford splendid places for the pleasure fishermen. Among those who took part in the inspection were President Miller, of the Game Commission; Superintendent Tulian, of the State Fishery Department; Judge L. J. Dosstive to the oyster industry. Mr. Greer will be here for some time and says that the task is much greater than he had anticipated. W. A. Roberts, another Federal inspector, is collecting data in Mississippi and Alabama, and both officials will meet here and go on to Washington. Mr. Greer says the oyster industry in Louisiana is very extensive. The information obtained will be turned over to the Bureau of Fisheries in Washington for record.

President Miller, of the Motor League of Louisiana, with headquarters in New Orleans, has written to Mayor Behrman that the automobile driveway to Chef Menteur from New Orleans will be completed within the next thirty days. Mr. Miller proposes that a roadway also be constructed by the side of Lake Pontchartrain to Little Woods and to connect that place with Chef Menteur. If this plan is carried out it will prove quite a convenience to the fishermen who



MR. PAROBEK'S ADJUSTABLE FROG-GANG.

mann, of the Oyster Commission; several high State officials, and members of the club. The Game Commission has the subject under advisement, but it is thought it will require a special appropriation from the Legislature before the work can be accomplished satisfactorily. It is believed that other streams and lakes over the State will be cleared of the wild hyacinth as soon as the Legislature provides the money. The trouble has not been so much the problem of getting rid of the hyacinth growth as one of the finances to defray the expense. The problem from any viewpoint is a difficult one.

Fishing conditions have improved considerably, and last week several parties landed a good many speckled trout, sheepshead, croakers, drums, red and other fish. The clubs at Lake Catherine, Chef Menteur, Rigolets, Lookout, North Shore and on Barataria Bay entertained many visitors. A sufficient number of shrimp were found for bait, and the result was fairly satisfactory. A number of families residing in the city will go over to Bay St. Louis, Pass Christian, Gulfport, Biloxi, Waveland and other places this month for the summer and the business men will go and come daily, or several times during the week. Many will take advantage of the season to fish one or two days in each week. The season will formally open this month. May and June are considered the best fishing months of the spring and summer, and October the best of the fall season.

R. L. Green, of the Department of Commerce and Labor in Washington, is here inspecting the books of the Fish and Oyster Commission for the purpose of obtaining data to be used by the Government statistical department relago to Chef Menteur and to various fishing places on Lake Pontchartrain. It will be a quick way of reaching some desirable fishing places and will eliminate to an extent waiting on regular train schedules. The roadway to the Chef is one of the best in the South, and is very popular. Chef Menteur is one of the best fishing resorts near New Orleans, and those who own autos, or who hire them, will be able to reach the place and return in quick time. The plan proposed by Mr. Milner is meeting with favor, and it seems probable it will eventually be carried out. It is claimed that many visitors will be attracted to New Orleans on account of these good highways, and especially those who are fond of the sport of fishing. F. G. G.

An Adjustable Frog-gang.

TRENTON, N. J., May 19.—*Editor Forest and Stream:* According to the experience of many bait-casters the best bait for our game fishes, especially for bass and pike, are small or medium sized frogs.

Up to the present time the frog casting was not in general use, because the frog could not be fastened so as to keep them alive, and if the fisherman wants to succeed, he must use live frogs.

According to the sketch and following explanation the frog gang can be adjusted to any size of frog. The main advantage is that the frog can be kept alive and cannot be thrown away from the hook.

The device is very simple and can be made of a piece of wire wound silk (gimp) smallest size, one small glass bead with central hole and a small leather disc.

The leather disc is about one-quarter inch in diameter and one-eighth inch thick with a small hole in the center.

The glass bead, together with the leather disc, adjusts three loops. The loop joint by the leather disc is for the body of the frog, while the glass bead joints two loops for the hind legs of the frog.

On the end of the frog gang is wound with silk a good Sproat or O'Shaughnessy hook, or any other hook. The gimp joining the swivel is also wound with silk. A. PAROBEK.

Kansas City Bait- and Fly-Casting Club.

KANSAS CITY, Mo., May 15.—*Editor Forest and Stream:* Below are the scores made at our club contest, held at Troost Lake, May 14. Both of the fly events were cast in a strong cross wind, which will account for the poor scores. Conditions have been very unfavorable for casting so far this year, this being the first fly event we have been able to hold on account of the weather.

Accuracy fly, per cent.:

A Fly-Book.

I FINGER the leaves and examine the pockets
To see what are here—like photos in lockets—
And find it is full of hooks dressed with feathers,
But not fuller than I of stories and pleasures.
There are teals dressed in red and in black and in green,
And butchers in black with a silvery sheen.
The coachman is ready to be put on a cast
When big fish are running up streams that are fast.
The woodcock and yellow is waiting for play
Among the brown trout on a fine fishing day.
There is grouse decked with claret, with green and with red,
To entice the fresh trout in the sea which have fed.
Ah, the glory of Greenwell is seen here with glee,
For great is the pleasure he has yielded to me.
The red palmer has often been a good lure
When others were doubtful and fishing was poor.
The spiders, the duns, the ants and the gnats
Are here in abundance—reds, blues, and blacks.
There are May flies as well—fluffy and light—
Pets of my fancy when summer is bright.
The jungle cock, too, has a way of its own
Of catching the fish in places unknown.
The Zulu is here along with the priest;
And Jock Scott and the doctor proclaim a great feast.
The rovers and rangers cause wonderful dreams
When salmon are rising to feed in the streams
Where heather is purple high up on the hills,
Or the cloud on the summit into water distils.
I've looked o'er the book and some flies I can't name.
But what does it matter—the pleasure's the same.
They're meant to catch fish wherever they rise,
And fill a big basket or win a good prize.

—Erskine Houston in the Fishing Gazette.

Some News and a Little Gossip.

AFTER months of planning and weeks of hard work to fit the yachts, the racing season will open to-day. In this section the Atlantic Y. C. will have an open regatta for all classes on the Sound, the Seawanhaka-Corinthian Y. C. will have special races, and in eastern waters the Quincy Club will have a club regatta. While many yachts will be taking part in these events many more will be tuning up sails, and those owners who are a little backward in getting their boats in shape will be hustling things in the yards. Decoration Day really marks the formal opening of the season, and on that day many races have been arranged for all types of boats.

The schooner Elena, built for Morton F. Plant, sailed from Bristol last Saturday with her owner on board. The centerboard was shipped earlier in the week. The weather was not favorable to fast sailing, the wind being light and later thick fog settling down. The yacht reached New London safely and will make that port her headquarters while being tuned up for the races.

The new steel schooner Enchantress, built by Lawley for William E. Iselin, reached City Island last week. Her furnishings were put on board at once, and on Monday the work of bending sails began. She had her first sail on Wednesday and pleased every one. A. Cary Smith, of the firm of designers, has charge of the tuning up of the yacht.

Mr. Iselin anticipates a great deal of pleasure in the use of Enchantress during the approaching season. The vessel represents the advanced ideas of naval architecture as applied to the form and construction of schooner yachts, and there are no reasons why she should not be very conspicuous, if not well at the top of the list, notwithstanding the other new schooner yachts that she may be compared with and opposed to in the races in which she takes part. A. Cary Smith, the designer of Enchantress, believes that she will be a credit to the New York Y. C. and to all that are interested in her. Mr. Smith laments that the draft of Enchantress and her gasolene and electric outfit will be a drawback to her speed. "A yacht of Enchantress' length, 100 feet on the waterline," he is reported to have said, "should draw two feet more at least (15 feet is her draft), but the comfort of the owner, who is a veteran at the sport, has been the first consideration, and 15 feet draft will give access to harbors where 17 feet draft might cause anxiety of mind and restricted anchorage location."

Enchantress is fitted with a centerboard, and it drops 8 feet or so, which added to the 15 feet draft naturally gives a matter of 23 feet, or thereabouts, for holding on purposes when the yacht is beating to windward.

Enchantress is 136 feet over all, 100 feet on the waterline, 27 feet beam and 15 feet draft. She is fitted with a 25-horsepower gasolene engine to drive a dynamo of sufficient power to get the anchor and hoist the sails. She was designed for an auxiliary, and the intention was to install an oil engine, but difficulties arose and the owner abandoned the idea for the present. The propeller aperture is plated up. The engine room is enclosed in steel and nothing has been spared to make it absolutely safe.

There are steel tanks for seven tons of water aft the engine, so fitted that one tank may be operated without affecting the others. There is a hot water heating apparatus aft the tanks, with radiators to each room and to the forecastle.

The 31-raters, Joyant, built for Commodore William H. Childs, and Corinthian, owned by a syndicate of members of the Seawanhaka-Corinthian Y. C., left Bristol early in the week and will said their first race to-day off Oyster Bay.

The schooner Westward is expected at Bristol about the middle of June. Already preparations are being made for the reception of the yacht. The mould makers and sail makers have started work getting new fittings ready for the crack schooner. It has been stated at Bristol that Elena is about 40 tons heavier in construction than Westward. There is about five tons less weight above the waterline on Elena than Westward. Eleana's area is 12,600 square feet or about 900 square feet more than that carried on Westward. It is thought that with her centerboard Elena will be able to more than hold Westward when turning to windward.

This will be the third season in which the Sir Thomas J. Lipton cup for 31-raters has been raced for in eastern waters. The first year it was won by John B. Fallon's Timandra and last year by Charles B. and Harold S. Wheelock's Amoret. This trophy is held by the Corinthian Y. C., and will become the property of the yachtsman first winning it three times. This year the races to count for this cup are: May 30, South Boston Y. C., City Point; June 3, Boston Y. C., City Point; June 17, Boston Y. C., Hull; July 1, Eastern Y. C.; July 4, Corinthian Y. C.; Aug. 7, Eastern Y. C.; Aug. 8, Boston Y. C., Marblehead; Aug. 9, 10, 11 and 12, Corinthian Y. C.; Aug. 17, Gloucester Y. C.; Aug. 19, Annisquam Y. C.; Aug. 25, Boston Y. C., Hull; Aug. 26, Quincy Y. C.; Aug. 29, Boston Y. C., Hull; Aug. 30, Boston Y. C., Hull.

Getting Busy on Old Barnegat.

THESE are busy times around the club houses of the various yacht clubs on Barnegat Bay. In most instances arrangement is being made to open up on May 30 for the summer. At Bay Head and at Mantoloking, where other sports are connecting with yachting, the tennis courts at the yacht clubs are being laid out for the summer and arrangements are being made for tennis contests, as well as for yacht racing. These two clubs, situate well up the bay, put in most of their racing on the sneak-box class, and several new ones have been built this winter for the contests, which take place twice a week, from July 4 to Labor Day.

At Sea Side Park there are big preparations being made for the coming summer. The club house is being overhauled and a new pier built, and moorings will be arranged for a large increase in the fleet. The field sports between the Sea Side Park and Island Heights yacht clubs, which were the occasion of so much fun last summer, will be repeated this year. One Saturday afternoon at each resort will be given to these competitions.

Ocean Gate is rushing the work on its new club house and pier, and Commodore E. T. Ramer is reported as saying that the contractors would have the house completed for the opening as per program on May 30. A large number of the yacht club members are expected down for the week-end and to stay over the holiday for the opening. Dr. Hearne, of Philadelphia, has his powerboat in commission. Joseph M. Sellinger has put his yacht in shape for the summer and disposed of one of his fleet to another member of the club. Mr. Tyrrell, of Washington, D. C., has his motor boat Seat here for the summer.

John P. Crozer, of Upland, Pa., a leading spirit in Beach Haven yachting and the owner of the finest fleet of yachts on the Jersey Coast, is having his various craft overhauled by Captain Will Smith at Tuckerton, where they were laid up for the winter. Mr. Crozer's fleet includes the famous Herreshoff creations, Happy Princess and Merry Thought, which have won many cups on the coast from Toms River to Atlantic City. James G. Lieper, of Philadelphia, is also having his famed racing sloop Marguerite overhauled and tuned up for the summer's regattas. Lester J. Osborne, of Camden and Beach Haven, has sold his power yacht St. Albans to N. V. Lane, of Tuckerton.

Little is doing at Harvey Cedars, High Point and Barnegat City as yet in the yachting line, the club members having made few trips to the shore. The new yacht club house at High Point has been completed and promises to be a social center at that resort.

At old Barnegat the racing spirit shows itself in motor boat and speed boat racing. The Gaskill brothers have a fast speed boat known as the Jersey Devil, which is likely to give a good account of herself this year, while the sneak-box Mineola has never yet been beaten in heavy weather. Henry Kilpatrick has just launched a 30-footer. Howard Perrine, a noted builder, is putting up several of his famous models.

Few of the yachtsmen have arrived at Island Heights as yet and the most of the racing blood will show itself first this year in the Delaware River races, one of the promoters of which is former Commodore John A. McAvoy, of the I. H. Y. C.

T. C. Glen Coats, Designer.

THE news comes from the south of France that Mr. T. C. Glen Coats has won the Coupe de Monaco with his 6-meter yacht Cynthia. Mr. Glen Coats designed the vessel and sails her himself, and her success in the Mediterranean will be heartily welcomed by British yachtsmen, says the Field. The weather there has been very severe, and hard winds have prevailed. Probably this has favored Cynthia, as she is a good little vessel in a breeze, and last season she did well in Scotland and at Burnham-on-Crouch whenever it blew hard. Yachtsmen are at last beginning to realize the advantage of the International Rule, which makes it possible to take a boat from port to port at home and abroad and always find a class open to her. There have been ten competitors in the 6-meter class on the Riviera.

The most delightful phase of yacht racing must be to design one's own vessel and sail her in an open class with success; but of course this is a difficult thing to do in competition with yachts designed by the leading naval architects. Mr. Glen Coats, who is a son of Sir Thomas Glen Coats, studied yacht designing under Mr. Alfred Mylne, and now he is evidently able to design a yacht worthy of meeting the best of the 6-meter fleet. Not many amateurs have competed with great success in open Y. R. A. classes with boats of their own design, yet there have been a few who have done very well. In the early days of the Solent classes—and what sporting matches they were!—Colonel Bucknill built the Quinque 5-rater in 1890; Mr. G. F. Flemmich either led or was well up in a hot class of 1-raters with the Mahatma, the famous boat which was the father or ancester of the scores of raters subsequently built by Sibbick at Cowes; then Mr. R. E. Froude—who, although he is of course a most distinguished naval architect in a branch of the profession which is concerned with things of more vital importance than luffing—has for many years enjoyed the sport as an amateur of designing and handling his own boats. His Jenny Wren was built twenty-six years ago.

Perhaps the most remarkable feat in amateur yacht designing since the days when Bentall, the plow maker, designed Jullanar in the early seventies, was the modelling of the 20-rater Audrey by the Earl of Dunraven. She was a fin-keel 20-rater. Lord Dunraven conceived the idea of making a boat which had segments of circles for sections. He made a model of the boat in clay—we believe Mr. Summers, of Summers and Paynes, at Southampton, has the original model made by his lordship, and that it can be seen in his office, but of this we are not sure. As he proceeded with the work he somewhat modified his original idea, but in 1894 Audrey was built. She was, however, really a misfit to the rating, and had to be pulled to pieces and practically rebuilt on a smaller scale. The design of the boat, however, was in principle the same. Then Audrey came out afresh in 1895. We wish we could give more fully the details of the alterations that were made between the seasons of 1894 and 1895 to this remarkable 20-rater, but we cannot pretend to state them with any degree of certainty. Anyhow, when Audrey made her appearance in the New Thames match of May 17, 1895, and won it, beating Fife's Luna and Inyoni and Stephanie, and when she won again in the Royal Thames race on the following day, and then beat everything in the race "Down Swin" from Southland to Harwich, and at Harwich regatta defeated the famous Yankee Niagara, the critics were very much surprised.

It was most amusing. The know-alls, who had been ready to laugh at Lord Dunraven's boat in 1894 as a cranky amateur design, were seeking for an excuse to show that Audrey of 1895 could not have been designed by an amateur. At the end of the season of 1895 the Field, in reviewing the class of 20-raters, said:

"Although, strictly speaking, Audrey was not a this year's boat, Lord Dunraven had his vessel almost entirely reconstructed, to his own design, at Summers and Payne's yard, Southampton.

OLD TIME SLOOP DRIFTING BY FORT LAFAYETTE.

The conception of last year's design was retained, but the displacement was largely reduced, and the lines carried out fore and aft, making her a much more shapely craft than hitherto; the bulb was also suspended by a metal fin instead of a wooden one. The result of these extensive alterations was highly creditable to her amateur designer, for in moderate weather Lord Dunraven's little beauty was the most successful twenty of the year, and generally proved to be the most dangerous opponent of the American crack (i. e., Niagara—Herreshoff)."

"Thalassa" gave the figure of merit of the 20-raters of 1895 by the late Colonel Smith's formula as:

Yacht.	Designer.	Firsts.	Starts.	Figure of Merit.
Niagara	Herreshoff	25	46	45.63
Audrey	Dunraven	16	32	40.34
Inyoni	Nicholson	15	38	32.49
Zinita	Fife	6	15	28.70
Isolde	Herreshoff	3	22	10.45
Stephanie	Clayton	3	24	9.70
Eucharis	Fife	2	11	7.60
Luna	Fife	2	33	4.90
Vincta	Watson	0	12	0.00
Dragon	Fife	0	9	0.00

When the keenness of the competition in the season of 1895 in this class is seriously considered, it is only fair that history should place the performance of the Earl of Dunraven's cutter among the most remarkable achievements in amateur yacht designing in the annals of yachting.

Royal Cups Tell History.

IT is said—and with a good deal of truth—that in the list of the winners of King's cups and Queen's cups may be traced the whole history of yachting, according to the Field. The first vessel of great note to win a King's cup was Mr. Joseph Weld's cutter yacht Alarm, for she in 1838 won the last cup given by King William IV. This same vessel, lengthened and converted into a schooner of 248 tons, figures in the list as a Queen's cup winner as late as the year 1861, still under Mr. Weld's colors. Alarm was one of the vessels which was altered from the cod's head cutter type to the hollow-bowed type which was introduced after the invasion of the schooner America in 1851. She therefore carries us through two periods of yachting history. Then from 1865 to 1875 some fine wholesome cutters and schooners won the Queen's cup. Fiona, "the Fawn o' Fairlie," won it six times in this period, and Egeria, from 1865 to 1881, also won it six times. Then came the days of the lead-mines, or plank-on edge cutters, when Mr. John Jameson won six Queen's cups between 1881 and 1888, with Samœna and Irex, and he got one more with the fiddle-headed champion Iverna in 1892. Since that date, Bona, which was built for the Duke d'Abruzzi, and was afterward bought by Mr. Peter Donaldson, won no fewer than seven royal prizes, the greatest number secured by any vessel, the Britannia having won six of Queen Victoria's cups. King Edward won more royal trophies than any yachtsman, securing the prize six times with Britannia, and on two previous occasions with Formosa and Hildegarde.

The smallest vessel which ever won a Queen's cup was the 10-tonner Ulerin, which won the Nore to Dover match of the Royal Thames Y. C. in 1885. The history of the royal trophy carries us down to the most modern vessels and the leading amateur yachtsmen of the present day, for in 1908 and 1909 the names of the 23-meter and 15-meter cutters White Heather, Shamrock, Brynhild, Ostara and Vanity were insrcibed on the honored roll.

The cups now graciously given by King George for 1911, to go to the 19-meter class at the Royal Northern at Rothesay during the Clyde fortnight and to the A class at the International regatta at Spithead in August, will afford the greatest encouragement to the pastime of yacht racing, as did the 174 trophies presented by King William IV., Queen Victoria and King Edward, from the years 1834 to 1909.

Five Yachts in Bermuda Race.

THE town of St. Georges, Bermuda, has offered the second prize in the race for sailing craft from Boston to Bermuda, which will be started by the Boston Y. C. Saturday, June 3. The city of Boston has offered the first prize, a trophy worth $500, provided there are six starters. There are now five yachts entered in the race, the last entry being the Bermuda pilot boat Chispa, which arrived here last week. Chispa is a Burgess boat, having been built in South Brooklyn in 1888, and was at one time a fast sailing yacht. She is 40 feet long, and if well handled should give a good account of herself in the race. The other entries are Harold S. Vanderbilt's schooner Vagrant, Seward V. Weed's schooner Enchantress, Francis M. Whitehouse's schooner Iris and P. L. Carmichael's schooner Sunrise. It is probable that other yachts will be entered and in order to give the owners all the time possible to make their plans the committee has extended the time for closing the entries to May 22.

J. E. Fletcher Buys Niagara IV.

J. E. FLETCHER, of Providence, has purchased the fast steam yacht Niagara IV., which was formerly owned by Howard Gould. This yacht at one time was the fastest of the so-called private ferry boats and was used by her owner to carry him to and from the city and his summer home at Sands Point. She raced against Tarantula and won. Niagara IV. is 110 feet long and 12 feet beam. She has twin screws and is driven by engines of 1,100 horsepower. The yacht is now at Nock's yard, East Greenwich, getting ready for the season.

New York A. C. Distance Race.

The eighth sailing of the annual race of the New York Athletic Club to Block Island will be started at 11 o'clock in the morning of Saturday, June 24, from a line off Whortleberry Island. This race is for decked or cabin yachts in cruising trim of less than 33 feet on the waterline. The finish will be at the West Harbor of Block Island, a distance of 100 nautical miles. There are no crew or sail restrictions. The time allowance is 10 minutes a foot over all length, and yawls and auxiliaries 5 per cent. additional. Yachts must carry leadline, compass, charts, fog signal, two anchors and cables, one life preserver on deck, the regulation lights and cabin fittings, tanks, etc. Five prizes are offered in the open event. There is also a prize to the handicap class in one division and a prize for the best time made over the course. Auxiliaries must report to the committee before 9 o'clock on the morning of the race and have their engines sealed. Entries for this race, which have been a big feature of the racing season, will close with H. A. Jackson, Jr., chairman, 409 Pearl street; Charles S. King and Alfred B. Fry on June 20.

Brooklyn Challenge Cup.

The regatta committee of the New Rochelle Y. C. has announced the conditions governing the race for the Brooklyn challenge cup, which will be sailed on Saturday, July 1. This cup is held by the New Rochelle Y. C. The course is from Echo Bay to and around the Vineyard Sound lightship, thence to the finish line off the Brooklyn Y. C. house, Gravesend Bay, passing south of Block and Long islands. The distance is 280 miles. Entries close on June 20. This cup is for yachts of 31 rating and under. They must be of a seaworthy type, substantially built, strongly rigged and properly ballasted, with closed cabins and watertight cockpits, and must have headroom and cabin floor space varying according to the rating. Boats must be properly equipped for cruising and each must have eight gallons of water for each man on board. The time allowance is figured according to the usual rule. The regatta committee is G. P. Granberry, 29 Broadway; M. S. Kattenhorn and A. E. Eldredge.

Half Moon, a Bermuda Racer.

Dr. G. W. Van Benschoten's Bermuda racer Half Moon was launched last week from Nock's yard at East Greenwich. The three sons of the owner christened the yacht with daffodils, roses, carnations and pansies, which were showered on her bow as she slid into the water.

Half Moon is 45 feet 10 inches over all, 10 feet 6 inches beam and 3 feet draft. The power plant comprises a four-cylinder, 24-horsepower Pearl engine. This craft represents the type of boat that has been brought out by the firm of Bowes & Watts, when they were in partnership, and is typical of many of the ocean cruisers that they have designed. The construction of the boat is unusually heavy; the planking, when finished, being 1⅜ inches thick, the frames of oak, 1⅞ inches square. She has an unusual number of clamps, bilge stringers, etc., and is very strongly built. No effort whatever was made to save weight.

The general exterior finish is mahogany, and the saloon and owner's quarters are finished in the same material. The owner's stateroom is finished in white enamel with mahogany trim; the crew's quarters, galley, engine room, etc., are in cypress, natural finish.

The owner's stateroom is aft and is 8 feet 4 inches in length, the entire width of the boat. On the port side there is a double berth; on the starboard side a sofa; at the forward end there is a large-sized wardrobe and at the aft end a bureau and locker. Forward of the stateroom on the starboard side is the companionway and on the port side a large toilet room fitted with a yacht closet, lavatory, linen lockers, etc. Next forward is the main saloon, which is under the raised sheer. It is about nine feet in length and is the entire width of the boat. On the starboard side there is a locker and an extension transom, also a short transom across the forward end of the extension.

To the port side of the bulkhead there is a door leading to the engine room. At the forward end of the port side there is a sideboard with locker above, fitted with leaded glass doors. There is also an extension transom this side.

Forward of the saloon is the engine room and galley, about 11 feet 10 inches in length. The engine is situated well aft. On the starboard side is a seat with lockers under it and a pipe berth above. There is also a dresser with sink and locker above. At the forward end there is an ice box with dresser and dish lockers above. On the port side there is a work bench, a large provision locker, stove locker with stove and lockers under them, shelves, etc., and forward of the bulkhead there is a chain locker and water tanks.

Only a Mile a Minute Claimed.

A novel hydroplane has been built at Rochester, which is to revolutionize motor boat designing, if the dreams of the owner materialize. This boat, which is so light that it weighs little more than a canoe is to be driven by an aeronautical wheel, and Joseph T. Seeley modestly states that all the figuring he has done shows that it should make 100 miles an hour. There are things that interfere with speed, and making due allowances for slip, etc., Mr. Seeley expects 60 miles an hour, or a mile a minute.

This boat has been built by Mr. Seeley from designs by Morris M. Whitaker, and according to the Rochester Herald, the boat was built primarily for the purpose of contesting in the Mississippi Valley Power Boat Association races at Dubuque, Iowa, the winner of which will be selected as the American International cup defender. It is modeled somewhat after the most successful of the many types used in France and is entirely new to this side of the Atlantic.

In no invention or contrivance of recent years is the age of speed and progress typified to a greater extent than in the hydroplane. At first designed as a plaything for daring sportsmen, it is fast developing into one of the marvels of the age and bids fair to have a place in the making of history as important as the aeroplane. The exhilaration which comes from the swift skim of the hydroplane over the surface of lakes and rivers is said to rival the delight of an aviator in the darting swoops of his unstable air craft.

Briefly described, Elbridge I. is a boat 19 feet 11 inches long, with a beam of 66 inches, in which is installed a six-cylinder engine of tremendous power. Connected by a chain to the shaft is a gearing upon which a 6-foot propeller—of the regulation type used for air-craft—revolves at an estimated speed of 1,800 revolutions a minute. The hull is a thin shell of light cypress and without the engine weighs little more than a birch canoe.

With a propeller of 10-foot pitch, the theoretical speed of the Seeley craft is 100 miles an hour, so that allowance for an impossible amount of slippage places its actual speed at little less than a mile a minute, six miles an hour faster than the greatest speed as yet attained by a power boat.

The remarkable rapidity with which the boat is able to annihilate distance is due chiefly to the fact that it draws but a few inches of water, skimming lightly over the surface in much the same manner as a flat stone "skipped" from the hand of a small boy. The air propeller is thought to develop a much greater thrust than those operated in the water and consequently to be capable of exerting a proportionately greater force of propulsion.

The Elbridge boat will be entered in the M. V. P. B. A. regatta at Dubuque on July 7, 8 and 9, and will be shipped West in charge of Mr. Seeley within the next few weeks. Considerable atention is being given to the claims of the local craft by promoters of the affair, as it looms up as a leading contender for the honor of becoming America's cup defender.

La Belle a Handsome Craft.

The cruising motor boat La Belle, built for Commodore Alexander Winton, of the Interlake Yacht Racing Association, was launched from the yard of John Dialogue & Son, at Camden, on Wednesday afternoon. She will fly the commodore's flag of the Lakewood Y. C., of Cleveland, as Mr. Winton is also commodore of that club, as well as of the association. La Belle is one of the largest gasolene boats yet built. She was designed by Cox & Stevens, of this city. Mr. Winton christened the yacht, which is now almost ready for commission. The builders have promised the vessel by June 1, and as soon as she is turned over she will proceed to Cleveland by way of the St. Lawrence River, a voyage of about 3,000 miles.

The yacht is built of steel and has the appearance of a steamer with a clipper bow, overhanging stern, continuous deck house, pole masts and stack. The principal dimensions are 140 feet over all, 118 feet on the waterline, 19 feet beam and 7 feet 6 inches draft.

The deck house, rails and skylights are of teak. At the forward end of this deck house is a large dining saloon with butler's pantry adjoining. Further aft is a room 28 feet long which is divided by portieres and makes a drawing room and smoking room. In the after part is a shelter seat with plate glass windows. The interior of the dining room is natural teak and the rest of the deck house paneled mahogany. Below there is the space for the officers and crew forward of the engine space, and aft there are three staterooms the full width of the yacht, two single staterooms and three bath rooms. These are finished in Colonial style with mahogany furnishings and the interior finish in white enamel.

La Belle is driven by three specially designed six-cylinder motors of 175-horsepower each. They were designed and built by Mr. Winton in the plant of the Winton Motor Car Company at Cleveland. The dimensions of the cylinders are 9x12¾ inches, and except for size, they are very much like the motor used in the Winton Six automobile. The cylinders weigh about 1,000 pounds each and each motor weighs about 8½ tons. They are equipped with a self-starting device, using air. The motor compartment is separated from the rest of the yacht by watertight bulkheads. The tank capacity is 3,500 gallons. The yacht is lighted by electricity, which is furninshed by an independent gasolene motor.

Power Boat Race to Block Island.

The annual race for motor boats arranged by the New York Athletic Club from Whortleberry Island to Block Island will be started at 5 o'clock on the afternoon of Saturday, June 24. This is the first of the long distance cruising races for boats between 25 and 40 feet over all length. The conditions require that the greatest waterline beam shall be not less than one-fifth of the waterline length. The first prize is a Thomas Fleming Day cup, which has to be won twice by the same owner to become his prop-

27 minutes from Liberty and 23d St. Ferries, C. R. R. of N. J.

erty. There will be a second prize if five boats start. The first race was won by Samuel Cochrane's Eronel, the second by P. Kossek's Martha and last year by F. D. Giles' Elmo II. The start will be off Huckleberry Island and the finish at West Harbor, Block Island, distant 100 nautical miles.

Each boat must carry a crew of not less than four persons. Boats must be propelled by explosive engines operated by gasolene, kerosene or alcohol. All fuel must be carried in fixed tanks permanently piped and connected. Each boat must carry or tow a tender not less than ten feet long and have two anchors, regulation lights, one life preserver for each member of the crew, lead line, compass, charts, bucket, for signal, two fire extinguishers and their cabin fittings in place. Time allowance will be figured according to the 1909 rules of the American Power Boat Association. Entries for this race will close on June 20, with H. A. Jackson, Jr., chairman of the committee, 409 Pearl street.

More Motor Life Boats.

THE U. S. Life Saving Service, Washington, D. C., opened bids on Tuesday last for the building of twelve 36-foot self-righting, self-bailing power lifeboats. Among the firms bidding were the Electric Launch Company, Bayonne, N. J.; National Boat and Engine Company, Chicago; Holmes Motor Company, West Mystic, Conn.; Welin Davit, Lane & De Groot Co., Brooklyn, and the Eastern Ship Building Co., Greenport, N. Y. The lowest bidder was the Electric Launch Company, Bayonne, New Jersey, who offered to built the twelve boats in two hundred days.

These boats will be similar to those the Department has had built previously, but with several improvements, including life rails, life belts for helmsmen and additional electrical appliances for lighting, ignition, etc. The boats will be built of solid mahogany, double planked, copper fastened and riveted throughout. The hull construction represents the most intricate work in wooden boat building and requires the most skillful workmanship and the very best grades of material to insure a perfect boat.

Heavy bronze keels and centerboards are used, as the boats depend primarily upon their sail power, which is of lug rig, for running offshore, while the 40-horsepower six-cylinder gasolene engine installed is used for maneuvering the boat around wrecks. The total weight of the lifeboat is eight tons, and nearly half this weight is made up in the bronze and copper fastenings used in the construction of the hull. The new boats will have the self-bailing, self-righting features that the Department has always embodied in boats of this type. They will be used on the Great Lakes, and along the Atlantic and Pacific coasts, where they are urgently needed. The introduction of the power lifeboat has enabled the Life Saving Service to increase by over 100 per cent. the area that one station can cover, in comparison with times when lifeboats were not equipped with power.

The contract will be completed and the boats placed in commission before the end of the year. The Electric Launch Company, Bayonne, N. J., has been favored with many previous orders from the Life Saving Department for similar boats.

Launch of Ioneta.

THE twin-screw motor yacht Ioneta was launched from the yards of the Gas Engine & Power Company at Morris Heights last Saturday. This yacht has been built for Rear-Commodore A. B. Waring, of the Moosehead Lake Y. C.

The boat is 65 feet long, 10 feet beam and in appearance resembles a small steam yacht, having the flat or torpedo stern below the waterline, with the graceful overhang above, in conformity with the regular Seabury high-speed yacht stern. There is a cabin house forward, followed by midship deck, where the steering wheel, marine telegraphs, etc., are placed. In the after trunk cabin is a large saloon, galley, etc. There is deck space between the rail and the house and a commodious after deck. Two six-cylinder, 6x6 inches Speedway engines are installed. A guaranteed speed of 16 miles an hour has been given and it is expected that this will be exceeded. The yacht is finished throughout in mahogany and will be furnished elaborately. The boat is lighted by electricity and will have a powerful searchlight. Ioneta will be sent to Moosehead Lake, where it will be in commission the coming summer.

Zip III. Expected to be Very Fast.

THE speed boat Zip III., built for Thomas Hutchinson, of Woodbury, N. J., was launched last week, and it is expected that she will be very fast. Zip III. is 28 feet long, 4 feet 2 inches beam and is fitted with a 100-horsepower Sterling motor.

This engine has already developed 125 horsepower. The craft is finished in cedar and mahogany, and over ten thousand screws and nails hold it together. The boat is guaranteed to make 33 miles an hour, but in trial trips has exceeded this.

The plans of this boat are by Hussey, and Builder Wright, at Paulsboro, N. J., has put it together in a fine manner. Zip I. was 25 feet long, Zip II. 32 feet, and each of these had great speed, won many a race on the Delaware and South Jersey waters, and Zip III. has already been entered in all the leading races at the shore meets and fresh-water contests.

Motor Boats in South China.

CONSUL-GENERAL GEORGE E. ANDERSON, at Hongkong, writing on the extension of motor boat traffic in South China in the Daily Consular Reports, says:

"The motor boats on these rivers are of Chinese make, the cost of constructing them in Hongkong being much less than in the United States or Europe. Most of the boats have been built in Hongkong by a Chinese shipbuilding firm under plans drawn by English shipbuilders. There are seven of them in service—six between Wuchow and Nanning and one between Nanning and Pai-seh. Other new boats are about to go into service bteween Nanning and Lungchow.

YACHT and BOAT SAILING
By the late Dixon Kemp
Tenth edition. Published 1904. We have a copy in fairly good condition, published at $12, which we will sell for $9.00.
FOREST AND STREAM PUBLISHING CO.

The Indians of To-day
By George Bird Grinnell. Demi-quarto, 185 pages, buckram. Price, $5.00.
It describes the old-time Indian and the Indian of to-day, and contrasts the primitive conditions and ways of living with those of the present. It contains over fifty full-page portraits of living Indians from photographs.
Contents: The North American Indians, Indian Character. Beliefs and Stories. The Young Dogs' Dance. The Buffalo Wife. A Blackfoot Sun and Moon Myth. Former Distribution of the Indians. The Reservation. Life on the Reservation. The Agent's Rule. Education. Some Difficulties. The Red Man and the White.
FOREST AND STREAM PUBLISHING COMPANY

The Story of the Indian
By George Bird Grinnell, author of "Pawnee Hero Stories," "Blackfoot Lodge Tales," etc. 12mo. Cloth. Price, $1.50.
Contents: His Home. Recreations. A Marriage. Subsistence. His Hunting. The War Trail. Fortunes of War. Prairie Battlefields. Implements and Industries. Man and Nature. His Creation. The World of the Dead. Pawnee Religion. The Old Faith and the New. The Coming of the White Man. The North Americans—Yesterday and To-day.
FOREST AND STREAM PUBLISHING CO.

WILDFOWL SHOOTING.
By William Bruce Leffingwell.
Illustrated, 373 pages. Price in cloth, $1.50; half morocco, $2.50.
Containing Scientific and Practical Descriptions of Wildfowl: Their Resorts, Habits, Flights and the Most Successful Method of Hunting Them. Treating of the selection of guns for wildfowl shooting, how to load, aim and to use them; decoys and the proper manner of using them; blinds, how and where to construct them; boats, how to use and build them scientifically; retrievers, their characteristics, how to select and train them.
FOREST AND STREAM PUBLISHING CO.

"Those now in service are 75 feet long with 14-foot beam built wholly of native pine for cheapness and lightness. They draw fully laden only 18 inches of water and can be handled in water 2 feet deep. They are fitted with 75-horsepower Garner engines using kerosene for fuel. Two were built in Wuchow and fitted with engines in Hongkong. The others were constructed in Hongkong at a cost of a little over $15,000 local currency ($6,300 gold) each, of which about $9,000 local currency ($3,780 gold) was for the engines and fittings. They will carry general cargo up to 250 piculs (about 15 tons) and 150 passengers. During the wet season when there is plenty of water in the rivers these launches have competition in junk traffic and steam launches towing junks or barges. In the dry season, covering about five months of the year, the motor boats or launches have the trade practically to themselves, but most of the time in dry season they do not go beyond Ping-Ma.

"There are similar projects in other portions of South China. For example, several wealthy Chinese merchants in Chia Ying Chow, up-river from Swatow and Chowchow-fu, have applied for permission to dredge the Han River in several places so that they can establish a line of motor launches between Chia-Ying-Chow and Swatow similar to the line now operating on the West River. The river is said to be navigable for the boats at present as far as Mei-chi."

Hydroplane for Commodore Pugh.

The speed boat building for Commodore James A. Pugh, of Chicago, which is to take part in the eliminating trials held to select defenders for the British international trophy, is expected to be very fast. It is building at Lake Geneva and, according to its owner, will revolutionize motor boat building. This boat is only 31 feet 10 inches long and 6 feet 4 inches beam. It is to be equipped with a 450-horsepower motor and when driven at full speed will draw only six inches. The bow and almost half the boat will be out of the water. The model is the hydroplane type and has six planes. The boat will be tried out soon at Lake Geneva and will then be taken to Chicago. Mr. Pugh is commodore of the Pistakee Y. C. The boat is to be named Disturber II., and will be in commission June 1. Later in the season the craft will be brought here and raced whenever possible.

Canoeing.

Hackensack River Cruises.

New York City, May 19.—*Editor Forest and Stream:* All previous attendance records were broken when twenty-five canoes, containing fifty-one men, started at West Nyack on the annual cruise of the Atlantic Division down the Hackensack River. The river was very low, and a great deal of excitement was caused by the numerous stoppages caused by various men trying to pry their canoes from obstacles. One man said that the reason there were so many well preserved rocks in the river, was that the A. C. A. men paint them every spring, and nobody doubted his word after the first mile. After paddling a little and wading and carrying and cussing a lot the first camp was made in a beautiful hemlock grove, and the welcome odor of frying steaks soon made every one forget his troubles. After supper the boys gathered around a camp-fire and sang songs until the wee small hours before turning in to sleep.

During the afternoon three boats were damaged and two men came to camp with a trophy in the shape of a big water snake, which they claimed gave them a terrific battle, succumbing only after a mortal struggle.

Sunday morning only a few of the very tired ones were asleep at 5:30 A. M., and a start was made two hours later. Progress was slow for a while, and the rear guard often caught up with the leaders, as fallen trees were frequent, and some wonderful handling of the duffle was done. Leslie dam was made about 11 A. M., and after lunch the party proceeded leisurely along. From there until Quinquingus camp the bunch kept well together, and after a short rest for photographing, proceeded to Oradel in single file. As the river widened it was a splendid sight to see the string of canoes with all the paddles rising and falling in unison, and many a loving couple on the banks gazed in delight at the scene. From Oradel to New Milford a stiff pace was maintained, enlivened with a carry and wade of quite a distance. From New Milford to the Oritani Club, at Hackensack it was a case of plugging the tide, and the bridge was lined with spectators when the men passed underneath.

After donning boiled shirts, the party proceeded to get outside of a well served dinner, and rumor says that the proprietor of the Susquehanna Hotel gazed in dismay at a depleted larder. Harry F. Noah, Purser.

Pittsburg Canoeists' Plans.

While much of the time of the members of the various canoe and boat clubs along the Allegheny River at Oakmont and Verona will, as usual, be devoted to river sports this summer, plans are being made to branch out in other directions, and this year tennis and baseball will be played on the tennis courts and the ball field of the clubs.

Most of the clubs have tennis courts of their own which are now being put in shape for the summer, and a ball field has been laid out in Sylvan near the club house of the Sylvan Canoe Club. At the same time the lawns and grounds surrounding the club houses are being replanted and fixed up for the summer, and the spring cleaning of the club houses themselves have been completed. All are now ready for the formal openings.

The most important club event of the summer will be the annual meeting of the Central Division of the American Canoe Association, which will be held at Verona on Saturday, July 1, a little later in the summer than last year, and many regattas, lantern parades, corn roasts, steak broils and other entertainments characteristic of canoe clubs are planned. The National meet of the Canoe Association will be held as usual this summer at Sugar Island, in the St. Lawrence, and many of the local clubs will be well represented, as was the case last year. The dates are from Aug. 4 to 18.

There will be thirty-four races in the program this year. Last Sunday was the first warm holiday of the year, and the river at Oakmont and Verona was dotted with canoes and small craft, and there were many on the river and at the club houses yesterday to remain over to-day.

The schedule of the Inter-Club Tennis League began on Saturday, May 20, with matches between the Minnetonka and Sylvan Tippecanoe clubs; and the other matches for the season are as follows: May 27, Keystone vs. Oakmont, and Algonquin vs. Duquesne; May 30, Oakmont vs. Minnetonka and Algonquin vs. Keystone; June 3, Sylvan vs. Tippecanoe and Duquesne vs. Crescent; June 10, Tippecanoe vs. Keystone and Minnetonka vs. Oakmont; June 17, Crescent vs. Algonquin; June 24, Sylvan vs. Duquesne and Oakmont vs. Algonquin; July 4, Oakmont vs. Keystone and Algonquin vs. Sylvan; July 8, Duquesne vs. Minnetonka and Tippecanoe vs. Oakmont; July 15, Sylvan vs. Crescent and Keystone vs. Tippecanoe; July 22, Algonquin vs. Oakmont and Keystone vs. Minnetonka; July 29, Duquesne vs. Sylvan and Crescent vs. Oakmont; Aug. 5, Duquesne vs. Algonquin and Tippecanoe vs. Oakmont; Aug. 12, Sylvan vs. Minnetonka and Keystone vs. Crescent; Aug. 19, Tippecanoe vs. Duquesne and Sylvan vs. Algonquin; Aug. 26, Minnetonka vs. Duquesne and Crescent vs. Sylvan; Sept. 2, Minnetonka vs. Tippecanoe and Keystone vs. Duquesne; Sept. 4, Algonquin vs. Crescent and Oakmont vs. Duquesne; Sept. 9, Tippecanoe vs. Minnetonka and Keystone vs. Sylvan; Sept. 16, Sylvan vs. Keystone and Algonquin vs. Minnetonka; Sept. 23, Crescent vs. Duquesne and Keystone vs. Algonquin; Oct. 7, Tippecanoe vs. Sylvan and Minnetonka vs. Algonquin and Duquesne vs. Oakmont; Oct. 14, Minnetonka vs. Crescent, Algonquin vs. Tippecanoe and Duquesne vs. Keystone; Oct. 21, Oakmont vs. Tippecanoe and Crescent vs. Minnetonka; Oct. 28, Oakmont vs. Crescent and Duquesne vs. Tippecanoe; Nov. 4, Sylvan vs. Oakmont and Crescent vs. Keystone.

In preparation for the opening of the tennis league all of the clubs are improving the courts. The Sylvan Canoe Club will enlarge its tennis courts, and the Minnetonka Canoe Club will build new ones. The entire building of the Keystone Canoe Club is being renovated and increased space for dancing and house parties has been furnished by sliding doors. Two new racing boats are being added to the equipment of the Minnetonka Canoe Club, and three more are being purchased by the Algonquin which is making some extensive improvements to the club house itself. A new hot water system is being installed and shower baths for both men and women are being installed.

Last year extensive improvements were made to the Crescent and Duquesne canoe clubs and both are as complete as could be desired. The Duquesne was raised out of the reach of the high water and the bank of the Crescent Canoe Club was protected with stone against the incessant washing of the waves.

Atlantic Division Cruise.

Philadelphia, Pa., May 22.—*Editor Forest and Stream:* The Rancocas Creek has been chosen once again as the scene of the Memorial Day cruise of the Atlantic Division. Cruisers will meet at Brown's Mills on Saturday, May 27, where camp will be made over night. This site was obtained with the understanding that no fires would be lit.

A start will be made on Sunday after dinner, and a short paddle taken to a good campsite, a little above the dam at New Lisbon. On Monday night, camp will be made at the big spring below Mt. Holly.

The committee believes that this will make a very pleasant schedule, and will not prove too strenuous for the less seasoned paddlers. Supplies can be purchased at the store in Brown's Mills on Saturday, and renewed at the different towns passed on the way down the creek. The cruise will terminate at the Red Dragon Canoe Club, Wissinoming, Pa., on the evening of the 30th. Refreshments will be served at the Red Dragon Canoe Club at a nominal cost per capita.

Canoes and duffle should be shipped by Adams Express, or by freight to Brown's Mills in the Pines, or same can be checked as baggage at the excess rate of $1 per canoe.

Try to make this cruise on one of the most beautiful streams in the State of New Jersey.

Members of the committee will be at Brown's Mills early on Saturday morning to see that every assistance possible is rendered. Do not forget the Delaware River regatta on June 17 at the club house of the Yapewi Aquatic Club, Bordentown, N. J.

Walter G. Sibley, Chairman.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—Benj. A. Sleeper, 428 High street, Burlington, N. J., by Henry B. Fort.

Northern Division.—W. Bartlett Dalton, 563 Johnson street, Kingston, Ont., Can., by R. Easton Burns; Dr. Albert Wm. Winnett, 96 Bagit street, Kingston, Ont., Can., by R. Easton Burns.

NEW MEMBERS ELECTED.

Atlantic Division.—6220, Arthur C. Biles, 223 Passaic street, Trenton, N. J.; 6221, Arthur F. Thornton, P. O. Box 137, Sparkill, Rockland county, N. Y.

Nov. 28-29.—Rising Sun (Md.) G. C. H. L. Worthington, Vice-Pres.

DRIVERS AND TWISTERS.

The nineteenth annual championship meeting of the Clay Bird Shooting Association of England will be held on June 29 and 30 and July 1, at the grounds of the Middlesex Gun Club, Hendon. An exceptionally attractive program is being arranged and a coronation commemorative trophy will be included in the program, which in a preliminary form will be issued about the end of May. Copies of it can be obtained from the Secretary of the Clay Bird Shooting Association, 68 Aldersgate street, London, E. C., England.

The Clinton Gun Club, of Lancaster, Mass., will hold their third annual registered tournament on Memorial Day, May 30, on their grounds. Shooting will start promptly at 9:30 o'clock; $50 by Interstate Association and 1 cent per target by club to Squier money-back system. Merchandise prizes for high guns and long runs. Program calls for 150 targets; $15 entrance to regular program. Optional sweepstakes extra, $10. Targets 2 cents each, included in entrance. Interstate rules to govern. Anyone may enter any event and shoot for targets only. Lunch and loaded shells for sale on the grounds. Ship shells, etc., prepaid to W. J. Tedford, Secretary, Lancaster, Mass. Shoot rain or shine.

The Chicopee Falls, Mass., Rod and Gun Club, beginning to-day, May 27, will conduct a series of shoots, comprising 25 birds, divided into three events, under the Lewis class system. The object is to give the shooters an afternoon's sport for little money. There will be four classes, and prizes of equal value will be given for the highest score in each class. Classes will be made up by dividing the total number of shooters by four. For example, with 32 entries: Class A will comprise the eight highest scores; Class B, the next eight highest; Class C, the third eight; and Class D, the fourth eight. The highest score in each class will receive a prize. Any further information will be gladly given upon request to Secretary F. E. H. Sheldon.

On June 3 the registered shoot of the West Chester Gun Club will take place at their grounds at Westchester, Pa., and will be managed by Lloyd Lewis. The usual conditions will prevail—ten 15-target events, entrance $1.40 each, with optional sweeps at $1.00 extra entrance. The Squier money-back system will be used, and does not apply to the optional sweeps. Division of moneys, regular program, Rose system, 5, 3, 2, 1. Optional sweepstakes, per centage system, 40, 30, 20, class shooting. There will also be special events at 10 targets, miss-and-out, 35 cents entry, targets included, reentry unlimited. For every target shot at 2 cents will be charged, and the remainder of the 35 cents forms a purse to be equally divided among the straight scores. Open all day. A fine shell case will be given for the longest run. White flyers and McCrea traps will be used. Program starts at 11 A. M. Manufacturers' agents shoot for price of targets only. F. H. Eachus is the Secretary.

Western Connecticut League.

Bethel, Conn., May 15.—The first of a series of six tournaments to be given by the Western Connecticut Trapshooters' League was held at Bethel, Saturday the 13th, under the auspices of the Bethel Gun Club. The weather conditions were not as favorable as would have been liked, as a strong wind was blowing and continued throughout the day and made the shooting very uncertain and many of the best shooters of the State could not reach their usual form. But from the time the first gun was fired at 9:30, the success of this the first tournament of the Western Connecticut Trapshooters' League was assured. Eighty-one shooters faced the traps. Bridgeport heading the list in numbers. There were good representations from New Haven, Long Hill, Stamford, Danbury, Mt. Kisco, N. Y., and New Haven. Six professionals were present. Over 12,000 targets were thrown from two sets of expert bluerock traps. Howard Judd, of Bethel, and C. Van Stone, of Bridgeport, won high amateur for the day. Judd beat Van stone in the shoot-off, breaking 24 out of 25 birds, while Van Stone let two get away. This was by far the most exciting event of the day, and was watched with much interest by both shooters and spectators. This shoot-off also decided the winner of a leg in the Du Pont Connecticut amateur trophy, which is open for competition among shooters who are residents of the State of Connecticut, the amateur making the greatest number of legs at the six tournaments to be declared the winner.

The special Parker gun event was won by W. A. Gregory, he making a perfect score of 25, shooting from the 20yd. mark. Staub, was second with 24, winning the leather gun case, and J. M. Carr was third with 23 kills, winning a derby hat.

There were three who tied in the contest for the Fairfield county cup with a score of 82 out of 90 birds shot at, J. M. Kyle, H. M. Judd and W. A. Gregory, Gregory winning in the shoot-off by one bird. At the next annual shoot held at Bethel the cup will again be shot for.

The team race was also very interesting, ten teams of five men each entering. The Bridgeport club entered three teams. Following are the scores, out of a possible 450:

Bridgeport No. 1	377	New Haven No. 1	353
Bethel	373	Bridgeport No. 3	347
New Haven No. 2	369	Bridgeport No. 2	342
Danbury No. 1	367	Danbury No. 2	320
Long Hill	365	Waterbury	293

Cincinnati Gun Club.

Only a few members attended the weekly shoot on May 13, other attractions in the shape of auto races and baseball proving too strong for some of the regulars. The weather was fine, and there was some nice work done. Johnson went out in first place with 89, which is a little faster gait than he has been going lately, though not a bit too fast for him. Hammersmith did not keep up to his reputation, and dropped to third place; it is seldom that he gets out of the 90 per cent. class. Lawrence, a visitor, was second. Hellman shot well and is fast getting into shape for some of the big tournaments this summer. Dr. Bird did not get over in time to shoot in all the events, but he scored 90 per cent. in those he entered. Connelly was a little off to-day, and did not strike his gait until the last event, when he missed but one target. The club will hold its money-back shoot on May 21, and has all the arrangements completed to take care of a big crowd, and that is what they are going to have.

One hundred targets:

Targets:	15	15	20	15	15	20	Broke.
Johnson	13	14	18	13	13	18	89

Team Match at Ryland, Kentucky.

THE match at live birds between teams from Philadelphia and Kentucky was held on May 15, at the grounds of the Crystal Lake Gun Club, Ryland, and proved to be the most successful affair that the club has given since its organization. Fifteen of the Pennsylvania shooters made the trip, and they certainly put a strong team in the field. The Fayette Gun Club, of Lexington, Ky., and the Crystal Lake Gun Club were the other contestants. The Louisville shooters were unable to get a team together, as they had hoped to do. The Fayette and Crystal clubs were obliged to go into the contest minus one or two of their best men, otherwise the story might have been a little different.

The day was hot, with just a slight breeze to make it a little less uncomfortable. The birds were a mixed lot; there were quite a good many extra hard ones, and a number of sitters, though some of the latter proved to be puzzlers when they once took wing. Owing to the inability of the club to secure birds, the handicap event, which was scheduled for the morning, was called off, and only members of the teams allowed to shoot. This was a disappointment to twenty-five or thirty sportsmen who had expected to enter the handicap, among them Ed. Voris, of Crawfordsville, Ind., who did not take his gun out of the case. There was a large attendance of local men, who came down to see the sport. Before the match began opportunity was given the visitors to shoot a few birds in order to get a line on the traps and become familiar with the surroundings.

A match at 10 birds, for $100 was also shot between Mr. Munson, of Dover, N. J., standing at 30yds. and using one hand, and Mr. Knowles, of Philadelphia, 28yds., using both hands. The former won with a straight score to the latter's 9.

The conditions of the team match were: Four men on a team, 50 birds per man, 31yds. rise, 30yds. boundary; entrance $50 and birds, per man. There was also an optional $10 sweep on the 50 birds, divided 50, 30 and 20 per cent., high guns. O. J. Holaday acted as referee, and George Walker and H. Lehman as judges. R. H. West, Jr., was official scorer for the Kentucky teams and F. C. Goodbody for Philadelphia. The Independent team proved rather easy winners, taking the lead in the first round, and finishing with a lead of 10 birds over the second team. Fayette made a good fight in the first round, the Clay brothers missing but one bird out of the 50, and the team being only 5 birds behind the Independents. Schreck and Gould were high men on the Crystal Lake in the first round, missing one bird each, but the team finished last, 10 birds behind Philadelphia, and 5 behind Fayette. In the last round Fayette and Philadelphia went back, while Crystal Lake picked up and gave the latter team a close race, losing out by only 2 birds, and getting 3 birds the lead of Fayette. Coleman was high man with 50 straight kills, or 55, counting the 5 at practice. Wolstencroft, of the same team, was second with 48. A. Clay and T. Clay, of Fayette, and Schreck and Gould, of Crystal Lake, tied for third place on 47. Of their lost birds, Clay and Schreck had 2 dead out each, and T. Clay 1. Payne, Buckwalter and Sommers each lost 3 dead out. The latter's first miss was on the 38th bird, a fast outgoer, hard hit with both loads, but able to carry the lead over the boundary. Payne, the promoter of this match, has no need to feel at all ashamed of the result. He went up against a hard proposition, a team of the best wing shots in the country, and his team put up a good fight, taking their defeat like the true sportsmen they are. There's more honor in fighting to the finish against heavy odds than in winning from a team of mediocre quality. A return match will be shot in the future, and perhaps the result will be more nearly equal. At the conclusion of the match Mr. R. H. West, Jr., announced that he had been requested to issue a challenge on behalf of the Hilltop Gun Club, of Austerlitz, Ky., to shoot a match with any member of the winning team, at 100 birds, for $500. The match to be held in Louisville, Ky., or on the grounds of the Hilltop Gun Club, at Austerlitz, and the time to be some day in November or December. The challenge was accepted, and on request of the Philadelphians, J. D. Gay was named as the Hilltop Club's man. That will be some match and well worth a journey to see. Whichever way it goes, the winner will know that he has been in a shooting match.

Practice, 5 birds, 31yds.:

WINCHESTER

Wins Three State Championships

Not only the Individual Championships but the Amateur High Averages, Professional High Averages, and other honors, were won with Winchester Shells at the big State Tournaments held in the East, West and Middle West on the 17th, 18th and 19th of May. After the Winchester count was taken there was nothing else worth mentioning. Read the brief details below:

MISSOURI STATE SHOOT

STATE CHAMPIONSHIP:
Peter Batterman, shooting Winchester shells.

HIGH AMATEUR AVERAGE:
Dr. W. S. Spencer, 440 x 450.
H. B. Pottinger, 2d, 433 x 450.

HIGH PROFESSIONAL AVERAGE:
C. G. Spencer, 445 x 450.
All shooting Winchester shells and guns.

PENNSYLVANIA STATE SHOOT

STATE CHAMPIONSHIP:
"Kelsey," score 437 x 450. This was also High Amateur Average.

HIGH PROFESSIONAL AVERAGE:
Lester German, score 446 x 450. Mr. German made the longest run of the tournament, 210 straight.

4-MAN TEAM CHAMPIONSHIP:
Won by the Pittsburg Team, every man of which shot Winchester shells.

SPORTSMAN'S ASSOCIATION OF THE NORTHWEST

INDIVIDUAL CHAMPIONSHIP:
Fred Dryden.

HIGH AMATEUR AVERAGE:
E. J. Shingren, 520 x 550.

HIGH PROFESSIONAL AVERAGE:
Lee R. Barkley, 530 x 550.

TEAM SHOOT:
Won by Walla Team, every man shooting Winchester shells.

What a tribute this is to the straight-shooting, hard-hitting Winchester Shells. You ought to shoot them all the time, if you want to improve your shooting.

Hyde Park (Ohio) Gun Club.

ON May 20 there was a slight break in the hot spell which has been with us for many days. In the afternoon it clouded up and the outlook for rain was so threatening that only a few members came out. Then, too, the wind blew half a gale and effectually prevented any high scores, by tossing the targets about in most unexpected ways. Schaefer, Phillips and Jenkins came out to the grounds, but amused themselves on the revolver range, the latter leaving early to escape an approaching shower, which passed over the grounds after all, giving us only a few drops.

C. G. Westcott, who is visiting in Cincinnati for a while, was high man with 86; this is not the kind of work he did at the Southern Handicap, but was pretty good for the kind of conditions we had. Holaday got in second place on a score so much below his mark that it is a shame to record it. Sampson broke 88 per cent. of his targets, but the 20yd. event cut him down some. Frohliger didn't do very badly; most of his misses were on the easy targets. Irwin had a race on with Holaday and led him one target in the first two events, which the latter got back in the third event and increased his lead in subsequent events. Irwin says he is going to get some of the new shells—99 per cent. guaranteed. As a finish to the afternoon Holaday shot at 11 pairs, breaking 17.

At the annual meeting on May 16, the following directors were elected: Z. De Mar, E. W. Rugg, P. K. Phillips, J. Stevenson, H. C. Matlock, J. W. Jenkins, Schaefer. The board will meet soon to organize.

Targets:	15	15	20	25	*25	Total.
Westcott	12	13	16	24	21	86
Holaday	14	12	17	19	18	80

Pennsylvania State Tournament.

DuBois, Pa., May 20.—The Pennsylvania State tournament was shot here on the 16th, 17th, 18th and 19th on the Beaver Meadow grounds, under the auspices of the Du Bois Gun Club.

May 16, Practice Day.

Over sixty shooters—a remarkably large number for the practice day—participated in the ten events run off. Those in charge of the meet fully expect between 125 and 150 to be here for the real activities. Another favorable indication was the unusually high scores made today, much of which can be credited to the Beaver Meadow grounds and its environs, chiefly its skyline. Visiting gunners, many of whom were here for the first time, were pleasingly surprised when they got a glimpse of the shooting grounds, to see the ideal skyline and other conditions that prevail, and they predicted unusual scores. The prophesy was fulfilled on the opening day.

Among those present were eleven professionals, including some of the best shooters of the country, and all were in good shooting form. But the work of some of the amateurs was the real sensation of the day, and no less a personage than Frank Guinzburg, of the Du Bois Gun Club, led the amateurs, being only two birds behind World's Champion Heer, and second in the entire list. Mr. Guinzburg broke 146 out of 150 shot at, and made a straight run of 115, one that is a record for the traps. Mr. Guinzburg will receive a medal valued at $100 from the Du Pont Powder Co. for making a run of over 100.

Dr. Quinn, of the Du Bois Gun Club, was fourth high in the amateurs with 142.

True to his title, Champion Heer was the peer of the shooters, and broke 140 out of his 150, getting a straight run of 123. Jim Elliott and Lester German, popular professionals, were among the leaders with 146 each. The scores were as follows:

	Shot at.	Broke
Guinzburg	150	146
Kelsey	150	144
Moore	150	144
Quinn	150	141

May 17, First Day.

The shooters of the Pennsylvania State Sportsmen's Association—eighty-five of 'em—got down to real business at their annual State tournament to-day and went through a big day of regular events and two special events with State championships at stake thrown in.

High amateurs in the regular events go to Schlicher, Kahler, Calhoun and Painter. They were tied at 148. Second on the list were Frank Guinzburg and Hugh Millen, of Du Bois, tied at 145. L. S. German and Wm. H. Heer were high professionals with 147 each.

The two-man team race was won by Highland, Philadelphia, while Du Bois No. 1 was second, and the individual championship at 25 doubles went to A. Heil, of Allentown, after a tie with Painter, of Pittsburg.

The number of gunners, while not quite as large as was expected, is a little larger than usual at the State tournaments. And appropriately enough, the scores to-day were a little better than the average of the State shoots.

The real hig event of the day, and the last to he decided, was the two-man team championship at 25 singles and 5 doubles, for which the Milt Lindsey trophy, a fine silver cup, was the prize. It was won by Highland No. 1 (Wolstencroft and Kahler) with 66.

In the general events, the running was very exciting, and it was only by the most magnificent finishes that the four amateurs were able to keep ahead of the professionals. Calhoun and Painter each shot nine events without a miss, and fell down twice in the tenth. German and Heer had chances to tie the leaders, but fell down in the ninth event and fell one short of the first place. The shooting of Guinzburg and Millen was consistently good, and but for a little badness at the end they would have come close to passing the leaders. Guinzburg missed three birds in the last three events, and Millen dropped two in the last two events.

High run for the day was made by J. Mowell Hawkins, who reeled off 106 without a miss. Jim Elliott finished out a run from Tuesday that totaled 111 without a miss. The totals of the ten 15-bird regular events of to-day follow:

	Shot at.	Broke
W H Kahler	150	148

Harrisburg.			
Martin	6 26		
Worden	8 32—58		

May 18, Second Day.

Contests for three special valuable trophies were run off to-day, in addition to the ten regular 15-target events and interest and enthusiasm ran high during it all. The first of these was the three-man team race at 25 targets each for the Harrisburg trophy. The event brought out eight teams, of which the Highland team of Philadelphia, winners of the Milt Lindsey trophy on the first day, won out after a very close contest. The Philadelphia team, composed of Wolstencroft, Kahler and Cantrell, scored 71 out of 75. The second was a 25-target event for four-man teams for the Reading trophy. It was won by the Pittsburg squad, after tying with the crack Highland team at 91 out of a possible 100. The third of the big events was an individual event, the 50 targets of the first two contests being combined with a handicap. Seventy-five shooters took part in this contest and the first round found ten tied with perfect scores, their handicaps included. The handicaps were split for the shoot-off, and Bennett, Stout, Speer, Vernon and Keenan made good again. In the final shoot-off, Speer with a handicap of 2, broke 21; Keenan with 5, got 19, and Vernon with 4, broke 22, giving him a perfect score and the trophy, a fine double-barreled shotgun.

In the run of regular targets Lester German was the big star with 149 out of 150, the best totals for the tournament to date. In 200 targets he got 198. Heer and Hawkins were second high professionals, tied at 146. S. B. Worden, J. F. Calhoun led the amateurs with 146 each. The summaries are appended:

	Regular Events. Shot at.	Broke.	Denny Trophy. Hcp.	T'l.

May 19, Third Day.

With a mighty cheer for Field Captain Woody Kelly, of the Du Bois Gun Club, in which shooters and spectators alike joined, the twenty-first annual tournament of the Pennsylvania State Sportsmen's Association was brought to a close this afternoon. Kelly had just won the McNichol trophy, symbol of victory in the feature handicap event of the entire tournament, and there is not the slightest doubt that it was the most popular win of the entire tournament. Shooting from the 18yd. mark, he broke the first 25, tying with Martin, who shot from the 17yd. line, and Harry Kahler, shooting from the 22yd. line. In the shoot-off, Kelly shot another perfect score, while Martin missed one and Kahler two. Kelly shot last, and it was the last event.

Just previous to this, the amateur championship of Pennsylvania for the Du Pont Powder Co.'s magnificent trophy was shot off and was won by George E. Painter, of Pittsburg, after a hot battle with H. Schlicher, who held the championship at the time. Kelsey and Schlicher had each broken 437 out of 450 during the entire tournament and were tied for the championship. In the shoot-off Schlicher missed his seventh. Painter won the event with a straight 25.

In the third special event of the day, the miss-and-out at 5 double targets, Millen, Coleman, Kahler, Howell and Heil tied. In the shoot-off, Coleman won.

The shooting during the day was better than any previous time. Lester German again won highest laurels by breaking every bird he shot at during the day. In the regular targets he broke 150, and in the McNichol event he broke them all from the 22yd. line, making a total of 175 for the day. These, with an unfinished run of 35 from Thursday, gave him high run of the tournament, 210, which is still unfinished. W. H. Heer was second with 148 out of 150, while Hawkins was third with 147 and Stevens fourth with 146. Hawkins also completed second high run of the tournament by breaking enough at the opening to give him 160 straight. The work of the amateurs was remarkable. H. W. Kahler, with Hugh Millen, of Du Bois, and Fred Coleman, were tied for the lead with 147 each, while Hickey and Worden were second with 146 each. To-day's regular scores and those of the McNichol trophy are as follows:

Handicap at 25 birds, for McNichol trophy:

	Hcp.	Score.		Hcp.	Score.
Glen	16	22	Anderson	21	22
Osburn	16	19	Moore	21	22
Schoffstall	17	16	Eames	21	21
Martin	17	25	Lewis	21	21

The ten high guns of the shoot were: H. Schlicher, 437 out of 450; "Kelsey" (G. E. Painter) 437; H. W. Kahler, 436; L. B. Worden, 435; J. F. Calhoun, 434; H. W. Millen, 433; F. Coleman, 432; F. Guinzburg, 429; Al. Heil, 428; C. R. Anderson, 425.

The following shows how the money-back system worked at the Pennsylvania State shoot:

Added by Interstate Association	$300.00
One cent on 35,865 targets	358.65
One dollar extra entrance	184.00
	$842.65
Losses paid in full	476.10
Surplus divided among 24 high guns	$366.55

Almost before the last event was finished yesterday the visiting shooters had started for their homes, all trains in the afternoon and evening carrying large delegations of gunners away from Du Bois. But it will be a long time before the gunners forget Du Bois.

Just before leaving the grounds yesterday, the gunners held a special meeting for the purpose of passing the following vote of thanks:

"Du Bois, Pa., May 19.

"To the people of Du Bois, the members of the Du Bois Gun Club, the Du Bois Automobile Club, also the Du Bois newspapers, especially the Courier:

"The Pennsylvania State Sportsmen wish to extend their kind appreciation and thanks for the loyal manner in which they were entertained. Beyond douht the conditions and general welfare for the shooters as provided by the Du Bois boys were among the best in the history of the Sportsmen's Association.

(Signed) "Frank Eames, Pres.
"Bernard Elsesser, Sec."

New York Athletic Club.

TRAVERS ISLAND, May 21.—Twenty gunners took part in the doubles shoot at the Travers Island traps of the New York Athletic Club, yesterday. The principal event was a race at 100 targets, for a gun offered by a sporting goods house. The marksmen allowed to shoot were the ones that did the best work at their respective traps in double events throughout the season. The Crescent Athletic Club, the Westchester Country Club, the Larchmont Yacht Club, Yale University and the New York Athletic Club were the organizations that had representatives on the firing line.

To the surprise of all, the winner was N. L. Herrick, of the Westchester Country Club. He had 82 out of a possible 100 targets. His individual scores in strings of 10 pairs each were 18, 17, 18, 14 and 15. Second prize ended in a tie between G. D. Dimock, Yale University, and D. I. Bradley, Westchester Country Club. The Eli student won the shoot-off by a single target. In the morning there were two other shoots at doubles. One was won by H. M. Brigham, of the Crescent Athletic Club, and the other was taken by C. W. Billings, of the New York Athletic Club. The scores of the principal event follow:

N L Herrick	82	R L Spotts	61
C D Dimock	74	D T Leahy	60
D I Bradley	74	L C Robbins	60
C W Billings	73	A Blake	59
C F McAlpin	68	C D Spears	59
G Adee	68	G Felix	60
H M Brigham	67	G F Pelham	58
F A Schauffler	70	G H Piercy	56
W J Simpson	64	Dr Long	55
D I Bradley	63	S Scott	55

Hudson Gun Club.

JERSEY CITY, N. J., May 21.—The appended scores were made at the traps of the Hudson Gun Club at their regular bi-monthly meet this morning, with an attendance of nineteen shooters. Carl von Lengerke and Billy Emmons were high average with 86, with N. R. Smith the runner-up with an average of 84 per cent. In the club prize event, Whitley, Kurzell, Strobel, Emmons and Dr. Groll managed to return straight scores, which enabled them to win a leg on the prizes being contested for. Our next shooting date will be on June 4. Everybody welcome to spend the morning at our grounds and shoot along with us if they feel like doing so.

Cincinnati Gun Club Tournament.

THANKS to the hustling of Emil Hammersmith, the first of the club's series of money-back tournaments was a success. In the program he drops into poetry and says:

"Welcome you'll be and welcome to stay,
Welcome, dear shooters, here any old day."

And he backs up his words by being on hand with a cordial handshake and pleasant word to greet the coming guest, and an equally cordial invitation "to come again" to the departing shooter. The program consisted of ten 15-target events, entrance $14; first five events divided Rose system, 5, 3, 2, 1, and the last five, percentage system, 35, 30, 20 and 15 per cent. There was also an optional $? sweep on the entire program, divided 60 and 30 per cent., high guns. The club gave a handsome trophy to the winner of high average. The day was fine, not a breath of wind to interfere with the flight of the targets, and the only drawback was a hard shower the latter part of the afternoon, and this stopped the sport but a few moments, as the shooters were anxious to finish, and shot in the wet. The club was lucky in getting the old ground manager, John Braunagel, to act as referee and scorer, and he gave perfect satisfaction, of course. Most of the shooters knew John at the St. Bernard grounds, and were glad to see him in his old place again. The office was in charge of G. C. Lambert, and he had the work right up to date, so that no shooter had to wait for what was coming to him. Shooting began at 11 o'clock, and the program was finished at about 4:30, a recess being taken at noon, so that the shooters might do full justice to the excellent dinner served in the club house. Twenty shooters took part in all the events, and several others, who arrived too late to get in the regular events, kept the traps busy until dark. C. G. Westcott and J. A. Payne, tied for high amateur average on 137, and shot off for the trophy at 15 targets, the former winning by one target. Second place honors were divided by Sampson and Bruns on 132. Then came G. C. Williamson and C. B. Woodbury with 131 each. C. A. Young (Chief Sparrow) was high man for the day with 142, R. W. Chamberlain (Roundy) second with 139. J. A. Payne carried off long run honors by breaking 56 without a miss, beating Holaday by one target. The money-back purse amounted to $44, and the losses, which were guaranteed by the club, footed up $35.70, leaving a small surplus to be divided as high average money. Ten of the amateurs called for relief in sums ranging from 90 cents to $7.15. After the program was concluded a few of the shooters went into an event at 12 pairs of doubles. Young was high with 23 breaks, Payne and Hammersmith 19 each, Holaday and Chamberlain 18 each, Schreck 13, Voige 11, Irwin 10.

At the annual meeting of the club on May 12, the following were elected on the board of directors: Dr. R. L. Bird, H. S. Connelly, E. Hammersmith, Dr. A. B. Heyle, C. Hellman, M. Johnson, J. A. Payne, D. Pohlar and E. J. Sampson. The board will meet on May 26 and elect officers for the ensuing year.

The club will hold money-back tournaments on the third Sunday of each month during the season, the next one to be on June 18.

Shoot-off, 15 targets: Westcott 13, Payne 12..

Columbus Gun Club.

COLUMBUS, O., May 22.—John Penn won high amateur average at the regular monthly shoot held Saturday, May 20. A nice crowd of shooters were present. Woolfolk Henderson won high professional by breaking 147 out of 150. J. R. Taylor second, 145. Fred Shattuck got third, 138. Second amateur went to Webb, 143; third to H. E. Smith, 141, and the Captain fell out of the boat on a fudge. The programs for the State shoot are being mailed. Programs can be had by writing Lon Fisher, Station A, Columbus, O. From all inquiries it will be well attended. Everybody invited. Decoration Day shoot will call for 100 targets, entrance $5, shot in strings of 10 targets each event; purses divided 50, 30, 20. Extra events to suit the shooters. Come.

Chicago Gun Club.

CHICAGO, Ill., May 13.—The pleasant weather to-day induced quite a number to come out to our park for a few rounds at the traps. Most of the scores are good, so that every one was well pleased. In the practice event Stannard, Ammann Graham each landed 24 out of 25, Fetherston broke 23, while Shrigley, Davis and Mathews each broke 21.

Ammann took first place in club event No. 1, scoring 48 out of 50. Stannard was close behind him with 47 to his credit, while Barto and Graham each put up a score of 46.

Graham showed the way in the handicap event by smashing 49, Mathews getting 48 and Ammann 44, all from 16yds. Barto connected with 43 from 20yds., MacLachlan and Davis each making the same score from 19yds.

Stannard did fine work in the double event, when he broke 23 out of the 12 pairs.

Bacci was out to-day for the first time in four years.

May 14.—Our attendance was considerably cut down by many of our members attending the tournaments at McHenry and Clearing, but we had twenty-three shooters, who enjoyed the afternoon at the traps, several of them putting up remarkably good scores, considering that the targets took very erratic flights at times and quite a strong southeast wind was blowing.

In the practice event at 25 targets, Shrigley and Stemmer each scored 24, Von Lengerke and Thwaite each breaking 23, while Shultz and Kelso each turned in scores of 21.

In club event No. 1, at 50 targets, all 16yds., Taggart landed first honors with a score of 48, Stemmer and May being next in line with 44 each, while Spangler connected with 43.

Stemmer was the top-notcher in the handicap event, scoring 48 from the 19yd. mark, Fetherston being a close second with 47 from 20yds. M. May took third place with a score of 42 from 18yds., Mrs. Fetherston being next with 40, she having made the same score in event No. 1.

In the next event at 25 singles, first honors were easily won by Von Lengerke with a straight score of 25, this being the only straight frame of the afternoon. Thwaite gathered in 21, while Kammerer, Gould and Fox each broke 17.

Our good friend Oswald von Lengerke has concluded to come out oftener in the future, as he says he may be able to learn to break targets again, and result of two frames he shot to-day seem to indicate that he can hit a few once in a while. A severe headache compelled him to quit after having shot the two frames.

Kelso paid our park his first visit to-day and was induced to try a frame; his score of 21 out of 25 pleased him, so that he expects to be with us next week and bring several friends with him.

Spangler is well pleased with the results he is getting, as his scores are steadily improving.

Mrs. Fetherston is making good on 80 per cent. right along.

Mrs. Taggart and Miss Sullivan are both doing good work with their 16-gauges.

Northern Kentucky Gun Club.

THERE was a very nice attendance at the club's weekly trophy shoot on May 14. It was a fine day, and the warm weather attracted quite a number of spectators. The trophy shoot resulted in four of the men tying on perfect scores, including their handicap. The shoot-off was at 25 targets, and it was agreed to decide the winner by the total score including the handicap. This was done with the object of arriving at a decision without the need of several shoot-offs. The scheme settled the matter all right, Lehman winning with a total of 32, of which 22 were actual breaks. Dameron was high man in actual breaks, with 46. He is fast getting back into form after his lay-off from ill health, and will be in trim to make the shooters go some at the state shoot next week. Sampson is also getting back to his old-time form again, and means to have a try for some of the big money this season; he was second to-day with 45. Charlie Woodbury always used to be thought one of the best in this vicinity, and it looks as though he would once more make good, he was third to-day with 43, which is better than he has been shooting lately. Rapp, from St. Louis, Mo., was trying the clays to-day for the first time in nearly five years, so that his score was not so bad, although not up to his old-time mark. Uncle John Dea has not been very regular this spring and shows it in his work on the firing line. We always used to look for his name much nearer the top of the list than he placed it at this shoot.

Next week the Kentucky State shoot will be held on these grounds, and the club has completed all the arrangements to care for the big crowd that will be here. An Ideal-Leggett and a set of experts will be used in running off the events, and both are in fine working order. Many of the members will attend the money-back tournament of the Cincinnati Club on May 21.

Trophy event, 50 targets, handicap:

Targets:	15	10	15	10	Broke.	Hcp.	Total.
Keefer	9	10	11	7	37	8	45

Lehman	10	32			

Siwanoy Country Club.

MT. VERNON, N. Y.—The shoot on May 13 brought out a number of enthusiasts, who were anxious to try for the third leg of the Du Pont trophy. There is considerable rivalry among the members who are anxious to secure the gold medal for the amateur championship, which is to be shot off on May 30.

The winner in the Du Pont trophy shoot was Mr. J. G. Wintjen. Two visitors from Bronxville, Messrs. Burrill and Proctor, came over to see the work at these traps. The following were the scores:

	Shot at.	Broke.	Average.
G A Wylie	105	83	79.0
W W Thorpe	90	56	62.2
G L Yates	120	59	49.1

Burrell	100	60	60.0

The Fred Macaulay Business Men's Gun Club.

NEWARK, N. J., May 16.—Seventeen gunners participated in the regular weekly shoot of the Fred Macaulay Business Men's Gun Club, held yesterday afternoon over the club's traps, near the Speedway. While the day was not exactly an ideal one for clay bird shooting, some good marks were registered. High gun honors were carried off by Louis Colquitt, who smashed 99 out of the first 100 disks that he shot at. A. B. Brickner won the president's prize, which was donated by B. M. Shanley, Jr., in the 50-bird handicap event, with an actual kill of 46. George Ohl, Jr., who had a handicap of 3 in this event broke 45 birds out of 50, and won second prize. The scores:

Smith Gun Club.

NEWARK, N. J., May 21.—There was a smaller attendance than usual at the weekly practice shoot of the Smith Gun Club yesterday afternoon on its Bloomfield avenue grounds, the threatening weather serving to keep many away. Those who did attend enjoyed a series of interesting open sweepstake events, the scores of which were as follows:

D M Kling	23	22	21	24	21	22
W Hassinger	15	17	22	23	..	..
Harry Hassinger	12	16	14	17	..	..
Henry Koegel	12	16	18	19	..	..
Dr Lockwood	15	17	16	15	..	..
Samuel Thornton	18	22	20	21	..	..
J Geiger	23	25	..	..	..	..
John Davis	21	20	..	..	..	..

Besides the regular shoot next Saturday afternoon, there will be a big program of sweepstakes, team and individual matches on the following Tuesday, Memorial Day, and it is expected that shooters from many parts of the State will be present to participate in the open events. In the main club event, for members of the Smith organization only, there will be between $50 and $100 worth of merchandise prizes.

The DuPont Gun Club.

WILMINGTON, Del., May 21.—Neaf Apgar, of New York, made his first appearance at the Du Pont Gun Club yesterday, and broke 96 out of 100 targets. He was greeted by a large crowd. Messrs. Lewis and Skelley made good scores, but they were not up to their usual form.

In Class 1 of the T. Coleman du Pont merchandise event, F. Mathewson and Eugene du Pont tied, each breaking 22 out of 25. W. Mathewson and T. B. Rogers also tied in Class 2 with 21 out of 25. J. J. Maghern won Class 3 with 20 out of 25. In Class 4 Dr. H. Betts, Dr. Bullock and G. F. Ford tied at 15.

In the shoot-off from the previous Saturday, Walker Mathewson won Class B with a score of 21. Isaac Turner won Class C with 18, and Dr. A. Patterson won Class D with the same score.

The complete scores of the day follow: S. J. Newman 17 out of 25, Dr. C. R. Jefferis, Jr., 15, George F. Lord 15, F. Megaw 9, W. E. Edmunson 17, W. M. Hammond 16, L. C. Lyon 13, Thorpe Martin 16, L. W. Crawford 17, W. E. Husbands 13, William G. Wood 12, S. G. David 16, N. K. Smith 17, J. B. McHugh 18, F. Mathewson 22, Victor du Pont 17, W. Mathewson 21, W. H. Hartlove 16, J. A. MacMullen 13, W. A. Casey 14, Dr. S. Steele 19, A. F. du Pont 20, J. J. Magahern 20, A. H. Lobb 21, T. E. Doremus 16, W. A. Joslyn 18, J. S. Grant 9, H. T. Reed 18, A. J. Curley 7, D. J. Dougherty 19, S. G. David 13, T. B. Rogers 21, T. W. Keithley 20, C. D.

Date..... Address.....

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring.**

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER
SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the $28 gun the peer of any $50 gun on the market. Upwards to $1,000. Send for free catalog and get Lefever wise.
LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N.Y.

Where, When and How to Catch Fish on the East Coast of Florida

By Wm. H. Gregg, of St. Louis, Mo., assisted by Capt. Gardner, of Ponce Park, Mosquito Inlet, Fla. With 100 engravings and 12 colored illustrations. Cloth. Illustrated. 238 pages. Map. Price, $4.00.

A visitor to Florida can hardly make the trip without this book, if he is at all interested in angling. It gives a very complete list of the fishes of the East Coast of Florida, and every species is illustrated by a cut taken from the best authorities. The cuts are thus of the most value to the angler who desires to identify the fish he takes, while the colored plates of the tropical fish shown in all their wonderful gorgeousness of coloring, are very beautiful. Besides the pictures of fish, there are cuts showing portions of the fishing tackle, which the uathor uses. A good index completes the volume.

Vicksburg Gun Club.

VICKSBURG, Miss., May 18.—A two-day registered tournament was held here by the Gun Club on the 16th and 17th. W. J. Fletcher was high amateur with the fine score of 291 out of 300, W. W. Locke pushing him close with 290, winning second high average. Guy Ward carried off high gun honors for the professionals with 296; H. D. Freeman second with 291. The team championship was won by a team from Greenville with a total of 70, shooting at 25 targets each. W. J. Fletcher, of Vicksburg, carried off the individual championship with 74 out of 75. Analostan Gun Club.

WASHINGTON, May 21.—The warm wave drove and kept a good many of the members of the Analostan Club away. However, seventeen of the faithful attended. The afternoon was perfect for shooting, with the exception of a fluky wind that interfered a little during the early part of the afternoon. Mr. Emory H. Storr, the popular trade representative, was with us, and gave a splendid exhibition of how to break them, scoring 98 out of his 100. Uncle Billy Wagner complained of not feeling well, but the boys all wonder what he would have done if he had been well. He missed four out of his first 43 and then ran 57 straight, scoring 96 out of his century. Dr. Harrison was also up on the bit, and cracked out 95 of his 100, followed by Dr. Stine with 93. Following are the scores made during the afternoon:

	Shot at.	Broke		Shot at.	Broke
Storr	100	98	Talbott	80	61
Wagner	100	96	Cockerille	75	61
Harrison	100	95	Dulaney	65	55
Stine	100	93	M Taylor	50	46
Peck	100	89	Dr Taylor	50	45
Green	100	82	Dufour	50	42
Parsons	100	81	C S Wilson	50	37
Holt	100	81	Drain	50	31
Hill	100	78			

A special event at 10 pairs had scores as follows: Wagner 15, Peck 13, Parsons 8, Holt 12, Talbott 10, Cockerille 10, Dulaney 10, M. Taylor 10, Dufour 12.

The officers of the club are making arrangements for an all afternoon shoot on May 30. The program will be commenced at 2 P. M., and two traps will be used. It will be a sociable shoot, with plenty of ice-water and some merchandise prizes. Visitors will be given a hearty welcome and a whack at the prizes.

Highland Gun Club.

MINEOLA, L. I., May 13.—W. F. Simonson won a special shoot of 100 targets, The marksmen shot in strings of 20 targets a man, and the winner had a total of 85. The scores:

W Simonson	19	16	17	16	17	85
J F Simonson	14	16	17	17	19	83
W Bennett	16	17	14	18	17	82

Eastlake Gun Club.

WILMINGTON, Del., May 21.—L. D. Willis made a most remarkable record at the traps, at the regular weekly shoot of the Eastlake Gun Club yesterday afternoon. He missed only two birds out of 130 shot at, and made a straight run of 101 birds. Shooting like this is not often seen, and Willis ran away ahead of the other contestants. Willis also broke seven pair of double targets out of 10 pair shot at.

In the Du Pont trophy shoot, L. Beatson was also on hand with a steady hand, and broke 25 straight. C. Haverbeck, R. Gray and K. Davis were tied for second place with 23. The scores were:

Regular club shoot: L. D. Willis (shot at 130), broke 128, K. Davis (125) 88, J. Spring (100) 70, L. Beatson (95) 41, H. Jones (55) 28, W. Fincher (50) 22, E. Potter (40) 28, F. Quigley (40) 26, H. Davis (35) 25, C. Maguigan (35) 17, C. Haverbeck (25) 15, W. Jones (25) 11, R. Donahue (20) 8.

Du Pont trophy shoot, 25 targets: L. Beatson 25, C. Haverbeck 23, R. Gray 23, K. Davis 23, W. Fincher 21, W. Gray 21, H. Jones 21, J. Spring 20, W. Jones 19, E. Potter 17.

Annual Meeting Pennsylvania State Sportsmen's Association.

DU BOIS, Pa.—The Pennsylvania State Sportsmen's Association went into session at 7:30 o'clock, May 17, in the assembly hall of the Acorn Club and transacted its yearly routine business.

The Sunbury-Selinsgrove Club, of Sunbury, was awarded the next tournament without opposition.

The election of officers resulted as follows: President, Frank Eames, of Philadelphia; Vice-President, C. E. Foster, Selinsgrove; Treasurer, Claude D. Henline, Bradford; Secretary, Bernard Elsesser, York; Directors: J. S. Speer, St. Marys; F. C. Cantrell, Philadelphia; J. Atkinson, New Castle; H. B. Shoop, Harrisburg, and E. W. Ludwig, Allentown. The latter two and Mr. Elsesser are the new men elected.

After the reports of the officials, committee reports were heard. The committee on revision of constitution reported a number of changes, which were adopted. It was decided that all contestants must be members of a club in good standing one month before a shoot.

Resolutions of respect for Harry Hess, E. C. Marshall and Elias Spangler, who died since last meeting, were adopted. The committee appointed to confer with the United Sportsmen's Association, "to buy up large tracts of land in Pennsylvania for reserves," was continued. The Pennsylvania Gun Club reported its disbanding and was stricken from the list of members..

Resolutions commending the Interstate Sportsmen's Association for its registered shoots and to furnish sporting papers with the programs for annual tournaments as soon as arranged, were adopted.

The Du Pont trophy, held by H. Schlicher, was called in and he was awarded $10 in its stead. It will be contested for again, as per conditions of its donation.

New Jersey State Tournament.

THE eighth annual tournament of the New Jersey State Sportsmen's Association will be given June 1, 2 and 3, under the auspices of the Smith Gun Club, of Newark, on their shooting grounds, Bloomfield avenue, Newark.

This is a registered tournament, to which the Interstate Association contributes $200 as a part of the Squier money-back special fund, and the club gives from $400 to $500 in added money and merchandise.

The events are open to all, except the three State championships, which are for New Jersey shooters only. In the team championships, after the price of targets are deducted, the balance will be divided among the three high teams, 40, 30 and 20 per cent. respectively. Winners also to receive cups, which they hold subject to challenge every thirty days until the following annual shoot, when they must return them to the State Association. This shoot is to be run under the Squier money-back system, championships and merchandise not included. All standard makes of shells will be for sale on the grounds at 65 cents per box. Price of all targets to be two cents each. Shells shipped express prepaid, to Thomas Smith, corner of Park avenue and Stone street, in care of Smith Gun Club, will be delivered on grounds free of charge. Three McCrea traps and white flyer targets will be used. In the merchandise event the high guns to have first choice and so on down. Professionals shoot for targets only.

Money in regular events to be divided by the Rose system, points, 5, 3, 2, 1, and in the optional sweeps, 40, 30, 20 and 10 per cent., high guns. Shooters in team championships must be residents of the State and a member of the club of which they represent for a period of not less than thirty days previous to this shoot. Club also to be a member in good standing in the State Association.

The winner of the amateur State championship to receive cup and 50 per cent. of the total entrance after the price of targets have been deducted, and the balance to second and third, 30 and 20 per cent. respectively.

The Laflin and Rand trophy, which is emblematic of the amateur State championship, will be shot for in events 8 and 9, which consists of 50 targets at 16yds. rise. Any shooter in the State is eligible to compete for same.

Program, first day, June 1, has ten 15 target events, entrance $1.40 each; optional sweep, $1.00. Nos. 11 and 12 is the three-man team race, 25 singles each, entrance $2. To the amateur making the longest run during this tournament a special price of $10 will be given by the president of the State Association.

Second day, June 2, is a repetition of the first day's program, except events 11 and 12, which is a two-man team race.

Third Day, June 3.—Seven 15-target events, $1.40 entrance, $1 optional sweep. Nos. 8 and 9 is the State championship event, 50 targets, $2 entrance. Nos. 10, 11 and 12, 15-target events; No. 13, merchandise event at 25 targets, entrance $1.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Rifle Range and Gallery.

Fixtures.

June 3-4.—St. Louis, Mo.—Second annual combination tournament, Missouri State Rifle Association. C. C. Crossman, Sec'y.

Missouri State Rifle Association.

ON the First Infantry range, opposite St. Charles, Mo., June 2, 3 and 4, will be held the second combination tournament of the Missouri State Rifle Association. Col. E. J. Spencer is the president of the Association, and C. C. Crossman, secretary, and it is through the efforts of these two enthusiasts that St. Louis expects soon to witness a unique and successful assemblage of gun users. Camp Perry, the scene of the yearly meeting of Government and State troops in annual practice, does not present the varied inducements offered by the promoters of the coming meet. On the St. Charles spacious range, furnished by the commonwealth for the use of its citizen soldiery, will be held simultaneously matches with the shotgun, rifle and revolver. These contests of skill are aided and encouraged by a liberal allotment of prizes in money and trophies, that make an attractive magnet for the users of small arms the country over.

Experts who had the pleasure of visiting the St. Charles range on the occasion of the first annual shoot, held last summer, expressed astonishment at the arrangements provided for carrying forward the diversified program. Fully a thousand men may at the same time be engaged at practice on the rifle, revolver and shotgun ranges, all within sight of the spectator, yet in no way interfering with each other.

The grounds are ideal for the purposes used, and at the same time they are within easy access of both steam and traction cars, which connect direct with local car lines. Ample provision is made for the care of participants and spectators, good and substantial meals will be furnished, and those attending are assured of excellent accommodations in every way.

The event will have the sanction and approval of State officers, and general orders will be issued giving authority to all officers and enlisted men to attend the second annual shoot of the Missouri State Rifle Association, and the State rate of one cent a mile will be available for this purpose. Subsistence can be had on the grounds at the rate of 30 cents per meal, unless contestants prefer to provide their own meals. Tentage and bed sacks will be furnished by the First Regiment, but cots and blankets must be brought. Interest in this competition is so general that it is expected a large number will attend from the various organizations of the National Guards.

The valuable prizes offered will have the effect of drawing many from outside points, and entries are expected to be largely increased over last year's attendance. Col. F. J. Spencer, commander First Infantry, N. G. Missouri, has issued general orders detailing those who will be in charge.

Interest in the shoot is exemplified by the unusual number of entries already received. In the Times trophy event, company team match, entries of six-man teams have already been received from Companies A, B, D, E, F, G, K, L, and M of the First Regiment, and from the Missouri State Rifle Association, making in all eleven teams to date, while some are expected from outside companies. The response of local sponsors in the way of trophies has been very liberal, and several handsome and costly examples of the jeweler's art are offered for competition. Not the least among these is the trophy donated by the St. Louis Times, which is destined to become historical in rifle circles. The donors of this trophy have spared no expense in securing a prize worthy the event, and under the conditions prevailing many a notable contest will be registered before the race is over.

There will be over $500 in money and prizes awarded winners in the various events. Many of the celebrated rifle shots of the East have advised that they will attend. John W. Hessian, of New York, and Capt. W. H. McBride, of Indianapolis, both military rifle experts, have already made reservation at local hotels. Clarence E. Orr, the noted revolver shot, will shoot through the program, as will also some of the country's best shotgun users. Among the latter, Chas. G. Spencer, Art Killam, F. W. Hoyt, Fred Gilbert, Geo. Maxwell, Fred Rogers and Ed. O'Brien, will represent the cream of the professionals, while J. W. Bell, W. H. Clay, Bill and Pete Boggerman, Dr. Spencer and a dozen others of St. Louis will make the visiting amateurs hustle to win the shotgun average.

The Philadelphia Rifle Association.

PHILADELPHIA, May 20.—The weekly competitions of this Association were shot to-day, on the Arlington range, Lansdowne avenue and Cedar lane, near Llanerch, Pa.:

Record match, 200yds., rifle: R. L. Dubbs 221, 211, 211, 209; Dr. G. G. Davis (Brockmeyer match), 193, 187, 174.

Offhand match: Williamson 213, 211, 207, 204, 202; Brockmeyer match: Williamson 204, 202, 201.

Honor target, 3 shots: R. L. Dubbs 65, Williamson 54.

Military match: H. A. Dill 44, 43, 43, 42, 41, 41; N. Spering 44, 43. Brockmeyer match: N. Spering 44.

Pistol match, 50yds.: H. L. Reeves (Brockmeyer match), 93, 92, 90, 86, 85; Dr. Palmer 90, 89, 88, 86, 84, 82.

Trojan Rifle Club Scores.

THE following scores were made at the regular weekly shoot of the Trojan Rifle Club, out of a possible 100, on the American Standard target: Holloway 74, Derrick 67, Gemmill 66, Campbell 61, McPherson 57, De Witt 59, Albert 55.

The PARKER GUN Again a Winner!

On January 11-13, 1911, The "OLD RELIABLE" PARKER GUN, shot by Howard D. Bates, of Ridgetown, Ont., again won the Grand Canadian Handicap at live birds, killing 25 straight and 9 in the shoot-off, from the limit distance of 31 yds. Mr. Bates shot at 54 birds during the tournament and killed them all. THIS IS SOME SHOOTING!

National Guard Indoor Record.

JOHN H. REINHARD, corporal in Company I of the Sixty-fifth Regiment, is now the undisputed holder of the indoor shooting record among officers and enlisted men in the National Guard of the State of New York. The record that he established was a count of 74 out of a possible 75. This was made at the Masten Park Arsenal of the Sixty-fifth Regiment, Buffalo, N. Y., a few nights ago while competing with the Company I team for the trophy offered by Adjt. Walter F. Nurzey.

Before Reinhard stepped to the front as a crack shot, the indoor record was a score of 73 out of 75. This held good for a number of years, having been made by Lieut. Frank C. Westphal, Assistant District Attorney, at the old Broadway Arsenal, before the Sixty-fifth Regiment moved to its new home. A number of approaches to the old Westphal record were made. Several years ago two out-of-town National Guardsmen secured 72 out of 75, but it remained for Corp. Reinhard to beat it, and with his new record, which rubs the edge of perfection in indoor marksmanship.

The record was made by firing five shots offhand or standing; five shots kneeling, and five shots prone. Corp. Reinhard, in order to secure this high count, made 14 bullseyes and one 4, which is the next thing to hitting the center of the target. He has assisted Lieut. Westphal in the work of organizing the new Sixty-fifth Company L. When this is mustered in, Corp. Reinhard will become first sergeant of the new company, and be given charge of its shooting squad. Corp. Reinhard lives at No. 166 Dodge street, and is a foreman in the Bureau of Water.

Company C, Tenth Infantry Wins Trophy.

ALBANY, N. Y., May 15.—The James Mix trophy offered for competition with the rifle between teams from the four local companies of the Tenth Infantry, N. G., N. Y., was won Saturday night by Company C, which rolled up a score of 386 points, 16 more than its nearest competitor, Company A, which made 370. Company B was third with 361 points, and Company D's team retired after the offhand firing.

Company C's winning of the trophy the first time it has ever been competed for occasioned much joy among the members of that command, and reflects credit on Corp. Charles E. Smith, who captained the team. The individual scores of the winning team were as follows: First Sergeant Miles 70, Private Robert Borthwick 67, Private M. S. Baronas 64, Private Daniel S. Benton 62, Private R. P. Thorn 62, Private Frederick Koons 61.

Middies Defeat Seventy-first Regiment.

ANNAPOLIS, Md., May 13.—The Seventy-first Regiment rifle team of New York was defeated by Annapolis in their annual shoot at Annapolis to-day. This was the sixth shoot, each team having won the match three times. scores:

DuPont Gun Club, Rifle Dept.

WILMINGTON, Del., May 21.—The revolver and pistol practice scores at yesterday's shoot were: D. Appleby 81, 82, 75, 84, 79, 85, 79; A. J. Curley 76; L. du Pont 86.

The rifle (.22caliber) practice scores were: A. G. Riley 64; C. T. Martin .31, J. J. Dutton 31, 37; N. K. Smith 42, 17; C. F. Martin 39, 30; D. Appleby 85; Frazier 50, 33; Tubbs 32.

The revolver and pistol qualification scores were: L. du Pont 91, 86, 90; I. du Pont 85, 83, 82, 80.

PUBLISHERS' DEPARTMENT.

Mr. Porter E. Osborne, of Springfield, Mass., is shooting very strong this season with his Stevens repeating shotgun. One of his latest achievements was scoring 97 per cent (second amateur prize) at the weekly shoot of the Paleface Gun Club, Boston, Mass.

WOODPECKER SUMMONS POLICE RESERVES.

MYSTERY and the prospects of uncovering a tragedy took Sergeant Stephenson and eight men of the police reserves of the Kingsbridge station into a wood near Riverdale avenue and 231st street recently, where they searched for more than two hours by the light of lanterns.

Miss Mary Halliday, a nurse in the Seton Hospital, was walking near the wood at night, when she heard several persons quareling and then several shots. The police were notified at once, and searched the entire place for two hours. The thrilling quest in the dark came to an end when one of the policemen made a discovery. Returning to the police station, this report was entered on the blotter by the men:

"Reported shots heard in the premises of Riverdale avenue and 231st street were found by Policeman Reilly to have been noises made by a woodpecker attacking a tin sign on a tree fifty feet from the highway. No trace of murder or suicide found."

Policeman Doyle offered the explanation that the woodpecker was a harbinger of spring rapping for entrance into town.—New York Herald.

THE KNOWING SCHOLAR.

"Now, Jenkins," said the master, "how many seasons are there?" "Two, sir," replied the urchin. "Only two, Jenkins, name them?" "The close and the open seasons," responded the budding Walton.—Anglers' News.

All the fish laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

UNCLE MARKIE'S GULLS.

Out in the Atlantic Ocean off the coast of Maine, there is a rocky little island with a stunted growth of trees, known as No Man's Land.

The surf breaks against the rocks summer and winter, and the ocean stretches out and away to the coast of Europe.

It is a desolate place in winter, with its storms and its ice-bound shore, and, if we saw it then, we could not dream what a change would take place when the soft south wind driving back the cold north wind takes possession and it is spring again.

Some warm day when the ocean is calm, Uncle Markie, who owns the island will take his sheep over to the island for their summer pasture, and will look in the thickest part of the trees to see if the ravens are nesting.

Two pairs of ravens come to the islands each year and build a bulky nest of sticks, lining it with wool which they gather from where it has been torn from the sheep by the branches, for the ravens nest very early, and the raven babies have to be kept warm.

Soon there will come sailing up on the south wind large white birds which will circle about the island and then drop down appearing at home as if they had only been away on a visit.

The gulls continue to come until many thousands are on the island, and the fisherman over on Matinicus Island will say that Uncle Markie's gulls are back again on No Man's Land.

The grass is green now and the sheep are gamboling about among the rocks, and the ocean is smiling in the summer sun as it stretches out and is lost in the distant blue.

It is a busy bird city now; the gulls have built their nests on the ground, among the trees, under the rocks, and everywhere we find the nests of sticks and grass, containing three or four large spotted eggs. Let us find Uncle Markie and get into his fisherman's dory and row over to the island.

It is such a wonderful sight that you would hardly believe it true unless you had been there and seen it for yourself. It was estimated that there were 50,000 gulls on the island last year. They rose in the air circling and screaming as we approached, a constantly moving mass of birds, looking from a distance like a cloud hanging over the island.

The young birds are brown and unlike their parents, and after they are old enough to leave the nest they sit around on the rocks while the old birds go out on the ocean to search for food.

The young look as much alike as two peas in a pod, and we wonder how the parents find their own among so many, yet they seem to have no trouble.

By the middle of August the young are grown and begin to leave the island and appear on the other islands near the fish wharves, where they feed on the refuse from the fish houses.

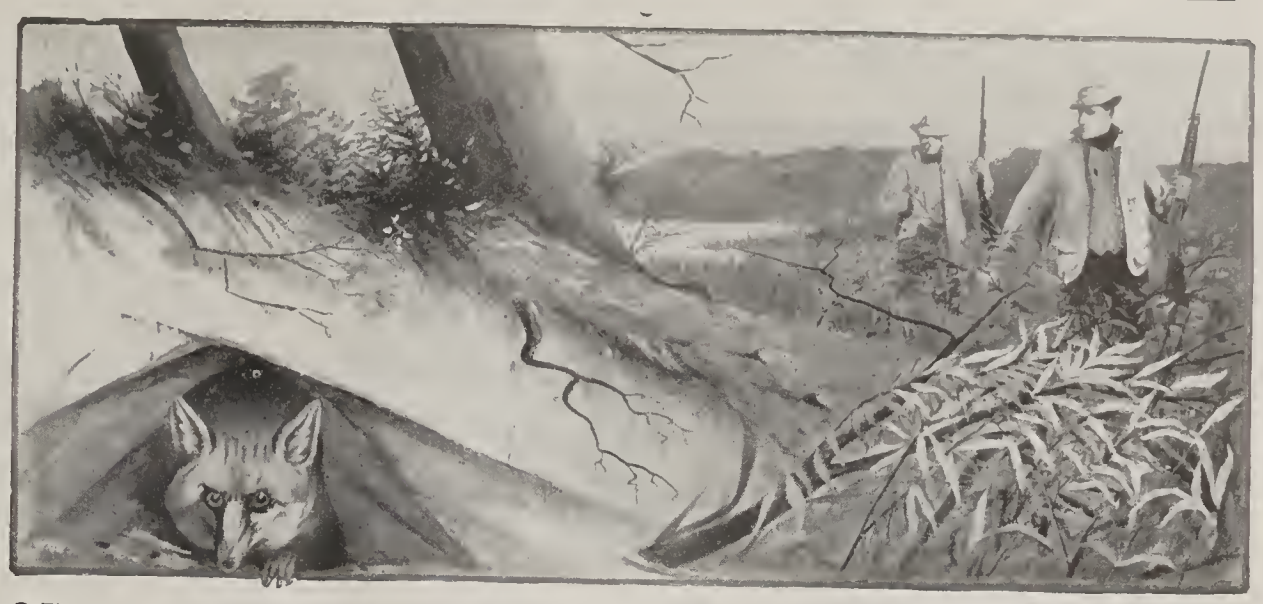
They appear also in the harbors and keep working down the coast until some day we again see the gulls circling about our own harbor, and we say the gulls have returned, yet how few know from where they came, and how some were white and some were brown.

Do you wonder how it is that so many birds can nest in safety on one island and why no one disturbs them for their feathers or eggs?

When the gulls were being killed for millinery purposes, Maine made a law to protect the sea gulls, the gulls which had been coming to No Man's Island for years to build their nests were safe if the island was saved to them, and some one appointed to look after the gulls.

Uncle Mark Youngs, an old sea captain, who went to sea when he was twelve years old, and had charge of a schooner at fourteen years, owned the island. Uncle Markie, as he is known to everybody, rented the island to the Audubon Society for a home for the sea gulls, and his State made him a game warden to protect them.

Uncle Markie lives on Matinicus, a mile away and with his glass can watch the island and



SPECIFY FOR REGULAR USE—

the powder you insist upon to make the best scores.

You naturally refuse to take chances when you realize that competition is going to be close.

Why take chances in losing any of the keen sport that might be yours if you are always careful to use the powder you know is best.

Dead Shot Smokeless

holds the world's record for accuracy.

Yet it combines lightest recoil with the highest velocity.

This means that you have more to show for a day's shooting—with less fatigue and nervous strain.

Shotshells loaded with this powder are to be found at any dealers. Ask for them.

American Powder Mills, Boston, Chicago, St. Louis

The Angler's Workshop

RODMAKING FOR BEGINNERS

By PERRY D. FRAZER

A unique work, bringing the science of rodmaking up to the very moment and epitomizing the knowledge and the experience of experts for the guidance of the average man. The evolution of bait-casting principles has made Mr. Frazer's book supersede all previous publications on the subject.

Every angler—young or old—who is fond of adapting his rods and tackle to his own ideas of what they should be, will find in this book a large fund of information gathered by the author in years of study, experiment and practical experience in fishing, tournament casting and at the work bench. He theorizes and speculates not at all. He tells "the how" of everything connected with rodmaking in a way that makes results certain. All explanations are simple and easily followed.

Separate chapters are devoted to each of a half dozen types of bait-casting rods; to tarpon, surf and light salt water rods; bass and trout, salmon and tournament fly-rods. Complete specifications of well known types are given, and the chapter on split bamboo rodmaking is the most comprehensive treatise on the subject ever published. Indispensable in the angler's library.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid, $1.

Living in the Open

"We just live out of doors."

How often have you heard the delights of a favorite resort summed up in these words, as if they told the whole story of an ideal holiday?

But how about the wife, the mother, the sister—the one who does the cooking for the party and spends two or three hours each day in a hot kitchen? Does she get her full share of "living out of doors?"

With a New Perfection Oil Cook-stove no one suffers in the kitchen. In the first place, a New Perfection does not overheat a kitchen as other ranges do, so that even if you stay there you keep as cool and comfortable as in any other part of the house. In the next place, the New Perfection is so easily portable. You can move it where you please—get the air near an open window, or take it right out to a corner of the porch.

It saves a lot of work, too. You have no wood to chop, no coal to carry, no ashes to clean up. There is none of the trouble of building up a fire at meal times. The New Perfection is ready for use at any minute.

It is smaller than most other stoves; it is lighter; it is cheaper. But it cooks food to perfection.

New Perfection
WICK BLUE FLAME
Oil Cook-stove

Made with 1, 2 and 3 burners, with long, turquoise blue enameled chimneys. Handsomely finished throughout. The 2- and 3-burner stoves can be had with or without a cabinet top, which is fitted with drop shelves, towel racks, etc.

prevent any one from stealing the gulls' eggs or from shooting them.

Should any one land on the side of the island away from Uncle Markie's view the gulls will rise in the air and this is the signal that tells him it is time to go over and protect his birds.

We love to watch the graceful gulls as they fly over our harbors, but few know of the breeding habits, and that they are becoming more abundant because they are protected in their summer homes in the north.

WILBUR F. SMITH.

SOUTH NORWALK.

ORIGIN OF BIRD NAMES.

IN studying the origin of bird names, we find that some names are imitations of the notes of the bird, though not always very successful imitations. Others again are allusive to color or appearance, while a still greater number refer to peculiar habits, although some of these have been so greatly modified as to be unintelligible except when the clue is sought in the history of the word. The "peewit," which the French call "dixhuit," the "kittiwake," and the "pipit," may be cited as attempts to indicate the notes of the birds to which they are applied. It is thought that the old High German "hiegro" was adopted as the name of the "heron," by way of allusion to its harsh voice. From this word have come the French "aigre" and "aigrette," of which our own "egret" is another form. From the root of "hiegro" also come the Low Latin "aigro" and "airo," the French "heron," which we have also adopted. The French "heronceau" has become with us the "heronshaw."

The pretty or peculiar appearance of birds has given risen to such names as "blackbird," "bluethroat," "razorbill," and "yellowshank." The name of the "oriole" is derived from the Latin "aureolus," and means the golden bird. Many of these names have become obscured by the process of time and the changes in the language which it has brought about. Thus "avocet," "bustard," and "ostrich" are all believed to be compounds of the Latin "avis," although they have departed widely from the original forms of "avis casta," "avis tarda," and "avis struthio." "Godwit" is a corruption of "good wight," while "goatsucker" indicates a former belief as to the habits of the birds.

The names of men and women have in many instances been applied to birds. Thus we have "Willock," "Guillemot," and "Magpie." The name of "Petrel" is an allusion to St. Peter on the waves. The name of "Mother Carey's Chicken," by which it is known to sailors, is said to be a corruption of the Portuguese "Madre Cara." It is notable that the French call the petrels "oiseaux de Notre Dame."

Some bird-names we have inherited from Greece and Rome. "Kestrel" has been traced back by Professor Skeat to "qurquedula," the Latin name for the teal. The intermediate stages of this transition are the old French forms of "quercelle," "quercerelle," which in English became "kerc'relle," and so was easily corrupted to "kestrel."

With many it must add to the interest with which they are regarded when we have the clue to the meaning of the names by which they are associated with the poetry or the superstition of bygone centuries.—Shooting Times.

GUN KICKS HUNTER OUT OF BOAT.

TONY BLANCO, JR., of Homer City, had an exciting experience while hunting ducks on the Yellow creek dam recently. Tony was in the boat in the center of the dam and seeing a bird, fired at it. The gun kicked so vigorously that the young man was thrown from the boat into the water. Coming to the surface he swam to the shore 125 feet away and left the empty boat in the water without making an effort to climb into it. Tony missed the duck and lost his gun.—Indiana Democrat.

SALMON FISHING

The Government of the Province of Quebec is prepared to receive offers for the lease for a term of three or of five years of any of the under-mentioned salmon rivers, flowing into the Gulf of St. Lawrence from the Canadian Labrador, namely, the

Rivière des ESQUIMAUX,	NATAGAMIOU,
BIG MECATINA,	DARBY,
LITTLE MECATINA,	KEKARPONI,
KEGASHKA,	NAPETIPI
MUSQUARRO,	COCOSHEPEE,
MUSQUANOUSSE,	BAY BRADORE RIVER.

Most of these rivers are known to contain salmon in great abundance, and all of them offer special attractions to those who love "the call of the wild," as well as abundant opportunities for original exploration.

A delightful summer cruise would be that from Gaspé or Natashquan (which are reached by regular steamers) to any of these North Shore Rivers; and until they are leased, permits to explore them and salmon fishing licenses can be obtained from the Minister of Colonization, Mines and Fisheries at Quebec.

Offers for leases to be addressed:

The Minister of Colonization, Mines and Fisheries
QUEBEC

CAPE COD Yarmouth-port, Mass.

A house of 14 rooms, besides kitchen and servants' dining room, 2 bath rooms, 5 open fireplaces, wide piazza and large grounds. For the summer or longer. Can be seen Saturdays, on application.

22 500 Fifth Ave., New York.

HITTING *vs.* MISSING

By S. T. Hammond ("Shadow").

Cloth. Price, $1.00.

Mr. Hammond enjoys among his field companions the repute of being an unusually good shot, and one who is particularly successful in that most difficult branch of upland shooting, the pursuit of the ruffed grouse, or partridge. This prompted the suggestion that he should write down for others an exposition of the methods by which his skill was acquired. The result is this original manual of "Hitting vs. Missing." We term it original, because, as the chapters will show, the author was self-taught; the expedients and devices adopted and the forms of practice followed were his own. This then may be termed the Hammond system of shooting; and as it was successful in his own experience, being here set forth simply and intelligently, it will prove not less effective with others.

THE PISTOL AND REVOLVER.

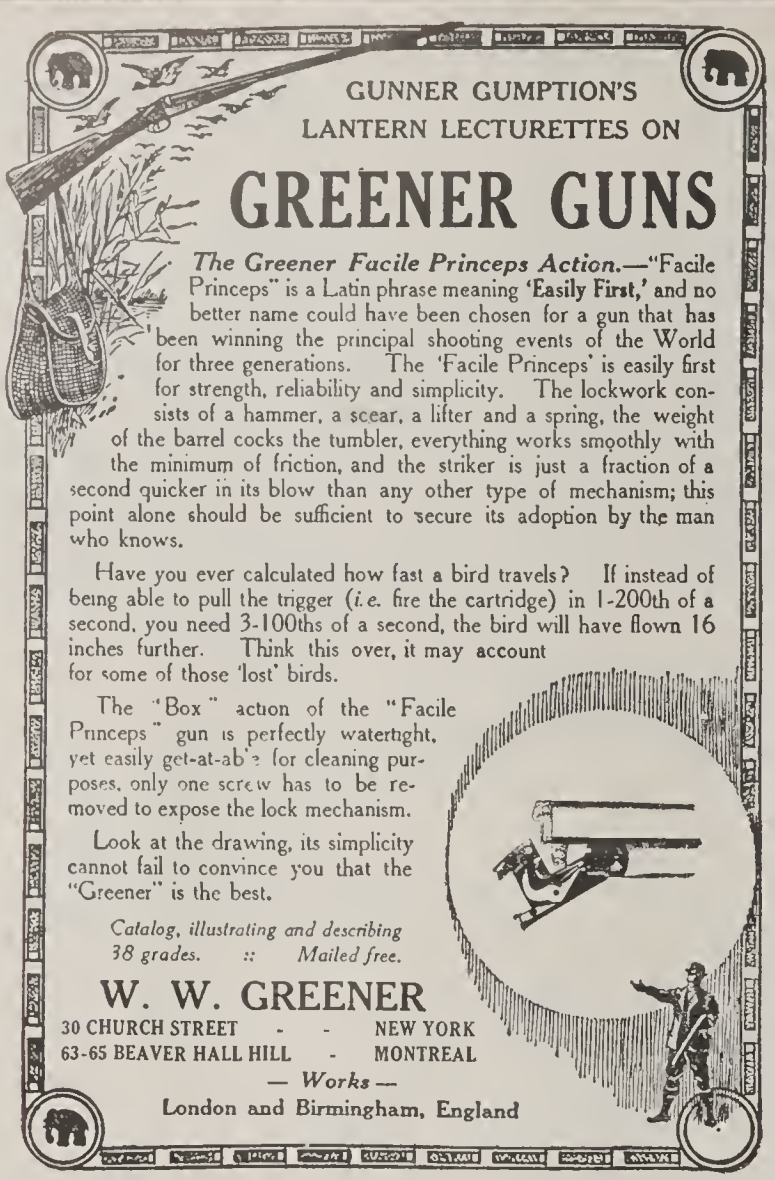
By A. L. A. Himmelwright, President U. S. Revolver Association, Director New York State Rifle Association.

A handy pocket-size volume of 157 pages of practical information covering the entire subject of Pistol and Revolver Shooting. This work is strictly up-to-date, including the latest development in smokeless powder; the 1908 Revolver Regulations and Practice of the United States Army, the United States Navy, and the National Guard; the Annual Championship matches and Revised Rules and Regulations of the United States Revolver Association, etc. Besides being a useful, practical hand-book for the experienced marksman, the work will also prove particularly valuable for beginners.

Contents: Historical: Arms—Military, Target, Pocket Ammunition; Sights; Position; Target Shooting; Revolver Practice for the Police; Pistol Shooting for Ladies; Clubs and Ranges; Hints to Beginners; Selection of Arms; Manipulation; Position and Aiming; Target Practice; Cleaning and Care of Arms; Reloading Ammunition primers, shells, bullets, powders, reloading. Appendix—Annual Championship Matches of the U. S. Revolver Association; Rules Governing Matches, etc. Records of the U. S. Revolver Association.

In three styles: Paper, 60 cents. Cloth, $1.00. Full morocco, $1.50. A liberal discount to military organizations and shooting clubs on orders of ten or more copies.

FOREST AND STREAM PUBLISHING CO.



GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener Facile Princeps Action.—"Facile Princeps" is a Latin phrase meaning **'Easily First,'** and no better name could have been chosen for a gun that has been winning the principal shooting events of the World for three generations. The 'Facile Princeps' is easily first for strength, reliability and simplicity. The lockwork consists of a hammer, a scear, a lifter and a spring, the weight of the barrel cocks the tumbler, everything works smoothly with the minimum of friction, and the striker is just a fraction of a second quicker in its blow than any other type of mechanism; this point alone should be sufficient to secure its adoption by the man who knows.

Have you ever calculated how fast a bird travels? If instead of being able to pull the trigger (*i.e.* fire the cartridge) in 1-200th of a second, you need 3-100ths of a second, the bird will have flown 16 inches further. Think this over, it may account for some of those 'lost' birds.

The "Box" action of the "Facile Princeps" gun is perfectly watertight, yet easily get-at-able for cleaning purposes, only one screw has to be removed to expose the lock mechanism.

Look at the drawing, its simplicity cannot fail to convince you that the "Greener" is the best.

American Duck Shooting

By GEORGE BIRD GRINNELL

No single gunner, however wide his experience, has himself covered the whole broad field of duck shooting, and none knows so much about the sport that there is nothing left for him to learn. Each one may acquire a vast amount of novel information by reading this complete and most interesting book. It describes, with a portrait, every species of duck, goose and swan known to North America; tells of the various methods of capturing each, the guns, ammunition, loads, decoys and boats used in the sport, and gives the best account ever published of the retrieving Chesapeake Bay Dog.

About 600 pages, 58 portraits of fowl, 8 full-page plates, and many vignette head and tail pieces by Wilmot Townsend.

Price, library edition, $3.50.

Dept. 326 **Chicopee Falls, Mass.**

ARE YOU A GUNNER?

Do you love to follow your good dog over the fields in search of quail or chickens, or to struggle through swamp or along thick grown hillside, expecting to hear the roar of the ruffed grouse or the twitter of the fall woodcock? If so, you should have this new book.

AMERICAN GAME BIRD SHOOTING

By GEORGE BIRD GRINNELL

(New—Just Published)

This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys.

The first part of the volume is devoted to a description of the various species and their habits—the way in which they live their lives.

The second part of the book is devoted to upland shooting and treats of the methods by which all the upland birds are pursued and taken. The chapter "Aids to Shooting" describes the clothing, guns, and loads and dogs that the gunner may profitably use; while the last section of the book treats of the shooting of the future and the efforts to rear our native quail and grouse in domestication.

The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full page portraits of different game birds and hunting scenes, with a number of cuts in the text.

Cloth. About 575 pages. Price $3.50, net. Postage 25 cents.

This book is of inestimable value. It contains the genuine hunter-naturalist facts given in the most entertaining and interesting style.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK CITY

A PERILOUS ADVENTURE.

OF many adventures when after big game, not one has remained in my memory so vividly, I think, as a narrow escape I had when I was about twenty years of age. The incident is a remarkable one, too, if merely an instance of the utter disregard a man may have of danger to life and limb when he is carried away by the excitement to the moment. At the time I propose to speak of I was in Norway in quest of reindeer, and, accompanied only by my hunter, had reached the slopes of Snachetten—the highest mountain of the Dovre Fyeld. Reindeer frequently rocky, snow-covered mountains, where to approach within range without alarming them is no easy matter, seeing that the path to be traveled is always a difficult and often a dangerous one.

On the morning in question we had seen some herds of deer in the distance, but had not succeeded in getting a shot. At length we caught sight of three fine bucks in a little hollow some way ahead of us, and on ground where they were apparently easy to approach. Accordingly we set about stalking them, with a firm determination to succeed this time. Advancing very cautiously along a steep mountain slope, we were nearly within range when to my disgust I discovered that our path was barred by a steep snow-slide, the crossing of which offered so much danger that my hunter, on consideration, declined to attempt it, preferring to the chance of an accident a long detour which, besides taking time, involved a long and laborious climb. With the impetuosity of youth, and fired with a determination to get one of those bucks by hook or by crook, I announced my intention of crossing the slide, and, taking my gun from the hunter, watched him hurry off so as to rejoin me as speedily as possible.

I now examined the slide, and found it more difficult that I had at first imagined. Have you ever attempted to walk, not up or down, but across, the sloping roof of a house? On my left was a perpendicular and inaccessible wall of rock, on my right a precipice many hundreds of feet deep, and between the two was the snow-slide—a steeply sloping roof of shiny slippery snow fully twenty yards across. It became evident to me at once that I must either make a sudden rush across or else make my way very slowly and carefully over, stamping footholds at each step, and, as I was burning with anxiety to get near the deer I chose the former. I took my rifle in my right hand, and, stepping back a little way so as to gather as much impetus as possible, started on my perilous journey. I knew that, provided I did not slip, it should not be very difficult to get across; so as I ran I planted my feet as firmly as I could.

I had got three parts of the way over, and was congratulating myself on being safe—for the friendly rocks on the other side were barely five yards away—when suddenly my foot slipped, I fell sprawling in the snow, and in an instant commenced to slide with increasing rapidity toward the precipice at the bottom of the slope. In that moment, perhaps the nearest to death that I have ever experienced, no thought of my danger occurred to me. I was simply filled with the keenest disappointment at the prospect of not getting a shot at the deer, and in struggling instinctively to clutch hold of something I never left go of my rifle. I had slid to within a few yards of the precipice when my outstretched left hand happened to come in contact with a small knob of firm rock just level with the snow. I clutched on to it with all my strength, and, my downward course being stayed with a jerk which almost sent the rifle out of my hand, I succeeded in pulling myself on to my knees, and after hammering a foothold with the stock of my rifle, I was able to get a fresh start, and then rushed across the remaining few yards.

The whole thing, though it takes many minutes to describe, was over almost in as many seconds, and without a backward glance at the scene of my narrow escape, I crept forward until I was within 150 yards of the three bucks, at the finest of which I proceeded to take careful aim. My shot was a good one, and I had

Kamp-it
TRADE MARK

Outing Suits for Men and Women

Kamp-it clothing is made from a very fine twilled cotton fabric of a particular dye and fast color. Guaranteed not to change color from the sun, washing or perspiration. Not Cravenetted like Duxbak, but is a cloth of great strength, far superior to the ordinary Khaki. For the golf links, motor cycling, summer camp, hill climbing, and tramping, you will find Kamp-it garments at their best advantage. Particularly suitable for ladies' wear.

"Supper Ready"

When you get back to camp, tired and hungry, you do not want to spend the rest of the evening getting supper ready. You want a stove you can start up in a minute—that will cook quickly and well.

For camp, houseboat or bungalow, a New Perfection Oil Cook-stove is the ideal cooking device. It is ready for use in a moment. It saves all the trouble of cutting wood and getting in coal. It does not overheat or make dirt in a kitchen; there are no ashes nor smoke. It requires less attention and cooks better than any other range.

New Perfection
WICK BLUE FLAME
Oil Cook-stove

Made with 1, 2 and 3 burners, with long, turquoise-blue enameled chimneys. Handsomely finished throughout. The 2- and 3-burner stoves can be had with or without a cabinet top, which is fitted with drop shelves, towel racks, etc.

Dealers everywhere; or write for descriptive circular to the nearest agency of the

A Classic for Sportsmen

AMERICAN BIG GAME IN ITS HAUNTS

Boone and Crockett Club Series

Edited by GEORGE BIRD GRINNELL

An invaluable work not alone for the sportsman, but for the student and lover of wild life. Treats of big game preservation and protection in the broader sense; tells of the habits, habitat and life history of the larger wild animals; touches upon the problem of the public forest domain, and is rounded out by interesting hunting reminiscences by such leaders in the fraternity of big-game hunters as Madison Grant, Paul J. Dashiell, George Bird Grinnell, Jas. H. Kidder and W. Lord Smith. Bound in cloth, library edition, heavy paper, richly illustrated, 497 pages.

Postpaid, $2.50

Building Motor Boats and Managing Gasolene Engines are discussed in the book

HOW TO BUILD A LAUNCH FROM PLANS

A complete, illustrated work on the building of motor boats, and the installing, care and running of gasolene motors. By Charles G. Davis. With 40 diagrams, 9 folding drawings and 3 full-page plans. Price, postpaid, $1.50.

The author is a builder and designer of national reputation. All the instruction given is defined and comprehensive; 40 diagrams, 9 folding drawings and 3 full-page plans. That portion of the book devoted to the use and care of gas engines should be most carefully perused by every individual who operates one. The book is well worth the price asked for it.

FOREST AND STREAM PUBLISHING CO.

the satisfaction of seeing him drop like a log—a feat upon which my hunter was quick to compliment me when he arrived upon the scene some time later. I then told him of my adventure, and we went back to the slope together. It was not till I saw it again and observed the track I had made in sliding downward—a track which seemed to end on the very edge of the abyss; indeed, my feet, before I pulled myself up, were not two yards from the brink—that I realized how narrowly I had escaped. We had a look down the precipice, and judged it to be almost 1,000 feet deep, and I can hardly repress a shudder now when I think how nearly I was being dashed to pieces on the rocks below. I always regard it as a very curious thing that on this occasion absolutely no thought of my danger or the imminence of a dreadful death was in my mind as I slipped down that snow-slide. Even now I could hardly believe it, did not the fact of my hanging on to my rifle, instead of using both hands in my search for safety, point so forcibly to the absence of any desire save to get at those reindeer! I have had opportunity, however, of talking to other men who have been in tight corners, and they all seem to agree that the personal element is invariably the last to be thought of in the excitement of the moment, and often does not occur to one at all until the danger is past.—Sir Henry Seton Karr, in the Glasgow Mail.

BRITISH COLUMBIAN FURS.

CONSUL ABRAHAM E. SMITH, of Victoria, furnishes the following information concerning efforts now being made to have an export duty levied on British Columbian furs:

The reason given by the local dealers to induce the provincial government to levy a prohibitive export duty on raw furs captured in British Columbia is that the American wholesale dealers in Seattle, Tacoma, and Portland have practically secured all the raw furs trapped in this Province during the last two winters, and the local traders in Victoria, Vancouver, and other provincial cities are compelled to go to Seattle or Tacoma and attend auction sales there to replenish their stocks. It is reported that most of the buyers of furs at recent auction sales in those cities were merchants from this Province, and it is claimed that, as a result, native furs are necessarily sold higher here than in American cities.

Some years ago the fur business of the Province aggregated hundreds of thousands of dollars per year, most of which was handled in Victoria; now it has shrunken to almost nothing, and local dealers are compelled to purchase in Sound cities, as stated.

American firms have their agents in northern portions of British Columbia, who purchase the furs direct from the trappers and Indians who capture them. The goods are thereupon sent direct to Seattle or Tacoma.

HOW MANY?

A STORY is told of an exceedingly keen sportsman going duck shooting for the first time in a punt. It was snowing, there was a high wind, and the water was choppy. But the sportsman did not mind in the least, as long as he got some shooting eventually. At length a dozen or more waders were sighted on a mudbank at some distance. Crawling forward to the heavy swivel-gun, in the bows, Robinson got ready. The boat crept a little nearer, and the old waterman whispered to him to fire. Now, a punt-gun is not a toy, and the recoil is pretty considerable even when one is used to it. Robinson had never used a 4-bore in his life, and, being intensely excited, he forgot all about the kick. There was a roar, and an instant later Robinson dived gracefully overboard. When he came to the surface, puffing and blowing like a grampus, the first thing he said was, "How many did I get?"

"STEERO"
(TRADE MARK)
Bouillon Cubes

Made by American Kitchen Products Co., New York

THE convenience of Steero Bouillon Cubes makes them especially valuable in camp or on a fishing trip. Cooking is always the drawback in outdoor life and the convenience of Steero Bouillon Cubes helps wonderfully to make this task a pleasure.

The hours between meals seem very long, but there is no need to wait. A cup of savory Steero Bouillon can be made the moment the kettle boils. Just drop a Steero Cube into a cup and pour on boiling water.

"A Cube Makes a Cup"

A supply of Steero Bouillon Cubes should form part of every camper's pack and every fisherman's lunch box.

We want you to test the quality and convenience of Steero Cubes, so urge you to

Send for Free Samples

and try them. If your druggist, grocer or sporting goods dealer can not supply you, send 35c for a box of 12 cubes, postpaid; enough for 12 cups. Tins of 50 and 100 cubes will prove more economical for regular use.

Where, When and How to Catch Fish on the East Coast of Florida

By Wm. H. Gregg, of St. Louis, Mo., assisted by Capt. Gardner, of Ponce Park, Mosquito Inlet, Fla. With 100 engravings and 12 colored illustrations. Cloth. Illustrated. 238 pages. Map. Price, $4.00.

A visitor to Florida can hardly make the trip without this book, if he is at all interested in angling. It gives a very complete list of the fishes of the East Coast of Florida, and every species is illustrated by a cut taken from the best authorities. The cuts are thus of the most valuc to the angler who desires to identify the fish he takes, while the colored plates of the tropical fish shown in all their wonderful gorgeousness of coloring, are very beautiful. Besides the pictures of fish, there are cuts showing portions of the fishing tackle, which the uathor uses. A good index completes the volume.

Rod or Gun—Which?

By WALTER McGUCKIN

"How happy could I be with either,
Were t'other dear charmer away."

CAN desire and philosophy go hand in hand? Does not desire lead, with philosophy so far in the background as to be sometimes actually out of sight, arriving only at the front when desire, after great accomplishment, has sat down in order to smoke a pipe, or perchance awaits philosophy's coming up the better to enjoy that spirit of refreshment which philosophy—always wise—never fails to carry in a flask? How then can the sportsman decide between the rod and gun as to which is the greater joy, when both of them are the glorious weapons with which he fights his way into that country where life is worth living?

The golfer's existence is confined within those eighteen gaping but elusive holes; he asks no aid, he knows no friend, his heaven is the winning score. The expert at tennis finds his delight in an equally narrow field, though it is true he is sometimes exhilarated by the applause of the onlookers, such cheer being rarely vouchsafed to the golfer. In all athletic games after the participant has reached the acme of his skill he is forced to look backward instead of forward, for he then learns that his day has gone by, and his interest in sport must unconsciously become less day by day. This narrowness of existence characterizes all sports which depend chiefly upon the athletic. But the follower of the rod and gun knows no bounds to the possibilities of his pastime and in consequence his devotion never tires. As his knowledge increases so does his field of action enlarge, and this greater scope but too clearly demonstrates the need of additional knowledge, to gain which he at once applies himself with redoubled energy. At the outset all his energy is concentrated on the pursuit and capture of his quarry, generally by fair means, though sometimes by means not quite so fair, but perhaps more successful. Many of the contrivances which he now uses will later on be discarded as unworthy. His ardor allows no excuse—he must and will have results, the larger the better.

At this stage it is solely and purely the diversion which field and stream offer; his enthusiasm is at fever heat, and anything which tends to make success greater and more striking is seized with avidity. The element of luck is now a matter for prayer. If his success also carries with it the envy of his brother sportsmen, his ardor takes on new life; it is up and stirring at every opportunity. But sooner or later successful capture made merely a view to display superiority in results, begins to pall. From the heights of his success he begins to look down with disdain upon capture made in the ordinary way and with the usual tools. He looks for new fields of conquest; capture which is easy has lost its charm.

His attention is now turned to capture which entails such difficulty as to be out of reach of

OVERCOMING DIFFICULTIES APPEALS TO THE ANGLER.
Photograph by J. T. C.

the ordinary sportsman. It is the overcoming of difficulty in the sport by methods which require time and study and which are not easily learned which now appeals to him. In order to accomplish this he devotes more attention to his outfit, he seeks for information, he studies and brings reason into play; philosophy has at last caught up with desire. In the land of gladness, through which he is now walking, results are of comparatively little importance; it is the manner in which results are accomplished which claims his attention. He schools himself in that patience which is so great an adjunct to the long and successful effort. And to his great joy he finds that this very increase in knowledge—this greater skill in the manner of capture—this willingness to hope and wait are forces which it is the greatest pleasure to control, forces which may be relied upon to produce the most satisfactory results whenever called upon. He has at last walked out of the province of mere sport into the generous land of pastime, that glorious country of unknown bounds where he may roam at will, now and then intent on sport perhaps, but ever with a light heart and always with a consciousness of the beauties of the playground which nature has provided. "The true sportsman must ever be a lover of the charms of rural scenery, and for this among other things I love and honor sportsmanship. * * * The very nature of his pursuits must needs awaken contemplation and induce thought."

It was well into the night and quiet. Each fitful flash of the dying camp-fire hurled itself against the darkness only to be absorbed and disappear within its depths. An occasional splash heard faintly through the stillness of the night told of soft October breezes out on the lake. Tossed into one corner of the camp were a rod and gun, thrown together not with that parallelism which means friendship, but lying in a rectangular position which is the sign of cross purposes. The faint hum of controversy was just beginning to exude from their corner when an owl, out on his nightly foray, but also not averse to adding to his store of wisdom, silently took his seat on the outstretched branch of a hemlock, and directly over the turbulent corner, where it was his great good fortune to listen to the following:

Rod: "Here, you great, big heavy bunch of steel, get off my back! Can't you see you are breaking my tip?

Gun: "Well, if I were as delicate as that I wouldn't follow a sporting life. I'd stay indoors and play bridge."

Rod: "It is an essential part of my existence that I should be frail and light in weight, for my accomplishments are all the result of dexterity rather than of force, and for this very reason I am a friend of the young as well as the companion of maturity. I am the small boy's first guide into the land of bliss, long years before he has even dared to so much as approach you. He and I are boon companions all through the pleasant summer days, when school is forgotten and only joy remains. Every morning out we go hand in hand down to the water's edge, there to remain for happy hours; and even if we are late for dinner, the fish we bring back with us take away the sting of the scolding. He learns to love me then, and I am his steadfast friend through life."

Gun: "All very true, but when he is nearing

manhood it is I who command his attention. I am then the companion that he takes with him when he goes after that hedgehog which he has been watching for days. As soon as the nuts ripen and the squirrels and rabbits are plentiful, you are quite forgotten, and it is I who spend hours with him on the hillside. He is just as proud of the first rabbit which I place in his hands as he was when you gave him that big pickerel. He begins now to look down on you with indifference in the same manner that he would on a younger brother."

Rod: "Not at all. I hold the sportsman's affection and always will; an affection active through the summer and dormant during the winter. With each recurring spring he grasps me with the same avidity, and off we go together with gaiety in our hearts. Nor do these trips cease until time calls a halt and nature decrees there shall be no more activity, whereas he had long ago placed you on the shelf, with the other relics of his robust past. All men cannot be great, but all men may be fishermen."

Gun: "Yes, bodily vigor is the hunter's *sine qua non,* a badge which he carries with pride, and he will let no occasion escape to prove that it is worthily carried. The heartiness with which I am carried from morn till night is but the exuberance of that condition. Nothing in the way of exertion is too difficult for him to attempt, for he feels that he shall be successful. My master and I sally forth into the nipping air at the first streak of light, thankful for that substratum of buckwheat cakes and their all pervading warmth. The climb up that first hill makes the breath come fast, I will admit, but the blood is singing through our veins and we are prepared for anything. The exhilaration of the bright October air intoxicates us with the joy of existence; we know no care, we can see no sorrow; we just exist in thankfulness. We trudge along in a world of glorious color, the beauty of the autumn tints heightened by the several greens of the pines and hemlocks. Across the valley the blue of the distant hills, with their sunshine and shadow, form a border of warmth to a picture which fills us with rapture. Merrily on we go, but as we near a clump of hemlock we move with care, for this is one of the partridge's favorite hiding places, as he takes fiendish delight in placing thick foliage between himself and trouble when flight is necessary. One step more and we are surrounded by a succession of whirring darts, but I stop the flight of two, as I always do good work when I am held straight. And if the dogs—"

Rod: "Dogs! *I* don't need a valet to tell me where *my* game is to be found!"

Gun: "Nonsense! The dog is the hunter's lode star. Nothing can be more engaging than to watch a well-trained dog making game, to say nothing of the feeling of good fellowship which his intelligence always produces. Ever ready and responsive, and always upon the alert, he is as eager for results as is the hunter himself. His dash and vim keep us ever on the verge of expectancy, with its consequent continual effort, and we do our utmost to follow where he deems it wise to lead, for we know that our confidence in him will result in success. And so indeed it does, for many are the birds to which he had led us, and which but for him we would never have seen; and it is with grateful hearts that we make sure that he has a warm place by the fire after his day of toil and hardship. So don't malign good old Dash or I'll be sorry I didn't smash your tip. But I've lost enough time; we must get after the birds again. Their flight was straight into the valley, so down the hill we hurry with an occasional slide that ends in a plunge, for loose leaves are apt to be slippery and they certainly cover a multitude of surprises. Once on level ground we make for the brook, for there may be a woodcock or two along its swampy shores. The brook with its water, sparkling and cold, is an irresistible invitation which we accept at once; a seat on a log and out comes the pipe."

Rod: "And if you smoke the pipe of truth you'll acknowledge that your master strolls along the brook looking intently into the water to discover if it contains trout and whether the young fry are thriving. Even at the height of your ardor you admit my possibilities."

Gun: "How do you account for the fact that last spring you were hurriedly set against a tree while your master went dashing into the woods after a hen partridge you had just flushed? He wished to ferret out how many young birds there were in the pack; for the moment you were entirely forgotten and his thoughts were all of autumn joys. You must bear in mind, my fragile friend, that a momentary diversion does not mean a change of heart—"

Rod: "It is sometimes the entering wedge."

Gun: "For the tyro, perhaps, but not where devotion is concentrated and of long duration; the joys which time has proven exist for us will keep us faithful to the end—this much from your pipe of truth. We had gone hardly fifty feet from the log when up jumps a spluttering woodcock and is off before we can pull ourselves together, his sudden appearance from underneath our very feet having filled my master with the uncertainty of surprise. But never fear, Dash will find him before we have gone far, and so indeed he does, and this time he is our victim. But as for those partridges we put up, confounded aeroplanes that they are, they have vanished without leaving their telephone number. Hour after hour goes swiftly by and we are still in eager pursuit, now in the swale, now on the hillside, an occasional trophy of my master's skill making us forget the many misses. Not till dusk casts its shadows do we forego the pleasures of a pastime in which we take the greatest delight, and the stars, which by now are shining, are not brighter than are our hopes of many more such days to come.

"Arrived at home, we expand with pride as one by one the birds are shown to our brother sportsmen gathered around the open fire, whose brightness and warmth create such a genial atmosphere that we are filled with glee as we shout with Christopher North: 'Blessings on the head of every sportsman on flood or field or fell.'"

Rod: "Bravo! That has the true after dinner ring when all the table agree with you that it's time to stop. Now listen to me. Great is the difference between us in regard to the means which we use to accomplish our ends; you with your handful of shells, artificial, dangerous and unfeeling, and I with my bunch of dainty flies, exact imitations of the winged life hovering over my realm. I go to nature for my lures; you follow along the lines that man has laid out the better to enforce his dominance. You are the exponent of noise and vigorous action, of abrupt and forceful method; you know nothing of the charm of quiet and continued effort. Perhaps this is due in part to the dissimilarity in our seasons, to the contrast between the sharp, cold winds of the autumn and early winter, and the soothing, balmy days of the spring and summer. Oh! the delightful spring time. This is when I step into prominence. Now it is that my master and I are boon companions as we rush forth to find

> "'Only an idle little stream,
> Whose amber waters softly gleam,
> Where I may wade through woodland shade,
> And cast the fly, and loaf, and dream.'

"You see, I can quote as well as you, and from one who does not need to wear a 'sporting jacket' to show the world that he is sincere in his love of nature and a king among sportsmen. How any one after reading Henry Van Dyke can still withstand the allurements of fishing is a mystery to me. I am surely fortunate in this that there are so many who are masters in the world of letters who are glad to sing my praise. This has been true for generations in Great Britain, and will be true for years to come in Greater America. Throughout this entire country year by year the interest in fishing is increasing rapidly. Immense sums of money are now being devoted to the propagation and care of fish, which would have been impossible only a few years back. We were squanderers of the bountiful gifts of nature, but we have learned our lesson, and the future will show that the general public is interested in the care and protection of fish to the end that all may profit thereby. Your followers are 'way behind us in this respect, but you also are at last beginning to look round and take notice. And the great improvements of to-day in the methods and tools of my followers are the results of study and intelligence; we are forging ahead both as regards tackle and lures.

"Contrast the dullness of the old time custom of sitting all day in an anchored boat, the hot sun beating down on your head, patiently waiting for a stray weakfish to come along and attach himself to your hook, with the lively interest of the up-to-date surf-caster, who knows how to cast, where to cast and how to entice the fish that he is after. Contrast the fisherman that splashes four flies—I have seen it done—on the waters of a trout stream, with the scientific angler of to-day who casts the single irresistible dry fly. My heart-felt thanks to England for that same dry fly. I bend deep and low in acknowledgment of its subtlety.

"I take great pride in the casting of the dry fly because I am such an important factor in the operation; it is due to my impressionable action under the skilled guidance of my master's hand and wrist that the fly is properly dropped upon the water. And while the line, leader and fly may have come from England, it is an acknowledged fact that I am second to none. It was early last spring when my master was revarnishing me that I overheard him make that statement."

Gun: "I am glad to hear you say your master keeps you in good condition. My master loaned me to a friend last autumn and that parlor sportsman let me get so dirty and rusty

that it was days before I could get into condition to do good work."

Rod: "The genuine sportsman well knows the importance of keeping his implements in proper condition. Before each trip, line and leader are carefully examined, and the flies which we are to take with us well paraffined. And what beauties those flies are, the list including those captivating May flies, double-winged and fully hackled, hares' ear, March-brown, Wickham's fancy, the various quills, gnats and duns, not forgetitng the whirling dun, which is without a peer. These are all English flies and naturally made to represent the insect life found on English waters, but they may be used to advantage in this country for want of better, for in color and form they are similar to the flies and bugs of our own streams, but some day there will step forth an advocate of the dry fly who is also an entomologist, and then we shall have a list of flies thoroughly adapted to our own waters. All genuine dry flies should be exact reproductions of the insect life found a'ong trout waters, and their success is largely due to that fact, and also because the fly is made to float down with the current in exactly the same manner as does the natural insect; whereas in fishing with the wet fly, very often the fly is pulled up stream against the current or diagonally across it, which is certainly contrary to the movement to which the trout has become accustomed, and he at once becomes shy and is on his guard.

"A trout will rise several times to a dry fly if properly cast, but it is a rare event to have a trout rise more than once to a wet fly. Changed conditions of our nearby trout waters also favor the use of the dry fly. Take the Beaverkill, for instance, thirty-five years ago when my master first knew it. In those days the entire country was heavily timbered with hemlock, affording dense shade to all the springs and brooks which emptied into the main stream, and in consequence the water throughout the summer was cold and sparkling with life; the extreme low water which we sometimes now experience was then unknown. The shores of the stream were lined with alder and willow, with an occasional majestic hemlock stretching an imperial arm across its waters; the play of sunlight and shadow a constant delight to the eye. The rocks were moss covered and vegetation everywhere in evidence. As a result of such conditions the insect life was vigorous, and bugs and flies were hovering over the water at all hours of the day. And the trout in consequence were feeding on the surface, darting here and there and always in evidence. It was a case of jump, jump all day long, so that it was of little importance what fly was used or how badly cast, your creel was filled before noon."

Gun: "Now cast a little further and tell me that all those fish were over a pound in weight."

Rod: "On the contrary they were native *Salvelinus fontinalis,* and they average smaller than the brown trout which are caught on the Beaverkill to-day, but under what different conditions. Now there are almost no trees left, the hemlocks not only gone, but forgotten. I doubt if the average summer visitor to that region would recognize a hemlock if he saw one. The springs and smaller brooks left unprotected from the sunlight, dry up during the summer months, and hence the water in the Beaverkill becomes so low that the trout all congregate in the deep pools. The entire stream is in the open with almost no shade.

"I well remember our last visit to a favorite pool, a pool which was entirely open save for a narrow fringe of alder on the further shore which the native owner had throughtlessly let remain and from underneath which my master was always sure to entice one or two nice fish. On arriving this time behold our native industriously cutting down those same alder, and when asked by my master in a few well peppered words why he did so, replied 'because it looked nicer not to have bushes around.' 'Ye gods and little fishes.' The sheltering log is no more, the rocks are bare of moss, the water warm and limpid. It is hardly surprising that under such circumstances there should be but few bugs and flies hovering over the water, and in consequence the trout no longer feed on the surface, but are mainly bottom feeders. You no longer see trout darting here and there as in the olden days, for they are out of sight hiding underneath the rocks on the bottom where most of their feeding is done, and it takes something more seductive than the wet fly to get them to come out in the clear, warm water and bright light. And this something is the dry fly. Just sit down on this log with master and myself and watch the stream for a few minutes.

"A most delightful day, clear and cool, and not a ripple on the water as it calmly floats down stream in front of us. It is entrancing merely to be out here in the brilliant sunlight. Look way up there in the blue sky at the graceful circles of that hawk; he must move without effort for he never seems to tire. Round and round he goes, now a little higher, now a little lower, but never stopping. He would not disdain one of your victims were opportunity to offer, I imagine. Yes, we may as well get out the flask, as we are in no hurry; we already have several nice fish and the day is young. I wonder—by Jove that tastes good—I wonder how it is possible for a trout to discern what is going on directly over its head, and yet it can. Its eyes seem to take in everything in all directions save directly behind, and the wise fisherman fishes up stream in consequence as trout always head up stream when out in the open water, but they will dart out in any direction when underneath rocks and logs. Trout waters such as we have before us are very misleading. The casual fisherman would say at the first glance that the stream contains no trout, but we know better, but certainly none are in sight and the inspiring splash of a rising fish is wholly lacking.

"Well, patience has caught many a trout, so let us loaf a bit but always with eyes on the water. See that flat rock directly opposite us on the further side of the stream? In fact, it is the only large one down this end of the pool. It has about four feet of water over it and appears to be perfectly flat and smooth, except near the bottom at the upper edge where you can notice a dark streak. Well, that dark streak is the shadow of a niche in the rock, and if there are any trout in this end of the pool, one will be hiding underneath it in the shelter of its shadow, but with eyes that are continually taking in the surface of the water over its head, so keep your eye on that rock and see what happens. A few shiners swimming aimlessly around, but nary a sign of a fly on the water. Hark! what is that? Surely, the splash of a rising fish in the swift water at the head of the pool. Now, don't get excited; stay where you are; we'll go after him later on. That fish rose to a fly and there'll be some down this end before long, so watch and wait.

"Again all is serene and quiet; there is nothing to break through the all pervading stillness save the occasional cheerful tinkle of a distant cow bell. As I live, another rise up at the top of the pool, but this time the trout has missed his mark, as I can see the fly coming down stream. When the fly is almost three feet up stream from our rock, he falls to the water with a farewell flutter and begins to drift directly over the pit of danger. Now is the critical time, if I am right in my surmise. And I most certainly am, for just as that thoughtless fly floats over the niche in our rock, up darts a trout. There is a swirl on the water with a down-darting fish, and the fly has disappeared.

"Now watch my master. Neither he nor I knows the name of that fly; entomology is not our strong point, but it was a combination of light yellow and gray, and about the size of a No. 12 hook, so my master opens his fly box and at once selects an olive quill, a fly almost identical with the one which the trout has just devoured. Advancing with me in his hand, slowly and quietly to the edge of the water, my master begins to lengthen the line, as our rock is fully forty feet from where we stand. When the line has been properly lengthened the cast is made, and the fly drops as a feather on the water some three feet up stream from the rock. Down it floats and so naturally that were it not attached to the leader it would be almost impossible at this distance to distinguish it from the live insect. The critical point is reached, but no interest is shown by our submerged target. The fly is left to float below the rock before it is quietly lifted from the water with as little disturbance as possible.

"A short wait and the cast is repeated with no result, but on the third cast the fly is seized with avidity and the result this time is a three-quarters of a pound addition to the creel. Now I ask you, would it have been possible to entice that fish from underneath that rock with a wet fly, to say nothing of the added enjoyment to be derived from the use of the dry fly? Never, and again never. It is because of the failure of the wet fly to produce results under such conditions that the smooth and quiet waters are forsaken by the average wet fly caster for the rifts and the rapid waters at the head of pools."

Gun: "But aren't there more fish to be found at the head of pools?"

Rod: "By no means. Fish are to be found wherever there is food, and as their feeding ground is not confined to any one spot in the stream, trout are sometimes taken in the most unlikely spots. It is true that the large fish, as a rule, are in the deep water, but the deep water is not necessarily at the head of the pool, but at early dawn and toward dusk the big ones investigate the shallow water, and I have seen my master take good fish out of three or four inches of water. Together we have fished the nearby waters of Sullivan and Ulster counties for many years, using the wet fly, and it is only of very recent date, within about three years in fact, that we have proven to our own

entire satisfaction the greatly enlarged possibilities of the dry fly.

"Primarily man fishes for the pleasure to be had from the sport, and as a delightful pastime the use of the dry fly far exceeds the wet. My master holds that there is greater pleasure in catching a few nice fish in nearby streams, where the fish are scarce and difficult to catch even with the most approved methods, than can be had in far distant waters where fish are so plentiful that their capture is merely a question of propinquity."

Gun: "Your master, however, makes many trips to those far distant waters."

Rod: "Yes, but not merely for the fishing. It is to enjoy the 'pleasures in the pathless woods,' the rapture of the near-to-earth life, where even you can be used to some advantage. And besides, you must remember that the dry fly is equally seductive in swift water. Follow my master up to the head of the pool and watch him catch that first fish that rose. Here we employ different tactics, for we do not know exactly where that fish is located, as we were too far down stream to mark the exact spot where he rose, and hence we plan this attack so as to reach as far as possible all the waters in his immediate neighborhood, but we must confine our efforts to dropping the fly only on those spots where the surface of the water is smooth, because rough water is not friendly to the dry fly.

"You will notice my master is using a shorter line as he begins casting the same fly he used before. This is because the cast is made very much more rapidly, as the fly is dropped time and again upon one of those small spaces of smooth water which are in the vicinity of our fish. You need not smile when I say 'our fish,' for he is almost certain to find a resting place in our creel. Given a known rising fish, the proper dry fly patiently and properly cast, and the result is victory. That smooth spot is small, say about a foot long, so that the fly has little time to float before it is retrieved and recast at the head of the smooth bit of water. This is done several times, and then my master discovers another smooth bit nearby upon which the same program is continued. Note particularly that the fly is let to float only on the smooth surface, for as soon as it comes in contact with the rough water, if not retrieved at once it will become partly submerged, a condition to be avoided as far as possible.

"Cast after cast is made, now here, now there, and by this time our trout must surely conclude that there is a swarm of flies hovering over the water awaiting his approval. Right here I demonstrate my high standing in the rod world, when my pliant action, subservient to every motion of my master's well trained hand and wrist, is so great a factor in the proper placing of that fly upon the water, for therein lies the success of the dry fly, it being due almost entirely to the proper placing of the fly upon the water. I am of the highest class and well made, and great is my master's pride in me, for full well does he know all that he can accomplish with me, and the pleasure he derives from being enabled to place the fly properly upon the water, and in just the spot he selects is a great part of the game. And so every cast is made with confidence, and it is not long before the expected rise is had, then a quick strike, a short struggle and our fish is in the net. And strange to say he is not as large as the one we caught in the lower end of the pool, and we are not even sure that he is the fish which rose at first, but we are content.

"And now for lunch and a talk. Can such blissful surroundings be had by your followers as are found here in this inspiring balm of an ideal summer's day? The bright sunlight everywhere, the sparkling water with its babbling music, the trees waving acknowledgment to the blue sky overhead, and here among the rocks the joyful companionship of our crackling little fire, whose every breath of smoke further whets the appetite. And what feast can equal this crisp trout and slice of bacon just out of the frying-pan, and this baked potato fresh from the ashes? Verily this is complete happiness, and the memories of such days are a priceless possession.

"And many are our happy memories of the olden days when master and I fished the Beaverkill, when Livingston Manor was Morsston and Lew Beach was Shinn Creek. Those were the days of sawmills and mill ponds, when it was worth while to make the trip up to Jones' mill to fish that magnificent stretch of water above the dam. But alas for the good fishing, the mill ponds are no more. They and the mills disappeared shortly after the tanneries shut down, for there was no timber left to saw. When 'spudding' bark for the tanneries was the order of the day, the waste of timber was simply awful and many are the hillsides which were literally covered with the felled hemlock, which after having been stripped of the bark were left there to rot. The casual house was made of logs with hemlock slabs for the roof; meat was almost unknown in many households, buckwheat being the staple article of diet, the first crop to be raised on every burnt fallow. The fences were also made of hemlock slabs, which, however, was a slight improvement on the entangling barbed wire of to-day. When you drove you were in a buckboard, but it was pleasanter to walk and quicker. The air, heavily laden with the odor of hemlock, was wonderfully invigorating. Partridges were plentiful with a few woodcock; in fact, it was an ideal land for the sportsman. But all is not lost, there are a few birds left, and there are good fish in the Beaverkill on the lookout for a dry fly, and you may still trudge home at dusk to the rhythmic music of the whippoorwill."

Suddenly there was a violent commotion within the hemlock boughs, the owl pitched forward and fell to the ground with a thud, for he was sound asleep.

Nature's Disturbed Balance

By W. G. DeGROOT

AN inevitable sequence of the invasion of a primitive country by civilized man is the destruction of natural things, and those first destroyed are the wild creatures useful for food. Of these the largest are first to go—the big game, the big birds and the big fishes. The smaller creatures persist longer, because they are less valuable for food and are less easily secured. As these animals, birds and fishes grow fewer, those who in the past have developed on them complain of their scarcity and seek for its cause, but the question is very easily answered by thoughtful people.

We have reached the stage in this country where we are complaining now of the scarcity of small game birds and small fish, and are puzzling our brains to know why they are almost extinct. Many explanations are advanced, and we are all anxious to put the blame for this destruction on someone besides ourselves, yet we all know that of the enemies of birds and fish, man is by far the most destructive.

It is perhaps worth while to consider some of the natural enemies of our game birds, and to try to weigh in some just measure the damage and the good done by the different classes of these enemies.

In primitive times there was room enough in North America for all food animals, birds and fish, and for all the natural enemies that preyed upon them. If we go back 250 years, we find from the writings of the explorers of that time that the prairies were covered with buffalo, while the woods were full of deer, bears and wild turkeys. Thus, in the year 1680 Father Allouez, recounting the journey of La Salle to the Mississippi River, says:

"There are also certain dry countries of excellent soil filled with an incredible number of bears, elk, deer and turkeys, against which the wolves make terrible war and which are so little wild that we were several times in danger of not being able to keep them away from us except by shooting at them," and this was only 230 years ago.

All this sort of thing is pretty well known now by anyone who is willing to take the trouble to look it up. The elk of the North, near Lake Champlain and Canada, were so abundant that the Indians used to drive them into pens, as in later times the Indians of the plains drove buffalo into the pounds which the Blackfeet called piskun. If these great food animals were abundant, not less so were the smaller fur-bearing animals whose skins were used for clothing or for ornament, or the birds, the wild turkey, the grouse which the Indians used to shoot out of the trees with blunt-headed arrows, or the wild pigeons whose myriads made the sound of a rushing wind and whose numbers broke down the branches of the trees on which they alighted.

Where have they all gone? In the early 80's the plains Indians of the North, when in successive years they found no buffalo, where always before there had been buffalo, believed that the white men or some bad spirits had gathered together all the buffalo and shut them up in some place underground. In the same way and about the same time, men who had always

been accustomed to see the wild pigeon flying through the sky in uncountable multitudes, when suddenly they found there were none left, either where they had been or in any other part of North America, believed that some terrible cataclysm had swept them off the earth; specifically that they had been carried out, either over the Gulf of Mexico or the Great Lakes, and there struck down into the water and drowned.

A number of North American birds have become extinct, and while we cannot in all cases say that they were exterminated by man, we may feel very confident that except for man they never would have been exterminated. To many minds the case of the great auk, the passenger pigeon, and the wild turkey over great areas that he may be fortunate enough to find and killing of them all that he can. Then when the next season comes around and he finds fewer birds than ever, he expends much breath in abusing foxes, hawks and owls, and very likely makes an effort to induce his assemblyman to introduce a bill providing that the State shall turn out foreign birds for him to shoot.

ENEMIES OF GAME BIRDS.

Among the most obvious enemies of game birds are carnivorous mammals, as domestic dogs and cats, together with foxes, wolves, weasels of various sorts, including skunks and a few rodents, notably the red squirrel, and to a less extent the gray squirrel. Hawks and owls of

SKIMMERS IN THE GULF OF MEXICO.
From a photograph by Frank M. Miller.

are conclusive, but who as yet can give a reason for the extinction of the Labrador duck?

It is on the Atlantic Coast where population is thickest that game of whatever kind is most rapidly disappearing, and it is not until its disappearance is almost complete that the average man wakes up to the fact that something must be done. When he rouses himself from his state of complacent satisfaction, he does not know what to do. It does not occur to him to put aside his gun; he is not willing to abandon the pursuit of the last ruffed grouse, quail, woodcock or prairie chicken. It never occurs to him that he more than anything else is responsible for the dearth of birds. He blames their scarcity on foxes, minks, skunks, cats, hawks and owls. A remedy very commonly suggested is that the State should offer a bounty on the different predaceous creatures that are supposed to destroy the game. Meantime he goes ahead, and every shooting season spends out of doors all the time he can spare, chasing up the few birds certain species destroy these birds, as do also snakes.

On the other hand all these flesh-eating creatures do much good by preying on noxious animals or insects. No one, so far as we know, has been able to weigh justly the good and the evil done by any predaceous animal, because no one knows all the facts, and no one knows how far-reaching the influence of any bird, mammal or insect may be. Almost everyone, however, is perfectly willing to announce with great positiveness his views as to the usefulness or harmfulness of any of these creatures, and give his reasons for these views, though often these reasons are founded on erroneous observation or on a failure to logically bring together cause and effect.

One of the most unpopular animals along the Atlantic coast is the fox. We received from the Old World the legend that he is a robber of hen roosts, and little children are brought up on this belief. Sometimes, no doubt, when opportunity occurs, a fox may kill chickens or ducks, or even turkeys, but this is unusual and seldom occurs, except when the fowls are permitted to wander far afield, or when they are not properly secured at night.

Anyone who will go out into the winter weather when a light mantle of snow covers the ground, and will follow a fox in his devious wanderings over hill and dale, through swamp and along hedgerow, will soon recognize that—so far as winter is concerned—the fox's diet consists chiefly of mice, with an occasional gray squirrel, and at rarer intervals a rabbit. From the first gray light of early dawn until the middle of the morning the fox trots along, looking, listening and above all, smelling. Where the indications are right he quickly digs a little hole in the snow and is often rewarded by a mouse, a few tufts of whose fur may be scattered on the snow where the meal was had.

Old fox hunters, of whom in New England there are still many, and who make it their business to search for and find the secluded dens among the hills where the vixen brings forth her young, declare that anyone who will keep watch of the food that the mother fox brings to her pups will recognize that the harm that they do to bird life is very slight. Mice, squirrels, young woodchucks, sometimes the head of a chicken, and rarely a feather of a bird, will be found about the mouth of the den, but in many cases it is thought the heads of chickens are those that have been thrown out by the farmer's wife, and not captures made by the fox herself. On the other hand it can hardly be doubted that in summer the foxes destroy the nests of many ground-nesting birds. It is not conceivable that they should be unaware of the fact that many sparrows and other small birds nest on or near the ground, and they must make a business of

hunting for them. On the other hand it may well be that mice are always so abundant that it is easier for the fox to catch them than to spend his time hunting for birds' eggs.

In the Middle West it is well known that the coyote at times is very troublesome to the poultry raiser, but it is usually true that when a coyote gets at poultry at night, it is because the door of the fowl house has been left open. The coyote makes a business of hunting ground squirrels and prairie dogs, and by his destruction of these little rodents does much to help the farmer. On the other hand he unquestionably kills a great number of birds, more so in proportion we are disposed to believe than does the fox, because the coyote often inhabits a country where there is no timber and where the birds must necessarily roost on the ground, and so within reach of the little wolf's powerful spring. Coyotes, too, are very destructive of young lambs and of new born pigs, and the same crime is charged sometimes to the fox.

Weasels generally, including minks, are too seldom seen to be justly charged with great destruction of game bird life. Skunks, which are much more common, have a bad name, not so much on account of the damage which they actually do, as from that which they are supposed to do. Skunks prey largely on insects—grubs, beetles and grasshoppers—and anyone who lives in a skunk country may readily convince himself of this. No doubt also they eat mice and birds if they can get them, but they also feed on berries, fruit and are much given to destroying corn when it is in the milk, climbing part way up the stalks, which their weight bends down, then gnawing off the ears below the cob, dragging them to the entrance of the burrow and there clawing away the husk until the soft and tender grains are exposed, when they will in a short time gnaw a whole cob perfectly clean.

All the ground-nesting birds are subject to the attacks of skunks, as they are to those of many other enemies. Rarely the skunk forms the chicken-eating habit, and may get in to the hen house where he proves very destructive, but here again it is the fault of the person who has charge of the chickens, who should have arranged to keep the skunk out.

[TO BE CONCLUDED.]

Camping

By WILLIAM H. HOLDEN

V.—ON LOSING ONE'S WAY.

WE now had become so popular that many of our friends wished to go with us, and one year our party numbered eighteen. This we found to be too large. The cooking and supplies were too extensive and the fishing grounds were not adequate. In trout fishing on a river the same ground cannot be used with satisfaction for more than ten days.

We would send one party down stream and one up stream, and if need be, another party further up and one further down, the party ahead to set a bush in the bank to indicate where fishing commenced, so that the party following would know why the trout were wary. As our river is sixty miles long, we sent parts of our party out for a week or ten days. On such trips your plans must be complete. Adequate supplies and utensils must be taken and you must provide so that you will keep warm and dry and have plenty to eat. A proportion of food—that is, the main dependencies—must be taken, based on your schedule for the trip.

In going up river the sportsmen walk and the guides pole the loaded boats. In doing so your places for lunch and for camp must be decided upon, or your guides must be directed to keep going until they find you on the river bank. You must also be sure that you know the trails, as it is very easy to get lost. You must also observe the weather so as not to be caught in a shower, get wet and catch cold. If you do get wet, do not sit down or stop walking until your clothes are dry and change as soon as you can. Always have necessary medicines in your camp outfit.

In going up river if you are not sure of your trails, stay in the boat. In going down river it is best to stay in the boat unless you wish to roam around in the woods and are quite familiar with the entire locality from start to finish. If you do get lost, there is only one way to get out of your trouble. You must stop, sit down and think. Trace your back course in your mind and try to locate yourself and the place you are bound for. Do not move until you are sure that you have become calmed and know what you are about. If you have a gun, a rifle or even a pistol, and have arranged with your guides, they will understand that three rapid shots mean that you want help at once. Do not use this signal until it is quite necessary, as otherwise it is apt to be disregarded, and then it is absolutely dangerous.

A compass is of little use unless you know the relative direction of the places of the locality and know the direction you were taking when lost. If you are really lost and cannot decide calmly where you should go, stay where you are and prepare to make yourself comfortable and your guides will have less distance to go in looking for you. If you have to stay out all night, select a protected place where you can keep dry with a back log, build a fire and do not let it go out. It will keep you busy and warm and will aid those who may be looking for you. If you are very hungry and weak, look out for a porcupine, kill him, burn off the quills in the fire, clean, skin and roast him by the fire on a stick or spindle and he will be good eating. We never had to do this, but have tasted the food when prepared by our Indians and found it just like young pigs.

You should, with maps, or otherwise, become acquainted with the landmarks of your locality and serious consequences cannot result from being lost.

Many of our party have been lost, one of them not being found until 2 A. M., but nothing serious happened. We who were in camp were always able after comparing notes and duly considering all the circumstances to send out a successful rescue party. One young man wandered seventeen miles just because when he found that he was lost he kept going instead of remaining where he was. He traveled probably twenty-five miles back and forth on unknown roads and finally found a lumber camp.

One rescue party, sent out at midnight after all nearby places had been searched, met a man on horseback with a lantern coming from the lumber camp to tell us where the lost one was trying to rest up after a hearty meal. He had been out all day and had been lost from about 9 A. M., but we were able to locate him and send our party in the right direction.

A lad was found wandering in a swamp, having lost the road. He had brushed off his hat getting through the alders, and after a while came upon it again, he having traveled in a circle. Knowing that he was lost at the river bank, a guide was sent to the locality in a boat, and by calling finally heard the answer off in the swamp. The boy undertook to take a short cut to camp, but could not get out of the swamp, and when he found the river could not tell whether he was above or below camp. If he had remained on the river bank he would have saved himself much anxiety and a tedious tramp.

Two new members of our party undertook to go ahead of the teams, but overlooked the turn in the road and went on miles out of the way. They weres overtaken by darkness, but finally found their way back and arrived at the life saving station at one the next morning, having been lost since ten in the preceding morning. When they failed to show up at dark, some of our party insisted on a hunt for them with lanterns, but I refused. I figured that they would do just what they did do, and that if they did not get into camp that night they would come in next morning. I persuaded the party to postpone the search until 9 A. M. and within ten minutes of nine they appeared on the road in a buggy from the station. A search would have been useless and was only avoided by a study of all the circumstances and a knowledge of the locality.

Sport in Austria.

MANUFACTURERS of sporting goods have a rapidly increasing market in Austria and especially in western Bohemia, says Consul W. L. Lowrie, of Carlsbad. Within the last ten years there has developed a liking for out-of-door games which have been popular in other countries for many years. In winter those who like the out-of-door life devote their spare time to ski running, coasting, and skating. Ten years ago skis were unknown in this part of the country, while now there are hundreds of devotees of this fascinating sport. It frequently happens that more than a thousand ski runners assemble on the Keilberg, the highest mountain of the Erzgebirge and fourteen miles from Carlsbad, to enjoy the runs and jumps afforded by the steep slopes.

Many of the cities have well-organized sport clubs which encourage all sports the year round. The one at Carlsbad is the most important in western Bohemia, and is called the Internationalen Sport-Klub Karlsbad.

The Luck of a Child

By O. W. SMITH

PHILOSOPHERS tell us that there is no such thing as luck, that every effect presupposes a cause. Now, I do not want to be understood as crossing swords with those wise men, for I am but an humble fisherman, but as a fisherman I must assert my belief in luck or something akin thereto. Why, bless you, we all know that some men will catch fish when the east wind blows and more scientific and better accoutered anglers fail, because—well, just because. Though I believe that proper tools and skill in using them will win out in the long run, I also know that it is not always the most experienced and skillful who catches the largest fish. We have all seen that fact illustrated again and again. Just why the largest trout in the pool, the one for which veterans have been angling without avail, should suddenly take it into his hard head to gobble the earthworm bait of some barefoot boy and be yanked out on the bank, is as hard for us to determine as it is hard for us to endure.

We all have our favorite trout streams, and mine is an unpretentious, slow-moving stream, too small to be called a river and yet too large to be called a creek; but a stream withal from which I have taken many large trout, and which still shelters larger ones. Probably because of its sluggish current, lack of rapids, and generally untrouty appearance, fishermen pass it by for more prepossessing water, and the stream remains the undisputed possession of a few old mossbacks like myself. While, as I said, the stream is almost currentless, it is as a consequence very erratic in its course, twisting and turning as it makes its slow way through low-lying cattle pastures and wide-reaching marsh meadows. As can readily be imagined such a stream would be a fly-fisher's paradise, so it has come to be tacitly understood by the elect few who whip its placid surface that only artificial flies shall be used.

Early in the season I discovered that a large trout had taken up its abode in a deep pool. The first time I caught a glimpse of the old fellow he rose to my fly viciously, but missed. Though I cast assiduously and used every trick of which I was master, the fish failed to rise again. Several times during the day I returned to the pool with high hopes, only to have them dashed remorselessly to earth; until at last in sheer desperation I borrowed a worm from my companion and offered it to the trout. That stirred the rascal. Gracefully he swept out from beneath the sheltering brush, circled the worm while I held my breath, turned his tail upon it contemptuously and, with an air of injured dignity, it seemed to me, swam sedately away.

All through May I haunted the stream. I fear that I neglected my work; I know that I invented excuses, so that I could have a try at the fish. Several times I caught sight of him, and he seemed to have grown an inch in length every time I saw him, for so does imagination serve us. A few times he condescended to notice my flies, and rose to them in a slow, half-hearted manner, but I did not succeed in hooking him.

At last I had two full days at my disposal, so I took the tent, wife and girl to the stream, determined to surprise the fish by nocturnal visitation and by offering all sorts of baits and lures at unseasonable hours. Time sped by, the second noon had come, and I was discouraged. After dinner that day I told my companions all about the fish and how faithfully I had worked in my attempts to capture it. Girl

HER PRIZE.

listened with shining eyes. The blood of a long line of trout fishers was running hot in her veins.

"Could I," and her voice trembled with eagerness; "could I borrow your fly-rod—it is longer than mine—and go down there and try just once?"

"Bless your heart, yes," I answered, "but don't expect results, for that fish is wiser than Solomon."

The tent was on a bluff overlooking the little creek, so the girl was constantly within my range of vision, and I watched her with all the interest of a father who delights to find his child an apt pupil in his favorite diversion. I smiled appreciatively when her crouched form stopped well back from the stream that she might in nowise disturb the trout in the pool; to me that simple act spoke volumes for the future. I secured the "bird glasses" in order that I might more clearly observe her actions, pleased that she was fisherman enough to "limber up" before she cast into the pool where the big fish was supposed to lie. Focusing the glasses, I sat down to enjoy the show, while Wife came and stood behind my camp-chair.

The child's first cast resulted in an average sized trout, which, judging from the expression of her face, she interpreted as a good omen. The next two or three casts were fruitless, then she secured another small fish. The two trout evidently steadied her nerve, and gave her courage. Keeping well back from the water's edge so that her light footfalls might not alarm the sensitive fish, she sneaked through the grass.

When she neared the pool which I had whipped again and again, she just poked the tip of the rod through the grass and lowered the bait upon the water, and in a moment she was hard and fast to the trout of my dreams. When my pet rod went double, I raced down that bluff. I was not long in reaching the child, but before I did the fish was high and dry on the bank. Think of it! The fish that had so long vexed and tempted me, disdaining my fancy flies and lures, had, with an absolute disregard for what we may term as conventionalities, swallowed the earthworm of a child and been dragged out of the water. The child's joy and triumph can easily be imagined. I believe there is such a thing as luck.

Natural Parks in Europe.

THE American national parks have caused admiration in Europe, and Consul-General Richard Guenther, of Frankfort, says that there is a strong movement in Germany and Austria to make similar reservations. He writes:

"The Kosmos Association of Naturalists in Stuttgart, the Duerer League, and the Austrian Imperial Association for Ornithology in Vienna have united in an address to the public calling for subscriptions to create a Natural Protective Park, which is to be a small copy of the great Yellowstone Park. This address was published last spring and since then has been followed up by a convention in Munish well attended by naturalists and scientists from all parts of Germany. An organization was effected, called the Verein Naturschutzpark, with headquarters in Stuttgart.

"The plan is to create three large parks, one in the Alpine Mountain Range, one in the highlands of central Germany, and the third in the low country of the north. The main object is to preserve and increase certain species of animal and plant life. The parks will become centers of attraction and recreation for millions of people, natives and foreign visitors. The fee for membership to this park association will be quite low, to encourage hundreds of thousands to join. The German and Austrian people are very fond of roaming in nature and take interest in this plan."

The FOREST AND STREAM *may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.*

GAME BAG AND GUN

Death of Charles Chouquette.

ONE by one as the years go by, those old-time residents of America who saw and were a part of the stirring events of the last century, are passing away, and of those who had to do with the early settlement of the West, few now remain. From time to time FOREST AND STREAM has recorded the moving onward of one or another of the men who, as explorers, military commanders, fur traders, or simple engagees, took part in the subduing of a West which once was unknown, wild and stubborn, but now is wholly tame, fertile, productive and—commonplace.

Charles Chouquette, old-timer, voyageur, trapper, interpreter and scout, died on May 18, at his home on the Blackfeet Indian Reservation in Northwestern Montana. He had lived in what is now Montana for almost the allotted span of man's life, and had witnessed all the changes that more than three score years had brought. During his long life he was honest, sober, industrious, reliable, highly thought of by his neighbors and friends; equally esteemed by the bourgeois of the fur company for whom he might work, the chief of the Indian tribe among whom this work lay, or the superintendent of the Indian school on the reservation.

Charles Chouquette was born in St. Louis, Feb. 18, 1822, the very year in which the town received its charter as a city. Its population was still largely French. It was already the center of an important fur trade, which was constantly growing greater. This fur trade, though well established out over the plains, had not long before begun to extend up the Missouri River. Of the French population of St. Louis, many of the strongest, most courageous and best of the young men took service with the fur traders. Among these was Charles Chouquette, who, at the age of twenty-one, became an employee of the American Fur Company, and in 1843 set out for the West, reaching Fort Union in 1844, "the year of the high water," as he used to call it. Old Bill Hamilton, as told in the book, "My Sixty Years on the Plains," had left St. Louis for the mountains the year before.

Not long after Charles Chouquette reached Fort Union, came the terrible smallpox, when the Indians gathered about the post and died there in appalling numbers. The employes of the fort buried them as they could, but at last, when freezing weather came, it was impossible to dig trenches for this purpose, and the bodies were stacked up like cord wood to await the return of spring and the softening of the ground.

During his residence at Fort Union, Charles Chouquette was often chosen for tasks of difficulty and danger. He often carried dispatches from Fort Union to the nearest post to the eastward, and the stories that he told of night rides in summer, and of foot journeys in winter, when dogs carried the packs of mail, were of extraordinary interest.

After years of service at the mouth of the Yellowstone, he moved up the Missouri to Fort Benton, and later lived at Sun River and Choteau. After a time he left the service of the Fur Company had became a free trapper, following that vocation during the season when furs were prime, and after the fur season closed, occupying himself with other pursuits. In one of his trapping journeys he wandered in the then unknown Yellowstone Park. Here or near here his horses were stolen by Indians, probably Sheep Eaters or Crows, and he was obliged to return to Fort Benton on foot, carrying his scanty possession on his back. He used to say that the Indians of those days regarded the Yellowstone Park as sacred ground, and that they used to boil antelope meat in a hot spring and considered that food their most powerful medicine in sickness.

On the plains with Charles was a brother, Roque Chouquette, who many years ago was frozen to death between Fort Benton and Sun River. Roque Choquette was traveling in company with Major Vaughn, then agent of the Montana Blackfeet. A great storm came on and Roque Choquette was sent to look for shelter and never returned. This was about the winter of 1857. His bones were found the following spring.

In the year 1855, when Governor Stevens made the first great treaty with the Upper Missouri Indians—Blackfeet, Gros Ventres, Assiniboines, Crows and Sioux—Charles Chouquette was one of the interpreters during the eight days of the councilling. Before this he had chosen a wife and made his home among the war-like Blackfeet of the Upper Missouri and Marias rivers, and here and among these people he died as he had lived.

One of his daughters, Louise, married the late Charles Aubrey, long known in Northern Montana political and business circles and long a correspondent of FOREST AND STREAM. Another daughter married John Wren, a familiar figure in Fort Benton and Choteau county in the days of the buffalo, the steamboat, and the bull team. Another married R. Morgan. Two sons, Charles and Antoine, live to-day on the Blackfoot Indian reservation.

Charles Chouquette came to the plains when might was right and the will of the strongest was the only law. He lived there for two generations of people, for sixty-seven years elapsed from the time when he reached old Fort Union until that day when he started on the long trail from which travelers do not return.

To Drain Lake Drummond.

RALEIGH, N. C., May 22.—*Editor Forest and Stream:* Alligator hunting is not what may be termed a profession in North Carolina, yet a good many are killed. Thomas Addickes, of the State museum, has returned from the southeastern part of the State. In a large pond on the Orton estate there are many alligators. Mr. Addickes had the good fortune to get specimens for the museum.

Herbert H. Brimley, curator of the museum, has also returned from Beaufort, where he visited some lakes which he has described in FOREST AND STREAM. He secured some fine specimens including six alligators. With one of these he had a curious experience. He stooped over the hole and kept quiet, and by and by the alligator, coming up to breathe, put his snout out of the water and Mr. Brimley, who is a powerful man, gripped him with both hands, holding his mouth so that he could not open it, then suddenly released one hand, drew his knife, bent back the alligator's head and cut its throat. This alligator was six feet long.

The Legislature acted wisely in enacting a law prohibiting the sale of certain lakes, part of the public domain, which have always been noted for their fish. One of these is White Lake, near Elizabethtown. In July the work of pumping the water from Lakes Mattamuskeet and Drummond will begin. There will be a battery of a dozen steam pumps, which will lift the water into a canal which will be used for drainage and also for vessels to come to what is now the rim of the lake. It is said that the drainage of this lake is the biggest undertaking so far in the United States, for it covers almost fifty thousand acres. The lake is to be cut up into plantations. Tradition holds that this lake, like Lake Drummond and others, was the result of a fire in some dry season. The peat is soft and the soil being burned out, water filled the basin thus formed. This lake, like Lake Drummond, is higher than the adjoining land. In the bottom of this lake, as in other lakes in this State near the coast and also in such rivers as the Cape Fear below Wilmington, there are vast numbers of partially burned cypress stumps, many of them of gigantic size.

Capt. Earl I. Brown, of the Engineer Corps, who did the work on the inland waterway near Beaufort, completed last year, tells me that 200 vessels are now using this route each month. The yachts coming up from the South pass in at Beaufort inlet and through salt water into the canal's south end, but soon strike fresh water and have this all the way until they reach the northern end of either of the Dismal Swamp canal, or the Albemarle and Chesapeake canal, since now they have the choice of either of these, though the United States is soon to take over the latter canal as the regular route between the North Carolina sounds and Norfolk.

FRED A. OLDS.

New York Legislature.

ALBANY, N. Y., May 29.—*Editor Forest and Stream:* Governor Dix has signed Assemblyman Manley's bill, providing that after Oct. 1, 1915, the open season for grouse shall be from Oct. 1 to Nov. 30, and for trout in that portion of Oneida county north of the Central Hudson railroad tracks from May 1 to Aug. 31.

The Senate committee on forest, fish and game has reported favorably Senator Burd's concurrent resolution amending the constitution by authorizing the State to use forest lands for water storage purposes, and to grant power rights for a period of not more than fifty years.

Senator Roosevelt's bill, reducing the price of hunting licenses from $25 to $10, has also been reported favorably by the Senate committee.

The Senate forest, fish and game committee has reported favorably Senator Long's bill, making the open season for ducks, geese, brant and swans from Oct. 1 to Feb. 1, both inclusive, instead of from Oct. 1 to Jan. 10, and making

the season during which they may be possessed from Oct. 1 to Feb. 15, instead of from Oct. 1 to Jan. 15, as at present.

Senator Emerson has introduced in the Legislature a bill providing that perch may be taken in Lake George at any time through the ice or otherwise. At present they may be taken through the ice by angling. Not more than thirty pounds of fish may be taken in a single day from the lake by fishing in one boat, either by one or more persons.

Senator Roosevelt has introduced a bill providing that short-nosed sturgeon may be taken in the Hudson River less than three feet long.

The Assembly has passed these bills:

Assemblyman Shortt's, creating a bureau for the purpose of shellfish cultivation, and for the protection and regulation of all shellfish and shellfish culture in the State. Assemblyman Shortt's, amending the forest, fish and game law in relation to marine fisheries.

The Senate has advanced to third reading the following bills: Senator Roosevelt's, allowing the forest, fish and game commissioner to settle or compromise actions for penalties. Senator Platt's, relative to the open season for fishing in Lake Keuka. Senator Bayne's, prohibiting the sale for food purposes to game generally.

The Senate has passed these bills: Assemblyman Gurnett's, relative to the open season and the manner of taking certain fish in Schuyler county. Assemblyman Gurnett's, relative to spearing suckers in Schuyler and Chemung counties. Assemblyman Constantine's, providing for no close season for blue pike in Lake Ontario. Assemblyman McDaniels, relative to spearing fish in Lake Cayuga. Assemblyman Evans', relating to eel weirs in the Delaware River. Assemblyman Evans', relative to skunk farms. Amending the forest, fish and game law so as to make numerous changes in regard to penalties. Senator Platt's, relative to the open season for fishing in Lake Keuka.

E. C. C.

Mixing Cartridges.

NEW YORK CITY, May 2.—*Editor Forest and Stream:* Under the heading "The Top Rail," Grizzly King writes that he cannot understand why Englishmen fear changes from the mixing of twelve and twenty-gauge cartridges.

The explanation is very simple. In England and Scotland most of the shooting is done at driven birds. Each shooter has two or three guns and one or two loaders. When a drive is in progress and a string of birds comes within range the shooter fires both barrels of his first gun, hands the empty gun to a loader, receiving from the latter a second loaded gun which in turn he discharges and in some instances exchanges for the third gun. The shooting while it lasts is much more rapid than anything we have in this country.

Now suppose a few twenty-gauge shells to be mixed in with the twelves in the pouch from which the loader takes his ammunition. The shooter fires and hands back the empty gun. The loader drops in a twelve-bore shell in the right barrel and a twenty-bore shell in the left. The twenty-bore shell falls through the chamber until its rim sticks in the tapering end where the barrel begins and remains there. The loader does his work by touch, as his eyes are on the shooter and the birds. The shooter being given the gun again pulls both triggers and apparently has a misfire in the left barrel. The loader upon again opening the gun to reload does not in the excitement notice that only one empty shell flies out of the breech, but drops in two more twelve-bore shells. In the left barrel there is now a twenty-bore shell firmly held in front of a twelve-bore shell. And at the next shot from that gun the shooter is lucky if he does not lose an arm.

JOSEPH C. BULKLEY.

Spring Shore Bird Proctection.

JUST as FOREST AND STREAM is going to press comes the news that Joseph Sauter, of the Fish and Game Commission, has just returned from a trip to Great South Bay, where with three wardens he has been looking after the violators of the law who were killing shore birds on the beaches, inlets and marshes of Great South Bay.

The trip lasted four days and is said to have resulted in the capture of five pot-hunters, one or more of whom is said to have shot at the wardens. According to the accounts there has been this year an extremely large flight north of shore birds, and they have stopped on the shores of Long Island in numbers quite unprecedented in recent years.

The trip was made from Islip on board the Forest, Fish and Game Commission launch Olive, and there was quite a large crew aboard. The first man captured was a foreigner who declared his ignorance of the game laws, but nevertheless, according to the story, vowed that he would shoot the wardens if they came near him. Between sunset and dark two were gathered in and the three captives were taken ashore and turned over to the authorities. The following day, Friday of last week, the news had evidently got about that the game protectors were in the neighborhood and there was no shooting all day. It is reported that from the fish commission launch great multitudes of birds were seen.

Mr. Sauter is quoted as saying:

"There has not been such a flight of shore birds in many years as there is now on the waters of the Great South Bay, and we are going to protect them until they leave for their nesting grounds in the North. John B. Burnham, who has charge of the Forest, Fish and Game Commission at present, has brought up this matter, and through his plans being carried out not only will these birds be guarded while they are here on their northward flight, but when they return early in the fall we will be ready to stop any one from shooting them.

"I have charge of the Metropolitan district, which includes New York and Long Island, and Mr. Burnham, who is a sportsman and naturalist, as well as being the acting head of the game commission, has planned our campaign to protect these birds for months. Some years ago thousands of snipe and other shore birds were killed every year in spring in the neighborhood of Great South Bay, but this year the number has dropped to a few dozen, and in nearly every case we have captured the men who did the shooting and made examples of them, either through fines or imprisonment if they did not pay.

"All sportsmen of New York are working with us in the effort to protect wild life, and never before have we been able to accomplish so much as this year, owing to the systematizing of our work under the new régime, together with the acquisition of a boat like the Olive that can get us where we want to go in a hurry."

The Olive is a motor boat fitted with everything from a high power searchlight to a well appointed galley and sleeping accommodations for eight men.

Seasonable Advice.

AT this time of the year, when, alas! we shall have so soon to be putting our guns away for another season, it is as well to offer a little advice on the subject, since the careful storage of weapons is a matter of importance, and one that is often overlooked when the gun is no longer the daily companion of one's leisure. There are more guns spoiled each season by carelessness in storing, says the Shooting Times, than in actual wear and tear of usage, for of all the things that does a gun harm rust is the very worst. For keeping a gun in good condition for any length of time, both inside and out, there is nothing to equal vaseline, which may be purchased very cheaply for the purpose. The gunmaker always employs this substance, and that is sufficient recommendation for its use. The best way to apply it to the locks and outside parts of the gun is with a brush, the vaseline being reduced by heat to the thinnest possible consistency before it is used. The coldness of the metal will at once cause it to solidify into a thin protective coat of grease that no damp will penetrate if it is evenly applied, but care should be taken that every part of the work is reached.

The barrels are to be coated outside in the same way, and the interior may be reached by smearing a little of the vaseline on a piece of tow that fits loosely into the barrel on the cleaning rod, the latter being drawn gently through the barrels once or twice. For the interior of the locks, which will not need oiling more than once in the year, a very small quantity of the fine oil sold for the purpose will suffice, but the mechanism, if it requires it, must be thoroughly cleaned beforehand. The woodwork of stock and fore-end should be wiped over with a rag that has been damped with sweet oil. After all is ready for putting away, the whole of the parts should be wrapped in grease-proof paper, or, failing this, in glazed brown paper, and put away in the case.

Guns stored in a dry cabinet will require no wrapping, of course, but when no case or cover of any sort is used it is best to make the stock and barrels into separate parcels, each being wrapped in newspaper first and brown paper afterward. If this be done carefully, the weapon will come out in perfect condition when wanted and be ready for immediate use after wiping over with a cloth.

An Old Maine Bear Trap.

T. B. F. BATES, of Oakland, has a bear trap made by a Lubec blacksmith in 1787 to catch bears. The present owner has also used it for this purpose. The trap has two large springs, one on each side of the jaws; on one of the jaws are five large teeth and on the other side six. The jaws have an opening of 12 by 14 inches.—Lewiston Journal.

Game Bird Shooting.

IN its review of the recently published book, "American Game Bird Shooting," by George Bird Grinnell, the Boston Herald has this to say:

The author has aimed to make this a companion volume to his "American Duck Shooting," and a worthy one it is. While claiming to have presented a more complete treatment of the subject than has hitherto been attempted, he has restricted the term "game bird" to birds which are usually hunted with the use of dogs. This excludes species of the feathered tribe which offer good sport and are excellent for the table, such as plovers, beach birds, the Bartramian sandpiper and rails. The book has three principal divisions, the first being devoted to "American Game Birds." Under this head the author begins with the snipe family, such as the woodcock and American snipe, and passes quickly to the gallinaceous variety, giving special attention to the American quail and grouse. In a clear and painstaking way he differentiates these birds, naming their various species, markings, their habitat and life ways, his object evidently being to interest sportsmen not only in the sport itself, but in the birds they seek. To facilitate this, a liberal use is made of plates, some of which are in colors. Technical terms are used for the family genera and species in the interest of scientific accuracy, but they do not intercept the non-scientific reader's interest. Another noticeable feature in the treatment of the subject is the author's attitude to the indiscriminate and unsportsmanlike slaughter of rare game birds. He pleads constantly for the sportsman's self control, needed restrictions and the enforcement of game laws. He mentions several species almost extinct, not through the effect of untoward climatic conditions wholly, but the lack of official protection and thoughtlessness of the hunter.

Especially interesting is the treatment of the wild turkey. Mr. Grinnell mentions the fact that it is purely indigenous, extending its ancestry back to Tertiary times, portions of its skeleton having been found in the Miocene deposits of Colorado and the post-Pliocene of New Jersey. In Massachusetts this *rara avis* persisted till the beginning of the last century, being seen and hunted in Cambridge at that time. Gradually, however, as the population increased in New England, it was driven back, till at present it finds its haunts in the Southern States, in Arizona and New Mexico, and in the Rocky Mountains. There are outlying colonies of a few birds still in Iowa and Nebraska, but such colonies, in the opinion of the author, cannot long remain unless protected. In the Rocky Mountains they build their nests at an altitude of 3,000 to 5,000 feet, but as summer approaches they ascend to greater heights, being found at 8,000 to 10,000 feet. In autumn they move down to find shelter in cañons or timbered river valleys, where they live through the winter.

The second part of the book is devoted to "Upland Shooting," and the woodcock, quail and grouse are amply dealt with. In this division Mr. Grinnell also treats of "Aids to Shooting," "Clothing," "Guns and Loads" and "Dogs," their relative value and working methods. In part III. he discusses "The Shooting of the Future," in which the introduction of foreign game birds is treated, particularly the English pheasant, which flourishes well in certain sections of the country, and the Hungarian partridge. The latter, which is the gray partridge of Europe, is the latest experiment, having been brought over within the last four years. It is said to thrive well, and is believed by many to be the coming game bird. The concluding pages take up the theme of "Destruction and Protection." The gist of the author's summing up is found in these words: "In view of all our experience it is clear that American sportsmen cannot continue to kill off their game and still have their covers full of birds. I believe that a time will come when there will be good shooting in many parts of the country, but this will not be until gunners have been taught the lesson of self-control. Methods must be devised for restocking our fields and woods, and the birds put out must have an opportunity to live and to reproduce their kind. This means better enforcement of law, shorter open seasons and a bag limit."

On the whole we have here an entertaining and useful book, which will be read with keen interest not only by sportsmen, but by those who cannot indulge in the use of a gun and dog, but who love nature and her children.

Massachusetts Legislature.

BOSTON, Mass., May 27.—*Editor Forest and Stream:* The bill for a commission of one man at the helm together with a deputy in charge of sea and shore work, which was referred to the Committee on Ways and Means, has been reported upon unfavorably to the House and there defeated. It is understood that the measure is finally defeated so far as this session is concerned. The bill called for a salary of not less than $4,000 for the commissioner and one of $2,500 for the deputy in charge of the sea and shore work. The advocates of the changes contended that with a commission of one man the possibility of shirking responsibility would be removed and better results might reasonably be expected. It is not unlikely that political considerations had much to do with the defeat of the bill. The result is a disappointment to many of the sportsmen.

Senate Chairman Keith made a strenuous effort to have the deer bill amended in accordance with the wishes of President Treadway and the general sentiment of Southern Berkshire by exempting Berkshire county from the five counties in which an open season of six days is allowed. Senator Malley, of Springfield, objected to this and declared that he was opposed to the slaughter of deer and favored permitting game wardens only to kill them. Senator Mellen, chairman of the Committee on Agriculture, declared that "the farmers do not want slaughter, but do want protection." Several other senators participated in the discussion, and the vote stood yeas seventeen, nays nineteen, and the bill was rejected. There seems no likelihood of further action, and the law remains as last year. Northern Berkshire is pleased and the southern portion of the county is disappointed. Certain sections of Berkshire are well adapted to deer farming.

At the last meeting of the executive committee of the Massachusetts Fish and Game Protective Association, George M. Poland, former representative in the Legislature from Wakefield, and for a time legal counsel for the State association, was elected to fill the position of librarian, recently made vacant by the death of Dr. E. W. Branigan, and it was voted that the books be placed in the office of the association in the Tremont building. After the business of the evening, Dr. Heber Bishop, of the committee, made a very interesting talk on his recent balloon trip with Mr. Leo Stevens, of New York city, from North Adams across portions of Massachusetts, Vermont and New Hampshire, landing near the city of Keene in the latter State. The doctor also exhibited several photographs taken by him on the trip.

Many of your Bay State readers know that Thomas L. Burney, of Lynn, has been for several years one of the most active of the State game wardens. Previous to his appointment to that office he was one of the pioneers in organizing the Lynn Fish and Game Protective Association, which has made an excellent record as a working body of sportsmen. Mr. Burney recently arrested Corporal Campbell, of the 157th Company Coast Artillery, U. S. A., located at the signal station at Nahant for shooting an eagle, the bird emblematical of United States sovereignty. The bird was a young specimen of the bald eagle and is being cared for by the deputy and apparently on the way to recovering from its wounds. Judge Wilson, of Nahant, imposed a fine of $20 on the corporal.

H. H. KIMBALL.

Aliens Punished.

NEW ORLEANS, La., May 26.—*Editor Forest and Stream:* During the past week three Italians were fined $25 each for hunting during the closed season, and also hunting without a license. The Game Commission made the charges and the three men pleaded guilty before one of the city recorders. The defendants, it was claimed, were not naturalized citizens of the United States.

New Publications.

LIFE HISTORY AND HABITS OF THE SALMON, SEA TROUT AND OTHER FRESHWATER FISH, by P. D. Malloch. Cloth, quarto, 264 pages, illustrated from photographs, $3.50 net. New York, the Macmillan Company.

With all the safeguards that are thrown around the salmon in British waters, the loss, according to Mr. Malloch, is appalling. Illegal fishing, water pollution and natural enemies are the causes. In the Tay district alone he estimates the number of immature fish taken by anglers at 157,000 for six months.

An interesting record was obtained through the marking of salmon and the recording of their scale growth. Out of over 1,000 salmon examined in February, all save about 10 per cent., which had spawned, were five years old, with an average weight of 20 pounds, but one of them weighed 38½ pounds. Another five-year-old salmon, weighing 35 pounds when taken in 1908, was marked as a smolt in 1905, when its weight was 1½ ounces. It had been in the sea nearly three years and had not spawned. As a result of marking, Mr. Malloch says he is convinced that many salmon of 40 pounds and upward are on their first return from the sea when captured. Aside from the marking of the dorsal fin with wire, the rings on the scales are counted, and these, it is claimed, give accurate records.

The value of the salmon is illustrated in a statement that whereas thirty miles of the North Esk brings only $2,500 in rentals from salmon fishermen, two miles of this river further down rent for $25,000.

Of the spawning habits of salmon, Mr. Malloch says:

"About the middle of November they leave the pools and come on to the streams. Here they select a bank composed of sand and gravel which is not very liable to shift throughout the season. Here the female digs into the gravel with her tail, turns on her side and gives a few scoops among the gravel, turning it up with each movement and making the water quite dirty. The spawn, which is being deposited all the time, falls to the bottom and is covered up with each stroke. This process is renewed every five or ten minutes, the fish working upstream all the time. If the gravel is easy to work, the spawning bed thus scooped out is often a foot deep; and by the time spawning is completed, the fish will have turned up the gravel to the extent of two or three yards upstream and about two feet across stream.

"The spawning beds can always be detected by observing the light color of the gravel which has been newly exposed, contrasted against the darker-colored part on each side. The whole process of depositing the spawn in the gravel to the depth of ten or twelve inches occupies from three to fourteen days, according to the state of the weather and the water. So eager are the fish to spawn in their own river that I have observed them begin five minutes after they entered. If, on the other hand, they are prevented from spawning by being delayed in pools during low water, they retain their spawn for weeks longer than they would have done had the water been suitable for their reaching the spawning ground. Very often one fish begins to spawn where another left off, and one follows another in this way until the spawning bed is twenty or thirty yards long.

"While the female is working, the male, if undisturbed, remains beside her, and occasionally pushes her sidewise off the bed for a second or two. If another male comes near, however, he rushes after him with his mouth wide open. Although this is repeated each time an intruder comes near, they seldom take hold of each other. On carefully examining a bed after a fish has spawned, or when it is spawning, one may see a considerable quantity of spawn at the lower end of the bed, uncovered with gravel. This may be either washed away by the first flood, or eaten up by trout or sea trout."

While salmon may spawn at any time, day or night, Mr. Malloch says they are most active from sunset to midnight. "Grilse," he adds, "often spawn with salmon, sea trout with grilse, and trout with sea trout, in a season favorable for fish running up."

The volume is an exceedingly interesting one, and the illustrations are very fine.

Book Exchange.

No doubt there are many of our readers who possess old books, and others who would be glad to possess them, and we are, therefore, making a special place in our advertising columns, which may be called a book exchange, where those who wish to purchase, sell or exchange second-hand books may ask for what they need, or offer what they have.

THE TOP RAIL.

HERE is a new one, which would seem to show that no matter how much you have studied and practiced firearms and shooting, the reporter knows more about such things than you may hope to learn in a life time. In the Times this appeared:

> But the money doesn't worry me so much as those guns. You see, I am a cripple, and can't help myself, as other men can, and that is why I always carried two revolvers. My right arm is paralyzed, and so I had the guns made to order, splendid weapons, equipped with a left-wheel break and especially constructed with the view of being handled with the left hand. The thief took both those fine guns, and I could hit a bullseye at sixty yards with either of them.

Many of the old model revolvers are loaded from the right-hand side and the cylinder revolves to the right. With the new model solid frame revolvers the cylinder is tipped out to the left, and in some of them the cylinder revolves to the left. If the man who lost his guns ordered them made with "left-wheel breaks"—whatever that means—it is possible the manufacturer sent him a couple of new model revolvers, and he, seeing that the cylinders were left-handed, so to speak, fancied they had been made to order. If so the maker's sense of humor was satisfied, and the owner's fondness for made-to-order guns gratified. He could have ordered one "right-handed" and the other "left-handed," and the two would have been as twins.

* * *

BROWN spends his vacations among the cowboys of the West, and the balance of the year in telling his friends in the Western vernacular that the East is no p'ace to live in. Once he attempted to persuade them to discard their motor cars and other toys and ride horseback. Now and then one fell before the tempter, got a big hat and spurs, borrowed a California saddle, and hired the nearest thing resembling a cow pony to be found. On one occasion Brown made up a party for a certain Sunday, but when he came to order the one horse that, in the whole countryside, resembled the cayuse of his dreams, he found that it had been pre-emp'ed by one of his converts. He had the big saddle, the wide hat, the spurs and the silver-inlaid and braided bridle, hair rope and high-heeled boots, but no cayuse.

He was desperate, so he took the only beast the liveryman had that was stout enough to bear the great sadd'e. This was Dolly. And Dolly is worthy of description as she appeared that morning. White in places where harness marks had not removed the hair; feet like inverted jardinieres; legs intended to support and propel her half ton of ill-proportioned bone and flesh; a gait that moved her at least two feet horizontally to every foot vertically. As a cow pony she was less attractive. Her only fau't, the black who brought her said, was that she was "skeered of buzzwagons."

The cavalcade proceeded. The craning of necks would have delighted Brown another time, but just then he was not wholly happy. They took a long steep hill at a walk. Half-way up Brown noticed that Dolly's ears were tilted backward in the angle of attention. From far away came a familiar buzz; it grew louder every second, and Dolly handled her feet in a way not practicable in plow harness. The motor-car driver threw in another clutch—whatever that means—and Dolly waltzed into a thicket on two legs, landing in a field. As she came to earth Brown, flustered, forgot that his spurs were for ornament only, and when they came in contact with Dolly's tug-worn sides, she made two jumps and landed in the middle of the road right in front of the car. What caused it Brown does not know nor care, but just as the monster was "browsing off Dolly's stumpy tail," to quote Brown, a tire blew up.

The benzine buggy became a thing inert. What Dolly did and Brown tried to do I leave to your imagination; it was worth seeing, but I cannot describe it, for it happened in a cloud of dust.

* * *

CAPTAIN A. W. MONEY, who lived for many years in the United States, and who has lived also in the far East and in England, his native land, is quoted by the County Gentleman as saying that, although he has keenly enjoyed shooting driven game in England, his preference is for other kinds of shooting.

Shooting driven birds, says the veteran, "does not and never has compared with shooting where there is nothing artificial and where you can do as you please; begin when you like, leave off where you like; go where you like, and eat where you feel inclined; carry your own gun, load it yourself and be content to use one only; own your own dogs, work them yourself and carry your own game, as done in America."

And the paper referred to says in comment that "a vast amount of English game shooting is done in just the unceremonious kind of way that Captain Money describes. It is regarded as so unremarkable that nobody thinks of remarking it." But the paper in question, in trying to correct a popular error as to Americans' viewpoint, falls into one on its own account when it says: "In America there is no tax to stop a man from owning or using a gun, and if he wishes to go after game he can do so quite easily without trespassing."

It is true that we impose no direct tax on the possessors of firearms, but the States where non-residents can shoot game without paying a license fee are exceedingly few, and the resident license fee plan is extending gradually all over the country.

* * *

SOME of the Hudson River boatmen are characters. Most of them will pile into a boat or jump off a pier in a jiffy if in doing so they can relieve persons in distress. One of them rowed several miles one Decoration day, most of the distance against a strong flood tide and a stiff breeze, assisting a sma'l boat sailor who had capsized, only to find, when the grateful one sought to remunerate him for his timely help, that the bathing suit he wore had no pockets and the boatman got no reward. But the latter only laughed as he said, "Oh, that's all right. Glad to he'p you."

GRIZZLY KING.

FOREST AND STREAM
A JOURNAL OF OUTDOOR LIFE,
TRAVEL, NATURE STUDY, SHOOTING, FISHING, YACHTING.

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,
127 Franklin Street, New York.

GEORGE BIRD GRINNELL, President,
CHARLES B. REYNOLDS, Secretary,
LOUIS DEAN SPEIR, Treasurer.

CORRESPONDENCE.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Terms: $3.00 a year; $1.50 for six months. Single copies, 10 cents. Canadian subscriptions, $4.00 a year; $2.00 for six months. Foreign subscriptions, $4.50 a year; $2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davis & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line ($2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line.

A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be received by Saturday previous to the issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

BIRD AND BIRD MAN.

HIGH altitudes affect different persons in various ways. Flying at high speed develops impressions that vary with the individual. Hence it is that the story of the attack by an eagle on M. Gibert, the aviator, must be accepted with a liberal sprinkling of salt.

It was in the third stage of the Paris-to-Madrid aviation race that M. Gibert, shortly after leaving San Sebastian, and while high above a desolate mountain region, was—or thought he was—attacked by an eagle. The great bird, he said, "struck at him with its beak," which is not in accord with eagle habits and is contrary to physics. But as M. Gibert reported the loss of his cap, perhaps this particular eagle had formed the souvenir hunting habit, and in gratifying its desire did what no other wild creature has shown bravery enough to do—ignored the roar and sputter of the motors.

It is by no means impossible that a great bird, absolutely free from danger of attack by any enemy while in the air, might have ventured close to an aeroplane, drawn there by motives of curiosity. As to whether it actually made hostile demonstrations we have only the testimony of the bird man, and a man who is driving a flying machine is not favorably situated for making careful observations in natural history. The story will be popular in newspaper offices.

NEW YORK AQUARIUM.

THE application made last week to the Board of Estimate and Apportionment of New York city for the sum of $1,750,000, to be used by the New York Zoological Society in the construction of the new Aquarium, is still under consideration.

The plan of the proposed structure has been already published in FOREST AND STREAM. It is to consist of the present building with two large wings and another story, and, if carried out as contemplated, will treble the exhibition space of the Aquarium, and will make it one of the largest in the world. Not only will it be the largest for exhibition purposes, but it will have in it a great floor space which may be used by the Zoological Society for work leading to the establishment here in New York of a marine biological laboratory such as the world has not yet seen.

No institution in America is so popular as the Aquarium, and none has so large an attendance. The city authorities recognize this and appreciate something of the good done by the institution. Whether the Board of Estimate and Apportionment will be disposed to grant the great sum asked for—the expenditure of which is to extend over five years—is not certainly known. It is believed, however, that the budget committee of that board has reported favorably on the request, and there seems a good prospect that the money will be allowed.

The work done by the New York Zoological Society, in establishing the Zoological Park and in carrying on so efficiently that institution and the Aquarium, has counted for much in the last ten years in behalf of the citizens of New York. That work has only begun and as time goes on will prove increasingly useful. The society's work in behalf of science is about to begin; we believe that it is to be a great work.

THE French Ministry of Agriculture has submitted to the Government a plan which, if adopted, will result in sweeping changes in the fishery laws. Among these is one provision by which any person may fish with so-called floating lines on any State water during the open season. He may fish from boat or bank, but his tackle must be only of a kind which will require his constant attention, hence set lines and other wholesale devices are barred. The angler can use only two single hooks, and spoons and other metallic baits are prohibited. No industrial concern whose refuse waters may pollute streams can become lessees of fisheries belonging to the State within 2,000 meters of the point where such refuse is discharged. There are other meritorious provisions, but on the other hand, fishing on Sunday in the closed season is to be permitted, and it is rumored that the reason for this is that in certain parts of the republic the authorities are unable to enforce the law on that day, in season or out.

THE people of Newfoundland take pride in the so-called free fishing they are offering to residents and visitors alike. An angler from the United States or Europe must, on entering Newfoundland, pay a fee of $10 for a fishing license. Thereafter he may go to any stream, lake or inlet on the island and fish as long as he desires during the season, and no man shall deny him. Later, on procuring a shooting license, at a cost of $50, he may roam the entire island at will—except for a certain relatively small sanctuary for game—and kill three bull caribou and small game without stint. This is free shooting and fishing in the sense that the game, the fish and territory they occupy are held by the insular Government, which refuses all applications for rights to establish preserves. The situation is novel, but this plan appears to be succeeding. Newfoundland is providing an object lesson on the conservation of game and fish for economic as well as sentimental reasons.

WHILE some horticulturists are looking forward with apprehension to the coming of the seventeen-year locusts, sea anglers wisely aver that a locust year is a favorable one for their favorite sport. Last year was an unusually good one alongshore, and if 1911 is to be a better, then anglers may rejoice. It may be said in passing that quiet but thorough preparations are being made by a number of sea anglers to excel E. T. Townsend's record for number and size of Atlantic tuna. Mr. Townsend will no doubt be heard from again ere long, for he has seen and hooked far greater tuna off Asbury Park than any of those he brought to gaff, and is making preparations to be early afloat.

THE Appellate Division has affirmed a judgment entered by Justice Blanchard, of the Supreme Court, in the case of the New York Association for the Protection of Game vs. Conron Bros., commission merchants of New York city. The association brought suit, alleging possession of game in the closed season. The commission firm admitted this, but said that the game was held under bond as required by Section 241 of the game law. The association demurred to this answer, maintaining that this section was unconstitutional, as being class legislation. Judge Blanchard over-ruled the demurrer.

WHERE it is deemed advisable to divide a State into game or fish districts, in order to secure the most efficient protection, county lines are customarily employed. In Colorado a different plan is in contemplation. It is proposed to permit trout fishing until Nov. 1 in all waters less than 9,000 feet above sea level, while above that mark the season will end one month earlier. The newly formed Colorado Anglers' Association favors the plan, for much of the most enjoyable fishing is had in October in Colorado, a balmy season when streams are low and clear, and skill is required in luring trout.

THROUGH the kindly offices of Carl Walk, a large part of the library of the late Julius C. Walk, of Indianapolis, has been presented to the Marion County Fish and Game Protective Association. These are books on fish and fishing, and a place has been found for them in the club house at Riverside Park, Indianapolis. The club is an influential one.

THE loss of chestnut trees in New Jersey, due to bark blight, has cost owners nearly half a million dollars. This is according to an estimate covering recent years made by State Forester Gaskill.

Bats the Enemies of Insect Pests.

TORONTO, Canada, May 24.—*Editor Forest and Stream:* The value and possible preservation of our insect-destroying bats is a subject of great economic importance. Aside from the practical usefulness attaching to it, there is felt by all true sportsmen a keen interest in any researches made in natural history.

What I have to say chiefly concerns the common gray bat which, in former years, was so numerous in the Northern States and Canada, and which of late has practically disappeared.

The imperative necessity to the fruit grower of the bat's continued existence I shall endeavor to show and explain. This bat is a true hibernator, which remains torpid throughout the winter season. Herein lies the crux of the question, for naturalists have shown that all hibernating creatures are dependent for existence on the preservation of their hibernaculum. To destroy this is to exterminate the creature, for they are all restricted within the limits of their own zoogeographical districts, which they never leave. If some species of bats migrate, we may be sure they are not hibernators, and the few that exist are not interfered with by the ruthless spoliation of man, who in many sections has absolutely swept away the bats' winter homes.

In those districts where the operations of nature have left caves in the ground, or on the sides of hills, hibernating bats find all the protection which is necessary, both from severe co'd and daylight. This being the case, the cost of constructing artificial places where bats might hibernate and multiply would be very little compared to the value derived from the outlay. A cave hibernaculum in any fruit district, which was made on the side of a hill, having a southern aspect, and as large as a farmer's root house, would provide a place where colonies of bats would take refuge and keep down all the fruit-destroying moths in the neighborhood. These artificial hibernaculums would take the place of the dense cedar swamps, or more properly speaking, ravines, which formerly existed. In constructing such places no ventilation would be required, for no oxygen is consumed during the trance of hibernation, the torpidity extending to the lungs as well as to the other parts of the body.

I am surprised to hear that the Biologieal Survey at Washington has had difficulty in discovering the nature of the food which supplies sustenance to our native bats. I have repeatedly seen them catching the moths which deposit their eggs in various kinds of fruit, and others must have had opportunities of observing such a common occurrence. If at night you hang a coal oil lamp, such as is used by railway conductors, to the branch of a plum or cherry tree after the fruit has been well formed, you may observe how cleverly the bats swoop down from a height and catch the moths that gather round the light. They do this without ever striking the lamp. It may require careful watching to discover what the bats are doing, for it is only when a large white moth is captured and triumphantly carried away that you become aware of what is taking place. In former years it was a common practice to hang a light in a favorite plum or cherry tree to save the fruit from the depredations of the moths. The explanation given was that the moths were so blinded by the light that they could not see where to deposit their eggs. The device, however, was too troublesome and expensive to come into general use.

In this vicinity at the present time you would have considerable difficulty in verifying this experiment, for the bats have disappeared. The moth pest, however, has increased to such an alarming extent that fruit growing is becoming more difficult every year. To accomplish what the bats and birds formerly did for us, constant application to the trees of poisonous mixtures is necessary.

This condition of the fruit industry differs entirely from that which prevailed in the early days of my boyhood. At that time bats were seen flying about at night in thousands, and the destruction of fruit was not known or spoken of. All kinds of fruit grown in the State of New York were abundant. Shortly after two large cedar ravines were cleared and the trees cut down, a great change took place. The surrounding district had been under cultivation for at least a century, but the cedar trees had been preserved as they originally stood. They were of special value, and a few were occasionally sacrificed to supply posts for fencing. Ultimately they all went for railway ties and telegraph poles.

On one occasion my attention was called to an unusual occurrence which took place before these primeval ever-green monarchs were cut down. A large quantity of brush had been piled along the eastern boundary of one of these ravines and close to the trees. The wind at the time was blowing from the east, and this brush had either caught fire or was being purposely burned. From the fire dense columns of smoke were blown into the trees. The effect of this was remarkable. Thousands of bats were seen flying about in all directions trying to get back to their dark abodes, or to find some other retreat that would protect them from the daylight.

In the older settled districts which have been under cultivation for a long period you will not find anyone who can describe to you what these original cedar ravines were like, or what a blessing they were in affording shade and shelter to all animal life. Summer and winter the evergreen foliage was so dense that it was impossible to get through it unless you followed the old deer paths that had been there from time immemorial. The heaviest fall of snow could reach the ground only in spots, and though the mercury might fall many degrees below zero, the ground remained unfrozen.

When the time comes that famine is sore in the land, then the public conscience will be awakened to what is a national scandal. We are all aware of the fact that the pot-hunters of the Southern States have nearly exterminated every insect-destroying bird that nests in the North and migrates to the South in winter. Except for the raucous caw of the crow and the angry chirping of the English sparrow, the Northern woods and meadows are now in many places as silent as a deserted village grave yard. A returning absentee, who has been away for two decades or more, will always inquire what has become of the droves of gorgeous birds we used to see in our country rambles; the multitude of bobolinks, or reedbirds, that were seen and heard as they hovered over the clover fields and sang their joyous songs in the air; the thrushes, the orioles, the highholders (*Colaptes amatus*), the meadow larks, the bluejays and a host of other birds too numerous to mention. The answer is always the same: "They migrate, and there is an army of pot-hunters in the Southern States who live by slaughtering them in thousands and sending them by carloads in cold storage to New York. There they are served up on toast as snipe and reedbirds for dollar-hogs to eat."

Here is what that charming naturalist, Wm. T. Hornaday, tells us of bats: "The great majority of bats are useful to man in destroying the insects which, without the aid of birds and beasts, would very soon overwhelm him. In regard to the habits of bats, little is known and much remains to be found out. Although they are nocturnal feeders, they are by no means blind when disturbed at mid-day, for they will then fly away to places of security as briskly and successfully as so many swallows. We know that in winter some of our species live in caves in a semi-dormant condition; thousands inhabit the Mammoth cave. They fly readily if disturbed in summer, but in winter they hang apparently lifeless. If knocked from the roof, some of them fall to the bottom of the cave and flap about, others fly away. In Central Montana, where there are no trees, I found a large colony of bats inhabiting a cave that a subterraneon stream had washed under the prairie."

Egypt has always been a land of plenty, and in recent years the production of fruit and cotton has been phenomenal. But Egypt is the land of bats and birds. If it were not so, the date crop would go to the moths and the cotton crop to the caterpillars. The old deserted temples provide habitations where millions of bats take refuge from daylight, and migratory birds from Northern latitudes visit the country in winter in such multitudes that it becomes a marvel to imagine where they can all come from.

In calling attention to this matter I feel assured that I have the sympathy of all true-hearted sportsmen who do not wish to see humanity expelled from the land and driven into those human plasmodiums which are called "ghettos" and are to be seen in all large centers of population.

A CANOEIST.

Chat and Thrasher.

NEW YORK CITY, May 23.—*Editor Forest and Stream:* On Sunday last, May 21, I witnessed an unusual incident in bird life, and I wonder whether it will seem to you worth recording.

About the middle of the day I had seated myself under a spreading apple tree in a brushy fence corner to spend a little time looking for birds, a pleasure which of late years I have been obliged greatly to neglect. The day was warm and windless, and the sky overcast. Various common sparrows, brown thrashers and blackbirds were about and a few warblers.

After sitting for a while I heard—apparently two or three fields distant—the notes of a yellow-breasted chat, a bird I had not seen for several years partly because of lack of opportunity to be out of doors. I called my companion's attention to the note, and described the bird and some of its odd ways, and she expressed the hope that it might come over to us.

A few moments later a bird flew into a nearby small scrub oak, branched down to the ground. It was our chat. He fed there for some time and gave us a fine view. At times he would work up the tree on one side to the topmost branches, then down on the other and then spend a little time on the grass beneath. Presently, while he was on the ground, a brown thrasher darted from a hedge row fifty feet from the little oak straight for the chat, which took wing and flew off across the field. The thrasher did not follow, but fed about in the tree and on the ground, spending more time on the ground than the chat had. Presently the thrasher flew away to the hedge row he had come from, and, somewhat to my astonishment, five minutes later the chat returned to the little oak and again began to feed.

While we were watching him and when the chat was in the branches of the tree four or five feet from the ground, back came the thrasher—not apparently with the purpose of feeding, but rather of attacking the chat, which again took to flight. The thrasher again spent a few minutes hopping about, feeding and again retreated to an apple tree in the hedge row, and not very long after the chat came back again.

I sat for some time on the watch, wondering whether the big bird would make a third attack on the lesser one, but he did not do so; and after a time the chat having apparently exhausted the food possibilities of the little oak for the moment, flew away across the field.

By this time the sky had cleared and the sun was shining with great force. I left my station and returned to the house. G. B. G.

SEA AND RIVER FISHING

The Biggest Artificial Fly.

WHENEVER the opportunity presents itself, some enterprising or patriotic person in England invents a new artificial fly. There are two, at least, so far to appear in the festivities which are to culminate in the coronation of King George, himself an angler. These are the coronation and the empire. Just how these are tied is not known, but in each the colors, red, white and blue are prominent. The coronation fly is said to have "white angel's wings, sky-blue body and sunset hackles," hence it is not remarkable that they are being made up into brooches for women's wear. It is also added that trout take the new fly eagerly!

The empire fly has attracted the attention of visitors to the Festival of Empire and Imperial Exhibition in London. One of these was suspended high overhead in the transept of the building. It certainly is "a fly to catch the eye," says the Fishing Gazette, being a blaze of rich patriotic red, white and blue velvets, silks, satins, ostrich feathers, golden bands and cordings. The dressing is an exact reproduction of the newly invented empire fly. The size of this model fly must be imagined when it is stated that a proportionate fisherman to cast it must be at least 600 feet high and his rod 1,800 feet long! The hook is over nine feet long, and the wing thirteen feet.

Fishing in the South.

NEW ORLEANS, La., May 26.—*Editor Forest and Stream:* Superintendent E. A. Tulian, of fish hatcheries for Louisiana, has reported to the Game Commission that catfish spawn in April and May and do not finish depositing their eggs until about the middle of June. Mr. Tulian has made an extensive investigation of the inland and other streams in Louisiana for the purpose of ascertaining just when the catfish and buffalo fish spawn. He is still in doubt about buffalo fish, but he states he will be able to file a definite report on that subject shortly. Many of the professional fishermen were in doubt about catfish and buffalo fish in reference to the time of spawning, and Mr. Tulian's report is considered valuable, and his additional report in regard to buffalo fish is awaited with much interest by those who are interested in fishing in Louisiana.

SHOWING THE COMPARATIVE SIZE OF THE EMPIRE FLY.

Commissioner Frank Miller and Mr. Tulian left Monday for an extended tour of the State for the purpose of locating a large fish hatchery. It is thought the commission has in view a big hatchery in a large sulphur spring near the central portion of the State. It is proposed to acquire this spring and additional property if it can be done for a reasonable price.

One of the fishing parties at the Rigolets caught 302 speckled trout Sunday. The party was composed of E. W. Johnson, A. Stenz, C. L. Cooper and E. Roth. Another party at Lookout landed 45 speckled trout, 135 croakers, 7 sheepshead and 12 flounders. A small party caught fifty perch at Lake Catherine. A number of croakers, redfish and striped bass were landed. At Chef Menteur, Jake Rief, Phil Reich and Philip Nastis caught a turtle weighing 125 pounds. Spanish mackerel were caught at several of the fishing resorts.

The fishing season has opened in earnest and scores of local sportsmen are now going to the various resorts on Saturday afternoons and returning to the city Monday morning. A number of families have gone to Bay St. Louis, Waveland, Pass Christian, Ocean Springs, Gulfport, Biloxi and other resorts for the summer and will enjoy the sport of fishing, especially on Saturdays and Sundays. A number of visitors have accepted the hospitality of the several fishing clubs and are enjoying the sport. The prevalence of real summer weather has stimulated the fishermen, and especially those who are taking their usual vacations at this season of the year. The best fishing months are considered to be May, June and a portion of July and the early part of October. A number of the club houses at the Rigolets, Lake Catherine, Chef Menteur, Lookout and other fishing resorts have recently been renovated and repaired and are now in good condition for the rush season. The L. & N. railroad has put on its club car on its Saturday afternoon train, and the prominent fishermen are patronizing it. F. G. G.

Overconfidence.

IT beats all how confident some untried anglers are just before fishing. There was the case of Andrew Jameson and a companion at Punta Rassa recently. They were from Dublin, Ireland, and just took a run over to show how easy it was to catch tarpon and then get back home as if nothing had happened. There was a boy there who had spent three months trying to land a tarpon and had lost every fish he hooked. It consoled him to hear these newcomers telling how they were going to get their tarpon. "Of course, we will use heavy tackle for our first fish," said one of them. "That is just conventional, but after that we will catch them with trout tackle, just to show how easily it could be done." They hooked nine tarpon between them and did not bring one of the fish to gaff. Everybody was sorry that they had to leave without a tarpon, especially as these fish were running in schools past Sanibel "thick as mullets," as one professional fisherman said. For the next month or two tarpon fishing will be at its best, but it is always easier to hook them than to land them.—Newark Call.

Brook Trout Near the City.

FRED T. MAPES, secretary of the Newark Fly- and Bait-Casting Club, of Newark, N. J., has sent us a picture of three brook trout that were taken by him in a brook within twenty-five miles of New York city recently. They measured 11½, 11½ and 11¾ inches respectively, and what is still more unusual in small streams so near the city, he took no undersized trout that day, hence put none back in the water.

All the fish laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

Fishing in California.

BERKELEY, Cal., May 24.—*Editor Forest and Stream:* Trout fishing is improving rapidly and there are few streams now that are not yielding satisfactory catches. High water is still the rule, but there have been no heavy rains of late and the streams are quite clear. In the large streams the use of bait is sometimes necessary to secure limit catches, but fly-fishing is steadily improving. From the early catches that have been made in the sierras it would seem that large fish are to be found in greater numbers than ever, this being particularly true in the Truckee River. In former years the large fish were taken on the Nevada side before fishing was permitted in California, but the laws of the two States have been arranged so that the season opens at the same date on both sides of the boundary line. Reports from the Big Meadows country indicate that fishing in that section will be very fine this season, and there will be quite an influx of anglers from San Francisco and vicinity into that region now that improved transportation has been afforded into Plumas county.

Quite a party of local anglers made a trip to the McCloud River recently, but met with rather indifferent success, owing to the high water and cold weather. Insect life has scarcely commenced to appear there, and but little could be done with a fly.

Madame Sarah Bernhardt recently made the first catch of a fish in her life in the Truckee River near Reno. For some time she has possessed a fine fishing outfit and has attempted to fish before, but this is the first time she has ever been successful. The trout taken was about seven inches in length and Mme. Bernhardt expressed her intention of preserving it as a souvenir of her Western trip. Under the new Nevada law, women do not require a license.

Striped bass fishing around the bay has not been of a high order for a long time, most of the fish taken being very small in size. In former seasons there were always lagoons where the large fish were to be found, but this season one is as apt to take a big fellow at one place as another. As a result none of the old time favorite grounds is crowded with anglers. Some experiments have been tried here in the use of live fish bait and big bass have been taken by this means by some of the experts. The best striped bass fishing of the season has been experienced on the Russian River, but only a few anglers have been able to visit those grounds, owing to the time necessary to make the trip. Formerly it was not an unusual thing for an angler to land a twenty-five-pound bass, but this season the capture of a twenty-pounder creates excitement.

There has been a great demand for permits to fish in the reservoirs owned by the city of Vallejo in White Horse and Green Valleys, and so many persons are now visiting these bodies of water that the authorities are considering the advisability of issuing permits good for one day only.

GOLDEN GATE.

Illinois Casting Club.

CHICAGO, Ill., May 22.—*Editor Forest and Stream:* The regular scheduled contest of our club, May 20, was postponed indefinitely, owing to the inclemency of the weather.

Members may take their re-entry on any regular day as scheduled above, viz.: quarter-ounce accuracy bait, quarter-ounce distance bait, light tackle accuracy dry fly and light tackle distance fly.

On May 21 the following scores were made in the order as cast. Weather cloudy with showers, wind south, velocity approximately twelve miles:

Accuracy bait, ¼-ounce:			
Kernaghan	98.4	Huntley	97.4
Swisher	98.5		
Distance bait, ¼-ounce:			
Kernaghan	114⅖	Huntley	87⅗
Swisher	111⅕		

Light tackle accuracy dry fly, wind southeast, approximately six miles:

Swisher	92 1-15

The next events will take place June 3 and 4. The events are as follows: Half-ounce accuracy bait, half-ounce distance bait, accuracy fly and salmon fly.

L. V. TOURNIER, Sec'y.

Salmon Fishing.

ANGLING is many sided. What is popular in one section of the country is frowned on in another. Look at the picture of William H. Holden playing a salmon in Monterey Bay in California. The launch, the angler, his sea rod, and the

PLAYING A PACIFIC SALMON.

boatman with his gaff all suggest tuna fishing, but the San Francisco Examiner, from which the picture is reproduced, says it was made while Mr. Holden was playing a large salmon. These fish come into Monterey Bay in numbers in the spring. They are trolled for with handlines and rods, and are taken at a considerable depth.

The Anglers' Casting Club of Chicago.

CHICAGO, Ill., May 21.—*Editor Forest and Stream:* Considering the weather conditions these scores are remarkably good. Wind variable and gusty, sky overclouded, and threatening rain combined with a background of trees made it very difficult to locate weights when casting.

Some News and a Little Gossip.

THE yachtsmen had several busy days beginning last Saturday and ending with Decoration Day. There were club openings and races and other festivities, and at each club house the fleet of yachts was a large one. The boats are mostly small ones, however, which shows that the tendency of the American yachtsman is toward the small craft, sometimes only large enough for afternoon sailing or raeing and sometimes suitable for cruising with a small party on board. The larger boats will eome later in the season.

At Oyster Bay last Saturday the Seawanhaka-Corinthian Y. C. formally opened the club house. Commodore Hastings, on the steam yacht Oneida, gave the signal to masthead the burgee and then the yachts in the fleet dressed ship. In the afternoon there were races for 31-raters, 30- and 15-footers. On Sunday divine service was held on board the Oneida. On Monday those members who have formed a syndicate to defray the cost of building the Corinthian, the ehallenger for the Manhasset Bay cup, were entertained at dinner. On Decoration Day there were more races for the same classes as on the opening day. The club has issued a pamphlet telling the members just what is to happen during the season. Each Saturday evening there will be dancing in the club house. On July 1 the Harvard-Yale clubs eruising race will be started from New London and members of those clubs and members of the Harvard and Yale clubs of this city will have the privileges of the Oyster Bay house extended to them. The racers are expected to reach the harbor on Sunday, July 2, when the members will give them a hearty weleome. The next day will be Harvard-Yale day. There will be music and tennis during the afternoon, and a dance and harbor illuminations in the evening.

The Atlantie Y. C. was opened formally on Deeoration Day. Commodore William H. Barnard ordered the fleet to gather at the club anchorage at 11 o'elock. At noon, on a signal from the flagship Sagamore, the burgee was mastheaded and the yachts dressed ship. Three minutes later the yachts saluted each with one gun. Official calls were made and later there was a reception on the flagship. Commodore Barnard has appointed Ernest E. Malcolm Fleet Captain; Charles E. Gilbert, M.D., Fleet Surgeon; Rev. Nehemiah Boynton, D.D., Chaplain; Dr. John E. De Mund, Chairman; Walter H. Sykes, Jr., and Carlos de Zafra, Regatta Committee.

The Indian Harbor Y. C. was placed in eommission last Saturday. In the afternoon Commodore William H. Childs held a reception in the elub house. The Manhasset Bay Y. C. went in commission on Saturday, and the members celebrated the day with a dinner and later music and an entertainment. The Huguenot, Marine and Field, Crescent A. C., Stamford, New Haven, New York Motor Boat, Belle Harbor, Corinthian of Marblehead, Edgewood, Rhode Island and many other clubs formally opened on Decoration Day.

The series of races for the Manhasset Bay ehallenge cup this summer will be the most interesting in the history of that trophy. The Larchmont Y. C. has named Windward, owned by R. A. Monks, as its representative, so that now eight yachts have been entered, and of these, four are from local clubs and four from eastern clubs. The cup will be defended by Cara Mia, owned by Stuyvesant Wainwright, of the American Y. C. This yacht won the cup last year, defeating Windward, then the defender and Timandra. Windward has won the trophy in 1909 for the Indian Harbor Y. C., so that this series will be the third meeting of these two boats in raees for this cup. The Indian Harbor Y. C. will be represented by Joyant, a Herreshoff boat built for Commodore William H. Childs, and the Seawanhaka-Corinthian Y. C. will be represented by the new Herreshoff boat Corinthian. The four boats to come around the Cape are all built from designs by George Owen. Of these, Italia, owned by George Lee, of the Boston Y. C., and Sayonara, owned by Vernon F. West, of the Portland Y. C., have been built this year. The others are last season's boats, and are Timandra, owned by J. B. Fallon, Eastern Y. C., and Amoret, owned by C. B. Wheelock, Corinthian Y. C. It is very probable that in order to make the trip around the Cape more interesting, a race will be arranged starting from Marblehead and finishing somewhere in the Sound.

Morton F. Plant's new racing sehooner Elena, the most important craft launched this spring, will be given her first real brush in the opening regatta of the Larchmont Y. C., to be sailed on Long Island Sound, Saturday, June 17. The announcement has just been made by Horace E. Boucher, Butler Whiting and A. R. Schmidt, the regatta committee of the club, that former Commodore Plant has entered his craft and that she will try her speed against E. W. Clark's Irolita. The latter craft formerly was called Queen, and was the property of the late J. Rogers Maxwell. For several years Queen has been eonsidered the queen of the American racing squadron. The race between Irolita, considered to be one of Herreshoff's fastest creations and the latest schooner to be designed by the wizard of Bristol lends unusual interest to the first important regatta of the Long Island Sound season. In addition to the two flyers, the regatta committee of the Larehmont Y. C. announces that George W. Scott's Miladi and Margaret, the property of George W. Runk, also have entered the regatta. These boats will make an excellent schooner elass for so early in the year.

Although no mention was made in the regular raeing program of the club, the Larehmont committee has arranged a special motor boat race for its spring regatta. This is a decided innovation and was suggested by Leonard Richards, Commodore of the club. The race will be for eruising boats and will be similar to the sueeessful contest given for the same type of craft during the race week of the club, last year. The yachts will be divided into two elasses. One division will be for boats that are less than 50 feet over all length, and the other class will be for yaehts that are more than 50 feet over all length.

Racing Season Opens.

EVERYONE is happy. The raeing season has eome again, and after many dreary weeks ashore, the yaehtsmen are afloat and their yachts, looking spick and span, are in prime racing condition. It takes several weeks of hard work to get the racing craft in shape, but it is work that pays, for, win or lose, the real yachtsman is happy if he can be afloat and is contented to have made a good raee even if he has to be content with second or third place. All cannot be sueeessful in a raee, and if one yacht should win every time, the sport would beeome monotonous.

The season promises to be a very brilliant one. It will be a season of small boat raeing, but there is just as mueh good sport to be had in a 25-footer as in a 90-footer. The small boat may not be as speedy as the larger one and its sailing may not be as speetaeular, but relatively a class of 15-footers furnish just as much interest and excitement as a class of 90-footers. Then, too, the 15-footers are usually sailed by their owners and an amateur crew helps. On a 90-footer a professional is usually at the wheel and a paid crew does the work, so that from a real sportsman's standpoint the 15-footers furnish the best sport.

Atlantic Y. C.

THE season opened on the Lower Bay with the regatta of the Atlantic Y. C. sailed last Saturday. This regatta was an important one for two reasons, it opened the Gravesend Bay season and it brought out four new yaehts and two others have been mueh altered since last year's racing. In the Q class there were two new boats—Gherardi Davis' Alice, a Gardner boat, and Suelew, owned by E. F. Luckenback and built from Mower designs. Suelew is an odd name, but it is made up of sylables of the daughter and son of the owner. Grayjaeket, last year's champion, a Gardner boat, was a starter, and in the fleet were Soya and Spider, two of last year's boats designed by Clinton H. Crane, which have had some lead removed and had other alterations made this winter. It was hardly expected that the new boats would outsail the others so early in the season. They are both fresh from the shops and not in shape yet, so every excuse must be made for their performances. Grayjaeket was in fine shape, and she was well handled, too. F. S. Noble, her owner, knows his boat, while the others have yet to learn theirs. When the eourse signal was set the wind was southeast and gave indications of baeking, so the committee sent the boats to Buoy 24, Craven Shoals, Bensonhurst and Sea Gate, twiee around, 12 miles. The wind did not baek. It hauled more to the south and then went to its original quarter and the yachts

had a reach all around the course. Grayjacket took the lead at the start and held it all the way. Alice was in second place at the end of the round, but on the second round Soya, which seems to be a much improved boat, passed Alice and finished second. Suelew was last, but she will do better before the season is over.

In the S class there were two more new boats, Wink, a Herreshoff boat built for D. G. Whitlock, and Cyric, a Gardner boat built for Dr. C. L. Atkinson. These two sailed against the older boats M and F and Gunda, and Cyric won. She seems to be a small copy of Grayjacket and sailed just as that boat does. Wink looked something like the 31-rater Cara Mia, and while she did well, she was not able to defeat Cyric. These two boats have had more time for tuning up than have the Q boats, and made better showing.

The regatta committee, Dr. J. E. DeMund, Walter H. Sykes, Jr., and Carlos de Zafra, handled the races. Earlier in the afternoon they started the sloops Gardenia and Margaret on a course to the southwest spit, buoy 5 and return, and Gardenia won. La Cubana won the handicap race, although Joy finished first. Scud, sailed by R. B. Moore, was the winner in the knockabout class. Mr. Moore has won in other classes several times and this year he has purchased a knockabout to show what he can do with that class. Aries won the dinghy class race. The finish times were:

Sloops—Class M—Course 21 Miles—Start, 1:30.

Gardenia	3 58 15	Margaret	4 12 16

Sloops—Class Q—Course 12 Miles—Start, 3:05.

Grayjacket	5 06 43	Spider	5 11 59

Corinthian is all Right.

CORINTHIAN is a yacht built by Herreshoff to try and win the Manhasset Bay challenge cup. A syndicate of members of the Seawanhaka-Corinthian Y. C. is defraying the cost of this yacht and will help to make some fine sport this summer. The yacht is to be sailed by C. Sherman Hoyt, Clinton H. Crane and Johnston de Forest, three of the best amateurs in these waters. At the time of the trial of the yacht it was stated that she carried a weather helm and had to be altered by her designer. The following letter tells that this was not so:

"Editor Forest and Stream:

"I have noted various comments in the daily press and just now in the columns of your last issue to the effect that the Corinthian carries an abnormal weather helm, and that certain alterations have been made necessary to remedy the same.

"In full justice to Mr. Herreshoff I wish to deny this most emphatically.

"After her first short trial spin a new tiller was fitted at my suggestion, as the original one was too limber and springy to suit my personal taste. No other change in her steering gear, trim or set of mast has been made or will be until her sails, rigging and gear have had a chance to find themselves.

"The boat at all times handles with the utmost ease, although under certain conditions and at a certain angle of keel, if sailed rather fine, carries perhaps a little too much weather helm. Whether it will be advisable to make alterations with the view of remedying this, possibly at the expense of a lee helm under other conditions, can not be determined until further trial.

"I might add that aside from a short preliminary trial spin of less than an hour's duration her only real test so far was the trip from Bristol to Oyster Bay, made a week ago in a little under nineteen and a half hours. Approximately for the first third of the way we had stiff to light head winds, and the remainder was a close reach with a northwesterly and northerly wind which came in very fresh at first and later on in the night almost dropped out at times. Throughout the run, in view of the fact of the newness of everything and our unfamiliarity with the boat, her behavior was most satisfactory.

"C. SHERMAN HOYT."

G. CECIL WHITAKER'S SCHOONER WATERWITCH.

From Yachting World.

Seawanhaka Corinthian Y. C.

COM. F. S. HASTINGS, on the steamer Oneida, signalled for the burgee to be mastheaded on the staff in front of the Seawanhaka-Corinthian Y. C. at Oyster Bay at noon last Saturday, and the club went in commission with the usual ceremonies. The yachts in the fleet dressed ship, and in the evening there was music and dancing in the club house. It was expected that Joyant, Commodore Childs' new 32-rater would be on hand to race against Corinthian, but Joyant did not race. Corinthian sailed over the course with the New York 30-footers in the afternoon and did well. She beat Nepsi, the best of the 30-footers, 16m. 5s. in 15 miles.

Seven 30-footers raced and Nepsi won, defeating Caprice 2m. 18s. In the race for the 15-footers over a course of 7 miles Imp won easily with Tamale second. The finish times:

Class P—Course 15 Miles—Start, 1:45.

Corinthian	3 44 19		

New York 30-footers—Start, 1:50—Course 15 Miles.

Nepsi	4 05 24	Juanita	4 18 23

Sabrina	3 50 23		

Southern Yachting.

NEW ORLEANS, May 26.—The regatta committee of the Southern Y. C. met during the week and adopted the rules and regulations of the American Power Boat Association in reference to motor boat races which open here at West End on Lake Pontchatrain Saturday, May 27. Thirty boat owners were present at the meeting and signified a willingness to participate in the various regattas to be held here this summer. The regatta committee is composed of C. A. Sporl, T. T. Barr and William Garrie.

E. L. Jahncke and Charles Farwell, owners of Bluewing II., the champion motor racing boat of the South, have announced this craft for sale. Bluewing II. has a speed of about 27 miles an hour.

The St. John Rowing Club opened its series of races here Saturday afternoon, May 20, and a number of young men from the various local clubs took part. There will be a number of regattas during the summer and much interest is being taken in them by the local amateurs.

A conference was held during the week between Mayor Behrman, City Engineer Hardee and a committee representing the Southern Y. C. in reference to extending the seawall, which is now in the course of construction to and around the club building. This work will cost $40,000, and the city will bear half of the cost, while the club must raise $20,000. The committee decided to take the subject under advisement and decide whether the club is willing to incur this expense. It is proposed that the club raise the money by floating bonds. If the proposed plan is carried out it will greatly beautify the club's property at West End and give additional park ground to the public.

A prominent member of the yacht club here, who did not care for his name to be published, said, in speaking of regattas: "I believe the public and the yachtsmen themselves have become tired of mediocre races between sailing craft. At any rate, the interest in the sailing craft in New Orleans and the waters near here is not nearly so great as it was about ten or twelve years ago. The sailing craft as a sport has been largely supplanted by the advent of the automobile and the popularity of the motor boat. This seems to be a fast age and the present young people do not seem to want slow going boats, however skillfully they may be managed, any more so than that they would desire to see a return to the old mule street car. Of course this observation does not apply to the International contests for America's Cup, where the pride of two nations is centered in the result and where hundreds of thousands of dollars are spent. The young people of to-day want to see flying machines, autos racing at 80 miles an hour, and they want to ride on the lightning-speed vestibuled trains. In view of these condition, no one need be surprised to see small crowds at the regattas when the average sail boats take part. The public simply will not remain several hours to see the end of a race, unless the event is extraordinary or International, or the craft have phenomenal records. Personally, I am very fond of the sailing craft and enjoy the contests between them a great deal more than the motor boats, but the public does not."

The Hollis Burgess Yacht Agency has sold the Sonder boat Bandit, owned by John C. Edwards, of Boston, to Francis A. Seamans of Salem, who will use her in Boston waters.

The same agency has also sold the knockabout Comet, owned by John H. Storer, of Boston, to P. A. Horton, of Dorchester, Mass.

The Schooner Waterwitch.

THE new schooner Waterwitch, built for G. Cecil Whitaker to race against Westward, has been launched. Unfortunately for Mr. Whitaker, Westward is on her way home, and unless the Waterwitch comes to these waters, her owner will not have much to beat. The Yachting World, in giving details of the yachts, says: The vessel has been built by the Ailsa Shipbuilding Company to the designs of Mr. William Fife, for racing in the A class during the coming season and will be sailed by Captain A. Embling, of Gosport, who had charge of Mr. Whitaker's Cicely, which is now in the sale list. Waterwitch is 139.5 feet in length over all, 120.25 feet between perpendiculars, 26.65 feet beam and by Thames measurement rates at 353 tons. She has been built of steel to Lloyd's 100 A1 class and has steel bulwarks about 12 inches in height. The deck fittings are of teak, with a very large companion deckhouse and wheel steering gear similar to that on Shamrock has been installed. The mainmast, foremast and bowsprit are of Oregon pine, the main boom being of steel and the remainder of the spars of hollow construction.

Waterwitch will have a large sail area and forward the accommodation consists of large forecastle, separate galley, three large rooms for captain and officers' mess room, and steward's pantry. The owner's accommodation includes dining room with fire place on port side, drawing room on starboard side, aft on starboard side large owner's room with bathroom in connection, aft of that guest room and another large bathroom with access from this room and from double-berthed after-cabin. On the port side there are three guest rooms with another large bathroom, and there is also a toilet room at extreme after end of accommodation. The woodwork in owner's accommodation is white enamel throughout, with the exception of the corridor, which is polished hardwood. All the rooms are fitted with electric light. Under the cabin floor there are large sail room and storage rooms fitted. The vessel carries three boats, including motor launch, and she will be painted white with a copper color boot top. There will be a crew of thirty-one all told.

Yachts Change Hands.

THE spring season has been a busy one with the yacht brokers. Many yachts have changed owners since last season and several have been chartered for the present season. These changes are of interest, as they show who are supporting the sport, and while perhaps some have retired temporarily from the game, others have entered the yachting world and will help make things successful this year.

The following transfers are reported through the agency of Cox & Stevens:

The steam yacht Owera, 194 feet, chartered for F. H. Stevens, Buffalo, to Senator Nelson W Aldrich, of Rhode Island, who will use her between his summer home and New York and on an extended cruise east.

The steam yacht Isis, 200 feet, chartered for W. S. and J. T. Spaulding, Boston, to Mortimer L. Schiff, New York Y. C., who will use the vessel on the New York Club cruise and for the balance of the season along the Atlantic Coast.

The steam yacht Margaret, 176 feet, chartered for Capt. I. E. Emerson, Baltimore, to E. B. Smith, Philadelphia Corinthian and New York yacht clubs, who will use the vessel in local waters and also on a cruise to Nova Scotia.

The fast express steam yacht Sisilina, 94 feet, sold for Nathan Straus to a member of the New York Y. C., who will use the vessel as a ferry between his country place and New York. The new owner has changed the name of his vessel to Skipaki.

The twin screw house boat Onawa II., chartered for the season for W. C. Fisk to J. N. Robins, Stamford, Conn., who will spend the summer on this vessel and use her on Long Island Sound and in eastern waters.

The twin screw house yacht Margaret, chartered for Capt. I. E. Emerson, of Baltimore, to a member of the New York Y. C. for a portion of the season, who will use her along the coast and have her at New London for the Yale-Harvard races.

THREE VIEWS OF WATERWITCH.
From Yachting World.

The twin screw steel cruising power yacht Alacrity, 120 feet, having two 300-horsepower Craig engines, chartered for W. A. Bradford, the owner, to a western yachtsman who will use her for cruising along the Atlantic seaboard and on the Great Lakes.

The twin screw fast motor yacht Alfredine IV., chartered for R. E. Slaven, her owner, to a member of the New York Y. C., who will use her in New York and eastern waters during the entire season.

The cruising power yacht Shadow, chartered by her owner Dr. J. C. Ayer, of New York, to a Boston yachtsman.

The raised deck cruiser Ethel May II., sold for J. W. Husted, Peekskill, to Charles Coryell, Bay City, Mich., who is having the boat sent to the lakes for his summer use.

The glass cabin cruising launch Nereid III., sold for John Kennedy, New York, to H. G. Leiding, Charleston, S. C., at which place the vessel has just been delivered.

The express launch Dreadnaught, sold for A. S. Zell, Baltimore, to W. N. Hart, New York, to whom the vessel has already been delivered.

The glass cabin cruising launch Palmetto, sold for Senator J. S. Frelinghuysen, New York, to J. W. Kaminski, Georgetown, S. C.

The raised deck cruiser Kahkin IV., sold for C. M. Clark, New York, to H. Busick, Baltimore, Md.

The twin screw glass cabin cruiser Delilah, sold for W. C. Arnold, New York, to S. Carsley, Montreal, Canada.

The raised deck cruiser Mijess, sold for J. C. Wilson, Philadelphia, to E. W. Walker, Brooklyn.

The raised deck cruiser Leonora, sold for John Atkins, New York, to John Meyer, Baltimore, Md.

The fast raised deck cruiser Alice, sold for C. H. Markham, Providence, to Peter W. Rouse, Oyster Bay.

The twin screw power yacht Gunedmedrix, sold for Carlos Lembcke, New York, to the United States Government Engineers at Jacksonville, Fla., who are using this vessel for survey purposes.

The schooner yacht Amazon, sold for the Young Men's Christian Association of New York to the Bishop of Montreal, Canada. Messrs. Cox & Stevens are entirely re-arranging the accommodation of this vessel for the new owner, and are having installed under their supervision a 75-horsepower Remington engine.

The auxiliary yawl Scapha, sold for G. C. F. Williams, Hartford, to J. H. Robinette, Baltimore, Md

The auxiliary yawl Dawn II., sold for Joseph A. Dunn, of New York, to a Boston yachtsman who is now cruising on the vessel.

The auxiliary yawl Alcatorda, sold for the estate of Rene La Montagne to H. M. Gratz, Philadelphia, Corinthian Y. C.

The keel raceabout Wacoutah II., sold for W. H. Truesdale, New York, to C. F. DuVivier, of this city.

The sloop Duchess, sold for J. B. Palmer, New York, to J. J. Lantry, Brooklyn.

The jewel class knockabout Garnet has been chartered with option of purchase, for J. R. Maxwell, Jr., to N. B. Burr, of New York, who will race the vessel in all events during the coming season.

Ocean Race to San Diego.

SAN DIEGO, May 22.—Commodores of the yacht clubs of Southern California met at the San Diego Y. C. May 8, and, after greetings, adjourned to the cabin of the Yankee Girl, flagship of the Sunset Y. C., of Los Angeles, for an executive session to consider the proposal of Sir Thomas Lipton to hold an ocean race in 1915 from some port on the Atlantic to the harbor of San Diego.

Present at the conference were President J. E. Wadham, San Diego Rowing Club, who also is Mayor of San Diego; Commodore A. J. Mitchell, Sunset Y. C., Los Angeles; Commodore E. J. Louis, Los Angeles Motor Boat Club; Commodore P. Thearle, Junior Y. C. San

Diego, and the host, Commodore F. C. Spalding, San Diego Y. C.

Sir Thomas Lipton's proposal, made to J. W. Sefton, Jr., of this city, at Colombo, Ceylon, was taken up in detail. The commodores were formed into an executive committee of the clubs named and an invitation to Santa Barbara Y. C. and to South Coast Y. C. to participate was decided upon. The committee will communicate with Sir Thomas at once, will extend to him the proper invitation through the San Diego Y. C., of which he is an honorary member, and will get busy at once on the details.

At the same meeting the arrangements for the races, held annually here for the Lipton cup for 30-footers, were made. Regattas are planned for the months of June, July and August, to be held between the ports of Santa Barbara and San Diego, a series of races that will engage the attention of every yachtsman on the Pacific Coast.

Defenders of Motor Trophy.

THE most important event in the motor boat world this season is the series of races for the British International trophy for motor boats. This trophy, which was originally called the Harmsworth cup, after the name of its donor, was successfully defended twice by the Dixie. In the last race that boat had perhaps more than her share of good luck. Pioneer was running at a phenomenal rate when she sucked some seaweed into her circulating pump and the engine becoming overheated, set fire to the gasolene, so that it took twenty minutes to put the fire out, disconnect three cylinders and proceed. In that time Dixie had taken so big a lead that Pioneer could not catch her.

Then only one race was necessary to decide which country should keep the cup. This was manifestly unfair to the boats entered, and the Motor Boat Club of America, holders of the trophy, suggested to the British Motor Yacht Club that the deed of gift should be changed. This has been done and now the trophy will go to the country first winning three races. Should one boat meet with trouble in the first race, if she is faster than the others, she will still have a chance of finally winning out.

Just what the British challengers are doing very little is known. One boat, Maple Leaf III., has been tried and went at the rate of 57 statute miles an hour, but at Monaco, while racing, she broke a strut of one of her propellers, lost her propeller and rudders and had a big hole torn in her hull. All this damage is now being repaired. The races for this trophy will begin off Huntington on Aug. 24. About ten days prior to the first international race eliminating trials will be held for the purpose of selecting the three fastest and most reliable American boats, and judging by the way fast boats are being talked of now, the committee, H. F. Sutphen, Victor I. Cumnock and James A. Blair, Jr., will have their hands full managing the races.

According to the best information, there are nine speed boats now building for these trial races. Some of these are already in the water, some are nearly ready for launching and others will be out later.

After Pioneer had shown that she could make more than 40 miles an hour, it was conceded that this year the racers would have to make at least 45 miles an hour to be successful. Now that Maple Leaf III. has shown such wonderful speed, 60 miles an hour is talked of as freely as the owner of a cruising boat talks of twelve or fifteen miles. Every boat building is high powered, and it is very probable that most of them will show wonderful bursts of speed, but to have the motors so tuned that they will keep running at their high rate for 30 miles will require some skill in tuning up, and after all the boat making a comparatively low speed may be the successful boat in the race because of her reliability.

The only limitations placed on these racers is that they must not exceed 40 feet, and so the largest measure 39 feet 11 inches over all. The power is unlimited, so that they are racing machines pure and simple. All now are modelled on the hydroplane type, some have several planes and some only one, but the hydroplane is now regarded by navel engineers as the fastest model. It skims over the top of the water and some rise so far out of the water that when driven at full speed only the after part is really in the water. One boat has been built which the owner says is for the trials which will be driven by an aeroplane propeller. This builder will be disappointed to learn that his boat is not eligible as the rules bar out anything in the way of a hybrid craft, half hydroplane and half aeroplane. The propelling mechanism must be wholly in and against the water.

One of the most interesting of the new boats will be named Dixie IV. This name has been so prominent in the American history of the trophy that Commodore H. H. Melville, Vice-Commodore F. K. Burnham and August Hecksher have had a boat built which is to be named after Mr. Burnham's famous old racer, the boat that successfully defended the trophy twice. This boat has been built by the Staten Island Shipbuilding Company from designs by Clinton H. Crane, who designed the older boat. Mr. Crane has made an extensive study of speed models. He had several made which he tested in the tank at Washington, and after many experiments, selected a model which he thinks will do all that is asked of it. This boat is to have twin screws and be driven by two motors of about 200 horsepower each. One of these motors was used in the old Dixie. It was built by H. M. Crane, and an exact duplicate is being built by Mr. Crane for the new boat. These engines each have eight cylinders. The old engine proved a wonder, not only for power, but for reliability. It drove the boat to victory in more than one hundred races and never once gave the owners of the craft any worry.

Rear-Commodore M. Stuart Blackton, of the Motor Boat Club of America, and owner of the fast racer Vita, is having two boats built. One is a hydroplane 33 feet long designed by W. H. Fauber, who is responsible for that type of boat. The model has been somewhat modified, however, by a New York designer, but only above the waterline. This hull is being built at the Electric Launch Company's works at Bayonne, and will be very strong and very light. It will be driven by two motors built by Pierce Budd Company, of Bay City, Michigan. These motors are of 250-horsepower each and the builders have contracted that the boat shall make a certain high speed, or Mr. Blackton need not accept the motors. This boat will be named Vita II. The second string of Rear-Commodore Blackton is a boat to be named Viva. In model it is a semi-displacement boat 32 feet over all, and 5 feet 6 inches beam. It is being built by the Emerson Company at Alexandria. The engines which will develop 400 horsepower will drive triple screws. This boat, too, is guaranteed a high speed. An Emerson boat has been having trials on the Patomac and is said to have developed a speed of 45 miles an hour.

Albert E. Smith, a member of the Board of Governors of the Motor Boat Club of America, and owner of the fast racing craft Edith II., is having a boat built by the Electric Launch Company which is to be named Edith III. The builders are designers of the craft, and the boat will be driven by two specially designed Standard engines of 300 horsepower each. This boat will be the limit of length and 7 feet beam.

YACHT and BOAT SAILING
By the late Dixon Kemp
Tenth edition. Published 1904. We have a copy in fairly good condition, published at $12, which we will sell for $9.00.
FOREST AND STREAM PUBLISHING CO.

The Standard motors have won many races and are regarded as one of the most reliable built. The Standard, a 50-foot boat, was equipped with engines of this make and made a wonderful record.

Thomas F. Chesbrough, who last year had Restless, which was rather unfortunate in her races, is having a modified hydroplane built under the supervision of a well known naval architect. Little is known of this boat yet, as Mr. Chesbrough does not care to give details out until he is sure of his boat. The length is something under the 40 feet, and the motors will be built by Herreshoff, not the Bristol firm.

Commodore H. H. Melville and August Heckscher last year had a boat named Restless, which was also unfortunate. They have ordered a Restless II., which is being built by the Atkin-Wheeler Company at Halesite, L. I. This boat will be equipped with Herreshoff motors, and it is hoped will be more fortunate than last year's boat.

W. E. Hughey, of Belleview, Iowa, is having a Fauber hydroplane built that is guaranteed a speed of 45 miles an hour. It will probably be named Red Top and is 36 feet long, 6 feet 3 inches beam. She is fitted with two engines driving a single screw. The builders are confident that Red Top will develop 50 miles an hour. Mr. Hughey will try the boat in home waters, and then send her east in time for the trials at Huntington, which will begin Aug. 16. W. H. Fauber has told Mr. Hughey that the winning boat will have to make 50 miles an hour for the course of 30 nautical miles, and he thinks Red Top will have a good chance of being selected to defend the trophy.

Commodore James A. Pugh, of the Pistakee Y. C., Chicago, is having a Fauber hydroplane built by the Inland Lakes Boat Company, of Lake Geneva, Wis. This boat is 31 feet 10 inches long and 6 feet 4 inches beam. She is equipped with two Sterling motors which will develop about 300 horsepower. This boat has six planes and is to be ready for delivery on June 1. Commodore Pugh will use the boat in home waters, and after it has been thoroughly tuned up it will come east for the trials. This boat is to be named Disturber II.

H. J. Leighton, of Syracuse, who has turned out several very fast racing boats, has an order for a Fauber hydroplane for a yachtsman who at present wishes to be unknown. This boat is intended for racing on the St. Lawrence, and the owner probably has his eyes on the Gold challenge cup. A speed of 45 miles an hour has been promised, and if she does as is expected, she will be sent on for the trials. This boat will be 32 feet long and 6 feet 2 inches beam. She will be driven by two motors of 120 horsepower each.

Commodore H. H. Melville, of the Motor Boat Club of America, has been unofficially informed that Gen. Du Pont, of Wilmington, is also having a high speed motor boat built at Atlantic City. No details of this boat have been announced, except that the contract calls for a speed in excess of 40 miles. She may be sent on for the trials, as Gen. Du Pont is much interested in speed boats, and thinks that his new craft will be one of the fastest in the country.

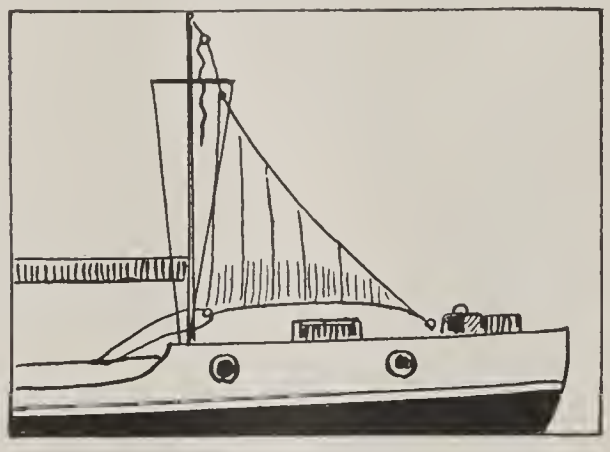
There are other boats building. Some are expected to make high speed, and if they do as their owners anticipate, they will be entered in the trials and may be selected to defend the trophy. There are three defenders to be chosen and these three will race against three which are to be sent here from England. Just what the Englishmen are doing is a secret, but it is said that the Duke of Westminster is having a hydroplane built which is to be much faster than his Pioneer of last year. He has Pioneer and Ursula now, so that the new boat can be thoroughly tried out before being shipped across the Atlantic.

One pleasing feature of the races in which these boats will take part is that nearly all will be handled by amateurs. Vice-Commodore Burnham steered Dixie last year and will handle the new Dixie. Rear-Commodore J. Stuart Blackton, Albert E. Smith and Thomas F. Chesbrough will each handle their own boats, and it is very probable that other owners will handle their boats.

To Frame Conditions for New Trophy.

A MEETING of the Council of the American Power Boat Association has been called to take place at the Waldorf Astoria, New York, on the evening of June 15, to draw up deed of gift and consider conditions for a silver cup offered under the auspices of the association by the Buffalo section for a perpetual challenge trophy for cruising motor boats. The first race for this cup is to be run off under the auspices of the Buffalo section at Buffalo, at a date to be settled at the meeting of the council. This trophy will represent on the Great Lakes the championship and supremacy among cruising motor boats and will occupy a position similar to that of the Marblehead race or other long distance events held on the coast.

At the meeting of the council the matter of choosing the third judge for the match held for the association's gold challenge cup on the Great Lakes, will also be acted upon. Under the deed of gift of the gold challenge cup, the challenged and challenging clubs each select one judge, the third being selected by the council of the association. The gold cup of the association has been raced for for a number of years and has come to represent the National championship for boats of unlimited power under 40 feet over all length. This year's race is expected to bring out some of the new boats built to defend the British International trophy, and it is hoped also that the English challengers may be induced to compete.



SAIL FOR A MOTOR BOAT.

Sparks.

IN the development of this country's export trade, the motor boat has come to play an important part. A considerable number of our prominent boat and engine builders have been paying close attention to this end of their business, and as the trade secured in this way is substantial, the outlook is brighter than ever before.

W. R. Grace & Company recently accepted delivery from Welin Davit & Lane & DeGroot Company of a 30-foot whale boat, with an 11-horsepower motor, and have shipped the boat to the west coast of South America. This boat is similar in all respects to the regular New Bedford whale boats and is equipped with a full whaling outfit, but the installation of power marked a new departure in boats used in this industry.

The same builders have also delivered to Carr Brothers a 36-foot shallow draft, tunnel stern, steel launch equipped with a 25-horsepower engine. After being completed and tried out, the boat was taken apart and shipped in three sections to Venezuela, where she will be used in the development of river trade.

The Vancouver, B. C., Police Department have let a contract for a runabout, 40 feet long by 7 feet beam, to be used by the police for protection along the water front, and in this respect leads a great many of the American cities. This boat will be powered with a 45- to 65-horsepower Sterling engine which will drive it at a speed of 15 miles or better.

The Canadian Government, Department of the Naval Service, has also awarded a contract for a 40-horsepower Sterling engine to be installed in a schooner which is to be sent to Hudson Bay this coming summer for survey purposes. The country in which this boat will do service is extremely isolated, and on this account it was necessary that a most reliable engine be selected.

A 54-foot shallow draft, twin screw, tunnel stern boat is now being built by Welin Davit & Lane & DeGroot Company for fast passenger service on one of the rivers in Columbia, South America. This boat will be equipped with two 30-horsepower Sterling motors and will be shipped shortly on the deck of a South American steamer.

John Larkin, of Buffalo, has ordered a runabout from the Matthews Boat Company, of Port Clinton, Ohio. This boat will be 30 feet long with a beam of 5 feet, and will have installed a 30-45-horsepower Sterling engine.

Cruising parties to the West Indies on board the American Line steamer New York, are now taken on inspection trips to the many points of interest among the islands in a 25-foot ship's yawl driven by a 20-horsepower engine. The boat was built for this service by Welin Davit & Lane & DeGroot Company, and has given great satisfaction to owners and sight-seers alike.

The many delights of motor boat cruising in Florida waters during the winter season are attracting many western men. Mr. Seymour Dane, of Malta, Montana, is having a 60-foot cruiser built for use in this way during next winter. The boat will be powered by two 40-horsepower Sterling engines, using twin screws, and when completed will be one of the finest power boats in Southern waters next season.

Sail for a Motor Boat.

OFTEN a motor boat owner may have trouble because his engine refuses to work. An enthusiast has suggested a rig which can be carried on all motor boats which would not only be of service on such an occasion, but which would steady the boat in a beam sea. The sketch shows the rig. A leg-o'-mutton sail is made of light canvas with a snap hook attached to the foot loop formed with the bolt at the head and double sheets lashed to fly. To raise the sail snap the foot to a screw-eye in the deck, attach the halliard and the whole outfit is soon drawing without the necessity of rigging a forestay and having a lot of bothersome rigging. Such a sail may be taken in and stored very easily, leaving no trace of wind jamming gear above the deck.

Canoeing.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—Paul J. N. Kuhn, 1322 Amsterdam avenue, New York, N. Y., by Morris F. Barth.

Eastern Division.—Edward F. Aubin, 44 Lander street, Providence, R. I., by S. B. Burnham.

NEW MEMBERS ELECTED.

Atlantic Division.—6224, James M. Castle, 8820 Germantown avenue, Chestnut Hill, Philadelphia, Pa.; 6225, Lewis Rushton, 324 West Duval street, Germantown, Philadelphia, Pa.

Central Division.—6223, Raymond A. Duke, 1118 Wallace street, Wilkinsburg, Pa.

REMINGTON UMC
TRADE MARK

Over 6000 Consecutive Shots Without a Misfire.

¶ The accuracy and surefire of *Remington-UMC* ammunition more than justifies its choice by the Colts Patent Firearms Co., in the recent Government automatic pistol tests.

¶ A *Remington-UMC* cartridge is individually made, tested and guaranteed for all standard makes of firearms.

Remington-UMC — **the perfect shooting combination.**

Oct. 10-12.—Des Moines, Ia.—Iowa State tournament. C. W. Budd, Chairman Board of Directors.
Oct. 17-18.—Scammon (Kans.) G. C. G. K. Mackie, Pres.

DRIVERS AND TWISTERS.

Owing to FOREST AND STREAM going to press on Monday this week, a number of reports are necessarily held over until next issue.

The dates of the Big Four League's registered tournament, scheduled for Pawnee, Okla., have been changed from Aug. 16-17 to Aug. 2-3.

Missouri State Tournament.

THE thirty-fourth annual State tournament of the Missouri State Game and Fish Protective Association was held at St. Louis Trapshooters' Association May 17, 18 and 19.

The tournament was a success in every way, the attendance was good and the weather conditions were favorable, but it was some warm. Some good scores were recorded. Peter Baggerman, of St. Louis, and H. B. Pottinger tied with 97 out of 100 on the Missouri State amateur championship. In the shoot-off Baggerman won, scoring 23 against 22 out of 25. Charley Spencer was in good form and led the professionals.

The Squier money-back met with the approval of every shooter. The amount paid out to pay losses was $254, while $361.80 was divided among the high guns.

Event No. 11 was the State championship at 16yds., open to all amateurs. 25 targets the first day, 25 targets the second day, and 50 targets the third day. Scores:

First Day, May 17.

Ohio State Tournament.

THE Ohio State Trapshooters' League will hold its twenty-fifth annual tournament at Columbus. Manager Lon Fisher makes announcement as follows:

"The Columbus Gun Club extends to you and your friends a cordial invitation to be with us on June 6, 7, 8 and 9, when the Ohio State shoot will be held. This big event was held at Cleveland last year and was well attended, and we hope to see a better attendance this year, and will try and make it pleasant for you, so you will want to come back in 1912, when we hope to hold it again. The Grand American Handicap will be held on our grounds June 19 to 24.

"This tournament will be run on the Squier money-back plan, and the Interstate Association has donated $300 for average money.

"With one hundred shooters shooting the program, this will make a purse of over $1000 for average money, and to pay the losses of those that shoot through and do not win their entrance back less the price of the targets. Come and bring your friends with you."

June 6 will be practice day, shooting to begin at 1 o'clock. Four events at 15 and two at 20 targets each, $1.50 and $2.00 entrance; purses divided 40, 30, 20 and 10. No average money.

All contestants wishing to shoot for the trophies will be charged $1.00 extra the first day, June 7, and the fund thus created will be divided equally among the ten low gun winners.

The first day's program has the regulation ten 15-target events, entrance $1.40; optional sweeps extra, $1.00 entrance, plus the $1 for Squier money-back system; also two optional events at 25 targets each, $2.50 entrance, moneys divided Rose system in regular program, 5, 3, 2, 1. In optional sweeps, percentage system, 40, 30, 20 and 10 per cent., class shooting.

June 8, the second day, will be a repetition as to the regular events. Events 11 and 12 will be the two-man team race for the Sportsmen's Review trophy, open to residents of Ohio only. Winners will receive handsome gold fobs. Teams must enter not later than 1 P. M. on the 7th.

On the last day, Friday, Jan. 9, events 11 and 12 will be the amateur championship event for a handsome trophy emblematic of the champion shot of Ohio.

This being a registered shoot, Interstate rules will govern. Targets 2 cents in all events. Further information from Manager Lon Fisher, Station A, Columbus, Ohio.

Sikeston Gun Club.

SIKESTON, Mo., May 25.—The Gun Club pulled off its tournament on the 23d and 24th. More than forty devotees of the shotgun participated, and the shooting game sure had a boost. With few exceptions the attending gunners shot through the entire program. High amateur average was made by H. B. Pottinger, who scored 283 out of 300. The peerless C. G. Spencer shot a magnificent race, putting up a tally of 148 ex 150 on both days. Scores:

The Squier Money-Back System.

MOBERLY, Mo., May 22.—*Editor Forest and Stream:* As there seems to be some question among the shooters as to whether or not the Squier money-back system with the Interstate Association's added money is a good thing for the amateurs, and as we have just issued the program for the fourth annual State tournament and grand Missouri handicap of the Missouri Trapshooters' Association, I have secured from Mr. J. L. Head, who acted as cashier for the Kansas State shoot with $200 added, and the shoot of the Missouri Fish and Game Protective Association at St. Louis, with $300 added, the actual figures showing the amount of money paid back to the shooters as losses and as averages.

At the Hutchinson tournament some forty-five amateurs shot the 450 targets, with $200 added by the Interstate Association; this made a total purse at the end of the three days of about $616.60. Twenty-seven of the forty-five amateurs failed to win their entrance, some of them falling as far short at $31. To bring these twenty-seven men up to their $36 entrance, it required $359 of the total purse, leaving $257 average money. This made eighteen averages, and it is a fact that men who have to have assistance from the purse to bring them back to the $36, drew as high as $10 average, making them even on the entire entrance fee. First average was $41, and as the four or five high guns were over $30 for average and good winners in the regular purses, it can readily be seen what a profitable shoot this was to amateurs.

At St. Louis, with $300, given by the Interstate Association, there were thirty-one amateurs that shot through, and the total purse for targets shot by them and the ten professionals was $315.80, with the $300, making $615.80. Of this amount, $254 was required to pay back the losses, leaving $361.80 as average money and twenty-four averages. High gun paid $46, and the first five high guns received something over $30 each. As these were good winners on the regular purses, it can be readily seen that this was a profitable shoot.

When, I ask, have two State shoots in close proximity paid eighteen to twenty-four averages, left every shooter even except as to targets and shells, and paid good winnings to the good shots?

Come to Moberly, where we guarantee the purse to pay back losses to be $650, and where you have a chance to shoot in a 100-target handicap with $100 added to this purse.

The gentleman from whom I obtained the above figures has assured me that the amateurs attending the above shoots expressed great satisfaction with the system, and there should be not less than seventy-five amateurs at Moberly. L. R. HULEN, Sec'y.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

WINCHESTER

Rifle Cartridges

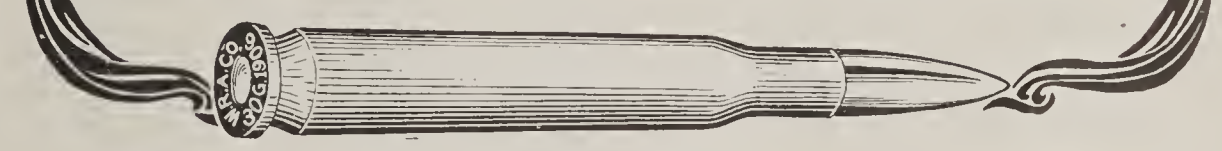
Again Win Government Accuracy Tests

Mean Radius Of The 64 Targets Shot

WINCHESTER, 7.122 Inches
FRANKFORD, 7.428 Inches
U. M. C., 7.565 Inches
PETERS 10.29 Inches

All Winchester cartridges from the tiny B. B. Cap to the big .50 Caliber are made with the same care, and under the same scientific supervision as the Winchester rifle cartridges which have won the Government Accuracy Tests two years in succession. Whatever rifle or pistol you shoot you should use the best ammunition. The tests by the Government Board of Experts show conclusively that Winchester cartridges are

BETTER THAN ALL OTHERS—BETTER THAN EVER



Audubon Gun Club.

BUFFALO, N. Y., May 21.—The competition for the several club events at the Audubon's shoot yesterday was especially keen, as a glance at the runs will show, and the winners were pretty well scattered. For instance, Frank Kelsey, the old reliable, was high gun of the day with 77 out of 80, and finished his 100 from the 20yds. mark, getting 19 more, making a total of 96 out of his 100. He also broke 37 out of 22 pairs.

Charlie Lambert was the runner up and won A class with a straight score and the Reed cup from the 21yds. mark, also with a straight. He was only one bird behind Kelsey in his 100 targets, but was away off from in his doubles.

Will Imhoff was just on edge and lasted long enough to win the B class badge for the sixth time. After that he took a tumble and made only fair scores.

Dr. J. M. Burke came back again and captured C class from Charlie Rogers, who was giving the doctor quite a race. Doc scored seventeen against Charlie's 10, thereby making absolutely certain his C cup for 1911.

The squad composed of Kelsey, Lambert, Wootton, Smith and Fish broke 465 targets out of 500, making an average of 93 per cent.—certainly excellent shooting.

The committee is hard at work completing the program for the Decoration Day shoot and will distribute same during the week.

The Lockport Gun Club has issued an invitation to all members of the Buffalo Audubons to attend its opening shoot on Saturday, May 27, to take place at the grounds of the Lockport Country Club.

The Audubon members are especially urged to bring their wives and friends, as arrangements for luncheon have been made.

Scranton Rod and Gun Club.

THE Scranton Rod and Gun Club held a registered shoot on May 23, and while the majority of the scores do not show a high degree of expertness, an enjoyable time was had. W. E. Corfield was high amateur with 137, closely followed by H. Gorman, Jr., with 136. Mr. Neat Apgar was taken ill and was compelled to withdraw before the close of the shoot.

The Fred Macaulay Business Men's Gun Club.

NEWARK, N. J., May 24.—Twenty-one gunners enjoyed themselves at the regular weekly shoot of the Fred Macaulay Business Men's Gun Club, held yesterday afternoon over the club's traps, near the Speedway. The day was not an ideal one for clay-bird shooting on account of a stiff wind that blew across the traps, which made good shooting impossible.

High gun honors of the day were captured by C. W. Billings, who smashed 163 clay disks out of the 175 that he fired at. P. Coffin also shot in great form, and on three occasions he sueeeded in breaking 25 of the blue-rocks without a miss. The scores:

B M Shanley, Jr	20	13	19	21	22	18	20	..	..
H Shannon	23	25	23	18	19	21	..	..	..

SMOKELESS.

Atglen Gun Club.

ATGLEN, Pa., May 25.—More than thirty shooters faced the traps at our tournament to-day. High amateur score was made by Buckwalter, 142 ex 150; Minker second with 151. H. H. Stevens was high professional. Very high wind prevailed and made scores bad. Had a fine attendance and good crowd of spectators. Scores:

	Shot at.	Broke		Shot at.	Broke

Clarke and Cole Tournanament.

THE second annual Clarke and Cole tournament is scheduled to come off on the Paleface shooting grounds, Wellington, Mass., on June 16 and 17. The program on the 16th consists of five 20-targets events, $2 entrance, money divided Rose system, three moneys for ten entries, 5, 3, 2; four moneys for over ten entries, 8, 5, 3, 2, targets included in entrance. Shooting begins at 2 P.M. The second day's proceedings will start at 9:30 sharp. Events 1 to 5 will be at 15 targets each, and events 6 to 10 at 20 targets. Events 6, 7, 8, 9 and 10 constitute the 100-target match, optional sweep $2.50, high gun system, two moneys for every five entries. Ithaca gun, value $70, will be shot for in events 6 to 10, added target handicap, entrance $1.00. Amateur high average will win the C. W. Sweetland cup, value, $30, with choice of merchandise prizes for second, third, fourth and fifth. The expert high average will win a silver-mounted bronze cup, valued at $8. A special feature will be a 100-target match, $100 a side, between P. E. Osborne and W. F. Clarke, 16yds., unknown angles. There are over 60 added target handicap merchandise prizes, running from $13.50 to $1.00 in value.

Targets, 2 cents each on June 17. Ties shot off at 25 targets. Interstate rules govern. Entrance free to all events, except Ithaca gun event. Shells and guns forwarded to Kirkwood Bros., 23 Elm street, Boston, not later than June 15, will be forwarded to the grounds free of charge.

Shoe Machinery A. A. Gun Club.

BEVERLY, Mass., May 22.—Almost perfect conditions favored the United Shoe Machinery Athletic Association Gun Club for its big tournament, which took place at the club traps Saturday afternoon last, and which brought together fifty of the cleverest trapshooters of the State, including representatives from the Paleface, Lawrence, Reading, Boston and other well-known Massachusetts gun clubs.

Frank was high gun for the day and won the $10 gold piece by breaking 165 out of 175. For second honors Hassam and Horace Kirkwood were tied with a score of 164. To Hassam went the honor of winning the magnificent North Shore championship trophy, a scratch event, when he broke 96 out of the 100.

There was the keenest competition for the handicap cups, a 100-target event, and five men who went to the mounds with handicaps added did better than the perfect 100, and on the shoot-off, E. D. Chapman won, taking the first cup, and the other cups were won in order by S. W. Winslow, Jr., George Goddu, Arthur T. Foster and Burns. Mrs. Alyce Winslow was the only one of the fair sex entered. She broke 47 of the 75 targets at the morning shoot and 67 of the 100 in the afternoon.

For the team matches there was lots of good sport. Team No. 6—E. D. Chapman, Marden, Muldown, C. F. Morse, Jr., and Kirkwood—shouldering the high guns with a net of 447 and a handicap of 36, their total of 483 giving each one a cup. But a single point separated team No. 6 from team No. 4, comprising Mrs. Winslow, G. F. Morse, Whidden, H. H. Eaton and A. T. Foster. They broke 378 targets, had a handicap of 104, giving them a total of 482. The affair was managed by a committee consisting of W. R. Hurd 2d, H. H. Eaton, P. R. Bosworth and George D. Eaton. Scores:

The Chicago Handicap.

SECRETARY E. B. SHOGREN writes: "The program for the Grand Chicago Handicap, to be held on the grounds of the Chicago Gun Club on June 15, 16 and 17, is now ready to be mailed. We believe that we have arranged a very attractive program. The program for the first two days will consist of 150 targets, Squier money-back system, and a special at 50 targets, divided on the percentage division. There will be 100 targets on the morning of June 17, moneys divided, percentage division; second annual grand Chicago Handicap at 100 targets; handicaps, 16 to 23yds., and purse to be divided on the Jack Rabbit system.

There is $300 in cash added to this event, and there will be $500 added to the entire program, which, taken together with the 1c. per target, should make the amount of added money between $800 and $900.

"The Chicago Gun Club will have its entire equipment of five traps prepared to handle any number of shooters. With proficient help stationed at every place will assure a well handled and smoothly run tournament. To all such shooters who intend to go to Columbus for the Grand American Handicap, we wish to announce that the Chicago Gun Club has made all arrangements for a special train to leave Chicago over the Pennsylvania lines, on Sunday evening at 9:15, June 18, arriving in Columbus at 7:10 Monday morning. Such shooters should arrange to take in the Grand Chicago Handicap and spend three delightful days securing some good practice.

"We will be pleased to mail a program to any shooter. One thousand programs will be ready for mailing on June 1. We also wish to announce that shooters contemplating taking in the Hickman, Ky., shoot, dates of which are June 12, 13 and 14, the Chicago Gun Club has arranged with the Illinois Central Railroad to stop train from Hickman, Ky., at the Chicago Gun Club grounds on Wednesday morning, June 15, the opening day of our tournament. We have every assurance that the attendance at this shoot will not be less than 150 per day. The beautiful $500 trophy donated by the Chicago Association of Commerce will be the main trophy in the Grand Chicago Handicap event."

Turkey Foot Lake Gun Club.

AKRON, O., May 24.—The Turkey Foot Lake Gun Club held the most successful tournament ever given by this club, and was largely attended by visiting as well as local marksmen. The regular program called for ten 15-bird events, and a handsome silver loving cup was presented to the winner of each event. There was also a five-man team race, consisting of 50 targets per man, and each member of the winning team was also presented with a handsome trophy.

Cleveland was well represented with twenty-three of the best marksmen of the Cleveland Gun Club, and returned with twelve of the fifteen trophies.

The success of this tournament is due to the management of Mr. W. C. State and Gerald Work. Every convenience for the shooters had been planned far in advance. Automobiles were in waiting at the station in Akron to convey shooters to Turkey Foot Lake, a distance of about eight miles, and a chicken and fish dinner was served at the club house for sixty shooters and friends. The feature of the program was enjoyed to the fullest extent by all. Machines were in waiting, and shooters returned to their homes singing the praises of Akron's hospitality.

The winners of the cups in the first ten events were as follows: Event 1, G. S. Work, Akron; No. 2, J. Flick; No. 3, F. Hogan; No. 4, A. B. Jones; No. 5, C. Haycox; No. 6, C. Doolittle; No. 7, S. Saffold; No. 8, G. Luckey, all of Cleveland; No. 9, G. E. Wagner, Akron; No. 10, F. Mitzler, Akron. The scores were as follows:

	Shot at.	Broke		Shot at.	Broke
G Work	150	136	H Heiman	150	116

The DuPont Gun Club.

WILMINGTON, Del., May 28.—Half a hundred devotees of the shotgun spent yesterday afternoon at the traps of the Du Pont Gun Club, at Newbridge. Owing to contrary winds, the usual high scores were not so much in evidence. J. T. Skelly was high man with a total of 87 breaks out of 100 singles. J. B. McHugh, A. B. Richardson, of Dover, former State champion, and E. E. du Pont were next in line.

J. W. Hessian was a visitor at the club at both the Thursday and Saturday shoots. Quite a good crowd of spectators were on hand to greet Mr. Hessian, as he is well known to all followers of the rifle and shotgun in this vicinity, and is a former Wilmingtonian. Hessian furnished amusement for the spectators by his remarkable pistol and revolver shooting over the club's 50yd. range. Besides this, he shot remarkably well with the shotgun. The club was especially pleased to have Mr. Hessian with them. He is regarded by critics as the foremost long-range rifle shot in the world. His most remarkable performance, and the one which brought him most fame, was at Camp Perry during 1909. At this time he made 57 consecutive bullseyes at 800yds., a record never before equalled nor since broken.

The shoot for the Fox shotgun, value $100, which started on Feb. 1, ended yesterday, and was won by S. B. Trott, with a score of 248 out of 250, including added targets.

In the T. Coleman du Pont merchandise event, T. W. Keithly was the winner in Class A. In Class B, T. B. Rogers and Eugene E. du Pont were tied for first place. Class C was won by D. J. Dougherty, and Class D by Harry T. Reed.

The shooting to-day was rather difficult, owing to a stiff breeze, which caused the targets to dip very much.

The scores yesterday, out of 25 shot at, were: A. B. Richardson 19, J. B. McHugh 19, S. G. Davis 13, F. H. Megaw 6, J. A. McMullen 11, Thorpe Martin 10, N. K. Smith 20, L. C. Lyon 9, J. W. Hessian 20, W. M. Hammond 16, S. J. Newman 19, Wm. Wood 16, A. J. Curley 7, T. B. Rogers 22, D. S. Wood 9, J. T. Skelly 20, S. B. Trott 16, W. A. Lindsay 18, D. J. Dougherty 20, H. T. Reed 19, L. L. Jarrell 15, Victor du Pont 10, W. Mathewson 15, G. F. Lord 8, J. T. Birch 10, D. A. Grier 14, Dr. C. R. Jefferis, Jr., 18, J. J. Magahern 18, H. P. Carlon 19, T. W. Keithley 20, Dr. Betts 14, Philip du Pont 17, H. Wilson 14, J. C. Gregg 9, I. Turner 18, A. H. Lobb 16, W. A. Casey 11, J. A. McCartney 1, J. C. Cannon 12, R. C. McArdle 12, G. A. Hille 20, Dr. A. Patterson 12, E. E. du Pont 22, D. R. Rutter 10, W. A. Joslyn 20.

Chicago Gun Club.

CHICAGO, May 20.—No doubt the attendance to-day was considerably cut down, on account of the threatening clouds which overcast the sky and which eventually did spoil the sport of the afternoon.

After the final half of the handicap event had been shot, the rain came pouring down and put an end to the shooting until Mitchell and MacLachlan decided to finish their half by shooting from the club house porch, which is 40yds. rise.

MacLachlan and Matthews then shot two frames from the porch while the rain was pouring down, MacLachlan breaking 23 out of the 50, while Matthews scored 19.

In a practice event, Graham scored 25 straight, Matthews following with 24 and Merrill grassed 22.

In event No. 1, Merrill and Graham were the top-notchers with scores of 48 out of 50, Matthews getting 47.

First honors went to Barton in event No. 3, when he scored 48 out of 50 from 20yds., Matthews getting 44 and Graham 41, both from 19yds., these three shooters shooting the last half after the rain had stopped. MacLachlan had a 24 and Merrill 21 to their credit in the first half, when the rain halted them and they had to get away on the early train.

F B Fox	16	20	27	..	..	..
C F Hjertberg	16	11	..	..	..	..
L M Fetherston	16	20	..	..	..	..

Events Nos. 4 and 5 were from 40yds.

May 21.—Although the weather looked rather threatening, twenty-five shooters decided to take the chance of getting an afternoon's sport at the traps; but we had no more than got fairly started before a "young" cyclone came tearing past which was followed by a rainstorm that almost resembled a cloudburst, and every one was glad to get inside the club house.

After a short time the sky cleared off and they went at it again, only to be driven to cover by another storm, which was almost a repetition of the first, and from that time on the shooting was done between showers, the different squads seldom having time to finish a frame before it would come down good and heavy.

When taking in consideration the many interruptions caused by the rain, the scores put up by most of the shooters are good, and quite a number are hard to beat when the "going" is good.

In the practice event at twenty-five singles, Young and Mitchell each broke 24, Kumpfer getting 22, while Shrigley, Kuss and Mott each connected with 21.

Fetherston walked away with first honors in event No. 1 with the excellent score of 49, Shaw and Mitchell giving him a clase race by scoring 48, while Young was hot after them with 47. Davis and Taggart each broke 45, Shrigley being next in line with 43, while Miss A. Riker brought down 42.

Mitchell put up the high score in the handicap event, breaking 48 from 16yds., Ralph Kuss being high amateur in this event with a score of 45 from 18yds., C. E. Shaw connected with 43 from 20yds., Young bringing down 40 from the same handicap, while Davis and Taggart each scored 40 from 19yds.

Young, Mitchell, Taggart, Kumpfer and Kuss all put up good scores in several matches at 21yds., in one of which Mrs. Fetherston joined in and broke 15, this being her first trial at such a handicap.

Collier also did well for his first trial on a handicap, especially with a borrowed gun and the first time he has shot on our grounds, he being here from New York, and he said had made up his mind to come out and have a look at our park and assured us that he will be with us whenever he gets to Chicago.

WM. F. MERKLE, Supt.

Jeanette Gun Club.

HAVING hibernated since the repeal of the statute in New York State allowing scoring at the real and original flying targets, the above club had a lively outing last week in which fifteen members participated. Under the presidency of Cordt Steffens, the program of the day's contests was carried out successfully. Our secretary, Mr. John Meyer, showed himself a chip of the old block and a worker of untiring activity. Mr. John Hainhorst, well-known among the riflemen of the Empire City, was right on the job, and his duties probably affected his scores. The club members are divided into three classes, as heretofore, with a trophy for each class, which must be won three times in order to become the victor's personal property. Class A shoots from the 30yd. mark. Class B from 28yds., and Class C from 25. When any ties occur in this competition, they are shot off miss-and-out; but it so happened to-day that each winner was alone in his class. Schorty won in Class A with the only straight. Bob Debacher in Class B with 9, and Claus Bohling in Class C with 9.

A 10-bird sweep followed the club event, club handicap rise. Then came in order the contest for the diamond challenge medal, the veteran Charley Meyer showing his old-time form. The final event was the usual contest in which Steffens' team defeated Meyer, Sr.'s aggregation by 3 to the good.

The day was very warm, with an outgoing wind at the traps, but very sultry at the score, a grove of trees being in the rear. Mr. Debacher acted as referee, relieved in the team contest by Mr. Schortemeier. Scores as follows:

Class A:

	No. 1.	No. 2.
C Steffens, 30	221*121211— 9	1111222201— 9
C Meyer, 30	1211*21122— 9	0112112111— 9

MANHATTA.

Smith Gun Club.

NEWARK, N. J., May 28.—There was a good-sized turnout of shooters at the weekly sweepstake tournament of the Smith Gun Club on its Bloomfield avenue grounds yesterday afternoon. A stiff breeze, blowing across the traps, bothered the men considerably and prevented the breaking of records. For the honor of high gun for the day there was a nip-and-tuck contest between C. W. Billings and Louis Colquitt. The former finally won by a single bird, having broken 191 targets to the 190 smashed by Colquitt, each man having shot eight strings of 25, or a total of 200 targets apiece. H. Lee gave them a close run, making a score of 183 out of 200. Excellent shooting was done by H. S. Lindle and S. G. Francisco, who each broke 109 targets out of a string of 125. W. Laing smashed 89 out of 100, and all the other participants in the sport of the afternoon overcame the wind handicap in splendid style. The club will have an all-day shoot on Tuesday, Memorial Day, beginning at 10 o'clock in the morning and continuing until dark. The chief event of the day will be a 100-bird sliding handicap merchandise prize sweepstake. This will take place in the afternoon, and there will be a dozen handsome prizes. Following are the scores made yesterday:

H Lee	24 22 23 22 24 22 24 21	182
H von Lengerke	25	25
C W Billings	23 25 24 24 23 22 25 25	191
H S Lindle	22 23 21 21 22	109
S G Francisco	21 20 22 23 21	107
F Lindle	11 18 17 19	65
H Hassinger	15 8 15	38
L Colquitt	23 23 24 24 25 22 24 25	190
A L Perkins	19 19 15 22 17	92
J F Murphy	18 18 16 18	70
I Quimby	8 11 7	26
C T Day	17	17
W Manning	18 21 21 22 25	107
W Laing	20 23 22 20	85
E Bellingsrath	21 19 19 18	77

Analostan Gun Club.

WASHINGTON, D. C., May 28.—The regular weekly shoot of the Analostan Gun Club was held May 27. Phil Steubener made the splendid score of 96 out of 100. The targets were thrown full 50yds., and the northeast wind which prevailed made the shooting difficult. Steubener is a very quick shot, and this accounts for his success. His good work will be appreciated when his score is compared with those of other members, which follow:

	Shot at.	Broke.	Spoon.	Medal.
Dulaney	150	129	42	20
Peck	150	127	42	24
Parsons	125	80	36	19
Steubener	100	96	47	24
Stine	100	80	41	22
Harrison	100	75	40	22
M Taylor	85	67	40	21
McQuillan	75	45	..	..
Talbott	75	31	29	10
Willis	65	49	40	19
Wagner	65	52	41	24
Jackson	65	34	28	15
C S Wilson	50	43	43	21
Barnes	50	38	38	17
Dr Taylor	50	36	36	19
Kahrs	50	26	26	13
Dufour	25	20	..	20

The spoon shoot was at 50 singles; the shoot for the Wagner medal at 25.

Steubener won the spoon in Class A on 47; Dulaney and Peck tied for the spoon in Class B on 42, Dulaney winning in the shoot-off; Dr. Taylor and Parsons tied on 36 for the spoon in Class C, and in the shoot-off Dr. Parsons won; George Talbott won the spoon in Class D, scoring 29.

Messrs. Peck, Steubener and Wagner won a leg on the Wagner medal.

Siwanoy Country Club.

MT. VERNON, N. Y.—An enthusiastic crowd gathered at the traps on Saturday, May 20. Besides being anxious to be in the best trim for the amateur championship of Mt. Vernon and the Siwanoy, on May 30, members are desirous of winning a leg on the Du Pont trophy. It must be won by the same party three times. The winners to date are: First leg, H. V. Morgan; second leg, L. G. Rauch; third leg, J. G. Wintjen; fourth leg, Z. C. Offutt. The following scores resulted on May 20:

	Shot at.	Broke.	Per Cent.
Donovan	120	71	59.1
W W Thorpe	120	78	65
E C Story	70	32	45.7
H V Morgan	120	84	70
Geo. Wylie	110	89	80.9
H J Smith	110	76	69
W Thorpe	110	81	73.6
Z C Offutt	110	84	75.3
Gates	95	52	54.7
A D Scovil	100	55	55
L G Rauch	105	80	76.1
W M Wylie	105	68	64.7

C. G. STONE, Sec'y.

The Palefaces.

BOSTON, Mass., May 24.—Just a dozen shooters took part in the Paleface program of to-day, and a better treat could hardly have been imagined in view of the high class scores that were invariably in evidence.

O. R. Dickey with his new black shell placed a pretty 98 for high average, but at that was only one too good for the president of the Association, whose 97 and run of 75 was the best amateur effort. Little Billy Hurd, of the Beverly Club, also gave a good account of him-

Peters Factory Loaded Shells

June 3-4.—St. Louis, Mo.—Second annual combination tournament, Missouri State Rifle Association. C. C. Crossman, Sec'y.

Interscholastic Invitation Shoot.

AT the invitation shoot held on Saturday, May 27, under the auspices of Morris High School rifle team, the holders of the interscholastic championship, won at the national tournament recently ended, were twice defeated by the De Witt Clinton High School marksmen. The shoot was held at the National Rifle Ranges, Lexington avenue and Thirty-third street, this city. The totals follow:

De Witt Clinton—S. Hubbard 84, J. M. Loré 83, H. Dutton 80, A. Bancel 81, R. De Castro 92; total 420.

Morris—Siebeneichen 82, H. Linicus 82, J. Levy 84, P. Phelps 77, N. Elias 87; total 412.

Commerce—L. Katz 74, J. Weil 68, R. Ulmer 82, T. Server 62, J. Shapiro 70; total 365.

Stuyvesant—D. Curry 65, L. Benson 64, W. Curry 82, J. Donahue 63, V. P. Pfeifer 70; total 344.

Erasmus Hall—E. Wood 72, J. Ericson 63, R. Ross 65, L. Greeder 59, H. Van Buskirk 79; total 338.

Rifle Club championship—Du Pont trophy:

De Witt Clinton—S. Hubbard 86, J. Loré 99, H. Dutton 85, A. Bancel 83, D. De Castro 79; total 423.

Morris—H. Linicus 80, N. Elias 81, H. Siebeneichen 79, J. Levy 76, L. Van Dusen 74; total 390.

Erasmus Hall—E. Wood 66, J. Ericsson 65, R. Ross 74, L. Greeder 78, H. Van Buskirk 62; total 345.

Dieges Plaque match—Second teams:

Morris—Van Dusen 77, Henne 65, Widmayer 73, Fogg 83, Romeo 81; total 379.

De Witt Clinton—Lenger 57, Schneider 63, Grossman 68, Clendenning 69, Eversfield 78; total 335.

Erasmus Hall—Arnold 44, Beyer 42, Rice 65, Alleson 54, Waldo 65; total 270.

National Rifle Association medal:

	Standing.	Prone.	Total.
H Linicus, Morris	78	97	175
J Loré, De Witt Clinton	77	93	170
N Elias, Morris	80	88	168

Individual competition leaders:

Class A—H. Linicus, Morris, 191; S. Hubbard, De Witt Clinton, 186; J. Loré, Clinton, 180; R. De Castro, Clinton, 180; N. Elias, Morris, 179; H. Siebeneichen, Morris, 178, A. Bancel, Clinton, 173, H. Dutton, Clinton, 172.

Class B—Romeo, Morris, 178; Eversfield, Clinton, 177; Van Dusen, Morris, 171; Henne, Morris, 162; Schneider, Clinton, 150; Wollenweber, Morris, 138; Benjamin, Commercial, 135; Norris, Curtis, 132.

Class C—Fogg, Morris, 170; Jaeger, Morris, 168; Adams, Morris, 168; Blatt, Eastern District, 160; Orthey, Stuyvesant, 158; Ammaducci, Morris, 156; Hermansen, Stuyvesant, 153; Schaeffer, Morris, 138.

The Philadelphia Rifle Association.

PHILADELPHIA, Pa., May 27.—The weekly competitions of this Association were shot to-day on the Arlington range, Lansdowne avenue and Cedar lane, near Llanerch, Pa. There was a fair-sized gathering of the faithful, including Mr. Brockmeyer, the donor of the prizes in the match of that name, who has been absent for a long time. Dr. Davis scored a 46 in the Brockmeyer military match, which is going some for a novice, and will make the sharpshooters get a hustle on. Dr. Dubbs got his silver honor score:

Record match, 200yds., rifle: R. L. Dubbs, 218, 218, 216, 211, 208; H. A. Dill, 191, 169, 155.

Honor target, 3 shots, for silver medal or cup; R. L. Dubbs 67.

Military match: H. A. Dill (A) 43, 43, 42, 42, 41; Dr. Given (B) 40, 38, 37; Brockmeyer 38, 36.

Brockmeyer Military Match: Dr. G. G. Davis 46, 42, 40; Williamson 43, 40, 38.

Pistol match, 50yds.: Dr. Palmer, 89, 88, 88, 87, 86, 85, 84.

Yale Gunners Victorious.

PRINCETON, N. J., May 27.—Yale defeated Princeton and Pennsylvania for the intercollegiate gun championship in a match held over the University track to-day. The scores were: Yale 430, Princeton 418, Pennsylvania 353. Morrison, of Yale, was high man, with 92. Each man shot at 100 targets. The wind was unfavorable. Summary:

Yale.		Princeton.	
Dimock	86	White	89
Morrison	92	Smith	84

Downing	71		

France Wins Rifle and Revolver Match.

FRANCE again wins the annual rifle and revolver shooting match between the Cercle des Carabiniers de Paris and the Manhattan Rifle and Revolver Association of this city. The match was shot in Paris and at Greenville, N. J., on Tuesday, Thursday and Saturday, May 23, 25 and 27, and the conditions were fifteen men on a side, 40 shots each, at 200yds., with rifle and 40 shots at 50yds. with the revolver.

The French team made a total score of 21,347 as against 21,011 for the American team. Last year the Frenchmen scored 21,457 and the Americans 21,252. In 1909 the Frenchmen made 21,246 and the Americans 20,990.

The following are the complete scores of last week's match:

French Team.	Rifle.	Revolver.	Total.
Mr Johnson	761	718	1,479

DuPont Gun Club, Rifle Dept.

WILMINGTON, Del., May 26.—The rifle section of the club made these scores at yesterday's shoot:

Revolver and pistol—Practice: D. Appleby 72, 71, 75, 86, 75; J. T. Skelly, 62. Qualification: J. W. Hessian 81, 85, 86, 86, 90.

Rifle—Practice: J. R. Owens 51, 51; J. Grier 36, 57; J. T. Birch, 65; D. Appleby 82; Sheppard 62, 50, 72, 81. Qualification: D. Appleby 87, 77, 77, 79, 88.

PUBLISHERS' DEPARTMENT.

At the three-day registered shoot, held at Hutchinson, Kans., March 27, 28 and 29, William Veach, of Falls City, Neb., shooting Ballistite, won high amateur average for the three days with a score of 419 out of 450.

At the two-day registered shoot held at Wamego, Kans., April 24, and 25, Mr. Harvey Dixon, of Oronogo, Mo., shooting Du Pont powder, won high amateur average, making the score of 269 out of 300. William Veach, of Falls City, Neb., and George Nicolai, of Kansas City, Mo., tied for second high average, 267 out of 300, both gentlemen using Du Pont brands of smokeless shotgun powder. J. W. Barre, of Louisiana, Mo., shooting Du Pont brands, won third high amateur average with a score of 266 out of 300.

At the second annual Interstate five-man team championship shoot on the Chicago Gun Club grounds, May 7, Chicago Gun Club team No. 2, composed of George Roll, L. Fetherston, Joe Barto, A. F. MacLachlan and C. E. Shaw, won first place, every member of the team shooting New Schultze powder, the team score being 471 out of 500.

Mr. R. L. Bennett, Little Rock, Ark., is doing very consistent shooting with his Stevens repeating shotgun. His average for this season has been 95 per cent. At Camden, Ark., on May 3, Mr. Bennett broke 97 out of 100 targets, and on May 4, scored 136 out of 150, which was high score for the day.

THE BIT O' RED.

THERE is no doubt that of the primary colors red has the greatest attraction for animal life, says Edgar S. Shrubsole, in the Shooting Times. The commanding crimson associated with a sunrise or sunset appeals more to the onlooker that do the deep purple shadows wherein are really contained the subtle details of the scene. We do not notice the green undergrowth when admiring a field of poppies; we have eyes only for the blazing bloom. The red glow of a fire forms a striking contrast to the blue smoke curling upward. Red is the color adopted as a danger signal, simply because it is the most likely to command attention. When we receive the "final notice" applying for payment of the rates it is printed in red; and so are the "Last weeks'" announcements of a play or a pantomine. Mephistopheles would be nothing on the stage if he were not clad in red. "A red rag to a bull" is an axiom. Even the man with a red nose stands out prominently from his fellows. And so on ad infinitum. Little wonder, then, that red has such a marvelous attraction for fish; but have you ever considered how very great that attraction is?

Most of us are acquainted with the deadly qualities, as a grayling fly, of a lure called the red tag; but how many of us give that same lure a fair trial when trout fishing? Yet when on a stream containing both trout and grayling the red tag kills its share of the former fish. As a matter of fact, it is a useful trout lure wheresoever the wet fly is used, and it is well worthy a trial at any time on any water. On those waters where it is a recognized favorite there is no doubt that it is "the bit o' red," i. e. the tag proper itself, that does the trick. Should you have any doubt as to the truthfulness of this statement, remove the tag from the fly and fish the lure as an ordinary Palmer; the result will be very convincing. And if the red does the trick where the fly is a proved killer, why not elsewhere?

But there are reds and reds. For instance, we cannot compare the "red on white" of the "final notice" concerning the rates with, say, the rich, red breast of the robin in winter as associated with the beautiful brown of the body of the bird at that time of year; such comparison, to quote Mrs. Gamp, were "odorous." Yet, in order to be most attractive red must be more or less scarlet according to the surroundings. Nature provides heaps of examples of that fact.

The tag should invariably be of a rich red hue, but in order to be most deadly it should be more or less scarlet according to the color of the water and the brightness or dulness of the weather. The importance of this can be tested by fishing a peaty, or brown, water with two flies on the cast, both of which shall be dressed the same with the exception that one shall have a dull red tag and the other a bright scarlet tag. By far the greater number of fish will fall to the latter. On the other hand, a

RODMAKING FOR BEGINNERS

By PERRY D. FRAZER

A unique work, bringing the science of rodmaking up to the very moment and epitomizing the knowledge and the experience of experts for the guidance of the average man. The evolution of bait-casting principles has made Mr. Frazer's book supersede all previous publications on the subject.

Every angler—young or old—who is fond of adapting his rods and tackle to his own ideas of what they should be, will find in this book a large fund of information gathered by the author in years of study, experiment and practical experience in fishing, tournament casting and at the work bench. He theorizes and speculates not at all. He tells "the how" of everything connected with rodmaking in a way that makes results certain. All explanations are simple and easily followed.

Separate chapters are devoted to each of a half dozen types of bait-casting rods; to tarpon, surf and light salt water rods; bass and trout, salmon and tournament fly-rods. Complete specifications of well known types are given, and the chapter on split bamboo rodmaking is the most comprehensive treatise on the subject ever published. Indispensable in the angler's library.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid, $1.

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

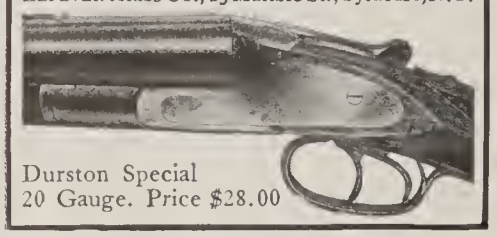
TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring.**

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER
SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the $28 gun the peer of any $50 gun on the market. Upwards to $1,000. Send for free catalog and get Lefever wise. LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N.Y.



Durston Special
20 Gauge. Price $28.00

SAM LOVEL'S CAMPS

A Sequel to "Uncle Lisha's Shop." By Rowland E. Robinson. Cloth. Price, $1.00.
FOREST AND STREAM PUBLISHING CO.

gin-bright chalk-stream is more successfully fished with a tag the red of which is of a deep, but still rich, tone. In the same way a brighter tag may be used to advantage on a dull day, and vice versa; for in variance with the general dressing of the fly the red tag should form a decided contrast to its surroundings. And this holds good in connection with the use of red in any way in connection with fishing.

For the benefit of those of my readers who have not yet given the red tag a trial, and to further substantiate my high opinion of it I give H. S. Hall's dressing, and his remarks thereon: "The red tag is generally regarded as a grayling fly, but at times it does wonderfully well among trout. The brighter the day and the hotter the sun, the better does this fly succeed. It is not generally known that when trout are 'smutting'—that is, feeding on any tiny midge which baffles all imitation—they will often take a small red tag ravenously. The accepted dressing is as follows: Body, peacock herl, short and fat, with a tiny red tag of floss silk, wool, or scarlet ibis feather; at the shoulder should be wound a dark rick red hackle; hook, 0, 00, or 000, new scale. Floss silk looks very well when it is dry, but it shrinks up when wet, and often loses its color. I have always found wool much more killing."

I fully agree with what Mr. Hall has to say concerning this fly, with the somewhat important difference that I much prefer the ibis feather tag to either silk or wool. As previously pointed out, I think there can be no doubt that the real attraction of the red tag is the tag itself; and, that being so, it naturally follows that the addition of a red tag to other patterns of flies should have a profitable result—which, as a matter of fact, it has.

The Coch-y-bondhu is another wonderfully good fly; add a red tag to it and there is very little to choose between it and the red tag as an all-round, successful lure for trout and grayling; indeed, on certain waters I know of the Coch-y-bondhu with the addition of a red tag is even preferred to the red tag proper. The Coch-y-bondhu, if dressed correctly, is of slightly more sombre hue, black and red, as the name implies, being the predominant colors instead of red only. Hence the body should be of darker peacock herl, and the hackle should be a furnace cock's, i. e., red with black butt. This fly, without the tag, is especially useful on a close, cloudy day; add a red (ibis feather) tag to it and you have a grand fly for brilliant, sunshiny weather.

We all know what a "tailing" fish is from bitter experience. I certainly consider a "tailing" fish to be far more exasperating than a "smutting" fish; it absolutely ignores any of the orthodox flies, and continues to stick its tail out of the water in sheer contempt of the angler's efforts. You may try him even with the red tag (fly), and perhaps fasten into him, but he will most probably refuse it, be it ever so deftly presented to his notice. Try him with a ginger-quill of fair size—hook 0 or 1—to which has been added a tiny red tag, and you stand a very good chance of basketing him. You may put such a fly over a "tailing" fish—so long as you do not "put him down"—until you fairly worry him into noticing it. Should he prove very obstinate and refuse the ginger and red, put a blue-dun or olive-dun, to which has been added the tiny red tag, over him, and see what they will do.

Most of the duns, gnats, and spinners, with the addition of "the bit o' red," will be found very useful for other than "smutting" or "tailing" fish. All trout are more or less "finicking" at times, and when their palate requires extra tickling the "little bit o' red" will often do the trick. Again it will happen that fish feeding freely on the natural fly rising at the time will refuse the most correct and artistic presentment in feather and silk of that fly. Then is the time to try the same patterns, with the addition of the red tag, and test the value of the tip. Even with an artificial May-fly the red works wonders at times; and that king of trout-flies, the March-brown, is improved now and again in a similar manner.

From all of which it may be gathered that I am in favor of utilizing—under certain circumstances—"the bit o' red" with any artificial trout fly. But, of course, with the exception of the red tag proper and the few other patterns that are dressed with a red tag, such as the Zulu, etc., the ordinary patterns, without the red tag, should be given a first and thorough trial in the ordinary way. "The bit o' red" may be resorted to when all else fails. In which connection it may be added that that is the time it is most deadly; and, further, when an orthodox pattern is killing in an orthodox conditions, often enough the addition of a red tag would be disadvantageous, and to have resort to it under circumstances would be a mistake.

"But," it may well be asked, "if we are to adopt your advice and give the red tag a trial with any and all patterns of trout-flies, surely that means doubling our stock of flies—which is already far too big—and that, maybe, on the off-chance of getting an occasional fish which we might not otherwise basket?"

Nothing of the sort. The only patterns that need be dressed with and without ibis feather red tags are those one uses mostly on this water or on that; for instance, the March-brown on this water, the Coch-y-bondhu on that, and the claret and partridge on the other. "The bit o' red" can be used with all other occasionally successful patterns after the following manner: Take some pieces of an old white kid glove and dye them various depths of scarlet color; then cut them up into tiny pieces, about an eighth of an inch square. Store them in an envelope, or, better still, a pill-box, and, as they are required for use—of varying depths of color, as recommended in the first part of this article—stick them on the hook, well over the barb. They will answer all practical purposes, although, perhaps, hardly so well as the ibis feather dressed in with the fly.

Before leaving this part of my discourse I would like to remind my readers that when a certain great authority in the angling world suddenly sprung on us the astounding theory that fish were not able to distinguish colors, he, in order to prove his assertion in so far as trout were concerned, elected to fish for fario in the May-fly season with a fly built of one-color materials. The color he chose was scarlet! And, sure enough, with a scarlet May-fly he actually succeeded in basketing several trout. It would be most interesting to learn if that same authority has continued to use scarlet May-flies ever since!

Trout are by no means the only fish that are influenced by red. The roach-fisher will tell you that paste into which has been worked a little vermilion often secures fish when the ordinary plain paste fails. And so with gentles; when these baits are just "turning" they assume a more or less red hue, and are then a killing lure. The pike fisher has still more reason to bless "the bit o' red." One of the most deadly of all spoons is the "Colorado," and it has a red tassel trailing behind in which is hidden the treble hook that generally does the trick. An ordinary spoon painted red inside is another deadly lure for pike; and so is an all-red large-size phantom minnow. By-the-bye, a small all-red phantom minnow is a capital lure in many waters from salmon and trout. An old and, alas! departed angling chum of mine used to be very fond of, and clever at, spinning, for pike, and a favorite dodge of his was to attach a red tassel to one of the flying triangles of his flight. Doubtless many of my readers have met with many other experiences where red has been responsible for a successful day's fishing.

I have often heard it remarked that salmon cannot possibly take a prawn, as, fished in fresh water, for any food with which they may be acquainted, seeing that if they feed on prawns at all in a natural manner they would recognize them only in the dark garb of life; it is only when a prawn is boiled that it assumes a red color! And salmon could hardly be expected to meet with and recognize boiled prawns on their natural feeding-grounds. Just so! But does not "the bit o' red" theory make

the matter plain? It is because the prawns used in angling for salmon are red that they are such a deadly lure; not because the fish recognize them as a dainty article of food with which they are acquainted elsewhere.

LADY GUNNERS.

PERSONAL observation leads me to conclude that, both in field and forest, lady gunners have been in evidence more than ever during this season. In a short time it will be the exception and not the rule for ladies to stay at home while their brothers and husbands are storming the citadels of the grouse, the blackcock and the deer. I notice with much interest that the names of many of them appear on the membership lists of the rapidly multiplying miniature rifle clubs all over the country. It was less than forty years ago that, for the first time, a woman took up her position on the moor, gun in hand, along with enthusiastic shooters of the sterner sex. From that day to this the health-giving sport has been gradually gaining fair recruits, and the number continues to increase from year to year. It was in the classic fastnesses adjoining Achnacarry, Inverness-shire, that the first lady stalker of whom we have definite and authentic information, Lady Seymour, put her fortune to the touch, and, in the autumn of 1845, succeeded in bringing down "a great many stags." Her example has since been sedulously followed by many of the highest ladies in the land. The Marchioness of Breadalbane and a number of other peeresses have placed quite a large number of splendid heads to their credit. The biggest stalking bag ever made in Guisachan in the course of one day was sixteen stags, five of which fell to the rifle of the late Lady Tweedmouth. The Duchess of Bedford succeeded on one occasion in shooting fifty-seven pheasants with fifty-eight cartridges, and on another twenty-three pheasants and a hare with twenty-five cartridges. Among ladies who have not only achieved distinction at home with their guns and rifles, but also tackled successfully big game in India and elsewhere, may be mentioned Mrs. Alan Gardner, Miss Lilian Elphinstone, and Miss Evelyn Mackenzie. All sportsmen will readily agree that the presence of ladies in a shooting party will add considerably to its enjoyment; and it will also be frankly admitted that the shooting skill of the "fair intruders" will compare very favorably to that of the other members of the expedition.—County Gentleman.

WHEN THE FEVER'S IN THE BLOOD.

Now the veteran fisherman
  Dreams of piscatory loot,
Overhauls a box of tackle,
  Sticks a patch upon the boot;
Sorts a mass of tangled hooks and
  Oils the automatic reel,
Lays out woolen shirt and stockings
  Cleans the inside of the creel.

Then the lancewood rod is tested,
  Is revarnished and rewound.
Fill'd the cheering little bottle,
  And the drinking cup is found.
The old canvas coat is tattered,
  But will last a season hence,
And the khaki pants are mended
  Where they caught upon the fence.

Next the sportsman knots the leaders,
  Buys a new enameled line.
Repairs he the basket harness
  With the little piece of twine.
Fills the old fly-book to bursting
  With decoys of latest type;
Minds the matches and tobacco
  And the fragrant corncob pipe.

But the days are long and weary
  When the fever's in the blood,
And the icy brooks are waiting
  For the springtime and the flood.
When the kit is packed and ready,
  And the patient angler dreams
Of the sunshine on the meadows
  And the sport along the streams.

The PARKER GUN Again a Winner!

On January 11-13, 1911, The "OLD RELIABLE" PARKER GUN, shot by Howard D. Bates, of Ridgetown, Ont., again won the Grand Canadian Handicap at live birds, killing 25 straight and 9 in the shoot-off, from the limit distance of 31 yds. Mr. Bates shot at 54 birds during the tournament and killed them all. THIS IS SOME SHOOTING!

The ***Marlin*** *Model 20*

REPEATING RIFLE

You can buy no better gun for target work and all small game up to 200 yards. Without change of mechanism it handles .22 short, long or long-rifle cartridges, perfectly. The deep Ballard rifling develops maximum power and accuracy and adds years to the life of rifles.

The solid top is protection from defective cartridges—prevents powder and gases from being blown back. The side ejection never lets ejected shells spoil your bead and allows quick, accurate repeat shots. With simple take-down construction, removable action parts—least parts of any .22—it is the quickest and easiest to clean. A great vacation rifle. Ask any gun dealer.

The 136 page *Marlin* catalog will help you decide what rifle best suits your individual desires. Send 3 stamps for it today.

ANGLING MEMORIES

Seasonable Books for the Sportsman's Library

MEN I HAVE FISHED WITH — MY ANGLING FRIENDS

Both by FRED MATHER

These two volumes are a source of endless delight to the fisherman. They deal with every phase of the gentle sport from bent pins and willow poles to salmon flies and special rods—with every kind of fish as well.

They are full of a quaint philosophy, written with a rare appreciation of human nature, and comprising sketches of angling "characters" as well as well-known men who were Mr. Mather's brethren of the angle. Much of other sport and adventure beside fishing will be found between the covers of these books. These two large, splendidly bound, splendidly printed, and richly illustrated volumes of 400 pages each regularly sell for $2 each. While they last we offer

Rhymes of The Stream and Forest

FRANK MERTON BUCKLAND

One of the freshest, most delightful collections of outdoor verse offered for many a day. They are the outpourings of a spirit which loves nature, the woods and streams and growing things, and appreciates its charms.

Mr. Buckland's verse has a charm that is at once rare and delightful. This book will appeal to every outdoor man or woman, and particularly to the "Brethren of the Angle."

Its form is as attractive as its pages, closely simulating the appearance of the standard fly-book, printed on heavy laid paper with ornamental border designs of trout flies, pocket for clippings, and blank pages for copying or individual composition. It is just the thing for the den, for the pocket, or for a gift to the friend who loves the big world out of doors.

Postpaid, $1.25

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

SHOOTING OVER DOGS IN THE TRANSVAAL.

Owing either to the denser covert afforded by the long grass of the High Veld or to the fact that the South African partridges (francolin) are not so much harried as our partridges at home, the use of dogs is not only desirable, but an absolute necessity. For some time after my arrival in the Eastern Transvaal I was always hearing that there were plenty of partridges in the neighborhood, but with the exception of two which got up under my horse's feet as I jumped the little drain through a vlei I saw none, and this despite real hard work incurred in quartering the ground they were said to frequent, and where I had frequently heard them calling—the call, by the way, is quite unlike that of our English bird, from which it differs both in appearance and habits.

One Sunday, says H. W. May in the Field, a neighboring settler came over to call, bringing with him two red setters. One of these dogs took an unaccountable fancy to me, and, despite thrashings, always found his way back to me, until his owner kindly proposed that I should keep and use him during my stay in the country. His acquisition was a veritable godsend. On an elevated plateau close to the house, with here and there the solid rock cropping up through the grass, dropping suddenly some 40 feet to the low-lying land bordering the river, there was said to be one covey at least, if not more.

Much walking through the thick grass backward and forward, and taking the narrowest of beats, had produced no result. I was getting sceptical as to there being really any partridges there. I had spared no trouble, and felt I must have walked not only near enough to put them up, but actually on the top of them. However, on the morning of the loan of the dog I determined once more to try my luck. Crossing the kloof I slipped a couple of cartridges into my gun and allowed the dog to range in front. Not a hundred yards from the house, in a new planted wattle copse, as the dog, whose movements I was closely watching, was going down wind, up got three partridges somewhat wide. I succeeded in getting one of them, which proved to be a young one, though as large as a full-grown English bird.

Although pleased to find the birds, which I was unable to mark down, I thought the dog could not have much of a nose. It was, however, too early to judge, for this was almost his first outing this season, and we proceeded. It was not long before I once more saw him suddenly stand at attention, and went up to him to try to get him to draw up to his bird. With the greatest difficulty I got him to move on some twenty yards, when suddenly he lay down, a picture of intense excitement.

We were then not ten yards from the edge of the cliff. At a loss what to do to put up the birds, I proceeded to walk the ground, starting about five yards in front of him and working to the very edge of the cliffs. Not a feather stirred. Finally I proceeded to move away. It was of no use; he paid no attention to me, but groveled forward on his belly yet another foot, quivering with excitement. Coming up behind him I patted him and encouraged him, to no purpose. At last I stepped just in front of him, hoping he would follow, and as I did so, within a yard of his nose, up got fifteen birds with a most alarming noise. Startled beyond measure, I put up the gun and let off both barrels, only to see every bird go away unhurt. From my coign of vantage, however, I could see that although the greater part had crossed the river (our boundary), two had settled on this side in the long grass mixed with rushes.

Scrambling down the rocks, the dog and I at once went after them. Arrived at the spot, he found one immediately, and sat down. Again my utmost blandishments failed to make him draw on. Stepping in front of him, however, up got a bird, which was immediately killed, while the other, which rose within five yards at the report, was easily knocked down with the second barrel. Much pleased with the dog, I patted and encouraged him, and we proceeded

on our way. We must have gone more than a mile, the dog quartering the ground at the gallop, and yet no more birds were found.

The South African sun at midday was awfully hot, and I found it impossible to keep anywhere near the dog, which, despite my admonitions, was getting further and further ahead, and must have been two hundred yards off, and approaching a spring. Poor beast, I thought, he is awfully thirsty and smells the water. Suddenly, as I watch him, he grows rigid. I hurry on, afraid the birds may rise before I can get within shot. When still a hundred yards off he is seen advancing stealthily foot by foot, his belly almost touching the ground. Again he squats. At last I arrive on the scene. Going up to him once more, I again urge him to draw on, without avail, so step in front. A little walking backward and forward and up springs a fine covey, out of which I drop two birds; but still the dog will not move, and further tramping within a yard of him flushes another bird which is also killed. Having only come out for a trial trip, I now make for home and lunch.

This was my first experience of shooting over dogs in South Africa, but it was followed by many others. The owner of the dog and I used to make a point of getting one whole day a week, when we would also be accompanied by the bitch. Though her nose was nothing like so good as the dog's, she had not the same objection to drawing up to the point, which proved an immense saving of time. On such occasions we would consider we had done well if we bagged eight brace of "partridges," though we would often succeed in killing a few quail, hares, and duck, and sometimes a bustard (paauw) goose, or one of the smaller bucks. The red dog, as he came to be called, would set steinbuck, hares, and even koorhan, though the temptation to chase the two first named was one he was unable to resist once they moved.

Many other happy days did I spend up hill and down dale over the veld, now pottering by the side of a little stream or picking my way through scattered boulders on the higher ground, favorite spots for "partridges," I on horseback, armed with a double-barrel shotgun and a Mauser pistol in case of the chance of a long shot at a buck, the red dog running alongside. When he scented anything I would dismount, throw the reins over the horse's neck in the certainty that, with the reins thus dragging on the ground, even if I should leave him for as long as an hour I should still find him there on my return, and make off to the dog to get a shot to his point.

Again, I would see some bustards in the distance, and, calling the red dog to heel, would proceed to try to get a shot by circling round them. Or perhaps some ducks would get up out of the stream to settle down some distance away, when I would stalk them on foot with varying success.

Hunger at times would make itself felt, and we would then make for the waterside. Here I would loosen my horse's girths, take the bit out of his mouth, and with trailing reins leave him to roam at will. Then, unpacking the saddle bags, I would get out the kettle, light a fire, make the tea, and, with bully beef, bread and butter, I and the red dog—who watched all the preparations with greedy eyes—would make a hearty meal. A quiet pipe would follow by the side of the rippling stream, while the South African sun would shine down upon us, making the hot air rising from the parched veld plainly visible as a shimmering haze. No one who has not tried this sort of life can understand the fascination of such days in the open.

In such a country the advantage of using dogs is immeasurable. In the first place, although there are plenty of birds, the average number of kills per acre would shock any one used to good partridge shooting at home. Secondly, the South African "partridge," or francolin, can rarely be flushed without a dog, unless you happen to walk almost on to them, and to make anything like a large bag would be an impossibility. Experience also taught us that a very early start was always advisable. Early in the morning the ground is generally

IT is no great achievement to get both birds with a Hammerless Smith Gun equipped with the *Hunter One-Trigger* attachment. Because it is so easy. Still the satisfaction is none the less, for it does require a good eye and a steady hand.

THE GREAT ADVANTAGE of the *Hunter One-Trigger* is that you do not disturb your aim by changing from one trigger to the other. You simply pull the same trigger each time. There's no relaxing of the muscles—no re-gripping—no re-adjusting yourself to the different length of stock represented by the distance between the two triggers—no disturbance of your aim. There's no creeping or dragging, either—and no firing of both barrels at the same time.

Write your dealer at once—or us direct—for handsomely lithographed Catalogue—it's free.

The greatest gun in the world today is the new *20-Gauge Hammerless Smith Gun with the Hunter One-Trigger attachment.* Weighs only 5¾ to 7 pounds.

AMERICAN BIG-GAME HUNTING

BOONE AND CROCKETT CLUB SERIES

Edited by George Bird Grinnell and Theodore Roosevelt

A thoroughly stimulating book dealing with American big-game hunting, East, West and under the Arctic circle, including every phase of sport with the rifle. "American Big-Game Hunting" is a compilation of the experiences of some of the most widely known sportsmen in America. Among the sketches are: The Story of the Buffalo, Capt. Geo. S. Anderson; The White Goat and His Country, Owen Wister; Old Times in the Black Hills, Gen. Roger D. Williams; Coursing the Pronghorn, Theodore Roosevelt; After Wapiti in Wyoming, F. C. Crocker; In Buffalo Days, George Bird Grinnell; Blacktails in the Bad Lands, B. Rumsey.

Forest Preserves and Game Refuges are also considered. Aside from the surpassing interest of the narratives, the book is invaluable for referenc. Cloth, heavy paper, library edition, richly illustrated.

Postpaid, $2.50

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

THE NARRATIVE OF A SPORTSMAN

INTER-OCEAN HUNTING TALES

EDGAR F. RANDOLPH

A series of hunting reminiscences of rare charm for the sportsman and for the wider circle which delights in true tales of outdoor life. With none of the high coloring and exaggeration which give a false note to so many hunting stories, Mr. Randolph's book is never lacking in interest.

He covers the field of sport with the rifle, east and west, drawing a vivid word picture of life in the open, subordinating his own exploits to the main incidents of outdoor experience, giving much valuable information on camp life, hunting and the habits of wild game, and continually delighting the reader with the freshness of his viewpoint.

This book will strike a sympathetic chord in the memory of every big-game hunter of experience and will prove of real value to the novice who is planning an excursion into the wild.

Cloth, 170 Pages. Richly Illustrated. Postpaid, $1.00.

FOREST AND STREAM PUBLISHING CO.

THE SALMON FISHER

Charles Hallock. Contents: Distribution of the Salmon. Life and History of the Salmon. Technology of Salmon Fishing. Salmon Fishing in the Abstract. Cloth. 125 pages. Price, $1.00.

FOREST AND STREAM PUBLISHING CO.

covered with the heavy dew so common in South Africa, and the birds are then feeding. At such time scent lies well, and the dogs will draw up to a covey from a long distance. Toward noon, however, scent seemed to fail, and birds were not discovered by the dogs until they got right on to them, many birds probably being never found at all.

DUCK SHOOTING IN THE PHILIPPINES

THE duck season in the Philippines commences when the rains finish, about December. When the country becomes easier to get about in, the ducks congregate more and are easier to find. During the past year I have been living in the Province of Pangasinan, which is situated about the center of the Island of Luzon, and, as I have been employed on the location and construction of a new railway extension, I have seen a good deal of the country and had an opportunity to find lots of places for duck. I often shoot alone, but in many cases with my friend C., who lives about twelve miles away. If we are unable to stay the previous night together, we arrange to meet about halfway between our respective stations and cover the distance in a native carromata, an uncomfortable conveyance drawn by two small and lean ponies, which, however, are wonderfully strong, and get over a lot of ground in comparatively short time. To take a typical day. Having met, as arranged, as early as possible in the morning, we take a canoe, dug out from a single tree trunk, to cross the river with our men, and then walk to where we intend beginning to shoot. In this particular district we know of two good places, and decide to go straight to the further one first before the day gets too hot. This means about one hour's walk over a fair trail to some mallard on the water. We approached the mallard, and on their getting up one fell to a long shot, but was not picked up. This shot put up quite a number of duck, which, not having been shot at before, came well over us, and we soon had some six or seven mallard and teal down, and mostly gathered. A wounded bird is seldom picked up, as they invariably dive when one approached them and are not seen again. The main lot of duck had now settled further up on the lagoon, and, having taken up good positions in their probable line of flight, we send the men round to put them up. Some mallard come over first, flying fairly high and fast, and though shot at by both of us, they go on apparently unharmed and heading for the other place, we intend shooting in the afternoon. Then some teal follow, and are not so lucky, for a couple are added to the bag. It is now 11 A. M., and the sun is very hot, so we decided to rest and have an early lunch, and then go down to the lower place. A cold drink from a "Thermos" is most refreshing, and after lunch and a smoke we feel quite rested and reach our other place about 4 P. M. This is a narrow creek with high grass on each side and steep banks. Here there are mallard only and in large numbers, and when put up they follow the line of the creek, flying right down, then wheeling and flying over again, giving the most perfect shooting, though difficult to kill, as they fly very fast and high. After a while they break up into flocks of about a dozen each and keep coming well over for about twenty minutes, when they seem to realize that they would be safer elsewhere, and then fly off, safe till another day. We then collect what has been shot, and, although we use no dogs, a well-trained Filipino leaves very few dead birds behind in spite of the thick jungle grass, in many places from 6 feet to 9 feet high.

We then make our way back to our carromatas well satisfied with our sport. On a day such as this our bag is generally between ten and twenty mallard and teal, which make a welcome addition to the larder. We have accounted for about 150 mallard and 100 teal from December to June, when the season ends, as the ducks begin pairing at the approach of the rains. The snipe, however, arrive in August, so we have not a long close season.—The Field.

For Sale.

Small-Mouth Black Bass

We have the only establishment dealing in young small-mouth black bass commercially in the United States. Vigorous young bass in various sizes, ranging from advanced fry to 3 and 4 inch fingerlings for stocking purposes.

HITTING *vs.* MISSING

By S. T. Hammond ("Shadow").

Cloth. Price, $1.00.

Mr. Hammond enjoys among his field companions the repute of being an unusually good shot, and one who is particularly successful in that most difficult branch of upland shooting, the pursuit of the ruffed grouse, or partridge. This prompted the suggestion that he should write down for others an exposition of the methods by which his skill was acquired. The result is this original manual of "Hitting vs. Missing." We term it original, because, as the chapters will show, the author was self-taught; the expedients and devices adopted and the forms of practice followed were his own. This then may be termed the Hammond system of shooting; and as it was successful in his own experience, being here set forth simply and intelligently, it will prove not less effective with others.

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener "Unique" Ejecting mechanism is but one of the many unique points for which the Greener Gun is famous. Weight for Weight, the "Unique" Ejector is the Strongest gun that exists.

It has all the extra weight necessary to a fore-end ejector put into the barrels.

It is the simplest and most scientifically constructed, the most perfectly balanced, the easiest and most reliable gun to use.

It has a thoroughly sound hinge joint, not cut to a mere skeleton by cocking levers and ejecting connections.

There is no thrust to force the fore-end away from the joint.

The action frame, though light, has the metal so disposed as to offer the greatest resistance where the strain comes.

It is the most compact form and is the handsomest of all guns.

It is made in the best quality only, and your new gun should certainly be made on this system!

Look at the drawing, its simplicity cannot fail to convince you that the "Greener" is the best.

Catalog, illustrating and describing 38 grades. :: Mailed free.

DOUBLEDAY, PAGE & CO. :-: GARDEN CITY, N. Y.

WINTER TRAPPING OF SCOTCH GROUSE.

AN Eskimo method of trapping the wolf, told of in old books of northern travel was to dig a deep hole in the thick ice, so narrow and so nearly perpendicular that while the animal might be able to slip down into it, to get the bait at the bottom, he could not, through lack of foothold and elbow room get out again, and was killed by the cold. A story not unlike this comes to us from the Shooting Times and is offered for what it is worth:

The general public are doubtless under the impression that during the close season no poaching of game birds takes place, as there is no open market for them, and consequently the birds are valueless. This idea, as far as grouse is concerned, is wrong, for poaching does occur, there is a market for the birds, and their value is more than during the open season. It must, however, be understood that these illicit operations and market are very limited.

From December to the end of March the grouse appears at his best. His physical form has attained the zenith of perfection, and he is resplendent in the variegated color and abundant plumage of his winter coat—a very "bonnie" bird indeed. Those who practice the taxidermist's art are, therefore, anxious to get hold of the bird at this season, and for good specimens do not hesitate to offer an enhanced price. It is among these gentry that a market for birds killed in close time is to be found. Stuffers of repute will, of course, have nothing to do with such illegal proceedings, but among them, as in every other class, unscrupulous parties are to be found, the inducement of making a little extra profit being an irresistible attraction. It may be further remarked that the taxidermists are, in this trade practically immune from danger. It is the poacher who runs all the risk, and if caught he is, of course, wise enough to say nothing of the intended disposal of his spoil. He has also other difficulties to contend with than the mere evasion of the keeper, for a bird with a ragged, torn coat is utterly unsaleable. His ingenuity is, therefore, called into play, and he has evolved some rather peculiar means of overcoming the difficulty.

In securing specimens the use of the gun is to a large extent dispensed with. The report of the discharge would serve to attract attention, and the plumage of the bird would oftener than otherwise be damaged to an extent that would preclude sale. If, however, the gun is used, the charge is reduced to a few pellets of large size, which, as a rule, do not damage the feathers very badly. The poacher has other and quieter means of attaining his end.

It is during heavy snowstorms, when food supplies are limited, that this system of winter poaching can be most successfully prosecuted. A train of grain laid on the snow, with gins consisting of a single strand of brass wire placed across it in such a way that in picking up the grain the birds are likely to thrust their heads through the nooses, often results in the capture of one or more victims when placed where grouse are likely to be attracted by it.

Even during heavy falls of snow the fountain-heads of springs seldom remain long covered, unless drifted over by immense wreaths. The constant rise of fresh water soon dissolves the superincumbent snow, and the icy grip of the hardest frost fails to bind up the ever-bubbling liquid. These fountain-heads are always covered by a succulent growth of verdant herbage, which give them the appearance of oases in a desert of snow. By the wild creatures, both furred and feathered, these tiny spots are much frequented. The poacher, who finds it to his advantage to study certain phases of natural history, knows this, and does not hesitate to take full advantage of his knowledge. He carefully conceals traps in the soft, springy substance, and has seldom to wait long before securing a victim. But the said victim may not be one of the kind desired; it may be a hare or rabbit, or even a prowling fox, in which latter case he stands a good chance of losing his gin. This method requires pretty close attention on the part of the poacher, for should a grouse be

Less Work—
More Vacation Hours

Good cooking for sharp appetites, in the house-boat—bungalow—camp, with a New Perfection Oil Cook-Stove. The perfect stove for summer in the home—cottage—anywhere. Easily portable. It broils and roasts, and, with the New Perfection Oven, bakes and roasts perfectly. Intense heat concentrated at the burners—nowhere else—kitchen not overheated.

Convenient, cleanly, economical. Fuel obtainable everywhere. No smoke—no odor. No wood to chop—no coal to carry.

The New Perfection Cook-stove is made with one, two or three burners, with long, turquoise-blue, enameled chimneys. Handsomely finished throughout. The two—and three—burner stoves can be had with or without a cabinet top, which is fitted with drop shelves, towel racks, etc.

New Perfection
WICK BLUE FLAME
Oil Cook-stove

Cautionary Note:—Be sure that you get this stove—see that the name-plate reads "NEW PERFECTION."

KEEPING POSTED

1. As you read Forest and Stream through each week, you are frequently reminded of one thing or another that you desire to purchase. Such and such must be supplied to make your Shooting, Fishing, Camping or Cruising outfit complete.
2. Possibly you need waterproof shoes, or waterproof clothing. Or a new tent? It is your intention to take a much longer trip this time, than usual. And you may be located where you do not have access to sporting goods houses where all of your wants can be filled. In fact, even the best of us are often in doubt when it comes to knowing **where** to get the **thing** we want at the **right** price. You wish you had a friend at your elbow to suggest.
3. **Our** experts are right at your elbow. It does not cost you a penny (except your postage) to take advantage of their knowledge. They know **where** to **buy** and **how.** It is their business—and your advantage.
4. Glance carefully over our advertising columns. If you don't see what you want, write in to our Information Department. You will receive a full detailed reply—post haste—we're always on the job.

Isn't this worth while, if for no other reason than to get the **right** information on **how** to reach your destination by the quickest and surest routes—what railroads or steamship lines to take?

Don't put this off. Co-operate with us by telling your relatives and friends, what we can do for them.

Keep posted. Write to

Building Motor Boats and Managing Gasolene Engines are discussed in the book

HOW TO BUILD A LAUNCH FROM PLANS

A complete, illustrated work on the building of motor boats, and the installing, care and running of gasolene motors. By Charles G. Davis. With 40 diagrams, 9 folding drawings and 3 full-page plans. Price, postpaid, $1.50.

The author is a builder and designer of national reputation. All the instruction given is defined and comprehensive; 40 diagrams, 9 folding drawings and 3 full-page plans. That portion of the book devoted to the use and care of gas engines should be most carefully perused by every individual who operates one. The book is well worth the price asked for it.

FOREST AND STREAM PUBLISHING CO.

allowed to remain too long in the trap the probability is that its legs (by which it is generally caught) will be damaged to an extent that will make its rejection by the taxidermist almost certain.

The favorite method, however, consists in making little pitfalls in the snow. The contrivance is simplicity itself, all required being a bottle and a small quantity of grain. Selecting a place likely to be frequented by grouse, the poacher, with the necessary requirements, repairs to the predetermined spot. Thrusting the bottle into the snow to a depth of about nine inches, he works it round until a conical hole, with the apex up, is formed, the top part being as nearly as possible the size of the circumference of the body of a grouse. When several of these holes have been made, he strews a quantity of the grain around, with a train leading up to each pitfall, into each of which a small quantity of the grain is dropped. When the grouse come to the spot they naturally begin feeding on the bait laid down for them, and are led up to the little pitfalls. Seeing the grain lying in the bottom of the hole, the hungry bird tries to reach it, and in doing so overbalances and falls head foremost into the pit. Here it is held a fast prisoner, for no foothold can be obtained, while its wings are held close to its sides by the surrounding snow. In this position, and without so much as a feather ruffled, the poacher finds it on his return.

The killing of grouse during close time is not largely practiced. The market is really a limited one, and operations are confined to a few who, in one way or another, have picked up an acquaintance with not over-scrupulous taxidermists. So cunning and careful are these "knowing ones" that but few keepers know or suspect their practices. The offense is, of course, worse than mere poaching, and heavy penalties have been imposed upon those found out. Captures are, however, few and far between, but that must not be taken as a proof that all violation of the law has ceased.

PRESERVING GERMAN STREAMS.

VICE-CONSUL W. Washington Brunswick, of Chemnitz, furnishes the following information concerning the manner in which German rivers are officially guarded from being polluted by pulp factories:

The pulp manufacturers are required to use every precaution possible so that not even a particle of the waste can reach the streams. The water which is to be emptied into the river must leave the factory in an absolutely clean condition, free from any remnants from the manufacturing process. This is accomplished by sending it through one or more settling ponds, and, if necessary, the waste must be passed through filters. The streams are regularly patrolled by inspectors, and any justified claims against the quality of the waters, due to pollution from the factories, is at once investigated and must be met with immediately, regardless of the cost.

There are no regulations setting forth the exact method which a manufacturer must employ to prevent the pollution of the streams; each manufacturer can use his own ideas upon the subject as long as his method fulfills the requirements. Settling ponds are invariably used, and the results are always satisfactory.

An employee of the Inspection of Factories, who makes tours from time to time to inspect the disposition of the waste material of the factories, is under the immediate jurisdiction of the country authorities and has charge of the licenses to the factories and of the inspection.

The law is enforced to the letter, and any violation, whether unintentional or not, compels the manufacturer to pay all costs in connection with removing the pollution from the streams. A manufacturer whose works are located on one of the small streams in Saxony polluted the water, and the inspectors compelled the owner to bear all the expenses for cleaning the stream and freeing it of impurities due to his negligence. The cost of freeing the stream from pollution used up the earnings of the factory for several years.

Jake Henshaw's Midshipmites

By EDMUND F. L. JENNER

EDITOR'S NOTE.—Among the many articles on shooting and fishing in the Nova Scotia woods, written for FOREST AND STREAM by the late Edmund F. L. Jenner, few left in the minds of readers more pleasant impressions than "Jake Henshaw's Midshipmites." In response to many requests to do so, we are reprinting the story herewith at a time when the attention of the world is directed toward the little island where the boy fisherman is about to be formally declared King of Great Britain and the Ruler of all her possessions.

"I'VE guided all sorts and conditions of men, from the Governor-General of Canada down. Some I parted from on more than friendly terms; others I've no use for, and they've no use for me. But the queerest experience I ever had was with a couple of little midshipmites I picked up in old Peter Sinclair's store.

"It's a good many years ago, one of them is dead now, poor fellow, and the other one is across the water, but I guess he hasn't forgotten the time he caught his first salmon in Nova Scotia, and rode out on a flat car to do it. They gave me those two little threppeny pieces I keep in my medal case. Light your pipe, and I'll tell you the story.

"This river was quite different then to what it is now. There were more jams in it, and a lot more bushes and trees along the sides. I used to watch the water mighty close, along about the beginning of August, for just as sure as it came a high tide, and maybe a bit of a rain, there would be a run of sea trout, and a few little salmon."

Uncle Jake settled himself back in his easy chair, stroked the blue Maltese cat in his lap, and gazed dreamily at the fire as he spoke.

"It was a few years before you came to this part of the world that I got those little bits of money. We had a big freshet that year, just after the hay was all gathered in from the upper meadows. The water fell away all day Saturday and Sunday. On Monday it was down under the banks. On Tuesday I went to town to try to buy three or four small salmon flies. It's a hard matter to 'fly' salmon in this river. The only flies I know to be sure shot are the Durham-ranger and the Jock-Scott. I hadn't a ranger or a Scott left; so I took a freight train down the line, and bright and early I turned up at Peter Sinclair's store. Peter had the flies, all right, but there were two young fellows picking them over when I went in. It was one of Peter's failings that he could never be civil to man, woman or child if he had a chance to be rude. I stood back for a few minutes, but the construction train I reckoned to go back on was due to leave in a quarter of an hour, so I said very civilly to the young fellows, 'I've got to catch a train, and I want a couple of them flies before I go. Do you mind letting me make my choice?'

"'Go ahead and get what you want as long as you pay cash for it,' says Peter. 'Them boys has been picking over the flies for ten minutes, and so far they haven't paid me one cent, and my store isn't swept out yet.'

"I reached over and picked out four flies. 'These'll do me, Mr. Sinclair,' says I. 'Now, gentlemen, if you want to know the best flies to use, I can maybe show you.' I reached over again and picked out half a dozen, the same as I'd chosen myself. Both boys' faces were as red as fire at Peter's rudeness. I felt sorry for them, for they seemed mannerly little chaps. The elder one took a gold sovereign out of his pocket and threw it on the counter. Peter gave him three dollars back, which was seventeen cents less than he ought to have done. I asked him what he was giving for sovereigns, and he made the change right.

KING GEORGE V.

"'I'm much obliged to you for your information,' says the biggest boy, when we were outside. 'What is the matter with that man? He's positively insulting.'

"'The poor creature was born that way,' I replied. 'He means no harm. Now, where are you boys going to use those flies? Maybe I can tell you something about the water here.'

"'There's a man called Jake Henshaw, who used to fish with Admiral Davis when he was on the station. We got a chance to run up here, and thought he might be willing to take us out for a day. The Admiral speaks very highly of him, and so does Lady Davis.'

"'My name is Jake Henshaw,' I replied. 'I had a letter from the Admiral at Easter. If you want a day, you can have one, and you're more than welcome, if you're friends of his. We haven't any time to lose, however. I'm going home on a construction train. She pulls out very soon, and you've got to double up if you want to catch her. I've got stacks of rods, reels, lines and trout flies. I can fit you out all right; but you'll have to ride in the caboose, along with the working crowd.'

"'Let's go,' says the younger boy; 'they can't hang us for going up on a train instead of driving in a carriage. They won't miss us at the hotel for an hour or two yet and I'd like to see things as they really are for once in my life.'

"I took stock of the boys while they were talking. They were dressed in the plainest way, but their clothes were of the best. I could tell they were gentlemen before ever I spoke to them. 'Come on,' says I, and we made a run for the depot and just caught the construction train pulling out. There was an awful mixed-up gang on board. The line was in bad shape after the rain, and men were scarce; so they'd gathered in niggers and dagos, and even Indians. The conductor knew me, and let us through on to one of the flat cars, and we sat there in the dust, but we were clear of the smell of bad tobacco and niggers that there was in the caboose. Every two or three miles we'd slow down and let off a gang of men, three or four cars, and a lot of tools. It took considerable time to run the empty cars back into the ballast pits. It was all of nine o'clock when we got to my place, and the conductor let us off. 'Now, boys,' says I, 'the chances are that you've had no breakfast. I haven't got much to offer you, but if you want a bite before we try the river, just say so, and I'll do the best I can for you.'

"The way those boys went into the rye bread and the cold pickled pork was a caution. It's a queer thing how some people are built. I had a low-down hired man who lived on salt gaspereau and cornmeal, and slept on straw for nine months every year. He wouldn't touch

rye bread. He wanted white bread, and he wanted it hot. He called rye bread 'pig feed,' and we dasn't have it on the table when he was round. Well, them boys cleaned up the best part of a loaf of rye bread and left a loaf of white bread untouched. They ate about a pound of pork apiece, and a big plate of cornmeal porridge and maple molasses. It did me good to see them eat. Then I sorted out two good rods for them, and a spare one in case of accident. While I was getting things ready the boys looked round this room and saw my medal case. 'So you've been in Egypt,' says the younger one; 'what regiment were you in?' I told them that I went up the Nile with the Canadian voyageurs, and drew a pension of fifty-two cents a day. They got my rifle and gun down, and the moment they put their hands on them I could see that they knew something about shooting. It's a queer thing how any one who knows a bit about guns can size up another man when he picks one up—I forgot to tell you that when we were riding on the flat car the boys told me that their names were Victor and Albert. They said their other name was Prince.

"While we were at breakfast I sent my boy, Rob—the one who was killed at Paardeberg—to catch some grasshoppers. We went down to the river and crossed on the old hay bridge. The water was just right, and there was enough wind to raise a ripple and not enough to spoil casting. I piloted the boys up stream, about a mile above the salmon hole; then I put the rods together and started the boys fishing. The first cast they made I could see that they had been fishing before. Both of them cast a pretty line; but casting don't amount to much in this river, unless a man knows where the fish lie. They hadn't been fishing five minutes when Victor hooked a pair at one cast. They were small ones, and when he landed them he just unhooked them and put them back. 'What did you do that for, Victor?' says I. 'You want all the fish you can get to carry home with you.' He kind of laughed. Says he, 'We don't want any little fish like those, unless their gills are hurt. We'd rather have four good big ones that four dozen small ones.'

"'That being your style, you shall have some big trout. You've gone over two already, unless I'm very much out of my reckoning.'

"I led them back to the spot they'd started at, keeping them away from the water. 'Now, boys, sit down,' says I. 'You haven't troubled the water very badly, but you want to give it ten minutes' rest before the fish forget you've been there. While you are resting, you'd better toss cents and see which of you takes first cast.' They tossed cents and Albert got the first cast. We crawled over the meadow on our hands and knees until we got to the bank. 'You see that dead log running into the water from the opposite bank? Well, unless I'm mistaken, there's a regular old deacon of a trout under there. Play out your line down-stream, and when I say "over," you throw so as to just touch your fly on that willow branch.' Albert did as I told him, and he made a beautiful cast. The fly just hit the water same as a bug falling off the willow tree. There was a flash and a boil in the water, and in five minutes I slipped the net under as pretty a pound-and-a-half trout as a man wants to look at.

"Victor took the next chance. I showed him a little bit of an alder bush growing on the same bank we were on. I knew there'd be a good fish under it, and sure enough he got one almost as big as his brother's. This went on until they had four or five nice fish each. Then Victor says, 'Uncle Jake'—they'd both got over their shyness by this time—'this is good fun, but it isn't fishing. We've got all the fish we really need. From this to the salmon pool, let us work out our own salvation. You seem to have these fish all tagged and numbered. If we get some more, so much the better; if not, why, we're quite contented with what we've got.'

"I let them do their own fishing altogether after that. They got a few nice trout, and they left some very good ones behind. All this time we hadn't put on a worm or a grasshopper. Just before we got to the salmon pool I took Victor's rod and caught a couple of nice fish he'd overlooked. I made a fire and we had them for luncheon, and the boys seemed to like them uncommon well. After luncheon I climbed up the big willow at the side of the salmon pool and took stock. I counted nine fish there, all small fellows. They were all fresh run, as far as I could judge. The water had run down until it was just as I wanted it, and if the fish would only rise, I knew we were in for sport worth having.

"'Boys,' says I, 'there's nine fish I can count in that pool. The ripple makes it a bit difficult for me to tell just how many there are, but in two hours' time, if things go right, there'll be some lively sport. Have either of you ever caught a salmon before? If not, I want you to listen to what I'm going to tell you.' They told me they had both caught salmon before, but not in Canada. 'That ends it,' says I. 'There are salmon in that pool. I've got the only flies they'll rise to, and you boys have got to make them rise and hook them. I'll do the gaffing, and if you get two salmon I want the half of one for old Parson Chute and his wife. The old parson was a great fisherman in his day, but he's old, and crippled with rheumatism. Years ago, he and his wife had some money, but they lost it; and all they have now is his little pension, and the place they live on. If they had half the money they've given away, and if every one they helped when they were in trouble would give them a dollar a head, they'd be well off. I don't belong to their church, but I respect the old folks, and if there's one thing in the world the old parson loves, it's a bit of salmon.'

"Well, we lay on the bank and talked about hunting and fishing and dogs until the sun began to set. It was no use to whip the salmon pool as long as the sun was beating down on it. I've fished in Ireland, and I've traveled almost all over Canada and the Western States. The boys had been in India and goodness only knows where. They made no brags about it; it just came out in the talking. When I judged the time was right to commence fishing, they tossed cents again for the first chance. Victor got it, and I put a Durham-ranger and a salmon cast on his line. I gave Albert a Jock-Scott. I took a spear of timothy and weighted one end of it with a bit of lead paper that was round my tobacco. Then I tossed it into the river, and it drifted down standing straight on end. 'Now when I say cast, you throw right for that spear of grass, and let the fly tail down about six or eight feet, then work it in with short snatches, and whatever you do, if you get a rise and miss your fish, don't cast over him again until you've said the creed, the Lord's prayer and the ten commandments twice over. Don't strike the fish. He'll do that for himself.'

"The bit of grass drifted down where I wanted it. 'Cast,' says I, and the boy dropped his fly within six inches of the mark. He tailed it down and worked it back, but no salmon moved. I let him make three or four more casts, and then I told him to stop. I gave the pool five minutes' rest. 'Now, Albert, you try your Jock-Scott. Drop it just in the same place, and work it the same way.' He did so, and a fish rose to him, but he rose short. 'That fellow means business. Just give him a couple of minutes' rest before you cast again,' says I.

"The way that fish came at the fly the second time was a caution. He took it as savagely as any fish I have ever saw. Ze-eeeee went the reel, and then the little fellow went three feet out of water. It was a quarter of an hour from the time he took the fly to the time I put the gaff to him. He was a pretty little eight-pounder, fresh run, with the sea lice still on his sides, the gamest fish which swims, for his size. Half an hour later Victor hooked another fellow and Albert gaffed him. Then I took one of the rods myself, and just at sundown I got a third one. I used him rough house and gaffed him myself, but I only played him for five minutes. I got him into quick water, and drowned him.

"'A salmon for each of you boys, half a one for the old minister and his wife, and half a one for the wife and kids,' says I. 'It's getting late, boys, and we'd better be getting back to supper. If you can stay all night, I'll be glad to keep you, and you can get as many or more fish tomorrow morning. If you can't stay, I'll hitch up and drive you back to town.'

"Just then old Angus McPherson came down on the other side of the river. He wanted me to send him some medicine for his colt. 'Who may those two boys be?' says he when he'd finished telling me about the colt. 'Two young fellows called Prince,' says I. 'Why do you ask me?' 'There's been men on the run all the day, inquiring for two young fellows who stayed the night at the Victoria Hotel,' says he. 'The telegraph wire was broken this morning, and they can't get any dispatches through.'

"I was two or three gunshots away from the boys, so they couldn't hear us plainly. I could see the post-road from the river bank, and I had noticed several men riding on horseback during the day, but I thought they were yeomanry recruits practicing horseback riding for the next camp. Then it dawned on me that they might be middies who'd overstayed their leave. I hadn't the heart to spoil their day's sport, so I said nothing to them. All the same, it seemed queer that there should be any special fuss about their being away. I felt sorry for them, all the same, because I knew that it meant trouble for them, and the worst kind of trouble, as soon as they got on board again. I went back to the boys. They had the rods all taken apart and were ready to start for home. I asked them if they would take my offer and

BRANDT'S CORMORANTS ON THE CORMORANT ROCKS OFF MONTEREY, CALIFORNIA, AS GROUPED IN THE AMERICAN MUSEUM OF NATURAL HISTORY.

Courtesy of the Museum Management.

stop with me, or would they like to go back to town after supper.

"'I'm afraid we've been away too long already,' says the older boy. 'There'll be the deuce to pay when we get back; but we'll see that you come to no harm. Now, we might as well settle up at the present time. What do we owe you for this day's most delightful outing? We've enjoyed it more than we can tell you and we shall remember it as long as we live.'

"'You owe me nothing but good-will,' says I. 'Admiral Davis was a friend of yours and told you to ask for me. I wish he was back on the station again. I hope when you see him, or write to him next, you'll give him my respects, and my wife's as well. You might tell him I used you white, and that you got a salmon each. As a rule, the fish don't take as well as they've been doing to-day.'

"We went home and had supper. The wife made no special fuss over them. They just had the same we had ourselves, and they seemed to enjoy it all right. Rob went off to borrow a double-seated express wagon, and I packed the salmon the young fellows had caught in wet moss, birch bark and sacking. I wound them tight round with withes. 'Those fish will keep for two days at least. Maybe you boys have some friends in Halifax you'd like to give them to,' says I.

"It's six miles from my place to town. The roads are just clear sand, as you know, and we couldn't make any going. The boys kept very quiet, only every now and then one would speak to the other in Dutch. [German is always called Dutch in the Provinces.] I didn't like this much, because when I used a man white I want him to speak out if he's any fault to find. I thought maybe they were dissatisfied with something. As we were coming close to the town, Albert says to me, 'There's something we ought to explain to you before we leave you. We had no right to go fishing the way we did. The fact is, our party was going to drive out to your place this morning and engage you as guide. We thought we'd take a walk through the town before breakfast, so we got out of our bedroom window, climbed down the veranda posts and went into the shop you found us in. We thought it would be fun to give the other members of our party the slip; so we took your offer up and left without telling any one. I'm afraid that when we get to the hotel they will have something to say to you, but we'll make it all right if they do.'

"'How many of your party did you leave behind?' I asked him. He said there were four, and a servant. 'Then you did a very wrong thing,' I told him. 'The getting down the veranda posts, and cutting off to the woods was all right. That's just playing truant, and nothing more. The letting four of your party spend the whole day looking for you and losing their fishing while they were doing it, is quite another matter. I took you two boys out, and did the best I could for you, but it's awful hard lines on the rest of your party. I call it right down selfish on your part. Maybe you didn't look at it that way.'

"'We didn't,' says he, 'and I am glad to say that we happen to be the principal people in the party. The others didn't come here to fish. They just came with us. The only thing is that I'm afraid we've caused them a lot of worry. All the same we've had a far better day than if we'd gone up the river with our friends and servant.'

"By this time we were in the town. As we went past a lamp I saw some people I knew, and one of them hailed me. 'Are those the two lost boys, Uncle Jake?' Victor gave me a nudge. 'They haven't been lost as far as I'm aware,' I said. 'They've been out in the woods with me, and as long as I wasn't lost, they weren't lost.' We hadn't gone a hundred yards when a gentleman on horseback came up with us. I could see that his horse had been ridden pretty hard. He was just about passing us when he caught sight of the boys and pulled his horse up. Albert said something about 'Oh, my prophetic soul, my uncle!' and Victor spoke up and said, 'Colonel, if you will be kind enough to ride on to the hotel and say we shall be there very shortly, I shall be very much obliged to you. We have dined, and there is no need for the people at the hotel to keep the dinner waiting for us.'

"'And who may this exceedingly disreputable person be?' says he, pointing to me. I spoke right up. 'That question might have been asked a little differently, sir,' says I. 'You might have asked who the person in the disreputable coat was. As it is, I'm not ashamed to answer you. My name is Jacob Henshaw. I am a blacksmith and farrier by trade, and I do considerable guiding as well. I leave the matter of my guiding to these boys and the scores and hundreds of people I've taken shooting and fishing in the past thirty years. If you want to know my character, I can get you fifty references in an hour.' The gentleman rode on, and the boys laughed fit to kill themselves. They didn't laugh out loud, though. 'What a scolding we'll get when we arrive at the hotel. I don't expect another day's shore leave as long as we're in Halifax,' says Victor. I was wondering who these boys might be, when they asked colonels to ride ahead and say they were coming. I took stock of the colonel while he was speaking, and I could see that he had 'officer and gentleman' written all over him in capital letters. I drove up to the hotel piazza and carried the fish in for the boys. The colonel was there, and there were two other men with him, one an officer, by the looks of him, and the other a parson. 'Mr. Henshaw, will you kindly wait until I send for you? I will tell the hotel people to look after your horse,' says Albert. This was spoken in the most civil, friendly way, but somehow or other I noticed a complete change in the voice and manner. The party went upstairs and I sat in the front room for five or ten minutes. One or two loafers tried hard to find out who the boys were. They said the party had been nearly crazy ever since they woke up and found the boys gone in the morning. I gave them no satisfaction, nor did I tell them the luck we had with the salmon.

"After a while, the servant came in, and said Colonel Andrews would like to speak to Mr. Henshaw. He showed me into a private room, and there I found the gentleman who'd ridden past us and the parson. 'I must apologize for the way in which I spoke to you a little while ago,' says the Colonel. 'If you only knew the worry and anxiety this escapade of their Royal Highnesses has caused us you would understand why I was somewhat brusque with you. The Fenians have been unusually active of late and we were afraid that an attempt had been made to kidnap the princes. I assure you that I have never been more uncomfortable under fire than I have been to-day. The whole responsibility for their safety rests on this gentleman—pointing to the parson—and myself. I am only too pleased to hear that they fell into your hands, and by their account they seem to have had a most pleasant time. They are here under a most strict incognito, and I must ask you not to tell any one who they are. They wish to say good-night to you, and I will take you up to see them. Bye the bye, what names did they give you when they met you in the shop?'

"'They told me that their names were Victor and Albert Prince,' I said. 'I knew they were gentlemen but I thought they were boys who were learning farming, or had got a day or two's leave off of the ships. I did all I could for them, and I used them just the same as I would use any other boys of their age who went to the woods with me.'

"'The names they gave you are perfectly correct, but under ordinary circumstances they are known as Prince Edward and Prince George. In future you will address them as "Your Royal Highness," in speaking to them, unless they tell you to do otherwise.'

"We went upstairs to the hotel parlor. The two princes were there, and two other gentlemen with them. Prince Edward came forward and held out his hand. 'My brother and I wish to thank you again for your kindness,' said he. 'It was all the more acceptable because you were not at all aware of our rank. Possibly, now that you know who we are, you will allow us to make you some return for your time and trouble.'

"I felt ready to go through the floor, but I remembered that I'd nothing to be ashamed of, so I replied, 'I should like a remembrance of your trip with me, Your Royal Highnesses, and if you will allow me to say so, the smallest piece of silver you and your brother have in your pockets will be all I want.' They gave me those two little silver pieces, shook hands with me and wished me good-night. Colonel Andrews and I went downstairs and we talked about fish and game for an hour or so; then I went home.

"About a week later on my wife got a present of a dozen solid silver teaspoons from Halifax. They were in a nice leather case, with a card inside it 'From E. and G. in return for your hospitality.' When my wife died I sent them to my daughter in New York. She's married to a Presbyterian minister, and when I die she'll get my medals and the little threppeny pieces."

H. COOPER, the honorary secretary of the Matlock and Cromford Angling Association, is frequently accompanied on his piscatorial expeditions by a most intelligent and interesting wire-haired terrier named "Jack." The dog not only delights to ramble with his master along the banks of the sport-yielding Derwent, but when Mr. Cooper hooks a trout on his fly, Jack quietly swims below the trout, and at the proper moment catches it in his mouth and brings it ashore without hurting the fish or disturbing a scale. Jack is known and admired by many anglers, and in fishing circles is often referred to as "Cooper's landing-net."—Angler's News.

Camping

By WILLIAM H. HOLDEN

VI.—SUPPLIES FOR A LARGE PARTY.

WE now come to the period in our camping life when we are over 65 and have to be comfortable and avoid hard trips. We now sleep on air beds, which are very fine if you blow them up only enough to just keep off the ground when you sit on the bed. In our warehouse one of our guides tried one that was blown up too much, and we found him sleeping on the floor in the morning. Air pillows are too hard. We use a small down pillow. We use teams to do all the moving of the duffle and to bring us into and out of camp. We have two home camps, two cooks, two cook stoves and outfits, and limit our party so that all may have a good time. One home camp is down river and the other quite a distance above, so that we can fish from both camps and not fish over each other's ground. We have Sunday dinners together and visit occasionally so as to keep posted as to the doings of each party. Our expenses are greater than they used to be on account of having more help and more teaming. It costs us about six dollars each per day, not including railroad fare nor the outfit for personal use. Each party has three boats and a permanent kitchen with tar paper roof and canvas sides. We have a warehouse at the mouth of the river where our boats and outfit are stored for the winter. Our guides go in a few days ahead of us and get the home camp in order so that when we arrive after a thirty-six mile drive with the teams, we have a comfortable camp to get into. We fish up and down from our home camp, and after that becomes monotonous, take a trip further away for a week or ten days.

We always take what we have invariably found sufficient in the way of medicines as follows: Pond's extract or Humphrey's Marvel of Healing, arnica jelly, whiskey, blackberry brandy, nux vomica, surgeons' court plaster, camphor pills, digest tablets and laxative pills.

Our supplies for ten men for forty days are as follows: Forty pounds table butter, 30 pounds cottolene, 30 pounds ground coffee in tins, 4 pounds green Japan tea, 50 pounds white cornmeal, 180 pounds bacon in canvas, 80 pounds granulated sugar, 20 pounds brown sugar, 20 cakes ivory soap, 9 gallons maple syrup, 5 gallons kerosene, 6 quarter-pound cans ground black pepper, 10 pounds shaker salt, 1 pint vinegar, 3 barrels potatoes, 6 packages yeast foam, 6 quarter barrel sacks flour, 25 pounds rye flour, 16 half-pound cans baking powder, 5 pounds codfish (for use by one having dysentery), 6 dozen grocers' matches, 3 dozen wind matches, 2 dozen plain baked beans, 2 dozen succotash, 4 dozen regular size highland cream (get more if breakfast food is used), ½ pound saleratus, 4 packages sheet toilet paper, 20 pounds rice, 5 pounds raisins, 5 pounds prunes, 12 packages shredded wheat, 12 packages cornflakes, 2 bottles chowchow, 2 dozen peaches, 2 dozen sardines for lunches, ½ pound borax for washing flannels, 1 pint viscol for boots, 5 pounds soda crackers, 5 pounds pilot bread, 5 pounds evaporated apples, 1 gallon mixed pickles, 2 bushels onions, one Edam cheese, one bottle each of ground ginger, cinnamon and allspice, 6 candles, 2 pints olives, 2 small bottles Worcestershire sauce, 1 tabasco, 1 horseradish, 6 tumblers currant jelly; as the tumblers are emptied, use them on the table. After several trips you have tumblers in camp.

With these supplies and a reasonable quantity of trout and some game you will have plenty, and no great amount to give to your help on breaking camp. If your potatoes get wet or damp, sort and dry them. Hang your bacon in your supply tent and put it out in the sun occasionally to prevent it from gathering mou'd.

Ship your supplies in boxes, take off the tops and place them one above the other, open top out and you will be able to get at them. Keep the lower tier off the ground with sticks of wood. Keep a small dog in camp; if he is any good he will keep away night prowlers. Many dogs will securely stay inside at night and are worthless except for the tent they are in. If porcupine quills get into the dog or elsewhere, remove them without delay, as they are barbed for about a half inch of the point and work in with the movement of the muscles and become dangerous. If a porkey gets into your tent, do not molest him, as you will scatter the quills. Get a light and put it near him, and let him go out, which he will speedily do. Keep out of the doorway, as he is apt to rush out and leave his quills in your shins. He switches his tail, which is heavily armed with quills. You cannot kill him or seriously wound him by shooting, unless you hit him in the head or in his spine, and pounding on his back is useless unless you pound hard enough to break his back, which I have never been able to do. I have had them get away after several close shots from behind with expanding pistol bullets. Do not shoot them while they are in your tents, as you will shoot up your outfit, as I did when I shot one that was in a frying-pan.

Our latest and best boats are flat bottom, seventeen feet long, forty-five inches wide at the middle, pointed at both ends; fourteen inches high in center, sixteen at bow and seventeen at stern, shear to correspond with top of boat and to extend five feet from bow and three feet from stern, balance of bottom flat. This makes a steady boat for fishing and an easy one to push up a rapid trout stream. Poling oars should be twelve feet long, have a metal point and be light. If your river has rocks, the boat should have an iron strip around the outside edge of the bottom, or it will wear through and leak.

Do not sleep in any of the clothes you wear in the day time. Have a warm set of pajamas and you will feel much better than if you sleep in any of the clothes you have worn during the day.

Our list of personal outfit other than fishing and hunting articles is as follows: Warm dressing gown, belt and large towels for bath, slippers, two blankets or rather quilts, light and large; rubber bed, rubber sheets for keeping duffle dry, rubber duffle bag, pillow and cases, two nightcaps (one warm), two hats, one warm cap, flannels, camping shirts, handkerchiefs, part woolen socks, razor, two camp suits, light gloves, sweater, rubber boots, rubber seat, towels, grip for brush, comb, headnets, white shirts to wear out of the woods; toilet soap, tooth paste, shoepacs, extra shoes, comb and brush, safety pins, shipping tags, copper wire, thread, buttons; pen, ink, stamps and stationery, umbrella for sun or rain going in and out, hand glass, overcoat, camp watch, check book, cork screw, night light, mosquito dope, drinking cup, set of pocket tools.

Do not wash flannels in warm water, as they will shrink Use two tablespoons of borax to one cake of soap dissolved equally for two small washings. Use cold water, rinse and hang to dry, but do not wring them out.

Your camp outfit should include boats, poling oars and paddles, 100 feet of rope, 10 yards cotton cloth, 10 yards cheese cloth, 30 yards toweling, 5 pounds black pitch, roll cotton batting, two mosquito nets, reflecting oven to keep things warm, stove, fireless cooker, coffee pots, axes, hatchets, corkscrew, tents, washboard, frying-pans with covers, plates, cups and saucers, knives, forks and spoons, water pails, stew kettle, chairs, sponges for boat, cord, twine, screw driver, nails, tacks and screws, covered butter dish, covered sugar bowl, muffin tins, pie plates, tablespoons, teapot, 4-quart pan, dripping pan, teakettle, small tin pails, cooking rack to cook over camp-fire coals, side dishes, table dishes for potatoes, etc., with covers, butcher knife, clothes line and pins, lanterns, oil table cloth, broiler, dish pan, wash dishes, syrup holder, salts and peppers, folding tables, traps for porcupines, etc., canisters, hay cock covers to keep out cold at night over your feet and for a carpet in front part of your tent in muddy weather, cedar saw, spade, tarpaulins to keep your supplies dry in wet weather and a can opener.

For guides, get those who know the country and have worked on the drive. Get a good camp cook who will wear white aprons and use a pit for his slops, and who will get his own fire wood and who can use the duffle boat. Do not get one who is afraid of bears, because he will not stay at your camp alone—the little dog will make it more agreeable for him to stay. Have the cook or one of the guides bring in a dog that is used to camping in the woods.

Arrange for your mail and distress telegrams to be speedily delivered and arrange a speedy and safe way out of camp for anyone who becomes ill or has an accident.

Have a dock built at your boat landing with steps to it if the bank is high and steep. While moving, stop for camp early so that you may get settled for the night before dark.

Watch for storms when going out or when moving. To do so, note where the wind comes from and the clouds in that direction. Watch a small cloud for a while, and if it gets larger, rain is quite sure to be on the way. Do not camp within reach of any dead trees, unless your guide can assure you that they will fall away from your tents. Do not camp in the woods; that is, not where the trees overhang your camp, but get into some open spot, because limbs are often falling in the woods.

In a thunderstorm do not seek refuge under a tree, but rather under a log or fallen tree. When crossing an old bridge, get out and walk, so that if it goes down you will not be injured and will be able to assist in the rescue.

Do not allow loaded firearms in the camp and do not use the axe or allow others than the cook and guides to use it.

Do not allow a member of the party to go off into the woods alone. He may get lost or get injured, and in either event should have company.

When you go out for an all-day fish, take your sweater and a haycock cover for your knees, as it will be cold riding in the boat before you get home. The haycock cover will also keep off the rain if you have no better article. Always have your cook know where to go to find you, as an emergency message may come in.

Put out your camp-fire at night, as the wind may rise and burn your camp. Camp away from roads and trails so as not to be bothered by travelers. Put up a wash dish shelf with a rack for towels, etc. Make a cedar brush broom and insist on having a clean camp.

If the sun is hot, wet your hat in the cool water, or put fresh leaves in it. If it is cold, put your handkerchief in your hat for warmth. In traveling the trail, the rear man should carry his firearms at safe, not ready to shoot. In shooting, do not shoot over or near anyone. He may make a motion and throw his hand in front of the firearm. Do not in any event shoot toward camp, nor at anything not clearly discerned. One of our guides once shot a pocket knife out of the mouth of his companion who was skinning a deer he had hung up. Better let your game move than take any chances.

VII.—COMFORT.

I now come to a most important matter in which our proficiency is the result of many attempts to keep warm in bed on cold nights without heavy and cumbersome bed clothes and without sleeping with our clothes on.

Have blankets, or what is better, light quilts, large enough to cover your head and feet, say seven feet long and six feet wide. Two are enough where the temperature at night does not go far below freezing. Lay your quilts on your bed, one edge of the two quilts even with the edge of the bed toward which your face is to be when you are asleep, put them over your pillow, not under it, because the cold will then come in around the pillow and chill your neck and shoulders. Fold your quilts over the bed far enough to bring the fold close to your back, the fold being at the side where your back is to be. Fold the corners at the foot under the quilts, then fold the point made by folding the corners under the place where your feet are to be. You thus will have a protected pocket for your feet much like a sleeping bag. When you get into bed, slip your feet down into the pocket, gather the quilt closely around your neck, and pull the quilts over you toward the front. Feel behind and see that you have taken up the slack so that no cold air chamber will be between your back and the quilts, reach down in front and fold the quilts close to your stomach and then tuck the upper corners under your chin, drawing the quilts closely about your neck. You will thus keep out all the cold drafts that otherwise will find their way in through folds in quilts merely laid over you.

If you are liable to have cold feet, take an extra blanket, quilt, haycock cover, or a rubber blanket and place part of it under your quilts at the foot and fold the balance over where your feet are to be and turn the sides under your quilts and your feet will keep warm. If this does not keep your feet warm, you will have to use an extra pair of wool socks and sleep in them. If you are too warm you can throw back one quilt and later if you need it you can pull it over you. Sleeping bags are not practicable if you have to get up in the night, as it is quite a job to get out and back again.

Wet feet will do no harm if you keep walking until they are dry or until you can change. If you get wet while in a boat, do not remain without exercise, but walk or pole the boat or use the oars until you are dry or can change.

Do not sit or lie on the ground or on a damp log, as you are quite sure to get dysentery. If you do get a bad diarrhea or dysentery, eat soda crackers and picked-up codfish. Do not eat any bread or fresh fish or fresh meat. Use Humphrey's Marvel of Healing by drinking a good mouthful two or three times daily while the disorder lasts. It is also splendid for piles, used internally as above and externally. It will also stop the common stomach ache if taken as the ache comes on. Nux vomica is also good for the latter. Camphor pills will cure a bad cold if taken early. Guides are quite apt to overeat in your camp, as the food is better than they usually have, and your Humphrey's and laxative pills are quite necessary to enable you to get adequate service out of them.

Take in a few old blankets or quilts for your guides, as they will not bring enough and will complain of the cold and get ill.

WILLIAM H. HOLDEN.

[THE END.]

Nature's Disturbed Balance

By W. G. DeGROOT

Concluded from page 852.

HAWKS and owls seem to have no friends among men. Sometimes it almost seems that man is jealous of their success as hunters, and wishes to destroy them in order to save for himself the prey that they would capture. Such scientific investigations as have been made point to the conclusion that a large proportion of the American hawks and owls are rather useful than injurious. It is to be remembered that the prosperity of our country is founded on the success of its agricultural population—the crops that they grow. Of the enemies of the farmer few are so injurious as the field mice, which by hundreds of species and millions of individuals are scattered all over the land. The food of a large number of hawks and owls consists chiefly of these small rodents. Except for the goshawk, Cooper's hawk and sharp-shinned hawk, there are, according to the conclusions of the investigators of the United States Biological Survey, hardly any of the hawks that destroy much bird life, but it must be remembered that these inquiries, while useful, so far as they go, did not extend over a great length of time, nor cover a very large number of specimens. One hears frequently of the killing of hawks or owls whose individual stomach contents quite contradicts the general conclusions drawn by Dr. Fisher in his "Hawks and Owls." Not very long ago, in fact last summer, an individual who examined the nest of a sparrow hawk—thought to be one of the most useful of our little hawks—discovered in the nest eight pairs of the feet of small song birds. A friend has told us of accidentally killing two short-eared owls and finding in the stomach of one great fragments of a meadow lark, and in the other feathers of another bird; yet the short-eared owl is supposed to be, above all things, a mouser.

Wilbur F. Smith, the game warden of Fairfield county, Connecticut, made perhaps last spring an interesting observation on the habits of the sharp-shinned hawk. Hearing that a boy had found the nest of a pair of these birds, he visited the locality and saw the nest. The boy then pointed out to him a tree about a hundred yards distant where he said the hawks always stopped before coming to their nest. Visiting the place, Mr. Smith found the ground positively strewn with the feathers and wings of birds that the hawks had captured, and after watching a little was convinced that the birds stopped there to pluck and prepare the food for the young that were then in the nest, and a little later his companion shot one of the birds as it was going to the nest, and it fell to the ground still clutching in its talons a neatly picked flicker—a bird almost as large as the hawk.

This habit of the sharp-shinned hawk apparently protecting the location of its nest from observation by leaving the débris at a distance is, we think, not generally known. If its purpose is protection of the nest from observation, the act is one of extraordinary interest.

Cooper's hawk breeds over much of New England and undoubtedly does much damage in the way of destroying poultry and game birds. We have known on two occasions where it broke through a wire netting to get at some fancy pigeons, and being unable to escape was killed in the one case with a stick, and in the other with a gun. Now and then there are migrations of goshawks in winter, which carry with them much destruction to all bird life. E. H. Forbush, the State Ornithologist of Massachusetts, in his report for the year 1909, gives such a migration of goshawks a year or two before as one cause for the scarcity of the ruffed grouse. During that year it was our fortune on three occasions to find in the woods complete skeletons of ruffed grouse, whose bones had recently been picked clean by some bird. On another occasion we found in the snow the bones of the trunk of a quail which had just been devoured by a hawk, probably a goshawk, though its species could not be definitely determined.

That snakes destroy small birds and their eggs

is well known, but whether they destroy great numbers of game birds is not known. The larger blacksnakes no doubt eat many birds and birds' eggs, and among them no doubt some of the eggs of quail. They are less likely to find those of the ruffed grouse, because as a rule blacksnakes frequent open country where the underbrush is low. On the prairies of the West, blue racers and bullsnakes no doubt kill many birds and eggs, but in the case of these snakes as in the case of the fox, the chief diet is probably mice and insects.

Of the birds destroyed by snakes, the vast majority beyond question are those species which nest upon the ground, yet the blacksnake is perfectly capable of ascending a tree to almost any height and of reaching almost any nest. Anyone who has seen a blacksnake cornered where he thought he could escape by climbing a tree has probably noted the ease and speed with which it ascends, and the readiness with which it moves about among the branches, often spanning wide intervals to pass from one branch to another.

Wilbur F. Smith, already quoted, recently told in FOREST AND STREAM an exceedingly interesting story of an old farm in Redding, Conn., the buildings of which were once frequented by swallows in such numbers that their nests were everywhere. The farm was abandoned for a number of years, its owner going to a city to live. When he visited the place in summer he noticed that year by year the swallows seemed to be growing fewer, and finally last summer only a single nest was seen in the very peak of the roof of the main barn, a situation which seemed accessible only to a being with wings or a ladder. As the observers looked at the nest, a blacksnake was seen crawling up a roof rafter in the angle between that and the roof boards. The next day the owner looking again at the swallow's nest saw close to it the snake, and protruding from its mouth the wing of a swallow. It had destroyed the last of these many nests.

On one occasion Mr. Smith after having photographed a chestnut-sided warbler on her nest, which contained four eggs, went back the next day to repeat the operation and found the nest empty, but no egg shells about. As he moved about the nest in making his examination, he disturbed a little snake, a copperhead eighteen or twenty inches long, and suspecting it of the robbery, killed it and found within it the four eggs of the warbler as yet unbroken.

There are a number of bird enemies, not included in the above categories, such as crows, bluejays, blackbirds and others whose habits are well known. Crows have been seen to fly into trees and systematically search for a nest which the actions of the frightened mother told them was near. Bluejays are notorious egg thieves and blackbird sometimes destroy eggs and devour young birds.

Red squirrels make a business of robbing birds' nests, eating eggs and young alike. We have seen a squirrel descend an oak tree carrying in his mouth a young robin that he had just taken from the nest, and in a locality where there are many red squirrels they should be destroyed without mercy, although they are attractive little beasts. It is hard to have both squirrels and birds. In many parts of the Central West where ground squirrels abound, it is altogether probable that they destroy the nests and young of many ground-nesting birds, but we do not know that there is any evidence of this.

By far the most dangerous enemies of our game birds in thickly settled countries are the domestic dog and cat. The house cat, as a rule, hunts chiefly about the house—within a few hundred yards at least—but occasionally cats leave the house entirely, become wild and live and rear their young in the woods. When this takes place, they cover a great deal of ground and are most destructive. It is the practice of many gunners to kill cats at sight when found in the woods.

Far more injurious than the cat is the domestic dog, the faithful guardian of the farmhouse, man's best friend. Often the farmer's house dog, either alone or with a companion picked up at some neighbor's, may go off and spend a whole day hunting through fields, along hedgerows and in woods and swamps, partly no doubt for the pleasure of hunting, partly also for the food that it can kill. A dog that has once formed this habit can hardly be broken of it, and if there are two of the animals, they can readily deplete a neighborhood of its ground-nesting birds and the smaller rodents which are not tree climbers. Such dogs, with much practice, learn to hunt in the most systematic way, following up the hedgerows, searching out each corner, each bramble patch and looking into the low-growing branches of the evergreen trees, literally making a business of finding whatever flesh or fowl or eggs there may be about. While perhaps they seldom kill the old birds, they destroy uncounted numbers of nests, and the quail, woodcock or ruffed grouse that attempt to breed within the range of one of these dogs is not likely to rear a brood. On the Western prairies the same thing happens. Quail and prairie chickens suffer, and if there is some pond or low spot where two or three pairs of wild ducks try to rear their young, the dogs are likely to find and destroy them.

In recent years one or two States have passed laws obliging people to keep their dogs tied up, but such laws if enacted are enormously unpopular, and in fact are never obeyed. Yet, if the farmer did but know it, it would show good business sense for him to keep his dogs confined at least during the breeding season of all birds, or from the beginning of May until mid July. The value to the farmer of insectivorous and song birds has been so thoroughly demonstrated and the increase of insect pests which prey upon agriculture has at different times been so great owing to the destruction of small birds that by this time we should all have learned to do everything in our power to preserve these benefactors of the country. In these insectivorous birds we have millions of police officers working without pay in our behalf from one year's end to the other. It is true that the same officers do not always work in the same place the year round. The beautiful insect-eating birds that come to us in spring pass along to more northern climes and do their summer's work there, but they are followed by another migratory wave of residents who stay with us all the summer, doing yeoman's work to protect gardens, corn and hay fields. When autumn comes a horde of helpers descends on us from the North, gleaning insects, insects' eggs and above all the seeds of noxious weeds, and when at length these pass on and the hard frost comes, then appear the winter birds which stay with us all through the season of cold. All through those bitter months these little fellows are at work, going up and down the trunks and branches of the trees, investigating every cranny and crevice in the bark, pulling out from their hiding places the eggs of insects, or the pupæ that have gone to sleep there preparatory to their attack on the vegetation next spring. Meantime the winter woodpeckers are at work, drilling holes in the trees, knocking off pieces of bark and wood and bringing to light unlucky grubs which, if they had been left to mature undisturbed, would have cost the land owner dear.

Few people think much about this. A fly, a grasshopper or a bug is merely a single insect—small, feeble and incapable of doing much harm, but if we multiply this single insect by the millions that would be found on a few acres, we can see that the injury caused by the ceaseless work of these millions may very well amount to much.

It has been said that the grasshopper eats his own weight each day in vegetation, and while the weight of a single grasshopper is not much, the weight of a million or of ten million would be a great deal, and anyone who has ever seen the Western country while it was being visited by a flight of what used to be called the Rocky Mountain locusts knows that but a very short time is required for a horde of those individually small things to sweep every vestige of green from a great field of growing corn.

The cat is commonly spoken of as one of the great enemies of our birds, and it is an enemy and must be reckoned with. But it may be doubted if the cats of the country kill one-hundredth part as many useful birds as do the dogs. Because the cat frequently brings into the house a bird, a rabbit, or a field mouse that it has caught, we imagine it to be very destructive, but we never see anything of the much greater killing wrought by the dog.

Civilization and the improvement which goes with it has been the worst enemy of natural life on this continent. The draining of the swamps reduces the area which moisture-loving birds may occupy; the cultivation of the fields takes away so much area where birds might breed; the cutting down of the forests contracts the range of the woods-loving species. On the other hand there are many birds that are glad to nest about our houses, that accept man as a friend and are willing to live with him on terms of more or less intimacy.

It is surely worth the while of all of us who love the birds and who appreciate the enormous work that they are doing to try to make life easy for them and association with man safe for them. It is astonishing how readily these naturally wild creatures will respond to any advances which we make to them and how soon they learn that man is not necessarily an enemy. The example of the blackhead ducks at Palm Beach, the actions of the migrating wild ducks which in New York city constantly come into the ponds in parks, paying not the slightest attention to men or horses or automobiles, or many other things that might be expected to terrify them, show very clearly that the wild creatures do not fear man, except where bitter experience has taught them that he must be feared.

"Bent's New Fort" as Seen To-day

By J. H. KELLOGG, M.D.

I WAS greatly interested in the articles telling of Mr. Garrard's book, and I send you some views just taken of the ruins of the historic landmark in Colorado to-day—"Bent's New Fort," or old Fort Lyon.

After reading the series of articles on Bent's Old Fort by George Bird Grinnell, I visited these ruins and was much impressed by them. They are nine miles from Lamar just across the Bent—Prowers county line, and twenty years ago were imposing. Since that time farmers have hauled away the stone to construct buildings, and I know of many large ones made of this material. What a pity these ruins should not have remained as they were.

The remains of the walls are now about two feet in height and show the dimensions of the different rooms of the fort. There are also the remains of an earth wall inclosing the old corral where the wagons and cattle were kept for safety during the night. At one point the walls of the corral extend to a precipice of rock, at the foot of which runs the river. In this stone a pathway was hewn, down which the inmates might pass to get water—a convenient thing in case of siege.

On the face of these cliffs many names of soldiers are carved in the rock, often giving the regiment and company number. I tried to photograph some of these, but the light was poor. Among the names decipherable were these: Corp. B. F. Witmer, D. Co., 2d U. S. I.; O. D. Holladay, Abbott W. Saunderson, Co. F., 2d Col. Cav., Feb. 14, 1865; W. P. Monteath, Co. K., 48 Wis.

There were many other engravings on the rock, but the action of the elements has partially obliterated them, but some years ago names could be read with dates back in the '50s.

The ground inside the outer parapet all sloped to the center where the store and barracks were built. There could not well be a better location for a fort than this one.

Standing on the site of the fort, a splendid view is to be had in all directions. To the south are the bluffs across the river, known as the Point of Rocks. It was here that the Indians used to gather when coming from the south to study the ground and observe whether any hostile tribe was camped near the fort. Many Indian dead are buried in these bluffs.

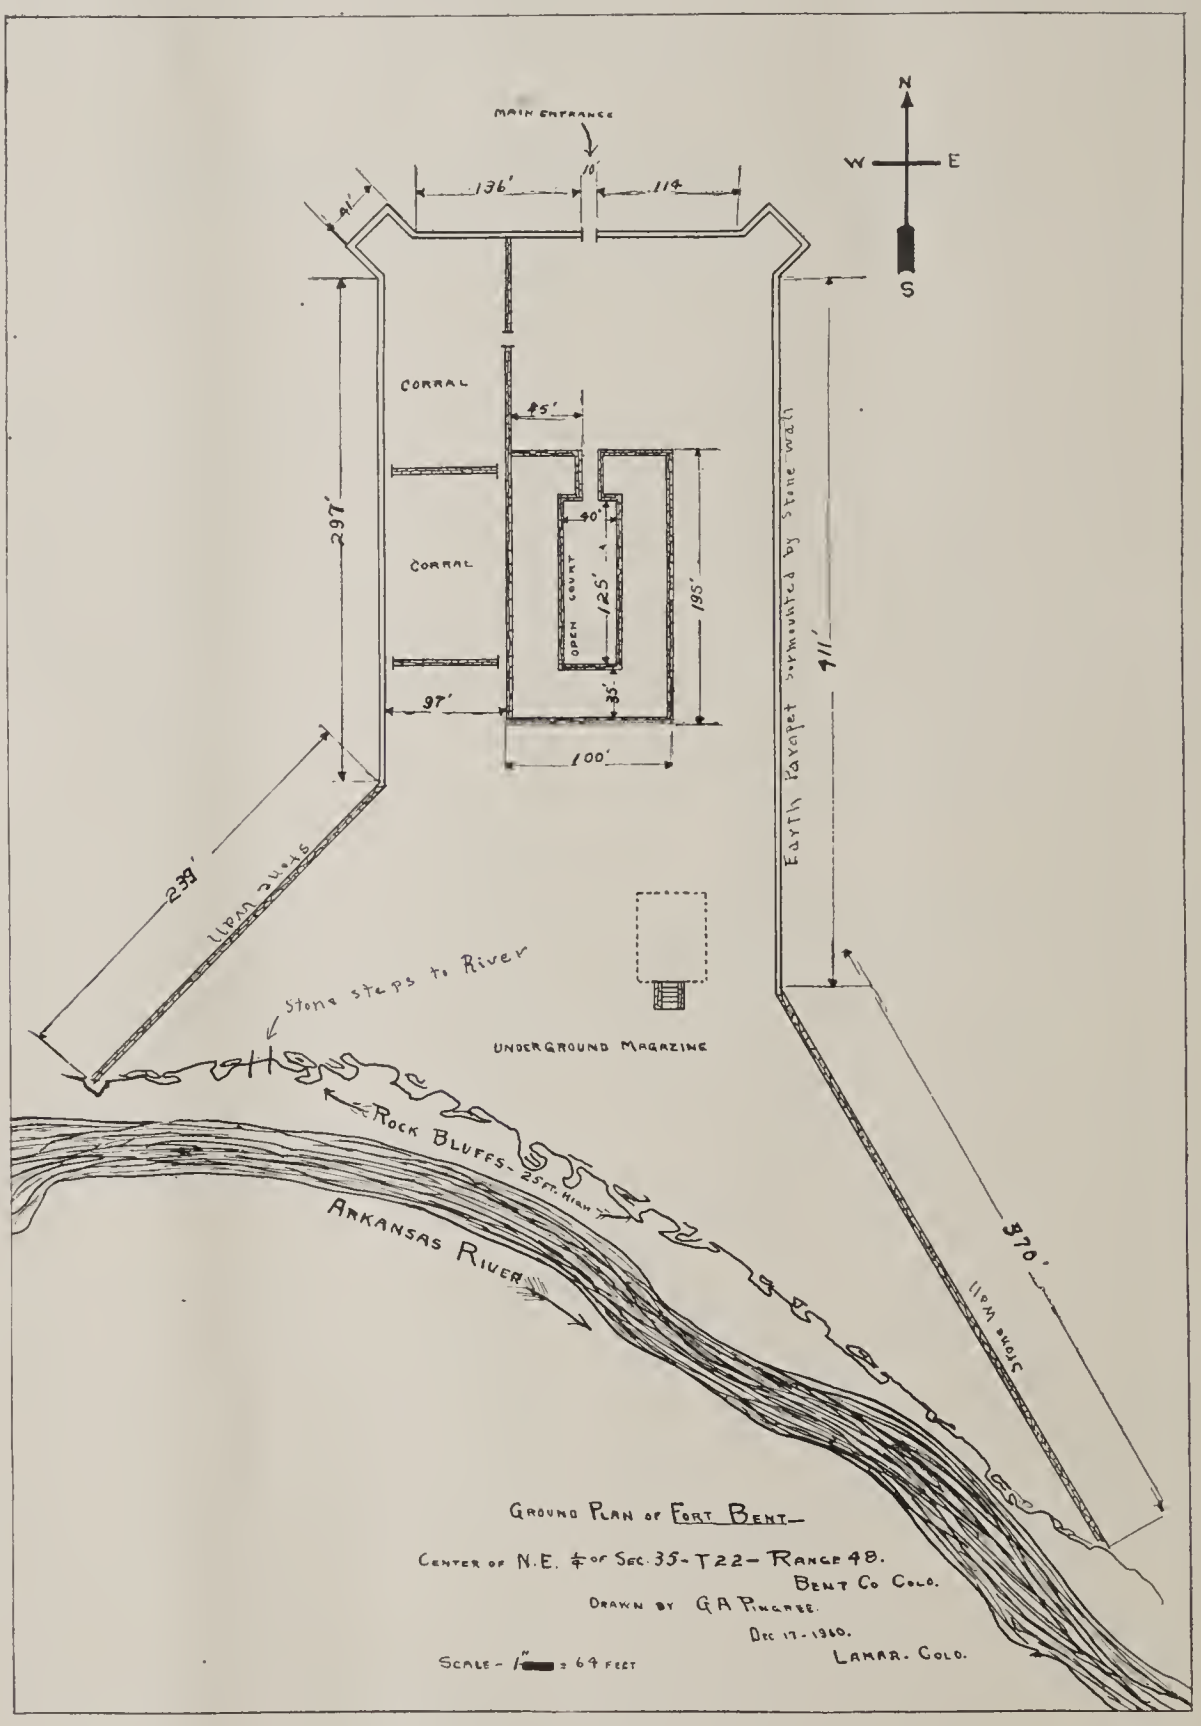
At the point in the river nearest the fort, the dam and head gate of an immense irrigation system show strikingly the change from the past to the present. Near this head gate are some caves in the face of the cliffs, which in their day may have sheltered Indians camping outside the fort.

At a point one mile from the business section of Lamar is the old Sante Fe trail, deep worn and long since sodded over by the dense salt grass of the river bottom. On this trail, at a point where it crosses the highway at right angles, stands a monument erected by the Daughters of the American Revolution. At its dedication five years ago, there were present some of the old timers who had trod that pathway when this country was the wild West in very deed, and to hear some of their experiences was most interesting. One of them said:

"A caravan of a dozen wagons, each drawn by six yoke of oxen, was camped at the river waiting for its flood waters to recede, when one of the drivers, thinking he could cross, yoked up his oxen and drove them into the stream. To follow the ford was difficult, and at length pushed by the current, the oxen swerved from it. No sooner had they left the firm bottom of the ford than they were caught in the quicksands, and oxen, wagon and man disappeared from sight in the muddy waters of the treacherous Arkansas, and were never seen again."

In following the old trail down the river I could not but notice that it followed the banks of the river just out of range of the old rifles, never getting any nearer, even though the going might be good.

All the old trail will soon be a thing of the past, and even now it can be seen only where the soil has remained unbroken. South of the river lies a virgin territory, soon to be converted into an immense irrigation district known as the Bent and Prowers. Its waters are to be taken from an immense reservoir constructed in the bed of the Purgatoire River, better known as the Picketwire. In the clefts of the rocks bordering the banks of that river the Indians used



GROUND PLAN OF BENT'S NEW FORT.

to bury their dead, and a friend told of finding a number of skeletons there, some with the moccasins fairly well preserved.

At present there are but two or three living men in our country that have a clear remembrance of the time when this historic ground was the scene of activity. All that I myself can do is to give the plan and measurements of the walls as I find them to-day. I wish to thank those who so cheerfully assisted me in procuring these plans, which so far as I know, are the only ones taken since the fort's erection.

Recently while riding in this territory I saw down the trail a coyote, and turning on the power soon overtook him with the machine. It was amusing to watch him as he buckled down to business, trying to outrun me. The cry of the present day is development, and where once raced the buffalo now speeds the automobile. The valley of the Arkansas will soon be as well known for its immense wealth of agriculture as in the past it was for its historic Santa Fe trail.

[As stated in the third of the articles entitled, "When Beaver Skins Were Money," this fort was built about 1853, and was leased to the Government in 1858. It was at first intended to call it Ft. Fauntleroy after the colonel of the old Second Dragoons, but was finally called Ft. Wise, and when Governor Wise joined the Confederates the post was called Ft. Lyon, after General Lyon, who was killed at the battle of Wilson's Creek.—EDITOR.]

Two Grouse Stories.

PATERSON, N. J., May 29.—*Editor Forest and Stream:* I was in Pike county, Pennsylvania, a few days ago when a resident, whose reputation for veracity is excellent, told me a peculiar story. The narrator has been a resident of Pike county for a number of years and is fond of sport with gun and rod. One day he and a friend were out with their guns when their attention was attracted by what seemed to be a ruffed grouse—they call them pheasants in Pike county. The bird was sitting on the lower branch of a large tree and was turning its head about in a peculiar manner. The two men approached cautiously and saw a fox under the tree. The fox was walking about in a circle, his path being well defined in the snow, sufficiently so to warrant the belief that he had been engaged in the circling about for some time. The eyes of the fox were fixed on the bird and the latter's eyes followed the fox, this accounting for the peculiar motion of its head. The men made up their minds that they would shoot the fox and approached nearer, wholly unobserved by either bird or quadruped, the attention of both these being fixed on each other. Suddenly the bird, which had been positively identified as a ruffed grouse by this time, dropped to the ground. The fox seized it and bounded away before the astonished men could bring their guns to the shoulders.

The incident reminded me of a somewhat similar occurrence some years ago. A justice of the peace came to my office carrying a pasteboard box, such as are used by dealers in shoes. The box contained a female ruffed grouse. Some boys had espied the bird sitting on a branch of a shade tree near the justice's residence, and one of the boys was about to climb up the tree when the justice appeared. He did not interfere, presuming that the bird would make its escape, at the same time wondering what the bird was doing in a tree near the heart of a city. To his surprise the bird offered no objection to being captured. The justice took the bird away from the boys. The eyes of the bird were bright, evidence of its good health, and a careful examination of its body, to which it offered no objection, failed to reveal even the slightest wound or defect. I offered the bird food and water, but it declined both. I repeatedly took it out of the box and stroked it, to which it submitted without any manifestations of either pleasure or the contrary. On the following day the justice and myself took the bird to a bit of woods near the city. We placed it on the ground, walked away a distance and then returned. The bird had not moved and evinced no objections to being handled. We walked a few hundred yards further and again placed it on the ground. We walked away again, but as we again approached, it got up in the orthodox grouse fashion, and I have never seen a grouse go through the air more quickly than did this particular hen. It did not cease flying until it was out of sight.

Are these two occurrences to be attributed to the sixth sense in animals we occasionally read about? C. A. S.

[The Pennsylvania tale recalls that of the owl about which the man walked followed by the eyes of the owl which constantly turned its head until it wrung its own neck and fell down dead. The capture of the grouse on the limb of a tree is something that has more than once been reported at the "running or crazy season," and we believe is quite true.—EDITOR]

National Beagle Club of America.

CAMDEN, N. J., May 29.—*Editor Forest and Stream:* At a meeting of the executive committee of this club it was ordered that the Twenty-second Annual Field Trial of this club start on Nov. 9, 1911, and that the Fifth Show of Hounds be held on Nov. 12, 1911.

The place of holding the trials was not determined upon, but referred to a committee consisting of Messrs. T. Dudley Riggs, Baltimore, Md.; LePage Cronmiller, Laurel, Maryland, and Raymond Belmont, 23 Nassau street, New York.

The feature of the coming trials of this club will be the addition of another class, to be known as Class "H" to consist of eight couples or sixteen beagles, the prize to be a sweepstake, winner to take all.

Another innovation to the trials of this club is the division of the derby class into two classes, one a fifteen-inch class, and the other a thirteen-inch class with the prizes as follows: First prize, $40; second prize, $25; third prize, $15.

At a meeting of the committee there was quite some favorable comment on the part of the members upon the trials held in the West, and a number of the members of this club will make every effort to plan either a trip to the Western trials or to make entries at these trials or both if possible. From the expressions of those present at the meeting the indications point to quite a representation from the National Club at the trials of the Central and Western Clubs.

CHAS. R. STEVENSON, Sec'y.

California Deer Enemy.

IN April we printed an account, received through the kindness of John P. Babcock, Chief Deputy of the California Fish and Game Comsion, of the reported killing of deer in California by wolves hunting in packs over the snow. Just what these animals are is entirely uncertain, for no skulls to identify them have yet been secured, some skins throwing no light on the question.

Mr. Babcock sent us some declarations recently and affidavits as to the damage done by these wolf-like animals. Benj. F. Addis, of Confidence, Tuolumne county, California, a miner and trapper, says that during the months of January and February, 1911, he counted the carcasses of seventeen different deer along the main Stanislaus River beginning at the Russian Place and extending up it for a distance of twenty miles. With two companions he came upon a large buck struggling with seven "wolves" with its throat torn open but still alive. He believes that these wolves, or coyotes, destroy from ten to twenty times as many deer as the California lion kill

These animals were at work in snow more or less deep. S. L. N. Ellis, the Deputy Fish and Game Commissioner, of California, says "soft snow of eighteen inches depth or more will tend to render the deer helpless; in fact, in snow two or three feet deep the deer move very slowly and would prove an easy prey for a pack of coyotes." Mr. Ellis believes that coyotes do kill many deer in the snow, and as the winter just past was extraordinarily severe, the snow falling low in the mountains, and so forcing the deer low down, they became easy prey for coyotes.

He does not doubt the ability of a single coyote to kill a deer, instancing the killing of a lone male antelope by a single coyote which he witnessed several years ago. In that instance the coyote crouched near an old and deeply worn cow path leading to the water and as the antelope came within reach he sprang cat-like and caught the antelope by the throat, cutting it quickly. This antelope was not in prime condition, but did not appear to be crippled.

Waterfowl Epidemic in Utah.

IT will be recalled that last year there was an apparent epidemic disease among the duck, geese, snipe, herons and some other water birds summering on some of the large lakes and streams of Utah. Efforts were made to learn the nature of the disease and to combat it, but with what success was not known.

From Dr. M. R. Stewart, of Salt Lake City, it is learned that the disease still exists among these waterfowl. Dr. Stewart inclines to the belief that it is some form of coccidosis, a trouble which as yet it seems impossible to combat.

Camp in the High Mountains.

LAS ANIMAS, Colo., May 28.—*Editor Forest and Stream:* I have sometimes been entertained by reading lists of the camp equipage considered necessary to reduce packs to a minimum by persons going out for an outing of from one day to two weeks. I do not wish to be considered a critic of these lists, for I know little of the conditions in the East, never having lived east of the Missouri River, but I am surprised invariably by the lightness of their bed.

In the West, whether the camper be young or old, the main thing is the bed. A number of old timers in Colorado living on the plains west of the Rockies—many of us in sight of them—feel obliged each season to have a few days or weeks in the "hills." Our beds and guns we take from home. If the guns are "take downs," they are rolled up in the beds; if not, they are carried in the car we ride in. Our destination is usually a point on or near the Continental Divide, and our supply point for grub is either at Pueblo, Colorado Springs or Denver where we enter the mountains. We generally expect to make a stay of several weeks and supply ourselves at these places with fifty pounds of flour, a sack of salt, baking powder, coffee and bacon. This stuff we ship by express to our destination. A frying-pan is in our bedding; our bedding is checked as baggage. When we reach our station on the divide—which is a water tank and telegraph office—we take our pack on our back and within a mile or so find our camp.

Our bed consists of plenty of quilts, rolled up in a bed canvas or wagon sheet. This canvas stretched over the bed rope, which is tied at either end to a tree, serves as a shelter tent in a storm. The old-time blanket has been discarded for cheap quilts, which are much softer to lie on and warmer. This bed is the heaviest part of our outfit. It is not considered complete without a hemlock or pine branch mattress. At the station, where we disembark, an old tin can is picked up for a coffee pot, and our collapsing cup is carried in our pocket, as we have been educated to beware of the "lunger."

Our bread is mixed in the flour sack, thus doing away with a bread pan. With the trout we catch and the game we kill we manage to eke out an existence until time forces us to bid farewell to the invigorating forces of mountain and valley that have inspired us, and that will be in our thoughts for many a day.

F. T. WEBBER.

A Brood of Partridges.

NEW YORK CITY, June 5.—*Editor Forest and Stream:* On Saturday, June 3, I had an experience quite worth relating. About mid-day with a companion and followed by a dog, I was passing through a piece of woods. As I stepped over a little rise of ground my eye caught, about twelve feet before me on the dry leaves with which the ground was carpeted, a dark object that for an instant I did not recognize. As I came in sight this object rose from the ground and ran round in front of my companion and myself, holding its body close to the ground and with its wings quivering. It was a ruffed grouse.

Before I could seize the dog, it had rushed toward the bird which swiftly ran away, and from the place where she had been sitting, hovering her young, fifteen or twenty tiny ruffed grouse chicks streamed out in all directions. A dozen of them ran over the naked dead leaves for fifteen or twenty feet to a patch of ferns in which they disappeared. One ran to me and disappeared, apparently between my feet. It was impossible to watch all the birds and we were too excited to select one and keep our eyes on it.

Presently the dog, at which I had been shouting, came back and I got hold of it. My companion tiptoed very carefully toward the ferns, and pushing them apart with a long stick, tried to see some of the chicks, but the fear of stepping on them put an end to this, and we prepared to move off and let the family get together again. My companion took the dog by the collar and dragged it toward the brook, but before she had made more than two or three steps, a little chick in front of her rose to its feet, and running a foot or two, crept under a dry leaf which completely hid it, but I could see that it kept pushing with its feet as if to get further under the leaves. We took this little bird in our hands, where it sat quiet, looking at us unwinkingly. The little wing quills were three-quarters of an inch or more long, and were brownish mottled with pale gray, and the down on the back was rich chestnut, smooth and polished like the coat of a well groomed horse.

Anxious to get away from the place for fear of doing some harm, we put the little chick on the ground, crossed the brook, and on the knoll just beyond it stopped to look back. As we did so we could see the mother grouse hurrying toward where her young ones were, her crest erected and the black tufts on the side of the neck standing out. As she hurried along, she uttered a clucking sound, and seemed wholly to disregard her human neighbors, who were only twenty-five or thirty steps from her. When she reached the edge of the patch of ferns she hopped up on a large chestnut stump, and stood there beneath a cluster of sprouts that had started from it, clucking constantly. Interesting as it was to watch her, and as it would have been to have seen the family gather together again and walk away, it seemed better to leave them to their own devices and to remove all cause for care and anxiety, so we went away.

In my time I have seen many broods of partridges and have often seen the chicks for a moment and then had them vanish from sight, but I never before saw a dozen or twenty chicks running around over the dead leaves, each one apparently anxious to reach cover and more or less careless as to whether or no it was observed. With some care and patience at least half a dozen of these birds could have been captured, but of course there would have been great danger of killing some of them. G. B. G.

Bears Troublesome.

RALEIGH, N. C., June 3.—*Editor Forest and Stream:* Jones county farmers are making a regular campaign against the bears, which are giving hog raisers no end of trouble. A year ago some of the farmers bought a couple of bear dogs, from which they have raised a pack. Almost daily hunts have been conducted, and the nine hounds have never failed to get a bear. Last week there was a hunt on Mill Creek, in which two score men participated, and these were delighted to see the skillful way in which the dogs handled the bear, the latter, true to his fighting style, sitting upon his haunches and fighting. Henry Oliver finished the bear with a bullet. The leading bear hunters are V. A. and W. H. Bender, who are the owners of the pack. In that section there are many small swamps, with a thick growth of bay and other trees, in which bears and deer take refuge. It is a capital hunting ground for Northern sportsmen in the winter.

FRED A. OLDS.

Young Wild Ducks on the Bronx River

NEW YORK CITY, June 3.—*Editor Forest and Stream:* Walking by the Bronx River the other day I was interested to see several flocks of young wild ducks. Some of them were pretty well grown, but others did not appear to have been long out of the shell. They were all, of course, accompanied by their mothers, and it was amusing and interesting in the extreme to watch their antics. Hither and thither they darted with the utmost eagerness as if they could not get too much out of their brief season of youth. Once a fluffy little fellow being too reckless in his mad pursuit of pleasure got separated a considerable distance from the flock. Then realizing his situation and apparently panic stricken, he set up a piteous "peeping." The attentive mother heard him and gave a reassuring quack or two. The little fellow was quick to understand and immediately began to paddle full speed in the direction of the flock.

While the youngsters thus disported themselves the grave mothers continued to give object lessons in food-getting, filtering the water through their bills, or tipping up to reach the bottom. The more developed of their progeny appeared to be apt pupils, but in attempting the tipping up feat often came to grief in a way that was really laughable.

It is evident that those young ducks are hatched along the river, though I have never found a nest. But, indeed, I have never made any particular attempt to find one, and the gray plumage of the mother duck harmonizes so well with the bank of the river in early spring that one might look on her without seeing her, so to speak.

Another interesting sight that I witnessed during my walk was the battle of three drakes for a female. It occurred on the little mere above the old stone bridge. At first one drake was alone with the female on the mere. Suddenly two other drakes swooped down from above. The issue was joined at once, the drake in possession attacking the newcomers with the utmost fury. While the battle was raging the female, as if to afford her mate a better chance, took wing. The three combatants ceased their fight and rose after her. For a while they circled over the mere, each drake trying his best to get alongside of the duck. At length the latter plunged down again upon the water and dived. The three drakes dived after her. When they reappeared one had possession of the duck, and as well as I could judge, it was her original companion. The other two went for him again, but it was no use; he beat them off valiantly and finally swam away in peaceful possession of his mistress.

FRANK MOONAN.

A Seventy-one-Inch Spread.

TORONTO, Canada, May 29.—*Editor Forest and Stream:* The accompanying picture shows Oliver Spanner, the Toronto taxidermist, and a pair of moose horns that have a spread of seventy-one inches.

The moose from which the horns were taken was shot during the open season of 1910 in the Temagami Forest Reserve, a few miles from Bear Island, Province of Ontario.

If possible to get photograph of head when mounted I shall have much pleasure in sending it to you. E. TINSLEY.

[The seventy-one-inch moose head from Ontario, the photograph of which we owe to the kindness of Mr. Tinsley, possesses a peculiar interest. This to be sure is by no means the largest head on record, for as long ago as 1897 we printed descriptions and figures of two moose heads, one of which measured 70¼ inches and the other 73¼ inches. There was also recorded, if we recollect aright, a head which measured 78 inches, but as it was mounted, there was always some suspicion that perhaps the skull might have been split and its spread thus increased.

The interesting point about the head we learn of from Mr. Tinsley is that it comes from Ontario, and we believe that no head approaching this in size has previously been brought from any Eastern locality.

Some years ago the Alaska moose was separated from the Eastern moose and given subspecific rank, and one of the chief characters on which this separation was based was size. If, however, 70-inch moose head grow in Ontario, size seems to be a character not to be depended on.—EDITOR.]

Audubon Society and Game Protection.

ON Friday, June 2, the board of directors of the National Association of Audubon Societies voted to accept a contribution of $25,000 a year for five years to be used in establishing and carrying on a department of game protection, the money being contributed by various gun, ammunition, powder and shot manufacturers.

For more than a year the manufacturers of arms and ammunition have recognized that the continued decrease of the wild game of the country is certain sooner or later seriously to interfere with the sale of their products, and have discussed the question of forming a game protection association, which will be more effective than any body now in existence, which shall cover the whole country and shall be managed by the best men procurable.

Within a month or two this matter came to a head, and H. S. Leonard, of the Winchester Repeating Arms Company, who was the active man among the contributors, approached T. Gilbert Pearson, Secretary of the Audubon Society, with the proposition that the National Association of Audubon Societies should establish a game protective branch, and should accept the contribution of not less than $25,000 for five years, to be used for this purpose. The matter was carefully considered by the directors of the Audubon Society at two largely attended and protracted meetings, and at the last of these it was determined to accept the contribution.

It was recognized that this acceptance might cause much criticism of the society, but on the other hand it seemed clear that the Audubon Societies were in a better position to do the work effectively than anyone else, for the reason that they have an efficient organization covering the whole country, and that—with the understanding that it should be absolutely free and untrammeled in its use of this fund—it could do much good with it.

SEVENTY-ONE-INCH MOOSE HORNS FROM THE TEMAGAMI REGION IN CANADA.

In its resolutions accepting the contribution, the National Association of Audubon Societies declared in substance that the acceptance was absolutely without conditions, except first, that the money is to be contributed to the association for the purposes of game protection, the association to decide what game protection means; and second, that the money should be disbursed by the executive officer of the association under the direction of the board.

In the resolutions of acceptance it was expressly stated that the acceptance of this fund does not commit the National Association to any policy for or against the use of any particular arm or ammunition, but that the association retains in all matters the same freedom of action it had always had.

ALASKA MOOSE HORNS WITH A SPREAD OF 73¼ INCHES.

In Louisiana.

NEW ORLEANS, La., June 3.—*Editor Forest and Stream:* The gift to the Game Commission of Louisiana of 13,000 acres or twenty miles of marsh land and a number of acres of higher land bordering on and near Vermilion Bay by C. W. Wiliis and E. A. McIlhenny, is still the talk of hunters and sportsmen. This great reserve will be used for ducks, wild geese, brant, deer, diamond back terrapins and wild birds in general. Mr. Ward, who formerly resided in Michigan, says the object of his gift is to encourage the propagation of ducks, geese and all kinds of game birds, and also the diamond back terrapin. Mr. Ward says there is high land in the tract where deer can roam and raise their young. He is especially anxious to protect the ducks, and says the ducks are subjected to the fire of hunters from Canada down to Louisiana and he feared that they would soon be exterminated.

Mr. Ward is an enthusiastic hunter and is also a horticulturist and naturalist, and has achieved a reputation on the raising of certain flowers. He was not satisfied with the laws in Michigan where the Legislature refused to pass certain game laws, and he became discouraged and came to Louisiana. He says the conservation laws in Louisiana are the best of any State in the Union, and are the most advanced. Mr. McIlhenny is associated with Mr. Ward in the donation to the Game Commission and owned some of the property. Both men are greatly interested in conservation of the natural resources. They say that in addition to game of all kinds on this tract to be deeded to the commission, with the use of several thousand acres additional, the waters of Vermilion Bay produce the best oysters in the South and is also a splendid body of water for fishing. F. G. G.

Enemy of the English Sparrow.

DR. LEON J. COLE, of the University of Wisconsin, announces that during the months of June and July, 1910, English sparrows in the vicinity of the College of Agriculture at Madison, were found to be commonly infected with a parasitic worm encysted in the skin of the abdomen. This parasite has long been known in Europe, but only occasionally reported here. In the vicinity of Madison it appears to cause a certain mortality among the sparrows, and it is possible that this may become a means which will help to check the increase of that bird in North America. Unfortunately it attacks also other small birds of several families.

FOREST AND STREAM
A JOURNAL OF OUTDOOR LIFE.
TRAVEL. NATURE STUDY. SHOOTING. FISHING. YACHTING.

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,
127 Franklin Street, New York.

GEORGE BIRD GRINNELL, President,
CHARLES B. REYNOLDS, Secretary,
LOUIS DEAN SPEIR, Treasurer.

CORRESPONDENCE.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Terms: $3.00 a year; $1.50 for six months. Single copies, 10 cents. Canadian subscriptions, $4.00 a year; $2.00 for six months. Foreign subscriptions, $4.50 a year; $2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davis & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line ($2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line.

A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be received by Saturday previous to the issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

MONEY FOR GAME PROTECTION.

THE offer of a large and continuing contribution to the cause of game protection by manufacturers of arms and ammunition marks the beginning of a new movement in game protection.

First and last vast sums of money have been contributed to this cause, and wasted because spent inefficiently in sporadic efforts to do some of the many things that ought to be done. A large sum is offered to be expended for game protection by the National Association of Audubon Societies, an association which has an organization and a working force which years of effort have proved to be efficient and to accomplish things.

The action of the manufacturers in offering this contribution seems to be nothing more than plain business foresight, for the manufacturers of guns and ammunition very well know that with the disappearance of game the demand for their product will greatly diminish.

Oddly enough, the acceptance of this donation by the Audubon Societies has been the signal for a violent and malevolent attack on it in public prints. The attack on an association which has done so much unquestioned good, and is managed by men of proved reputation, has no doubt made an impression on persons who have not taken the trouble to think carefully on both sides of the question, and who have forgotten past records.

We believe that a candid, thoughtful consideration of the matter will convince most people that the action of the Audubon board was wise. As an association long engaged in protective work, which speaks for itself, it is probably in a better position to handle the matter than any other existing association, while it has the sympathy of the best class of sportsmen. The character of the members of the Audubon Board of Direction is a guarantee that the acceptance of this donation implies no obligation whatever from the society to the donors, and in no sense abridges the freedom of the society to do what it considers right and wise.

The matter is one on which a hasty judgment should not be made. It is worthy of careful thought.

ALIENS AND FIREARMS.

THROUGH an important decision handed down by the Supreme Court of Pennsylvania, the game laws of that State have been upheld and their enforcement in the future made more certain. The court held that the State had violated no treaty, constitutional or property rights in forbidding hunting and shooting game and the possession of guns and rifles by unnaturalized foreign born residents.

The game laws were made primarily for citizens. To render game protection more effective the laws were made more stringent. The most persistent violators were aliens. So destructive were their methods, so general was their contempt for the laws, that the State was compelled to forbid them to hunt, shoot or carry firearms, though it allows them to possess revolvers and pistols for their own protection. The court further held that aliens are entitled to the protection afforded by our laws. In return they owe temporary and local allegiance so long as they reside here.

This ruling is probably final, since it is the word of the court of last resort in Pennsylvania, and only the United States Supreme Court can alter the decision.

It was in 1909 that Joseph Patsone was found guilty when tried before the Court of Quarter Sessions in Allegheny county on the charge of possessing a shotgun. He appealed and the Superior Court affirmed the ruling of the lower court, Judge Orlady writing the opinion, which the Supreme Court has now affirmed. The record was printed in these columns about a year ago.

Aliens living in the United States enjoy many privileges they cannot find at home. So long as they are law-abiding, they are entitled to and receive the same treatment as citizens. If they wish to become citizens, they can do so by complying with certain requirements which are neither exacting nor unfair. But until they have done this they cannot claim rights that are denied citizens nor set at naught the laws of the land. If in one State they are permitted to possess guns, it does not follow that in another State they will, by sufferance, be permitted to do likewise. The right of the State to prohibit all or any hunting cannot be denied.

SEA FISH AND FLIES.

THAT shad will at times take artificial flies is well known, and there are many veteran anglers who have enjoyed rare sport with these fish in times past. To-day, however, the assertion is regarded as more or less of a tradition because so few of the present generation ever see a shad taken from its native element by any other means than the set or the drift net. From California it is reported that this season shad have been taken from the San Joaquin River with the trolling spoon, and that in certain places in the West coast streams they may be taken with bright red and white flies.

That many sea fish will take artificial flies during their sojourn in fresh water or while skirting sand beaches is well known. In Florida fly-fishing in the surf is often successful, and some lively sport has recently been had at Aransas Pass, Texas, with Spanish mackerel that rise to flies in the clear water of the inlets.

THERE was a meeting at Middletown, N. Y., of officials from the railways and the Public Service and Fish and Game Commissioners, to discuss fire preventive measures for the State lands in the Catskill Mountains. Throughout the State—in fact over a wide area north and east—the lack of water in sufficient quantities to saturate the humus in the woods and the soil elsewhere is being regarded with no little concern, while cities and towns face almost certain shortage of water in reservoirs. Two very dry summers followed by winters of scant snowfall materially affected springs and brooks, many of which are to-day dry or very low. The rainfall for June is seldom sufficiently heavy to fill depleted watercourses and reservoirs, and at present the outlook is not particularly encouraging.

ACCORDING to a press dispatch from Washington, the first agreement between the Federal Government and a State providing for co-operation in the protection of the State forests under the Appalachian forest reserve law was signed last Saturday by Secretary of Agriculture Wilson with New Hampshire. The State will be given $7,200 for twenty-eight forest patrolmen. New Jersey, Connecticut, Maine, Massachusetts, Maryland, Minnesota, Vermont and Wisconsin have applied for funds. As only $200,000 was appropriated, not more than $10,000 will be allowed to any State for the year. No State will be allowed an amount larger than that which the State itself appropriates for the same purpose.

EVERY angler in America should consider it his duty to write to his senator in Washington, urging early and favorable action on the Dixon bill, which is printed in full in another column. If this bill becomes law, it will go far toward preventing the waste that has already been tolerated too long. Trout are not fish which can be thrown away in millions with impunity. Inexpensive and effective devices can be placed at the heads of irrigating ditches, to prevent the trout from being stranded on cultivated fields.

THE Russian Duma has passed a bill prohibiting for a period of three years the trapping of sables. Aurochs and river bears are to be protected for all time.

NATURAL HISTORY

Passenger Pigeon Notes.

GODBOUT, Canada, May 29.—*Editor Forest and Stream:* In reference to querics re passenger pigeon (*Ectopistes migratorius*) I beg to state that I have not seen any myself since 1908, but have heard of some being seen by others.

A hunter of Mille Vaches, County of Saguenay, named Tremblay, claims to have seen one about the end of September, 1910. He is an old man and says he is quite sure about the spccies, having killed many wild pigeons in former years. The lighthouse keeper of Point des Monts, Mr. Fafard, claims to have seen a male wild pigeon about two weeks ago. He is corroborated in this statement by his assistant, the latter being quite familiar with the bird. This would lead us to suppose that the bird is not extinct yet, though getting very near it.

In 1872 they were still very abundant on the north shore of the St. Lawrence, and I remember seeing some very large flocks—two to three hundred in one flock—at Point aux Outardes, Trinity Bay, Egg Island and here. After that year they decreased very fast, and flocks of over fifteen or twenty were rare.

I noticed, however, that we continued seeing a few here long after they were supposed to be quite rare elsewhere. I am quite familiar with all that has been recently written on the bird and also with the offers made for the finding of their nests. I have spread this information in our section of the country as much as possible and advised hunters and trappers not to shoot the birds if by chance any were seen.

NAP. A. COMEAU.

SAGINAW, Mich., May 28.—*Editor Forest and Stream:* I believe that all of the passenger pigeons are dead, and that Mr. Mellish is mistaken. The pigeon laid but one egg. Occasionally two were found in the nest, but I never yet have seen a record of two squabs found in a nest, so it is safe to say positively that there was but one young bird raised at a hatching. When they lived in vast communities, the young birds could mate and reproduce. Aftcr the colonies were broken up they nested singly. It strikes me that it may have been pretty hard for the young birds to find mates. In certain localities all might have been males, but if they were of both sexes there is no certainty that they could keep together and return north for breeding purposes the following year. I have noticed that after the nesting the old birds left, and the local birds were all young ones, that the shooting was entirely young birds. I do not mean to say that you would not find old birds, but when you did, they were all old birds together. That is my recollection of the situation, but unfortunately there are not enough of absolutely accurate data in existence relative to these minor details.

In 1878 the big nesting was broken up. In 1881 there was a big flight of them but no one seems to have located their nesting. Very early in the '90s the last ones were marketed. After that pigeon reports were rare and they soon became objects of interest. How long it was before we realized that the reports were mistakes or false reports, I do not know, but the chances are that for the last seven or eight years, there has not been an authentic pigeon report.

I do not know how long the wild pigeon would live. I do not believe the average life would go over fifteen years, but we will say that they did exist in the wild state and become twenty-five years old. If they ceased breeding as far back as 1883 or 1884, as I think they did, all of the pigeons would have been dead if they lived to be twenty-five years old, by 1909. There might have been an occasional old one that lived up to that time, but I doubt it. I think that the pigeons that bred in the '80s were probably all gone ten or fifteen years afterward. Many of the young ones never found mates or bred at all, and that the wild pigeon breeds at the present time is simply an impossibility.

W. B. MERSHON.

New York Zoological Society.

THE Executive Committee of the New York Zoological Society has submitted to the Board of Managers a report from which the following items are taken:

An effort will be made to secure some living gorillas from the west coast of Africa, and the Society has invested $1,000 toward the preliminary cost of an expedition for this purpose.

An order has been placed with Henry Tarlton of Nairobi, British East Africa, for the collection and transportation to New York of a large collection of characteristic African animals, the most important of which are, three white rhinoceroses; pairs of giraffes, hartebeests, grevy zebras, kudus, cheetahs, bushpigs; and in addition some gazelles, a baboon, colobus monkeys, and that rare and interesting animal, the aardvark.

Recent births include one Beatrix antelope; three American bison; two axis deer; two Tld deer, and one Rocky Mountain goat. Many more births are expected during the next four weeks.

The collections have sustained practically no losses of importance since the first of the year, and the health of the animals has continued excellent.

The building of the eagle and vulture aviary is well under way. The foundations are completed and the iron work will be delivered shortly. The new bear dens are progressing satisfactorily and will probably be ready for use about Aug. 1, 1911.

The contract for the zebra house will be awarded in the immediate future for an amount well within the appropriation for this purpose.

Since the first of the year 102 new members have been elected as follows: Annual members, 89; life members, 9; patron, 1; founder, 1; founders in perpetuity, 2.

The land in the eastward extension of Bronx Park has at last been transferred to the Park Department.

Woodchuck Ways.

POLAND, N. Y., May 24.—*Editor Forest and Stream:* From an observation recently made I am wondering if the woodchuck has developed a game.

On the morning of May 9, while returning home after an early tramp in the woods to note the new arrivals in the way of birds, a friend and I suddenly came in sight of a pair of woodchucks at play. We had not yet come out of the edge of the woods, and the animals were at the mouth of their burrow in a large meadow some distance away. They would sit up, take hold and wrestle, and we noticed that when one was thrown, hc usually landed in the hole and disappeared from sight for a second or two. We watched this performance for a considerable time and at first thought it accidental when one woodchuck or the other landed in the opening, but it was repeated too many times not to have been intentional.

This gives rise to my question and I would be glad to learn if any other observers have seen the little red monk at his game of "hole" your partner. The woodchucks were probably the young of the previous year, as the young of this year at this date would have been too small for such game.

I have watched woodchucks a great deal both with and without murder in mind, but never before have I seen them at play.

While on the subject of woodchucks I will relate the curious and fatal conduct of one yesterday. Taking my rifle, I wandered off back of the house to a grassy hill, capped by three maples, and a favorite lookout of mine. From this point I have a considerable view of the surrounding meadows and pastures, and I seldom climb there without seeing woodchucks. This day I fired and overshot one some distance away. At this she ran for her burrow and disappeared and here her strange performance commenced. She reappeared at the entrance. I shot again and missed, and she took to her heels and started running up a small depression in the hill straight toward me, and I finally killed her about ten feet away. Just over the crest of the hill behind me were some burrows and for these this woodchuck was undoubtedly headed, but why she left the security of the first burrow and ran sixty or seventy yards up the hill toward me will always remain a mystery. Possibly there was an occupant in the first hole to whom the other was unwelcomc. I may find out on my next visit.

CHARLES A. GIANINI.

[We imagine that the young of all mammals, great and small—from men down to mice—indulge in play, a favorite form of which is pretended fighting. This is seen in children, puppies, squirrels, and indeed in all animals that we have an opportunity to observe. Years ago, in Montana, we watched two three-quarter grown Richardson's ground squirrels at play for some minutes at a distance of only a few yards. They were on the shelf of a flat block of weathered yellow standstone in which there were several large cracks. They sat up on their hind legs, wrestled, pretended to bite necks and shoulders, and the one thrown down, when he fell, at once ran into a crack in the rock, to emerge a few seconds later and resume the game. We took it for granted then that this was a part of the sport, the defeated animal running away and

hiding to escape the victor—in other words carrying out the mimic warfare to the end. If this inference was just, it is conceivable that the woodchuck described by our correspondent was influenced by the same motive and pretended to hide. We often see something like this, when two puppies are playing and the defeated one runs away. At the end of its race it may throw itself flat on the ground, as if hiding, or it may drop down behind a bush. An inspection of the hole which the woodchuck left to meet her death might have given some suggestion of an explanation of her conduct. Was the hole a new one and how deep?—EDITOR.]

Albino Gray Squirrels.

MINNEAPOLIS, Minn., May 29.—*Editor Forest and Stream:* About two years ago our park superintendent imported a number of the common gray squirrels into one of our city parks. These animals have thrived and increased. To one of these squirrel families this spring three young ones were born, and of these three, two were albinos, the third being of normal color. The albinos are snow white; the color of the iris pinkish white, and pupil light red. Both are males. As Mr. White, the superintendent, has promised to do all in his power to protect these little sports from vandals, we shall hope that they will live and prosper.

J. W. FRANZEN.

Elephant Seal in London.

IN the Zoological Gardens in London there is a young elephant seal from the Crozets Islands on the borders of the Antartic, a little larger and presumably a little older than those now on exhibition in the New York Aquarium.

This animal, like those here in New York, was on its arrival at the gardens offered squid to eat, following out the belief that these animals feed largely on cephalopods. It declined to eat the morsel. Mr. Pocock, of the Zoological Society's Gardens, adds also that one of three California sea lions in the garden, after swallowing with some misgiving a piece of squid that had been tossed to him, refused a further supply. The other sea lions and the common seals would not taste the squid. The elephant seals of the southern seas are regarded by American naturalists as a different species from the form from Guadalupe Islands, which Dr. Gill years ago described as *Machrorhinus angustirostis.*

Zoological Park's Sportsman's Day.

SPORTSMAN'S day at the New York Zoological Society's Park in the Bronx, June 2, was attended by a large assemblage of sportsmen. The occasion was a brilliant one. Under the guidance of Madison Grant, the chairman of the society's executive committee, the sportsmen made the rounds of the park, bringing up finally at the Administration Building where the National Collection of Heads and Horns was inspected by the gathering of hunters.

The young animals recently born in the park, tottering buffalo calves, a young Rocky Mountain goat and many deer and antelope, were looked at with especial interest.

SEA AND RIVER FISHING

Important to Every Angler.

TUPELO, Miss., May 29.—*Editor Forest and Stream:* In your issue of Jan. 2, 1909, there appeared a communication from my pen with the above caption, which embodied a resolution and memorial from the American Fisheries Society to Congress, calling attention to the importance of the conservation and protection of fish in connection with the work of the United States Reclamation Service. The awful destruction of fish through the operation of irrigating canals and ditches is well known wherever irrigation is practiced.

I am now much gratified to state that through the interest of Senator Dixon, chairman of the Committee on Conservation of National Resources, the following bill has been prepared by him and introduced in the United States Senate and referred to the Committee on Irrigation and Reclamation of Arid Lands.

It is now up to every angler, and for that matter to every philanthropist, to communicate with his United States Senators, requesting them to advocate and vote for this bill. As to its importance I can only repeat what I said in my former article: "As the system of reclamation of arid lands contemplated by the Government is of great magnitude and will affect most of the streams of the West and Northwest, it is certainly evident that some provision should be made to conserve the fish life now existing in them, otherwise it will be a question of but few years before these waters become barren."

JAMES A. HENSHALL,
U. S. Bureau of Fisheries.

A Bill to authorize the construction of fishways, screens and paddle wheels at the intake of canals constructed in connection with irrigation projects.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that in the construction of all irrigation dams, canals and ditches under the provisions of the Act of Congress approved June 17, 1902, and in the construction of all projects for the irrigation of Indian lands, authorized by any Act of Congress, the Secretary of the Interior is hereby authorized and directed to cause to be erected, constructed and maintained fishways, wherever practicable, in all dams, and some effective paddle wheel, screen or other device at the intake of all canals and ditches in connection with said irrigation projects that will effectively prevent fish from entering the same.

Rainbow Trout.

LINVILLE FALLS, N. C., May 31.—*Editor Forest and Stream:* This is the best rainbow trout season Linville River and gorge have known. The protection and stocking of the past three years have resulted in more and larger fish than have ever been known here. All the local and visiting fishermen report large numbers of small fish, as well as plenty of good ones, and several have been taken from twenty-two to twenty-four inches, weighing from three pounds to three pounds ten ounces.

The weather has been warm for two weeks now, so the fish are active, as they were not before. They are taking flies and bait with apparently equal appetite. The river is low and very clear, the best condition for fishing here. The season lasts from May 1 to Oct. 1, and often the fishing is good into November. It is always fairly good all summer, except perhaps a few weeks from the last of July to the first of September, when the vegetable food is so plentiful that the fish are not so eager for the angler's offering. The people here say the fish are "mossin'" then.

F. W. BICKNELL.

A Michigan Trout Stream.

SAGINAW, Mich., May 31.—*Editor Forest and Stream:* I have had some very good trout fishing this spring, but water conditions lately have been against us. I have just come in from the Black River where I spent four days. The water was high when we got there. The second day it fell about four inches, so that we could wade parts of the stream, and the trout came good and were a fine size.

It was very hot and I never saw the mosquitoes so bad. We simply could not keep them out of the car, although it was screened and we smudged it out before bed time. The thermometer stood at 88 during the day. Heavy thunder showers followed, and the river rose again, so we had to give up wading except in a very few shallows. The river is literally alive with trout and many of them are of fine size. The stream is isolated in about the wildest part of Michigan.

Our guide, who traps in the winter and had his winter camp near by, told of the killing of a big buck some time in February by four wolves. He said he did not see the killing, but he traced it on the snow. Two of the wolves headed the deer off before it could get to the river and the fight took place in the jack pines within 200 yards of the water. When he found the deer it was about two-thirds eaten. The deer was hampered by the crust on the snow that held the wolves.

This was the last of our southern peninsula grayling streams. Only a few years ago when I was camping there in August our helper was picking huckleberries within a hundred yards of the camp. He suddenly let out a yell and came running to the camp and explained that a big bear had risen from the opposite side of a log alongside of which he was picking berries and made a sudden remark and he started for camp. We saw two bears on that trip.

The thickets along the river were filled with various kinds of warblers. It has been a favorite place for the redstart. I never was up there, but I saw quantities of them.

W. B. MERSHON.

All the fish laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

Newark Fly- and Bait-Casting Club.

THE plans of the Newark, N. J., Fly- and Bait-Casting Club have this season taken new form. Early in the year the club leased the Fox Hill Lakes, near Butler, N. J., famous black bass waters, and since the season opened, on May 20, a number of the club members have fished these lakes, with fair success. One of them captured a 7¼-pound bass, another a 4¼-pounder, both big-mouths; and small-mouth bass weighing 2½ and 3 pounds were landed last week.

To-day, June 10, the first club casting contest will be held at Weequahic Lake in Newark, commencing at 2 o'clock P. M. Other club contests will be held there on July 8, Aug. 12, Sept. 30 and Oct. 14 with an open contest on Nov. 7. An open casting contest will be held at Fox Hill Lakes on Labor Day. On Sept. 16 the annual Interstate tournament will occur at Weequahic.

If for any reason it becomes necessary to postpone a regular club contest, it will be cast off on the following day at the Orange Rod Club house on Cable Lake, reached via Lackawanna railway and trolley.

On Sept. 16 there will be cast off the ties undecided last Election Day. In case only one of those who tied appears, the prize will be forfeited to the one who is present.

Landlocked Salmon in Black Lake.

HAMMOND, N. Y., May 29.—*Editor Forest and Stream:* I have noticed your comments on the appearance of landlocked salmon in Lake Michigan in a rather sudden and unexplained manner and was awaiting the explanation, when much to my surprise on the morning of the 8th of this month one of the market fishermen, Stanley Froman, came up to the house with a live fish in his landing net, stating that he had just caught it while trolling a short distance below our landing. He said that he did not know what it was, and asked if I could tell him. I recognized it at once as a landlocked salmon such as I had seen in Canada, and to make the identification sure and verify my statement I compared it with the cut of a female landlocked salmon opposite page 232 in the second annual report of the Commissioner of Fisheries, Game and Forests of the State of New York for the year 1879. It was a perfect reproduction of the cut with the addition of a few dark spots on the fish's tail, and this fish was a female carrying two pretty well developed sacks of roe.

This body of water, Black Lake, is about eighteen miles long and receives the Indian River as a feeder at the head and empties through the Oswegatchie into the St. Lawrence at Ogdensburg, N. Y. If there has been stock planted in any of the feeders it might have come down stream; otherwise it must have come over the dam at Ogdensburg. There may have been other specimens taken in this lake, but if so I have not heard of it. H. A. MORSE.

[As early as 1801 laws for the protection of salmon in that part of the St. Lawrence watershed lying in New York State were enacted by the Legislature of New York. These laws referred to the Oswego, Grasse, Raquette and St. Regis rivers and smaller streams. The erection of dams that would "prevent salmon from following their usual course up said streams" was prohibited on streams flowing into Lakes Ontario, Erie and Champlain. It appears that no laws relating to salmon in the Hudson were enacted prior to 1770. Even then it seems to have been understood that Atlantic salmon were occasional rather than regular frequenters of the Hudson.

DeKay wrote in 1842 that the salmon were only found in New York on the St. Lawrence slope. They appeared in Lake Ontario in April, he said, and left it in October or November. They were formerly very abundant in the lakes in the interior of the State which communicated with Lake Ontario, but artificial impediments thrown in their way have greatly decreased their numbers, and in many cases caused their total

THE EARLY ANGLER'S RETURN.
Photograph by Edward Breck.

destruction." He says also that in Oneida Lake he saw salmon weighing ten to fifteen pounds.

Salmo salar sebago, the landlocked salmon of Maine, were put in numerous Adirondack streams during past years. These are larger than the ouananiche of the Saguenay River and its tributaries, which debouche into the St. Lawrence River further east in Quebec.—EDITOR.]

The Fisherman's Journal.

"THE FISHERMAN'S JOURNAL" is a handy booklet designed by Elmer Russell Gregor, whose frequent contributions are read with interest by the FOREST AND STREAM family. The purpose of the book is given in three words, "Records stimulate memory." There is an index in which various fishing trips are numbered to correspond with the blank pages that follow. Each number refers to two pages. On one is the serial number, the locality, the time taken, the railway, station, conveyance and the fare; varieties, length and weight of fish taken; the baits used; names of waters fished; hotels, guides and cost. The other page is left blank for remarks. This book is 5½ x 8½ x ½ inches in size. It is strongly bound in cloth and is substantial enough to be filed in the angler's library after its pages have been filled with records of many pleasant trips.

Kansas City Bait and Fly-Casting Club.

KANSAS CITY, Mo., May 29.—*Editor Forest and Stream:* Below are the scores made by our club at Troost Lake, yesterday:

One-half ounce accuracy:

	Per C't.		Per C't.
E. G. McLean	98.8	C. H. Cheney	97.8
W. L. Rock	99.6	O. H. Pitken	97.5
J. C. Kerner	98.4	C. H. Doyle	97.3
E. M. Meier	98.4	O. C. Viquesney	97.1
E. E. Guenther	98.4	F. B. Robinson	96.5
J G Hollingsworth	98.3	G. W. Woolworth	96.3

One-quarter ounce accuracy:

	Per C't.		Per C't.
W. L. Rock	98.7	J. C. Kerner	97.3
E. M. Meier	98.7	O. C. Viquesney	96.8
E. G. McLean	98.1	E. E. Guenther	96.5
F. B. Robinson	98.0	O. H. Pitkin	91.0
C. H. Cheney	97.6		

Accuracy fly:

C. H. Cheney	98 9-15	E. M. Meier	96 6-15
J. G. Hollingsworth	99	E. E. Guenther	96 14-15
W. L. Rock	98 8-15	U. H. Hosterman	96 10-15
F. B. Robinson	98 2-15	J. C. Kerner	96 7-15
E. G. McLean	98 1-15		

In practice, J. W. Bramhall made a score of 99 8/15 per cent., accuracy fly.

At a meeting held on the lake it was unanimously decided to transfer the two remaining meets which we have scheduled for Troost Lake to Rock's Lake, as the conditions at Troost are very unsatisfactory.

I hope that we will be able to report much better scores after we commence casting at Rock's. E. G. MCLEAN, Sec'y.

Chicago Fly-Casting Club.

CHICAGO, Ill., May 28.—*Editor Forest and Stream:* The following scores were made May 27-28:

One-quarter ounce accuracy bait:

O. E. Becker	98.9	D. R. Linder	97.6
F. P. Naylor	98.2	F. N. Peet	96.9
H. W. Perce	98.3	*Mr. Kleinfeldt	98.0
E. R. Letterman	97.8		

One-quarter ounce long distance bait:

O. E. Becker	118 5-18	F. N. Peer	128
F. P. Naylor	117 4-5	*Mr. Kleinfeldt	142 5-21
H. W. Perce	93 2-5		

Dry fly accuracy:

F. N. Peet	99 1-15	J. M. Smith	98 2-15
O. J. Loomis	98 10-15	G. S. Eldred	98 1-15
H. W. Perce	98 6-15	D. R. Linder	97

Salmon fly:

	Feet.		Feet.
F. N. Peer	124	J. M. Smith	105

JOHN HOHMAN, Sec'y.

A Thames Rainbow Trout.

THE most interesting item from the Thames this week is the report of the capture, at Sunbury, by G. Griffin, of a rainbow trout of about three pounds. Evidently all the rainbows placed in this river have not gone back to America.—Anglers' News.

Anglers' Club of New York.

THE June meeting will be held on the night of the 13th at the Hotel Navarre, when a program of contests for the summer will be arranged. These will be cast off at the club platform on the big lake near 77th street, Central Park.

29. Indian Harbor Y. C., race to New London.

Some News and a Little Gossip.

THERE is a possibility of G. Cecil Whitaker bringing his new Fife designed schooner Waterwitch to this side of the Atlantic to raee against Westward, Elena and other vessels. When it was announeed that Westward would not race this season on the other side, FOREST AND STREAM suggested that the New York Y. C. should invite Mr. Whitaker to bring his yacht to these waters and sail against Elena. It was pointed out that several Ameriean yaehts have helped to make the British seasons successful, and that it was time some British yachtsman visited these waters.

Waterwitch was built to race against Westward, and with that yaeht out of the way there would be little good sport for her owner. Mr. Whitaker was very much disappointed when he learned that Westward was ordered baek to these waters. The New York Y. C. offieers have invited Mr. Whitaker to bring his yaeht here and take part in the elub races and in sueh other events as can be arranged.

Last week a cablegram was received from Mr. Whitaker asking how much racing he could be assured if he crossed the Atlantic, and in a reply sent at onee he was told that he could have racing every day except Sunday. Yaehtsmen hope that Mr. Whitaker will bring his yacht here. Every club of standing on the Atlantic eoast would offer eups for races between Waterwitch, Westward, Elena, Irolita and other boats, and such racing would be the best that has been witnessed in these or any other waters for many years. Mr. Whitaker's answer is now awaited with much interest.

The new boats are being tuned up. Some have taken part in races and have shown well; others are not yet in shape and will need more racing for their owners to find out their peculiarities. In Eastern waters George Lee's new 31-rater Italia has twice been beaten by Amoret, ehampion of last season. Each race was won by a smal'l margin. One was in light weather and the other in fresh winds.

On the Lower Bay the Q boats Alice and Suelew have raced. Twice Grayjacket defeated the new boats and onee Alice finished first, but her victory was somewhat of a fluke. The new boats, however, are not at their best yet, and when properly tuned up will defeat the older eraft in almost any kind of going.

In the S elass, Wind and Cyrie have met three times. They are mueh faster than the older boats, and in the three races Cyric won when the wind was steady and moderate, and Wind seored one victory when the wind was light. It would seem to indicate that Cyric likes a good breeze and Wink is at her best in moderate airs.

On the Sound, Joyant and Corinthian have met twice and eaeh has scored a victory. Joyant won at Oyster Bay in a steady wind and Corinthian won in the Knickerbocker regatta. The wind was fitful and ehangeable and her victory was partly due to an error on the part of Mr. Hanan on the Joyant who mistook the course and lost some minutes at the start.

The Stamford Y. C. opened its season on Decoration Day with a race for its one-design class. There are ten of these boats in the club and nine started in the opening race which was won by T. Dominick's Curlew. The regatta committee, Bartholomew Jacob, Douglas L. Elliman, Wm. W. Heroy, Theodore R. Hoyt and Walton Ferguson, has arranged a very long schedule of races for the season which is as follows:

June 3—One-design elass for owners' cup.
June 10—First series raee, one-design class, Barlow cup.
June 17—Seeond series raee one-design class, Corning eup motor boat races.
June 24—One-design class at Seawanhaka annual.
July 1—Third race one-design class, Dominick eup.
July 4—First round tournament raee; motor boat handicap.
July 8—Fourth race one-design elass, Elliman eup.
July 15-22—One-design class, Larchmont.
July 29—Ladies' race, one-design elass.
Aug. 5—Fifth race one-design class, Fleitman cup.
Aug. 12—Seeond round tournament raee, one-design.
Aug. 19—Annual regatta.
Aug. 26—Sixth race one-design elass, Gillespie cup.
Sept. 2—Seventh race, one-design elass, Jacob eup; motor boats.
Sept. 4—Eighth race one-design elass, Kingan eup.
Sept. 9—Ninth raee one-design elass, Raymond cup.
Sept. 16—Tenth raee one-design class, Weber eup.

In the one-design races of the series points will be eredited each yaeht for the championship and the series prize. The ehampionship eup is presented by Commodore Weber and the series cup by R. W. James Kingan. The prize for the tournament raee is offered by Mr. Kingan. There are two courses over which these yachts sail. The start is off the club house, and the length of each course is about six miles. The boats are able eraft of one-design and governed by a set of rules whieh make the racing very fair for each competitor. They may be hauled out once in three weeks and only two suits of sails are allowed in a season.

With thirty eharter members owning power boats and fast sailing craft, the new Sandy Hook Bay Y. C. went into eommission on Decoration Day at Atlantic Highlands, N. J., with a bright outlook for a season of interesting raeing on Sandy Hook Bay.

The former club station of the New York Y. C., eonveniently loeated on the end of a long pier, with a good depth of water about it at all times, was purchased and renovated by the new organization. Here every eonvenience may be found, not only for members, but for yachting visitors who may "put in" at Atlantie Highlands during the summer. Parties who may drop anchor off the elub house, intending to proeeed by train down the Jersey Coast, will find the elub house float a great eonvenienee—only a step from the train shed.

The offieers of the thriving young club are: Commodore, H. Taylor Sherman, of Rooksie; Vice-Commodore, William B. Smith, of Evolution; Rear-Commodore, Frank L. Bailey, of Kahkin II.; Treasurer, W. H. Posten, of Erminie II., and Seeretary, William Friedlander, of Wanderer.

It is the purpose of the Sandy Hook Bay Y. C. to promote elass raeing in waters which are admirably suited for it. In addition to these eontests, there will be oeean races with the Ambrose Channel and Seotland lightships as the outer marks.

The regular meeting of the Sea Cliff Y. C. was held at the club house at Sea Cliff, L. I., on June 1. The following officers were elected for the coming year: Commodore, F. W. Sheridan; Vice-Commodore, D. G. Evans; Seeretary, Edward J. Hogan; Treasurer, Charles E. Robinson; Trustees to aet for one year—Arthur Joel, W. S. Porter, Hon. Osear Schultz, Henry A. VanDyne, Frank J. Ruhlman and Harry Stevenson. The club house was formally opened with a reeeption and dance on last Saturday night.

On Memorial Day the twenty-third season of the Riverside Y. C., of Riverside, Conn., was formally opened. At 12 o'clock, on the signal of one gun, the flag at the club house was masthead, and at 12:15 there was a reception to club members and their friends.

Commodore C. T. Pierce has appointed Arthur Winslow Cabot, of Stamford Fleet Captain.

This is one of the oldest clubs on the Sound. It numbers among its members E. C. Benedict, W. J. B. Mills, Lemuel C. Benedict and George A. Hurty, all members of the New York Stoek Exchange; J. Kennedy Tod, H. T. Hand, R. A. Gillespie, C. A. Hatch, C. H. Cairns all conneeted with stoek exchange firms; I. M. Shaw, president of the Chelsea Exehange Bank; F. C. Mills, with the Union Square Savings Bank; W. L. Edwards and C. E. Peek, with the National City Bank; John S. Montgomery, No. 2 Wall street; W. W. Shaw, No. 2 Rector street; T. A. Liebler, theatrical manager, and numerous well known yachtsmen with winning boats.

A small yaeht, built for the six-meter (19.7 feet) elass, was launched from Wood & McClure's yard at City Island last week. This boat is for a St. Petersburg yachtsman and will take part in some of the important European regattas. The yaeht was built from designs by William Gardner and is named Vodka. She sailed in the regatta of the Harlem Y. C. on Decoration Day and proved to be very fast defeating easily the boats of the Manhasset Bay one-design elass.

Irex to Go to Eastern Waters.

JOSEPH PULITZER, JR., of New York city, has sold through the ageney of John G. Alden, of Boston, the 39-foot waterline sloop Irex to William S. Kinney, of Boston. Irex will shortly start around the cape and will be raeed by her owner in Massachusetts Bay. Irex is 53 feet over all, 13 feet 9 inches beam, 6 feet 6 inehes draft and was designed by T. L. Ferris in 1898.

National Y. C.

THE first regatta of the National Y. C., the successor of the old and better known Brooklyn Y. C., was sailed on Decoration Day. Twenty-six sail yachts took part. There was a fresh southeasterly wind, and course No. 16, which sent them to Craven Shoal and Ambrose Channel Buoy 11, was selected by the committee. This is one of the new courses, and it gave great satisfaction, as the racers had a long windward leg. Three started in Class Q, and Alice, the new Gardner boat, built for Gherardi Davis, won with F. F. Luckenback's Mower-designed Suelew second. Alice showed up remarkably well, and Suelew also did some good sailing. When she is in good trim she will hold her own with the best of the fleet.

In Class S, Dr. Atkinson's Gardner-built Cyric easily defeated Wink, a Herreshoff boat. In 10.5 miles Cyric won by 6m. 38s.

Three sloops in Class M, Gardenia, Margaret and Adyta, sailed a course that took them to the southwest spit buoy No. 5 off the point of the Hook and home again. Gardenia found another soft spot and her victory will help bolster up her record at the end of the season. In the handicap class Joy had to be content with second place.

In the knockabout class there were three disqualifications for fouls. The race was won by F. L. Billingham's Skylark, with R. B. Moore's Scud second. Just how it happened no one is able to figure out, but Skylark managed to get home ahead of the crack skipper of the Lower Bay by 10s. The New York C. C.'s dinghies race again was won by the Arie, with Vivi, Commodore Allerton's boat, second. The summaries:

Sloops, Class M—21 Miles—Start, 1:15.

Gardenia	3 44 20	Margaret	3 58 09
Adyta II.	3 52 38		

Sloops, Class Q—11 Miles—Start, 3:05.

Alice	4 49 03	Soya	4 55 15
Suelew	4 51 30		

Handicap Class, 11 Miles—Start, 3:10.

Joy	5 01 47	La Cubana	5 12 33
Miana	5 02 03	Careless	5 16 28

Corrected time—Miana, 1.48.08; Joy, 1.51.47; La Cubana, 1.54.44; Careless, 1.55.17.

Sloops, Class S—10.5 Miles—Start, 3:15.

Cyric	5 10 32	M and F	5 19 05
Wink	5 17 10	Gunda	5 21 05

Sloops—Class X—10.5 Miles—Start, 3:20.

Skylark	4 43 10	Suffragette	...Disqualified
Scud	4 43 20	Chico	.....Disqualified
Pike	4 44 11	Slow Poke	....Disqualified
Mouse	4 49 02	Merry Widow	Disqualified

N. Y. C. C. Dingheys—4 Miles—Start, 3:25.

Aries	4 12 09	North Star	4 16 30
Viva	4 15 41	Bullfinch	d.n.f.

Bensonhurst Y. C.

IN the opening regatta of the Bensonhurst Y. C., sailed on the Lower Bay last Saturday, Alice, a new yacht owned by Gherardi Davis, won her first race. She sailed in the Q class and did well, although her victory was more due to good luck and some judgment on the part of her skipper than fast sailing. They went twice around a course, which gave them a reach, then a run, then a broad reach and then windward work. Running, Alice proved very fast in the light air. On the second round Spider took the lead at the leeward mark and held it until she hauled her wind. Then Grayjacket closed with her and just managed to turn the next mark with a slight lead. Spider was on the weather quarter of Grayjacket and the two indulged in a luffing match on the short reach to the finish. Alice was third boat at the end of the windward work, and Mr. Davis, sailing a straight line for home just managed to take the victory from Grayjacket by 22s. The five finished within 1m. 4s. Soya was last, but she almost caught the others by standing across the channel and getting the best of the ebb tide. Had she held on a few minutes longer, she would have won the race.

Wink won her first race in the S class, defeating Cyric very easily. She is evidently a light weather boat. The wind was east all the afternoon. Careless won the handicap class by a small margin and Miana beat Joy by less than one second. The times:

Sloops, Class Q—9.6 Miles—Start, 3:05.

Alice	5 04 24	Suclew	5 05 15
Grayjacket	5 04 46	Soya	5 05 28
Spider	5 04 53		

Sloops, Class S—8 Miles—Start, 3:15.

Wink	5 08 16	M and F	5 12 45
Cyric	5 10 44	Gunda	5 13 59

Handicap Class—9.6 Miles—Start, 3:10.

Joy	5 12 25	La Cubana	5 25 02
Miana	5 15 28	Careless	5 26 02

Corrected time—Careless, 2.02.21; Miana, 2.02.24; Joy, 2.02.25; La Cubana, 2.04.28.

Sloops, Class S—8 Miles—Start, 3:20.

Mouse	5 17 46	Scud	5 25 40
Skylark	5 19 34	Slow Poke	5 27 34
Merry Widow	5 24 12	Suffragette	...Disqualified
Pike	5 24 36		

Sloops, Class X—4 Miles—Start, 3:25.

Aries	4 30 02	Bullfinch	4 37 17
North Star	4 37 05	Viva	4 38 13

Harlem Y. C.

THE racing season on the Sound was opened on Decoration Day with the annual regatta of the Harlem Y. C. Fifty-four yachts started from a line off the black buoy to the northward and eastward of Execution Rock and sailed over triangular courses varying from 6 to 11 miles. The wind was light from southeast and the first leg of each course was to windward. Several new boats took part in the racing. One very attractive little craft was named Vodka and has been built from designs by William Gardner for a Russian yachtsman. She sailed against the Manhasset Bay one-design class and defeated Scylla 6m. 20s. It is a pity this boat is going abroad, as she would do well against the new Cyric of the Lower Bay fleet.

A new class, called the Star Class, sailed its first race. These boats have been built for members of the American Y. C. The race was won by George A. Corry's Little Dipper. J. A. Crowley's Ediana, a new boat, was the winner in Class P. The fininshing times of each boat follow:

Handicap, First Division—11 Miles—Start, 1:10.

Dorinda	3 12 00	Interim	3 12 03
Sally IX	3 14 29	Amorita	3 19 53

Corrected times—Sally I., 1.57.10; Interim, 1.57.47; Dorinda, 1.59.34; Amorita, 2.07.27.

Sloops, Class P—11 Miles—Start, 1:15.

Ediana	3 12 32	Hyperion	3 24 25
Zingara	3 17 53	Vagabond	3 43 00

Corrected times—Hyperion, 2.06.45; Vagabond, 2.22.29.

Handicap, Second Division—11 Miles—Start, 1:15.

Fearless	3 17 40	Mist	3 27 10
Red Wing	3 18 14	Scud	3 24 24

Corrected times—Fearless, 2.02.40; Red Wing, 2.30.14; Scud, 2.07.34; Mist, 2.08.29.

Sloops, Class Q—9 Miles—Start, 1:20.

Alyce	2 59 25	Malolo	3 15 10
Bonito	3 01 28	Mistral	3 17 31
Naiad	3 01 45	Kathryn	3 45 45

Corrected times—Alyce, 1.39.25; Bonito, 1.40.24; Naiad, 1.41.37; Mistral, 1.50.24; Malolo, 1.53.08; Kathryn, 2.22.42.

Raceabouts—9 Miles—Start, 1:20.

Cliphora	2 58 15	Chinook	2 58 56

Handicap, Third Division—9 Miles—Start, 1:20.

Robin Hood I.	3 16 12

Inter-Club—9 Miles—Start, 1:25.

Salas	3 10 08	Dagmar	3 14 01

Snake	3 19 37		

Bug Class—6 Miles—Start, 1:50.

Iney	3 32 50	Scarab	3 33 42
Mayfly	3 33 35		

Knickerbocker Y. C.

THE annual regatta of the Knickerbocker Y. C. was sailed on the Sound last Saturday in a very light flukey wind. It was a disappointing day and the wind came east, then south and later northwest. Fifty yachts started and the feature was the defeat of Joyant by Corinthian. The Seawanhaka yacht footed quite fast in the paltry winds and was more than 10m. in the lead at the finish. The yachts were started off Execution Rock and sailed triangular courses. The times:

Sloops, Class P—10 Miles—Start, 2:00.

Corinthian	5 31 20	Joyant	5 41 14

Sloops, Special Class—10 Miles—Start, 2:00.

Bonnie Kate	6 57 31	Kirry	Not timed
Painte II.	7 00 38	Carnation II.	..Not Timed

30-Foot Class—10 Miles—Start, 2:05.

Nepsi	6 19 37	Gossip	6 58 02
Rowdy	6 23 27	Ibis	6 37 10
Caprice	6 32 55	Dahinda	6 43 11
Alera	6 44 40	Juanita	6 53 47
Phryne	6 34 55	Carlita	.....Not timed

Inter-Club Class—10 Miles—Start, 2:10.

Dagmar	6 52 55	Como I.	.....Not timed
Salas	6 53 08	Wild Thyme	6 45 45
Festina	7 03 04		

Raceabout—10 Miles—Start, 2:15.

Amarita III.	6 57 45	Ardette	6 59 16
Scylla	6 58 15		

Sloops, Class R—10 Miles—Start, 2:20.

Pachita	6 48 56	Hoyden	6 57 49
Hamburg	7 02 48		

Handicap, First Division—10 Miles—Start, 2:25.

Alert	6 34 08	Sally IX.	6 45 14
Interim	6 29 04		

Corrected time—Interim, 3.55.32; Sally IX., 4.06.49; Alert, 4.49.08.

Handicap, Second Division—10 Miles—Start, 2:05.

Mist	6 57 22	Scud	6 56 14
Fearless	6 57 37	Red Wing	6 56 14

Corrected times—Scud, 4.26.57; Red Wing, 4.31.14; Mist, 4:45.31; Fearless, 4.52.22.

Handicap Class, Third Division—10 Miles—Start, 2:30.

Chinook	6 57 24

Handicap Class, Fourth Division—10 Miles—Start, 2:30.

Dolly	6 57 26	Robin Hood	7 01 22
Kenosha	6 58 08	Sybilla	7 00 46

Corrected time—Dolly T., 4.10.25; Kenosha, 4.21.27; Robin Hood, 4.23.21; Sybilla, 4.22.03.

Match Race—6 Miles—Start, 3:15.

Arizona	6 44 17	San Toy	.....Not timed

New Rochelle One-Design—6 Miles—Start, 3:20.

Virginia	6 48 38	Nereid	6 54 26

Star Class—6 Miles—Start, 3:35

Little Dipper	6 51 45	Gold Bug	7 13 51

Seawanhaka Corinthian Y. C.

THE two new Herreshoff-built 31-raters Joyant, owned by Commodore W. H. Childs, and Corinthian, owned by a syndicate of Seawanhaka Club members, met in their first race on the Sound of Oyster Bay on Decoration Day. They sailed a triangular course 10¾ miles in length in a moderate southeasterly wind, and Joyant won. It was very close between the two boats all over the course, and at the end Joyant finished 1m. 12s. in the lead. In the class for 30-footers Nepsi won again with Caprice second, and Thelema won the race for 15-footers. The times were:

Sloops, Class F—10¾ Miles—Start, 1:40.

Joyant	3 24 02	Corinthian	3 25 14

N. Y. 30-footers—10¾ Miles—Start, 1:15.

Nepsi	3 35 50	Dahinda	3 37 48
Caprice	3 36 17	Howdy	3 37 59
Phryne	3 36 24	Carmita	d.n.f.
Alera	3 37 24		

Seawanhaka 15-footers—Start, 1:50.

Thelema	3 21 26	Water Baby	3 21 55
Iris	3 21 30	Sabrina	d.n.f.

Boston Y. C.

Two of the 31 raters took part in the regatta of the Boston Y. C. on June 3. Amoret, champion of last season, defeated Talia, the new boat owned by George Lee. The wind was from the southwest strong and puffy and several of the yachts put in reefs. Horald Wheelock had Amoret in the better position at the start and he increased his lead, finally winning by 45s. H. S. Bloomfield's Moslem II., won the race for 18-

foot knockabouts with Arrow second. The race in this class was a very pretty one. The times:

Class P—Amoret, 1.25.08; Italia, 1.25.53.

Class I, 18-foot Knockabouts—Moslem II., 1.41.18; Arrow, 1.41.55; Dorehen II., 1.42.40; Mirage II., 1.43.10; Bonitwo, 1.43.59; Kittywake, 1.44.39; Aurora, 1.45.36; Cheroot, 1.47.15; Reina, 1.47.35; Acanthus, Disabled.

First Special Rating Class—Nutmeg, 1.30.14; Novice, 1.29.53; Perhaps, did not finish.

Second Special Rating Class—Idol, 1.37.03; Micaboo, 1.42.24; Plover, 1.46.12.

Mosquito Fleet Races.

QUITE a large fleet of yachts took part in the Mosquito Fleet Y. C. races off City Point, Boston, last Saturday, and in each class the contest was good. The strong southwest wind caused trouble to some boats, and others found the wind too much for them and withdrew. Virginia broke her gaff and Wawenock had her mainsail carried away. Until the accident, Virginia was leading in her class. Off the wind Flirt was the faster, but on the wind Virginia worked through Flirt's lee and gained half a minute lead. Flirt won the race easily. In class B Winona finished first, but was beaten by Quakeress on corrected time. The finish and elapsed times are as follows:

Class A—Flirt, 1.27.40; Tiger, 1.31.35; Eleanor, 1.33.20; Thordis, 1.35.35; Virginia, disabled; Marion III. and Gussie II. did not finish.

Class B—Quakeress, 1.33.30; Winona, 1.32.17; Spook, 1.34.40; Barracouta, 1.37.25; Sintram, 1.36.25; Beryle 156, 1.35.55; Lobster, 1.42.25; Mildred II., 1.58.50; Sentinel, 1.44 30; Jack Rabbit, 1.30.10; Pirate, 1.45.25.

Class C—Violet, 1.34.50; Thialfi, 1.39.22.

Class D—Iris, 1.33.05; Busy Bee, 1.40.03; Mudjekeewis, 1.39.49; Dartwell, 1.47.40; Emeline, 1.48.00.

Class S—Zoe, 1.41.18; Elf, 2.09.10; Wawenoek, Winnihadin and Maritza were disabled, and I. X. L. withdrew.

Cabin Power Boats—Beatrice III., 1.02.00; May S., 1.06.15; Gertrude, 1.16.00; Dream, 1.22.50; Heatherbell, 1.15.10; Beachcomber, 1.13.25; Fatima, 1.23.30; Chitna, 1.37.10; Alvalsee and C U Later withdrew.

Open Power Boats—Vera, 1.22.25.

Class X, Dories—Bessie, 1.37.36; Teaser, 1.42.55; Barbara, 1.46.16; Naid, 1.50.10; Elizabeth F., 1.52.00; Terror, 1.52.07; Hattie H., 1.54.35; Question, 1.58.30.

South Boston Y. C.

MASSACHUSETTS Bay yacht racing was started for this season on Decoration Day with the regatta of the South Boston Y. C. Seventy-two yachts took part in the many class events, and of these sixty-nine finished. In the power boat races there were fourteen starters. Amoret met the new Italia and won, crossing the finish line with a lead of 46s. The wind was light and fitful. What there was came northwest, but the day as a whole was a disappointing one from a racing standpoint.

The elapsed times and corrected times where there are allowances follow:

Hingham One-Design Class—Hanky Pank, 3.22.49; Polly Wog, 3.23 00; Usonia, 3.23.40; Maywindor, 3.24.00; Mischief, 3.32.10; Puzzle, 3.32.45.

Class A—Nutmeg, 2.16.56, 1.53.35; Medric, 2.18.22, 1.54.38; Virginia, 2.18.44; 1.51.24; Flirt, 2.20.38; 1.58.27; Novice, 2.23.11, 2.01.44; Eleanor, 2.24.35, 2.01.52; Tiger, 2.28.37; 2.06.33; Sho Sho Nee, 3.12.21, 2.48.05, Thordis, 3.15.10, 2.51.42; Marion III., disabled.

Class B—Quakeress, 2.10.38, 1.45 42; Simtrum, 2.18.12, 1.52.24; Pirate, 2.20.52, 1.54.42; Winona, 2.54.06, 2.02.32; Lobster, 2.56.37, 2 28.11; Grayling, 2.59.04, 2.31.24; Spook, 2.58.31, 2 32.25; Sentinel, 2.59.27, 2.33.48; Eleanor, 3.28.38, 2 35.02; Beryle 156, 3.00.21, 2.35.25; Flame, 3.10.13, 2.41.42; Mildred II., 3.10.12, 2.45.20

Class C—H. Lindsey, 2.10.15, 1.53.38; Violet, 2.18.42, 2.00.33; Lorna Doone, 2.25.42, 2.05.32; Thialfi, 2.35.32, 2.15.56.

Class D, Catboats—Iris, 2.16.35, 2.16.35; Mudjekeewis, 2.24.55, 2.24.42; Busy Bee, 2.44.16, 2.40.48; Emeline, 2.48.22, 2.48.09; Dartwell, Dolly III., 3.00.34, 3.00.00; Hush, 3.05.35; 3.03.59.

Class S—Winnehadin, 2.42.09, 2.18.21; Wawenock, 2.40.35, 2.18.52; I. X. L., 3.11.04, 2.43.38; Zoe, 3.09.41, 2.44.23.

First Special Class—Idol, 2.55.32, 2.37.16; Micaboo, 3.02.22, 2.41.54; Rambler, 3.02.04, 2.42.48; Yankee, 3.31.53, 2.54.46.

Second Special Class—Lassie, 3.20.40, 2.50.01; Alfred, 3.31.09, 2.53.18; Juanita, 3.37.36, 3.08.01; Swinta and Scat did not finish.

Class P—Amoret, 2.16.16; Italia, 2.17.02.

Class I, 18-footers—No. 14, 2.48.23; Mirage II., 2.49.47; Kittewake, 2.51.51; Aurora, 2.52.27; Arrow, 2.53.37; Bonitwo, 2.58.48; Dorchen II., 3.01.05; Reina, 3.03.42; Cheroot, 3.04.40; Acanthus, 3.08.27; Aspinquid, 3.09.04.

Class X, Dories—Barbara, 2.44.52; Spray, 2.49.15; Elizabeth F., 2.59.54; Sunny Jim, 3.05.15; Hattie A., 3.05.18; Teaser, 3.05.19; Terror, 3.09.27.

Cabin Power Boats—May S., 1.54.07, 1.54.07; Beachcomber, 1.59.51, 1.54.51; Beatrice III., 1.57.22, 1.57.22; Heatherbell, 2.06.04, 2.01.04; Gertrude, 2.11.26, 2.03.26; Alvalsee, 2.12.57, 2.12.57; Dream, 2.32.55, 2.20.07; C U Later, 2.34.20, 2.34.20.

Open Power Boats—Peggy, 0.29.47, 0.29.47; Presto, 0.31.29, 0.31.29; Bessie II., 0.32.40, 0.32.40; Vera, 0.32.51, 0.32.51; S. & Co., 0.48.38, 0.48.38.

Edgewood Y. C.

THE regatta of the Edgewood Y. C. was sailed on Narragansett Bay last Saturday. The wind was southwest from light to fresh. Clare parted her throat halliards and Dorothy went aground. These were the only accidents. The 18-footers have been divided into classes. In one Wanderer VI. showed her superiority in a marked way. She sailed the windward leg very fast and took such a lead that she was not troubled after that. The elapsed and corrected times follow:

Class Q—Isuelo, 2.33.43; Paloma, 2.33.41; Molly, 2.37.20; Gazelle, 2.34.58.

Class D—Mblem, 2.48.30; Marguerite, 2.55.38; Omeme, 2.59.46; Clara, 3.08.00.

Class E—E. L., 1.53.32; Bother, 1.57.26; Netor, 2.01.33; Trouble, 2.06.48; Trinket, 2.11.00.

Class X—Scud, 2.05.50.

Class Z—Rube, 2.23.55; Bud, 2.25.10; Little Mother, 2.24.04.

Class I—First Division: Wanderer VI., 1.54.18; Answer, 1.54.49; Mouse, 1.55.02; Dorothy, 1.57.08; Bat, 2.02.54. Second Division: Bonito, 1.58.12; Question, 2.33.14; Raduga, 2.13.03.

Class S—Gladys. 1.27.15.

Fall River Y. C.

THE racing season on Narragansett Bay was opened on Decoration Day with a regatta of the Fall River Y. C. The wind was light and short courses were sailed. Dorothy defeated Wanderer VI. in the 18-foot class. The elapsed times in each class follow:

Class Q, Sloops or Yawls, 20-25 Feet—Isuelo, 1.57.50; Molly, 2.08.00; Paloma, 2.24.07; Gazelle, 2.24.14; Idler, 2.11.00.

Class I, 18-footers—Dorothy, 1.58.35; Wanderer VI., 2.00.40; Mouse, 2.04.30; Bat, 2.06.00; Question, 2.23.33.

Class D, N. B. Cabin Cats—Mblem, 2.01.30; Clara, 2.05.00; Marguerite, 2.06.28.

Class E, N. B. Cabin Cats—E. L., 1.59.33; Netor, 2.07.15; Trinkett, 2.11.15.

Class R, 17-20 Feet—Flash, 1.55.30; Nimbus III., 1.59.44; Rambler, 2.01.30.

New Rochelle Y. C.

THE New Rochelle Y. C. announces its season's program as follows:

June 17—Power boat race (club).

July 1—Annual regatta (open).

July 1—Brooklyn Y. C. challenge cup ocean race.

July 8—Cornfield Lightship race for sailing boats (open).

July 8—Cornfield Lightship power boat race (open).

July 12—Ladies' day.

July 29.—Stratford Shoal power boat race (club).

Aug. 5 to 13—Annual cruise.

Aug. 26.—Special regatta (open)

Sept. 2—Power boat race to Lloyds Harbor (open).

Sept. 2 to 4—Club cruise to Lloyds Harbor.

Sovereign is a Fast Boat.

THE steam yacht Sovereign has had two trials and shown great speed. First she was sent over the measured mile course and averaged 35.9 miles an hour. Her guaranteed speed was 35 miles. A few days later she was given a trial on the Hudson River over a course 17 miles long. She was sent against a strong tide and covered the course in 26 minutes 55 seconds, which is at the rate of 37.7 miles an hour. Sovereign was built by the Gas Engine & Power Company at Morris Heights for M. C. D. Borden. The trials were in charge of her designer, Charles L. Seabury, who is confident that later this vessel will make 40 miles an hour.

Sparks.

A high speed boat is nearly completed at Wood & McClure's yard, at City Island, which is a candidate for the defense of the British International trophy. She has been built from designs by Tams, Lemoine & Crane, and is to be equipped with three engines to develop 625 horsepower.

The New Rochelle Y. C. will have a motor boat race open to members of the club on Saturday, June 17. The rules of the American Power Boat Association will govern. No boat will be allowed to start unless it has been measured by R. M. Haddock. The preparatory signal will be made at 2:55 o'clock, and the start five minutes later. The course will be from the starting line in Echo Bay southeast 4⅞ miles to and around red spar buoy D2 off Mott's Point, then to and around the stake boat. This course is to be covered twice, making 19½ miles. Cabin cruisers wil be in one class, and if there are three or more entries a separate class will be made for open boats. Final instructions will be given by the committee an hour before the start of the race. The committee is G. P. Granberry, M. S. Kattenhorn and A. E. Eldredge.

The Hackensack B. C. opened its season on Decoration Day with a race for motor boats. L. Godley's Possum was the winner, Lester de Loynes' Daisy L. was second. The course was five miles.

George E. Smith in his 20-foot motor boat Pronto broke all records for speed boats of the 20-foot class in the races of the Illinois Valley Y. C. at Peoria on Decoration Day. In the free for all, Pronto won, going at the rate of 28.12 miles an hour. The previous best time was 27.19 miles an hour.

IT has been stated that sixty-five or seventy motor boat owners of New Orleans have not

complied with the national law requiring this class of vessels to be equipped with life-preservers, fire extinguishers, fog horns, whistles and other appliances. There has been some confusion in regard to the requirements of the law enacted by Congress in 1910, and as a consequence many of the motor boat owners have been somewhat slow in complying. The Federal authorities here are investigating the subject and instructing the owners just what the law requires. The officials are not inclined to be severe and state they wish all the motor boat owners to understand just what is required before enforcing the statue. It is believed that all the motor boat people will gladly comply with the law and no trouble is anticipated.

Twin Screw Yacht Speejacks.

THE twin screw motor yacht Speejacks, designed and built by the Gas Engine & Power Company, Morris Heights, for Rear Commodore Albert Y. Gowen, of the Cleveland Y. C., represents the very latest type of the high speed power cruiser. This boat is 77 feet long, 10 feet 6 inches beam and draws 3 feet 6 inches. The hull is double planked copper fastened. Speejacks is a very handsome craft. No expense has been spared in the construction, finish or equipment. The motive power consists of two 6-cylinder 8 x 8 Speedway gasolene engines 175 to 200 horsepower each. The yacht is very fast and has proven a perfect success. It is lighted throughout by electricity and has a 2,500 candle power searchlight. This boat left Morris Heights last month for Cleveland by way of the Erie Canal with Commodore and Mrs. Gowen and a party on board.

Speejacks can jog along at 700 revolutions per minute, giving a speed of twenty miles an hour which is about two-thirds power capacity.

The boat was designed and built on a speed guarantee of twenty-five miles an hour. In spite of this fact she is a commodious craft with a 12-foot cockpit and a 14-foot owner's stateroom with two single beds, wardrobe, bath and lavatory, all aft of the engine room. The latter is amidships and extends seventeen feet from bulkhead to bulkhead, containing besides the motors and electric generating set a 600-gallon fuel tank and sleeping accommodations for two engineers. Above the fuel tank is a six-foot bridge deck extending the entire width of the boat, with steering wheel, engine controls and navigating instruments, also a large divan across the after end.

From the bridge a companionway leads down to a dining salon with cushioned transom berths, sideboard and toilet, forward of which is an eight-foot galley with ice box, dish lockers, stove and all the culinary necessities. Three people can sleep comfortably in the forward cabin, while the cook has a berth in the galley.

The boat is finished throughout in solid mahogany with polished brass and bronze trimmings. A big stack and brass cowls ventilate the engine room. On the cabin house is carried a twelve-foot power tender, with davits for hoisting over the port side. Above the bridge deck and cockpit are khaki tops with storm side curtains. A mahogany hatch on the forward deck leads into the galley just ahead of which is a stout winch and davit for handling the heavy anchors.

For all her heavy cruising equipment the Gowen craft is a flyer. She can leave Cleveland at midnight and beat the D. & C. steamer to Detroit, being capable of making the run in five hours or less in good weather. Her owner is an enthusiastic racing man and Speejacks will be seen at Put-in-Bay, where she will without doubt win the cruiser championship, which last year went to Florence, owned by A. H. Marks, of Akron. Until the new yacht anchorage off East Forty-third street is complete, the boat will make her home at Rocky River.

SPEEJACKS—REAR COMMODORE GOWAN'S HIGH SPEED CRUISER.

Busy Times at Luders.

DURING the past week the yards of the Luders Marine Construction Company at Port Chester have been the scene of unusual activity, four boats of importance having been put overboard. At midnight of Memorial Day the 106-foot yacht building for John H. Flagler, took the water and was christened Esolanie. The 300 horsepower Standard engine will be placed aboard at once and the boat will be in commission within the next month.

The 60-footer Kathmar II. was launched with appropriate ceremonies, the bottle of wine being broken in its bow by Miss Marjorie Fowler, daughter of the owner. The boat was immediately taken out on a trial trip during which a speed of thirteen miles was obtained.

The 32-foot cabin launch for Johnson de Forest was launched and delivered last week. A speed of 9½ miles per hour was maintained on the initial run. This boat is to act as a tender for Mr. de Forest's New York 30-footer Nepsi.

El Tovar, the 30-mile 32-footer, has been delivered to Albert Chesebrough, of Northport This boat will be entered in all possible racing events this season and gives promise of being a formidable competitor.

The 36-foot Marblehead racer Sentinel for Commodore Samuel Cochrane is now practically ready for trial and will probably have its first tryout in the Block Island race.

The 45-foot cabin launch Rapier, designed by this firm, for Schuyler Shieffelin, is having the 100 horsepower motor removed and a 200 horsepower air starting machine installed. A speed of 29 miles an hour is assured by this alteration.

Clason Point Y. C.

THE opening regatta of the Clason Point Y. C. for motor boats on Decoration Day was a most successful one.

The race was of ten miles over a triangular course the length of which was two miles. The race was a handicap affair, the handicaps being given according to the speed of the motor boats. The handicaps ranged from twenty minutes to one minute.

In the morning elimination trials were held, so that the handicaps could be arranged. The race was closed to pleasure and working craft, and of the thirty-seven boats that started in the race there was not a racing boat to be seen. Eleven boats were lucky enough to survive the disqualifications of the judges, and as there were eighteen prizes to be given out, the judges had to add seven of the lowest penalized boats to the list of prize winners. The prizes consisted of silver cups. The race was keen, both in the elimination trials that were held in the morning and the ten-mile final in the afternoon.

Slick, a fast motor boat, owned by U. H. Doll, a member of the Westchester Rowing Club, was the first launch to pass the judges' stand at the end of the fifth lap. Doll's boat did the distance in 54:45. Jessie Lenhart's boat, Jodie, was second, covering the distance in 48:50. J. D. E. Lord sent his boat Daisy home third in 54:32. The order of finish and time of the boats are as follows:

First—Slick, V. H. Doll, Westchester Rowing Club, 54:45. Second—Jodie, Jess Lonhart and Strauss, 48:50. Third—Daisy, J. D. E. Lord, 54:32. Fourth—Eastern Star, Finch, 54:47. Fifth—No. 40, 57:25. Sixth—Anna H., L. Hashagen, Bronx River Y. C., 51:16. Seventh—Netty,

Lexington II. Launched.

THE motor boat Lexington II., owned by Henry P. Scott, of Wilmington, Del., was launched last week from the yard of the New York Yacht, Launch and Engine Company, Morris Heights. The boat is 65 feet over all, 11 feet 8 inches beam and 4 feet 3 inches draft.

The motive power consists of two 30-horsepower Twentieth Century engines situated in the middle of the vessel and separated from the accommodation by two watertight bulkheads, this compartment containing, in addition to the machinery, a gasolene supply sufficient to give the craft a radius of 750 miles, a large ice-box, sink and kerosene range, the dimensions of the vessel being such that it was impracticable to have a separate galley.

The owner's quarters are in the after part of the vessel. Immediately aft the engine room is a stateroom, the full width of the boat, having a built-in berth in each side with drawers under for towage, a large bureau at the forward end with plate glass mirror and at the after end of each berth a large hanging wardrobe. This room opens at the after end into a lobby, from which access is had to the upper deck by means of a companionway on the starboard side. The lobby itself can be utilized as a stateroom, as it has a full length extension transom that can be curtained off, still heaving the passage to the other staterooms. The Lexington will be used in the waters about Wilmington.

Long Beach Motor Boat Club.

THE Long Beach Motor Boat and Yacht Club, of Long Beach, L. I., has been organized. The club of which Lawrence Perry is commodore will engage actively in the work of making the south shore of Long Island a racing center of widespread reputation, joining with such effective organizations as the South Shore, Hempstead Bay, Keystone, Unqua Corinthian, South Side, South Bay, Nassau and Cedarhurst yacht clubs and the Bayshore Motor Boat Club.

The club is building a fine home of stucco and red tile after the prevailing manner of the Long Beach buildings. The location is on the channel a few hundred feet below the Long Island Railroad bridge.

The first regatta will be held on Saturday, July 15, and plans are making for a memorable inauguration of the club's first racing event. The principal trophy will be a $600 cup, to be known as the South Shore Motor Boat Challenge Trophy, which must be won three times by the same boat for final ownership. In addition, however, three prizes will be given if the entries exceed five. The event in which this trophy figures will be for high speed automobile boats under 40 feet waterline and with a spread of not less than twenty miles an hour. There will be a race also for Class B boats of less than 40 foot waterline.

National Y. C.

THE National Y. C. had a race for cruising motor boats on Decoration Day. Four boats were started over the course, 29¾ miles long. The times were:

Motor Boats—29¾ Miles—Start, 1:30.

	Finish.	Elapsed.
Sim Too, A. C. Soper	4 14 51	3 04 54
Suis Moi, Robert Henke	4 16 49	3 06 49
Neptune, Jr., N. B. Smyth	4 33 48	3 06 49
Wanderlust, E. J. Steiner	Did not Finish.	

Corrected times—Suis Moi, 2.39.12; Sim Too, 2.42.51; Neptune, Jr., 2.48.07.

Wa-Shi-Shi-Ma Sold.

THE Hollis Burgess yacht agency has sold the big motor boat Wa-Shi-Shi-Ma, owned by Frank A. Smith, of Worcester, Mass., a member of the Boston Y. C., to Charles W. Clifford, of New Bedford, Mass., who will user her running between his summer home at West Chop, Martha's Vineyard, to New Bedford.

Wa-Shi-Shi-Ma is 62 feet long, 13 feet beam, 3 feet 6 inches draft. She has a very large cabin with comfortable stateroms and is one of the best equipped power boats of her size ever built. She is thirty-two gross tons and has a 40 horsepower Knox motor.

Canoeing.

The Rancocas Cruise.

THE Atlantic Division Memorial Day cruise down the Rancocas, starting from Brown's Mills, was voted by all participants a great success. The New York members were especially enthusiastic. The attendance was less than half the number of last year, but the falling off was probable due to Monday coming in between the holidays. This no doubt prevented many from going.

All had collected by Saturday night, a few reaching camp late. Among the late arrivals were R. H. Nash, of the Knickerbockers, and J. A. Mott, who missed their connections at Whiting's Junction, and had a long walk to camp. They tried to ride on a freight train, but were put off by the crew, although they were allowed to leave their suit cases on the train, which was a big help.

The camp was made just below the dam, near a little sandy beach and on the edge of a pine grove. A short distance below a fine spring is located. After dinner Sunday the start was made about 2 o'clock. The creek is very narrow and winding from Brown's Mills almost all the way to New Lisbon, and the trees and bushes meet overhead, making it most attractive and shady.

Instead of camping above the New Lisbon dam, as was first proposed owing to some of the party who had to return on Monday morning, the little town of Pemberton was made, and all camped in a meadow below the dam. A number of the boys went up to the village after supper to look it over. Sunday night the dew was very heavy, a most like rain, which drove some of the tentless party to seek the shelter of their overturned canoes.

Monday morning the start was made fairly early and a stop for lunch was made in the beautiful white oak grove, about a mile and a half above the Smithville dam. After lunch it was only a short paddle to the dam, which was successfully negotiated in a few minutes, and the course continued until the Mount Holly water works were reached, where a short portage across the dam was quickly made. In Mount Holly the party stopped for some time, getting supplies. The unfortunates who had to leave Pemberton in the morning all joined again at Mount Holly, excepting one or two, who turned up at the big spring below. After the purchases were made and the absentees of the day collected, the party continued down to the spring, which was reached about 6:30. A number of the boys enjoyed a good swim here, and after the camp was put in order and supper finished, everyone joined in collecting wood for the campfire, which was made a feature of the last day in camp. Every one was happy, and a good deal of good natured chaffing was indulged in, the usual songs sung and stories told. The festivities were kept up until well into the morning hours, when all settled down for a few hours of sleep.

The cruise was resumed fairly early on Tuesday morning, as the advantage of the strong ebb tide was not to be despised. The morning sun was hot, and when Centreton was reached, the half way stop between the big spring and Delanco, all landed for refreshments. After a short rest the party paddled steadily, well bunched, until Delanco was reached, where they were met by Walter Bockman in his motor boat and towed down the Delaware to Wissinoming, the home of the Red Dragon Canoe Club.

After indulging in shower baths the boys donned their shore clothes and all sat down to a very generous supply of good things for supper, and thus ended a very delightful three days' cruise. WALTER G. SIBLEY, Chairman.

Atlantic Division Races.

THE Delaware River race meet will be held off the club house of the Yapewi Aquatic Club at Bordentown, N. J., June 17, at 3 P. M. The events:

1. Club fours, double blades, half-mile straightaway.
2. Tandem, single blades, half-mile straightaway.
3. Tail-end, one-eighth mile straightaway.
4. One man, double blade, half-mile straightaway.
5. Blindfold race, one man.
6. Tandem, double blades, half-mile straightaway.
7. Club fours, single blades, half-mile straightaway.

Twenty-foot cedar racing canoes are eligible for events 1 and 7; in all other events open cruising canoes only are eligible. First and second prizes will be awarded in all events excepting 3 and 5, in which first prize only will be given. All entries to be made with the committee before the start of the races. At the conclusion of the regatta the members of the Yapewi Aquatic Club will serve a luncheon in the club house to all members and visitors. In the evening the club will give a dance, to which all are invited without further invitation.

Members intending shipping canoes (including club fours) from New York should ship canoes by freight.

Train service from New York to Bordentown:

Leave Pennsylvania Station, New York, 9:00* A. M., 9:04 A. M., 11:08* A. M., 11:12* A. M., 12:45 P. M., 1:30* P. M.

Leave Jersey City, 9:02 A. M., 9:25 A. M., 11:02 A. M., 11:25 A. M., 12:55 P. M., 1:24 P. M.

Arrive Bordentown, 10:37 A. M., 11:44 A. M., 12:47 P. M., 1:48 P. M., 3:01 P. M., 3:17 P. M.

On trains marked (*) it will be necessary to change cars at Trenton. Convenient train service obtains from Bordentown to New York.

A registration fee of 25 cents will be collected from all members in attendance. The Yapewi Aquatic Club already have quite a reputation for sociability and an enviable way of entertaining visitors, and since they have compelled the committee to allow them to show their proficiency in this direction during this meet, you will miss something if you do not arrange to be there and taste a sample of their hospitality. You should attend also with the idea that you are helping make the meet a successful one.

HENRY B. FORT, Chairman.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Eastern Division.—Frederick Coulson, 12 Lenox street, Worcester, Mass., by J. B. Howard.

NEW MEMBERS ELECTED.

Atlantic Division.—6228, Benj. A. Sleeper, 428 High street, Burlington, N. J.

MEMBER RE-INSTATED.

Eastern Division.—5998, W. A. Phinney, 450 Manchester street, Manchester, N. H.

Book Exchange.

No doubt there are many of our readers who possess old books, and others who would be glad to possess them, and we are, therefore, making a special place in our advertising columns, which may be called a book exchange, where those who wish to purchase, sell or exchange second-hand books may ask for what they need, or offer what they have.

REMINGTON UMC TRADE MARK

Nov. 28-29.—Rising Sun (Md.) G. C. H. L. Worthington, Vice-Pres.

DRIVERS AND TWISTERS.

The Asbury Park Shooting Association will hold their fourth annual tournament on the beach at Asbury Park, N. J., Aug. 30-31 and Sept. 1, under the well-known management of Frank Muldoon and E. I. Vandeveer, both of Freehold, N. J.

Secretary-Treasurer Elmer E. Shaner issues the following announcement: "In accordance with a resolution adopted at the last annual meeting of the Interstate Association, I beg to advise you that Mr. E. L. Mitchell, of Los Angeles, Cal., was the winner of the sixth Pacific Coast Handicap, shot at Madera, Cal., May 27. Mr. Mitchell used a Remington pump gun, Winchester shells and E. C. powder."

The Stillwater (Okla.) Gun Club was organized recently, with a membership of twenty. The following officers were elected: L. H. Rose, President; Grover Shideler, Vice-President; George Merry, Secretary; Clem Steen, Treasurer. The club expects to make a rapid growth.

President King writes: "After a season of rest, the Brownsville (Tenn.) Gun Club met on May 30, elected the following officers: Dr. T. Benton King, President; J. M. Cox, Secretary and Treasurer. The secretary was instructed to apply at once for tournament dates. With a membership of thirty, shooting all the way from 50 to 95 per cent., and knowing of no satisfactory way of apportioning equality, so that all shooters would be in the race, without giving the appearance of hippodroming, and it is probable that no such plan will ever be found except diligent and constant practice, with confidence and enthusiasm every member has promised to shoot it out till the season closes, knowing that a one day's victory does not make a champion. For our weekly meets we extend a cordial invitation to all shooters."

New Jersey State Tournament.

THE New Jersey State Sportsman's Association's tournament, held under the auspices of the Smith Gun Club, came to a close on the 3d inst., after three days of fine sport. Over eighty shooters attended and the sport did not flag during the shooting hours. The regular scores follow:

	1st Day		2d Day		3d Day

Siwanoy Country Club.

MOUNT VERNON, N. Y.—The shoot on Saturday, May 27, brought out quite a number of members. The fifth leg of the Du Pont trophy was won by C. Z. Offutt. This is the second time he has won this. It is necessary to win this three times in order to have it become one's personal property. The following were the scores:

	Shot at.	Broke.	Average.
W Thorpe	135	92	68.1
E W Valentine	105	86	81.9
H J Smith	135	86	63.7
G A Wylie	110	87	79
Z C Offutt	105	91	86.6
W W Thorpe	140	99	70
H V Morgan	100	78	78
A D Scovil	100	45	45
G L Yates	135	77	57
W M Wylie	135	62	45.9
Procter	65	47	72.3
Burrell	55	38	69
Green	25	10	40

May 30.—The gun section of the Siwanoy Country Club wound up its shooting season to-day by holding two shoots, one in the morning and one in the afternoon. The morning session included the first annual competition for the championship of Mt. Vernon, the scores for which were as follows, four events of 20 targets each: W. Thorpe 76, G. A. Wylie 75, E. W. Valentine 78, Dr. Barnard 84, H. J. Smith 73, C. B. Holmes 86, W. M. Wylie 46, L. G. Rauch 79, H. V. Morgan 74, W. W. Thorpe 67, Z. C. Offutt 76, Diehl 67, Knapp 70, J. G. Wintjen 64, Dr. Hill 66.

The scores of the remainder of the morning shoot follows:

	Shot at.	Broke.	Per C't.
Skelly	250	222	88.8
W M Wylie	200	138	69.0
Dr Barnard	175	128	67.4
H J Smith	200	119	59.5
Yates	200	139	69.5
W Thorpe	200	152	76.0
E W Valentine	75	58	77.3
Z C Offutt	50	41	82.6
G A Wylie	150	103	68.6
C B Holmes	125	104	83.2
W W Thorpe	50	39	78.0
L G Rauch	100	80	80.0
H V Morgan	50	36	72.0

The scores in the afternoon session out of 100 targets shot at, were as follows: Skelly 89, Dr. Barnard 74, W. M. Wylie 77, W. Thorpe 76, C. B. Holmes 84, Yates 73, H. J. Smith 59, W. W. Thorpe 39, L. G. Rauch 80, G. A. Wylie 78, H. N. Morgan 36. W. W. Thorpe and H. N. Morgan shot at 50 each.

Shooting will be resumed on Labor Day, Sept. 4, and it is hoped that there will be a good attendance on this occasion.

Mohawk Gun Club.

SCHENECTADY, N. Y., June 1.—At the tournament of the Mohawk Gun Club, held on Decoration Day, Hurd, of Albany, was high; Valentine and Sanders, also of Albany, were second and third respectively; Brown, of Glens Falls, fourth. The weather was ideal for the sport. The program consisted of twelve 15-target events. Four average moneys, $10, to first; $7 to second, $5 to third, $3 to fourth. The scores:

	Shot at.	Broke		Shot at.	Broke
Hurd	180	167	Sann	180	142
Valentine	180	166	Hagadorn	180	128
Sanders	180	163	Beller	105	73
Brown	180	162	Hill	180	120
White	180	155	Sitterley	135	87
Shorey	180	152	Borne	180	111
Kirkpatrick	180	150	Welling	150	82
Rice	180	144	Blackburn	15	6

J. W. WHITE, Sec'y.

Chicago Gun Club.

CHICAGO, May 27.—The extremely hot weather the past week had the effect of cutting down our attendance today, as many who might otherwise have come out to the park thought it best to keep as quiet and comfortable as possible. Scores:

Events:		1	2	3	4	5	6
Targets:	Hdcp.	25	50	50	24	24	25
J S Young	21	22	46	42	18	21	22

Miss J V Sullivan	16	12	26	..	..	..	..

Event No. 1 was at practice; Nos. 4 and 5 was at 12 pairs each, and No. 6 was at 21yds.

May 28.—The cool wind from the north was quite a relief from the scorching heat of the past week, and although the weather was rather threatening, twenty-eight shooters and a large number of their friends came out to the park, enjoyed a good afternoon's sport at the traps and just had time to make the train before a heavy shower of rain came pouring down. The strong cross wind made the shooting quite difficult, but a good number of fine scores were recorded, as shown below:

Events:		1	2	3	4	5	6	7	8

Event No. 1 was at practice; No. 4, was at 12 pairs, and No. 8 was at 20yds.

WM. F. MERKLE, Supt.

Indianapolis Gun Club.

INDIANAPOLIS, May 27.—In the practice events Britton led and was the only one to score a straight. He had two of then connected Dixon was second. Perry was best in the trophy race with 48 out of 50 Dixon, Lewis and Smoke in second place, each with 46.

A five-man team shoot with the Evansville Gun Club resulted in a victory for the home team, 231 to 228, each team shooting at 250 targets. This result gives Indianapolis two out of three contests.

Practice: Dixon (shot at 100) broke 92, Lewis (60) 53, Clark (130) 103, Smoke (80) 73, Britton (60) 57, Parry (60) 54, Treat (105) 80, Edmonson (125) 99, Short (85) 63, Neighbors (40) 23.

Du Pont trophy, 50 targets: Dixon 46, Lewis 46, Smoke 46, Britton 45, Parry 48, Neighbors 35.

Team race:

Indianapolis Gun Club—Parry 48, Dixon 46, Lewis 46, Smoke 46. Britton 45; total 231.

Evansville Gun Club—Beard 48, Miller 48, Green 46, Erskine 45, Fuchs 41; total 238.

May 30.—In spite of the big automobile race and many other attractions, the Decoration Day tournament of the Indianapolis Gun Club was well attended. Shooting did not begin until 10 o'clock, and an hour was spent at noon in the enjoyment of one of Mrs. Waiter's good dinners. Conditions were very good indeed, yet no high scores were reached. Of the amatcurs, Miller was first with 182 out of 200; Smoke second with 179. Jewet, who shot at but 80 targets, broke 75, and led the average column. Ogden was credited with three straights. Creviston, Britton and Parry with two each.

	Shot at.	Broke		Shot at.	Broke
Smoke	200	179	Roberts	115	95
Norris	200	148	Boecker	105	61

SECRETARY.

The Pacific Coast Handicap.

MADERA, Cal., May 27.—Madera, the hustling San Joaquin town, was the scene of one of the best trap-shooting tournaments yet carried out by the Valley Sportsmen, and these meetings have not been few by any means within the past four or five years. That the Interstate Association made a congenial selection when it was finally decided to hold the sixth Pacific Coast Handicap here this year is proven hy the successful termination of the three days' shoot. While the tournament was not up in entries to some previous tournaments in the State, there were more entries than in the two preceding handicaps held in California. The members of the Madera Rod and Gun Club and prominent citizens of the pretty town vied with each other in extending various hospitalities to visiting sportsmen.

The Madera County Club's handsomely appointed club rooms were thrown wide open for all the shooters. Mr. R. Roberts, the president, and Secretary J. M. Carey, did their utmost, assisted by the club members, to entertain the visitors.

The shooters' headquarters were located in the Yosemite House. The Ladies' Aid of the Presbyterian Church, won many encomiums for the tasteful lunch provided every day. The ladies' ice cream booth was surely a boon, time and again, to the warm and tired shooters.

The shooting grounds are located to the north of the town on a level plain. The background is a clear skyline, and on any but a very heated day, is an ideal one for target shooting. Secretary Porter C. Thede deserves much credit for the complete and detailed perfection of arrangements for the gathering. Secretary-Manager Elmer E. Shaner was at the helm all the time—the first and the last connected with the shoot to take executive action every day. The shoot went along smoothly each day, an elaboration here would be mere reiteration of a hundred and more praiseworthy descriptions of the tournaments the genial and popular Pittsburger has conducted successfully.

San Francisco had a representation of over thirty shooters; Los Angeles, with a recently organized gun club, having, it is claimed, about two hundred members, was not represented by a full squad. Shooters from nearby points, however, were in pleasing evidence. San Bernardino was represented by a full squad from the Urbita Gun Cluh—and popular shooters they are. From every valley point one or more shooters were on hand.

Dr. Snook, of Twin Falls, Idaho, and Messrs. Twitchell and Edens came from Phœnix, Ariz.; Guy Holohan, E. J. Chingren and Frank Riehl, represented the Northwest. To enumerate the scattering visitors here would require too much space.

Ahout ninety-five shooters were in attendance altogether. The places of those who dropped out each day were filled by the new-comers.

Among the visitors were Capt. A. W. du Bray, Ed. B. Morris, of Portland; Harry T. Hoyt, of Los Angeles; Geo. Morss, of San Francisco; J. X. De Witt, of San Francisco, and others.

Practice Day, May 24.

Wednesday afternoon, May 24, ten squads were on the firing line for practice shooting. The schedule embraced four 15 and two 20 target events, Rose system, 5, 3, 2, 1. Optional sweepstakes. P. C. Thede fired the first shot and hroke his target.

Weather conditions were not any too fvorable—warm and windy, with spurts of dust at times. E. J. Chingren, the Spokane oracle, broke 95 out of the 100. P. C. Thede's scare was 93. Ed Schultz, of San Francisco, followed with 92, and two 91s hy Tony Prior, of San Francisco, and C. J. McGowan, of Riverside county, were the high amateur guns. Fred Willet, the Selby representative, dropped but 4 out of his century allowance. He was backed up by Frank Riehl, of Tacoma, and Guy Holohan, of Twin Falls, with 91 scores. Hugh Poston was satisfied with a 90 per cent. gait.

The general impression, coming over the assembled talent, was that record scores would develop. However, that was another story—the shooter proposes, but wind, dust and radiating heat waves from a baked adobe plain dispose of smokeless powder ambitions sometimes.

Practice scores, five events of 20 targets each:

E J Chingren	95	J J Ryan	82
F Riehl	91	J Connelly	82
C A Haight	86	Ed Schultz	92
W A Robertson	86	W Golcher	85
John Dale	84	T Prior	91

F Willet	96	J R Warner	80
E Hoelle	79	T D Riley	71
P C Thede	93	F Fuedner	80
H Garrison	89	W H Price	27

First Day, May 25.

The first squad faced No. 1 trap on time, 9 A. M., but under such weather conditions as few shooters ever have the ill luck to contend with. A gusty north wind prevailed until late in the afternoon before moderating a bit. Clouds of gritty sand dust hurtled through the heated atmosphere, making shooting conditions anything but conducive to sport or favorable results. The heated level plain for several miles beyond the trap bulkheads caused a deceptive atmosphere conditions tht was puzcaused a deceptive atmosphere condition that was puz-

Ten 15-target events constituted the regular program. Chingren fired the opening shot and broke, and from then until the close the boys worked down the line of traps steadily. Many promising scores were hattered out out of countenance before the day was over. No. 3 trap was a baffler and remained so throughout the shoot, proving the Waterloo of several strong contenders in the handicap feature. Fifteen squads and four shooters were in the melee.

The first event produced ten 14s for high scores, the illusive last target was not in the reach of any shooter until Poston broke the ice with a straight, heing No. 3 shooter in the first squad. After this, clean straights were broken by Ed. Kerrison, Dick Reed (who broke two), Poston again, Tony Prior, Otto Feudner, Lon Hawxhurst, Emil Holling, all of San Francisco; W. J. Sears, of Los Banos; J. R. Warren, of Madera; W. B. Twitchell and T. L. Edens, who came all the way from Phœnix, Ariz.; Barney Worthen, an erstwhile crackerjack of Atlanta, Ga., but now located in Sacramento; J. J. Ryan, of Hanford; T. W. Neel, of Ventura; G. E. Small, of San Francisco; W. Eilert, of Fresno, and C. B. Teller.

High amateur gun for the first day was shot by Sears, who dropped but 15 of his targets—135 out of 150. Ryan was next with 132. Frank Newhert, with 130, Toney Prior 129, Worthen 128, and Billy Varien, of Pacific Grove, with 127, were next in order.

The men in the 11 hole in events 1, 3 and 6 received a slight financial recognition in the purse distribution. There were so many of them tht this modicum of silver did not go far, all taken with the utmost good nature, however.

Poston led the professionals with 141, Holohan 130, Hawxhurst and Holling 127, were propositions.

The San Francisco squad, composed of M. O. Feudner, 127; A. J. Webb, W. J. Golcher, 121; T. Prior 129, shot high amateur squad for the day—614 out of 750 targets in the schedule.

In the special event at double rise, 25 pairs, fifty guns took part. Charley Haas, of Stockton, with Fred Stone, of Fresno, were the leaders with 42 each, pretty good work considering the wind. Neel and Thede went through with 41 breaks each. Hawxhurst 43 out of the 50, put high sign on the event. Poston garnered 41. Scores:

J R Converse	106	W Eilert	119
T W Neel	119	W Worsrich	98
H Burmister	109	Jim Bradley	120
Ed Mitchell	113		

Double event, 50 targets: Chingren 39, Cadwell 33, Richl 41, Holling 35, Poston 37, Lee 29, Jacobson 24, Lancaster 34, Snook 32, Holohan 30, Reed 36, Willet 36, Hoelle 33, Thede 41, Garrison 30, O. Feudner 38, Webb 39, Schultz 32, Haight 29, T. Prior 40, Draper 34, Drew 23, Cathcart 28, Monaghan 40, Rodden 21, Converse 26, Neel 41, Hawxhurst 43, Burmister 38. Riley 17, F. Fuedner 38, Ryan 33, Bungay 32, Dale 32, Christian 28, Gibson 33, Connelly 17, Varian 39, Haile 35, Twitchell 32, Chamberlin 27, Stelling 29, Newbert 37, Worthen 36, Haas 42, F. Stone 42, W. Eilert 33, W. Worsrich 36, Bradley 28.

Second Day, May 26.

Weather conditions all day long were in most appreciable contrast to the previous day. The temperature was mild and balmy, with gentle cooling zphyrs that did not interfere with the flight of targets. Current impression that good scores would be shot was correct. In the regular 15-target program of ten events, seventy-eight straights dotted the score sheets. Haas broke six straights, two 10s, an 11 and a 14. Chingren turned the trick four times, as did Monaghan and Newbert. Poston, Riehl, Ryan, Schultz, McGowan, Drew and Worthen tipped out three each. Sears, Holling, Thomas, Hoelle, Thede, Otto Feudner, Tony Prior and Tracy chalked up clean strings twice. The singles are tallied in appended scores.

Indications for a climh into the high average seat cropped out early in the day's powderfest. Newbert and Worthen finished with 140 and 139 respectively. Bob Bungay, of Ocean Park, loomed up with 138 breaks. Chingren also broke 138 targets. Sears connected with 136, which left him one target in the lead. Haas tallied 135, Hoelle and Otto Feudner also had 135.

The race was an open one, and left the possible contestants in the following order: Sears had lost 29 out of 300. Newbert 30, Worthen 33, T. Pryor 38, Ryan 39, Bungay 39, Hoelle 43, Varian 43, G. A. Johnson, of Chico, 44, Chingren 44, Haas 45, Kerrison 47, C. Lancaster 48, D. Ruhstaller, of Sacramento, the high gun Saturday forenoon, was 50 targets behind.

High squad score was again the mark set by the San Francisco squad—we'll call it No. 1 this time—662 out of a possible 750, an average loss to each event of 8 4-5 targets, less than 2 per man in each race.

The Urbita Gun Club squad, from San Bernardino, wheeled into second position with 636. San Francisco No. 2, was next up with 633. A composite squad, the San Adesto cut loose for 626 broken targets. The Capital City squad went through the ninth event without a stumble, every target was accounted for. In the last event, each man of the four broke 14 targets.

The double event, 25 pairs, closed the day's festivities. Ten five-man squads shot from the 16yd. peg. Results were: Neel 45, W. Haile, of San Bernardino; Thede and Worthen, 44 each; Holohan, 43; T. Prior, 42; the other scores appear in another column.

Secretary-Manager Elmer Shaner announced the handicap committees as composed of the following shooters: P. C. Thede, of Madera; R. H. Bungay, of Ocean Park; C. B. Monaghan, of San Bernardino; A. J. Webb and E. L. Schultz, of San Francisco.

Poston retired at the end of the day with 141, still in the lead of the trade representatives. Reed was second with 133.

Haas 34, Brown 25, Haille 44, McGilvray 21, Varian 41, Newbert 35, Ruhlstadler 30, Worthen 44.

Third Day, May 27.

Weather conditions for the final day of the tourney continued delightful and balmy, with just enough cooling zephyrs from the north to temper the sun's rays.

The feature event of the shoot drew large crowds of interested spectators from town, among which the fair sex were conspicuous. The ladies, from their attractive demeanor, intelligent comment and criticism, evinced a more than ordinary knowledge of the shotgun and its possibilities as a medium of healthy sport and recreation. This section, by the way, is a center for wildfowl and upland sportsmen.

The sixth Pacific Coast Handicap started at 11 A. M., the preliminary events being started promptly on the notch at 9 A. M., and went through smoothly without a hitch. E. J. Chingren led off from the 21yd. peg, and from start to finish the big event ran along without a hitch. Frank Newbert was the first strong contender to finish. With a total of 91, it was hardly thought that he would remain in front very long, the shooting talent behind him was too strong. Sears following close, came through with 91. Jack Converse, of Los Angeles, topped these scores with a 92 mark. Close scrutiny of the bulletin board sheet showed possible chances for several shooters to exceed the last mark. Rodden, Mitchell, Draper, Ruhlstaller, Neel, Small, Kerrison, and several others had a look in. Gradually the dangerous element was winnowed out, the best Ruhlstaller could do was 92. Varien and Rodden topped at 91. Chamberlin, of Tulare, was the only man to break 90. E. L. Mitchell, of Los Angeles, was steadily hammering his way to the top with two 19s, a 20, another 19, and a final 16; he tore off 93 out of the 100, from the 17yd. mark and won the Pacific Coast Handicap for 1911.

The race was a well-fought one throughout. Upsets and surprises cropped out here and there, as is usual and expected at a tournament, but the utmost good nature and fair spartsmanship prevailed throughout. When the fun was over, many shooters stated that they had en-

joyed a grand time, and would go to the next Interstate tournament.

Secretary-Manager Elmer Shaner, at the conclusion of the trophy event, in the presence of a big assemblage of ladies and gentlemen, in a felicitous speech, presented the handsome diamond fob trophy to the winner. Mr. Mitchell responded in a happy vein, and the audience gave three cheers for Shaner and Mitchell. The winner is a most popular sportsman, and was congratulated by everybody who knew the genial Tufts-Lyon man, and many were pleased to meet him for the first time. Scores:

THE PACIFIC COAST HANDICAP PURSE—80 ENTRIES.

65 entries at $7.50 each	$487.50
1 entry at $12.50 (penalty entry)	12.50
14 entries for targets only.	
Added to purse	200.00
Total purse	$700.00

The winners, their scores and amounts won follow: E. L. Mitchell, score 93, $250 (guaranteed); J. R. Converse, 92, and D. J. Ruhstaller 92, $94.50 each; W. H. Rodden 91, F. M. Newbert 91, W. H. Varien 91, W. P. Sears 91, $56 each; J. C. Chamberlin 90, $35; H. Garrison 89, F. B. Stone 89 R. Bungay 89, $28 each; F. E. Snook 88, J. C. McGowan 88, Tony Prior 88, $14 each.

The forenoon program started on the minute at 9 o' clock. The card called for four 15 and two 20 target races. This was changed into five sections of 20 targets each, as was the arrangement made in the handicap event. Eighty-three shooters were in the forenoon events. Ruhlstaller was high with 97 out of the 100, shooting a fine clip to every race. Bungay was on his mettle with 96 breaks. Varien and Monaghan shot a 95 per cent. gait. Willet scored 97, Hawxhurst 93, Holohan 93, and Poston 92.

The shooting all day was down to hard pan; every man tried his best. Reed, Hawxhurst, Newbert, Prior and Schultz were high squad in the forenoon with a total of 97 out of 100. Scores:

Frank Newbert won amateur high average with a total score of 365 out of 400; W. P. Sears 359, R. H. Bungay 357, Tony Prior and Otto Feudner 355 each; W. H. Varien, 352, and A. J. Webb 352.

Hugh Poston was high professional with 368.

The office corps were: Joe Rice, of San Francisco, cashier; H. P. Jacobson, compiler of scores; C. W. Clement, assistant compiler of scores; Frank Mayo, clerk.

The efficiency of the office force was exemplified in daily settlement within fifteen minutes after each event was closed.

The Squier money-back special fund amounted to $896, of which sum $530.05 was used to pay back losses, leaving a surplus of $365.95. The surplus money was divided among the high gun amateurs as follows: F. M. Newbert, $47.55; W. P. Sears, $43.80; R. Bungay, $36.50; T. Prior, and M. O. Feudner, $31 each; W. H. Varien and A. J. Webb, $23.70 each; B. H. Worthen and A. J. Ruhstaller, $18.25 each; E. J. Chingren, $14.60; H. Hoelle and F. C. Drew, $10.95; T. L. Edens and J. J. Ryan, $9.10; C. J. Haas, H. Garrison, J. C. McGowan, F. Feudner, C. B. Monaghan, W. T. Neel, G. A. Johnson, C Lancaster, E. Kerrison and E. Schultz, $3.65 each.

Ossining Gun Club.

OSSINING, N. Y., June 1.—Sixteen shooters enjoyed a fine afternoon's sport at the grounds of the Ossining Gun Club May 30. The conditions called for five 20-bird events, distance handicap, optional sweeps for eight prizes, also a cup for high gun shooting for targets only. John Hendrickson, of Jamaica, was high with 97 out of a possible 100, which is the record on these grounds. The cashier's office was looked after by W. S. Haight in a faultless manner. Lyons won cup shooting for targets only.

Kentucky State Shoot.

THE annual tournament of the Kentucky Trapshooters' League was held on May 24 and 25, under the auspices of the Northern Kentucky Gun Club. It was one of the most successful shoots in the history of the League, both in attendance and in lack of friction in pulling off the events. Supt. Taggart had looked after every detail, and there was not a hitch in any of the arrangements during the two days.

The program consisted of ten 15-target events on each day, entrance $1.40 in each event, and an optional $1.00 sweep in each event. These 300 targets counted for the average.

On the first day there were two special handicap events at 25 targets each, $2.00 entrance in each, with a valuable prize to the winners. The handicap was based on the work in the regular program—85 per cent. and under standing at 16yds.; over 85 per cent. at 18yds. On the last day there were two extra events of 20 targets each, 40 cents entrance in each, and these, together with the last four events of the regular program made up the State championship event at 100 targets. Money was divided Rose system, 5, 3, 2, 1, in the regular events, and 40, 30, 20 and 10 per cent. in the optional, class shooting.

The attendance was good on both days. There was also a large crowd of spectators, including a number of the fair sex, who watched the sport with interest. The events were run off over an Ideal-Leggett trap and a set of experts. Supt. Taggart had the traps in perfect order, and they worked smoothly throughout the shoot. John Braunagel, formerly ground manager at the Cincinnati's old grounds in St. Bernard, acted as referee and scorer at the Ideal-Leggett; C. Klein performed the same duties at No. 2 on Wednesday, his place being taken on Thursday by G. Keefer. The office was in charge of L. J. Squier, and in this line of work he has no superiors, and it is doubtful if his equal can be found. The office accommodations were not of the best, but, regardless of crowd, noise and confusion, he carried on the work without delay or error, and fifteen minutes after the close of the last event on Thursday, everyone's money was ready, cash balanced and turned over to the club officials. It was as nice a piece of tournament offiee work as one would wish to see.

The grounds were open for practice on Tuesday, but only a few of the visitors availed themselves of the opportunity. C. A. Young, J. H. Kemfer and C. D. Coburn, each shot at 100 targets, breaking 97, 89 and 95 respectively. A few others shot at 40 targets each. Dameron and B. S. Cooper got 38 each; A. H. Sunderbush 37; Walker 35; Le Compte and Ed. J. 33 each.

The tournament opened on Wednesday, May 24, with forty-four shooters, all but three staying in to the finish. The weather was clear, but uncomfortably hot, the mercury staying around 90 all day, and there was no breeze to tempter the heat. Shooting began about 10 o'clock, and at noon the program was half finished. A rest was then taken, that the shooters might fully enjoy the dinner served by Mrs. Taggart in the club house, and everyone made a straight score, not overlooking a single item on the menu.

Among the out-of-town shooters who were present today were J. C. Bond, Louisville; Wm. Shattuck, Coal Grove, O.; C. G. Westcott, Richmond, Ind.; R. H. Bruns, Brookville, nId.; Lon Fisher and W. Webster, Columbus; B. S. Cooper, Thornville, O.; T. H. Clay, Jr., Austerlitz, Ky.; A. H. Sunderbruch, Williamsburg, O.; W. D. Straughan, Waveland, Ind.; W. Henderson, Lexington, Ky.; E. O. White, Columbia, Ky.; R. O. Heikes, Dayton, O.; Fred Gilbert, Spirit Lake, Ia.; W. R. Randall, Mason, O.; J. N. Shropshire, Cynthiana, Ky.; C. D. Coburn, Mechanicsburg, O.; C. E. Goodrich, Chicago; F. M. Edwards, Portsmouth, O.; C. J. Wheeler, J. H. Kemper, V. K. Dodge, J. G. Denny and F. C. Bell, Lexington, Ky.; J. G. Francis and A. M. Turrell, Harrison, O.; J. J. Richardson, Nicholasville, Ky.; C. O. Le Compte, Eminence, Ky.; C. E. Dimmitt, Morrow, O.; C. A. Young, Springfield, O.; J. M. Thornton, Des Moines, Ia.

The leaders in the day's program finished with good scores. F. M. Edwards and Lon Fisher shot a close race, the former got 2 targets ahead, but in the ninth event Lon caught up and they went out tied on 141, or 94 per cent., for high amateur average. J. A. Payne was second with 140. J. H. Kemper 139; Hammersmith and Randall 138 each. High score among the professionals was made by R. O. Heikes, who finished with 144, or 96 per cent.; W. Henderson 140; F. Gilbert 139. One or two long runs were made. Kemper broke 88 without a miss in the regular and special events. Henderson 87, Randall 60.

In the first special event Kemper, Shattuck, Richardson and Payne tied on 25, and in the shoot-off Kemper won by breaking straight again. Young and Henderson also broke 25 in this event, but were not eligible to win. The prize was a Haviland china dinner set, an especially appropriate one for Kemper to win, as he has just started housekeeping.

The second special was captured by Doc Shattuck, of Coal Grove, O., on a straight score of 25.

During the day 7615 targets were trapped without a hitch.

Shattuck		21	Payne		17

The attendance on Thursday, the last day of the shoot, was one more than on Wednesday, the places of those who failed to return being filled by new-comers. The regular program was the same, and two special 20-target events were added, which, with events 7, 8, 9 and 10, made up the contest for the State championship at 100 targets. The shooters were given another perfect day by the Weather Clerk, and many more interested in the sport were on hand to see the finish. Everything worked smoothly to-day, 8160 targets being trapped. Shooting began promptly on time, and six events were finished by noon, when all hands stopped for dinner.

During dinner hour (or two hours) the annual meeting of the League was held on the club house veranda. Cashier Squier had everyone paid off soon after the close of the last event. The money-back purse amounted to $391.15, including $200 added by the Interstate Association. Fifteen shooters failed to win their entrance and were reimbursed from this purse, in sums ranging from $1.45 to $17.60. The surplus, $266.30, was divided among the eighteen high guns. Still there are some who can't see any good in the money-back system.

Among the average winners was one shooter who failed to win back his entrance. The banner squad of the day was No. 3—Coleman, Webster and Trimble, 15 each, Cain 14, and Dameron 13; total 72 out of 75. Long runs were not numerous. Hammersmith was high with 99, and his last two targets of Wednesday gave him a total of 101, entitling him to a Du Pont amateur long run trophy. Charlie Young got in a run of 62. Hammersmith started off in fine shape, and smashed them all up to his 100th target. He was a hot favorite for the championship, but failed to keep up this pace in the afternoon. However, he was high amateur with 145, or 96.6 per cent., beating Kemper for this honor by one target. E. Cain was third with 142, Coburn and Straughan 141 each. Among the professionals there was a hot race for first place, and the finish found Young and Gilbert tied on 146, with Henderson second, 143 and Goodrich third, 141. The championship race started right after dinner, and some of the best work of the tournament was seen in this race. Most of the shooters went into this contest, but only Kentucky amateurs could win the trophy. J. H. Kemper had things pretty much his own way, and landed the prize with 95. Hammersmith, Shropshire and T. Clay were second on 92, and J. J. Richardson 90. The former winners of the championship are: T. H. Clay, Jr., in 1903, 1904, 1907 and 1908 on scores of 93, 95, 96 and 96; E. Pragoff, 1905,

score 94; W. Henderson, in 1906, and 1909, on scores of 98 and 93; J. D. Gay, 1910, score 94.

W. Webster, of Columbus, O., was the high man in this contest, missing but 3 targets. C. A. Young and Gilbert got 96 each. C. D. Coburn, F. M. Edwards and W. L. Straughan 95 each. For the two days, Kemper and Hammersmith were high amateurs on 283 each, or 94.3 per cent; F. M. Edwards, 280; Lon Fisher 277.

Fred Gilbert put it over Charlie Young for high professional average by one target, 285, just an even 95 per cent., to 284, or 94.66 per cent. Henderson got second on 283, and Pop Heikes next on 279.

Annual Meeting.

Immediatcly after dinner the annual meeting was called on the club house veranda, Judge Denny presiding in the absence of the president and vice-president. The roll call found the following clubs represented: Mt. Sterling, Northern Kentucky, Crystal Lake, Ryland, Fayette County, Lexington, Jefferson County, Louisville, Hilltop Gun Club, Austerlitz; Harrison County, Cynthiana. The minutes of the previous meeting and the reports of the Secretary and Treasurer were rad and approved. There was some discussion of the treasurer's report of expenditures. These amounted to a trifle less than $2, and some of the members thought that he should have made an itemized report to the League as to where this immense sum went. There was talk of an investigating committee to look for the graft, but on the treasurer's promise to produce the vouchers at the next meeting the matter was reluctantly dropped. A letter was read from Judge Geo. B. Kinkead, tendering his resignation and requesting that his name be not presented to the League for any office. The resignation was accepted with regret, as Mr. Kinkead has been an enthusiastic worker in the League, and has filled the office of President with honor and credit to himself, and to the benefit of the League for several years. The next business was the selection of a place to hold the annual live-bird tournament. Only one club made application for the event, and it was given to Jefferson County Gun Club, the time to be on some date in Decemher. The annual target tournament for 1912 was then disposed of, going to the Fayette Gun Club, Lexington, the only applicant. It will be held in May, 1912, date to be announced later.

The election of officers was next in order. Judge Denny, in a short speech, nominated T. H. Clay, Jr., for President. The motion was seconded by J. H. Kemper, nominations closed, and Clay declared elected unanimously. He tried to decline the honor, but was declared out of order by the chairman, who refused to allow him to speak. Mr. Clay nominated J. H. Kemper for vice-president, the motion was seconded by Juoge Denny, and the vote was unanimous. Mr. Kemper also came to the front with several good reasons why he could not accept the position, but he was accorded the same treatment that had been handed out to Clay, and by these arbitrary actions, the League succeeded in securing the services of two of the most popular sportsmen in Kentucky for the ensuing year. No name but that of Frank Pragoff was offered for the office of Secretary-Treasurer, Tom Clay saying that he was elected for life and would have to die to get out of the job. As this seemed to be the sentiment of the meeting, Mr. Pragoff gracefully accepted the inevitable, and the office.

The following clubs were admitted to membership in the League: Hilltop Gun Club, Austerlitz, and Winchester Gun Club. The League now consists of thirteen active clubs.

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

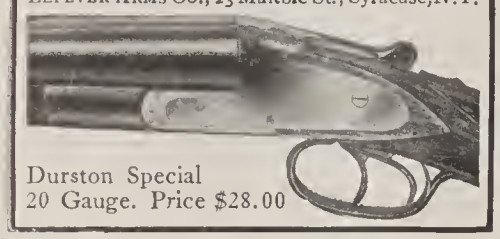
TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring.**

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

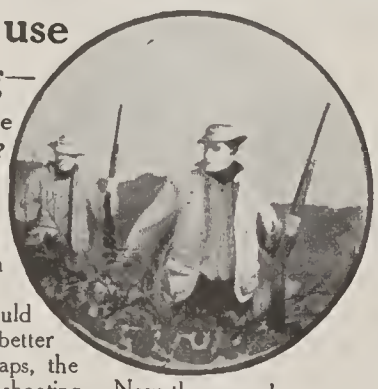
LEFEVER
SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the $28 gun the peer of any $50 gun on the market. Upwards to $1,000. Send for free catalog and get Lefever wise.
LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N.Y.



Durston Special
20 Gauge. Price $28.00

What's the use of shooting—
unless you have the best to shoot with?



What would be the use of pitting your skill against some one who is better equipped than you?

Neither he nor you would know which was the better shot — which is, perhaps, the chief reason you are shooting. Now there can be no reasonable doubt that **Dead Shot** is the best made powder. Recorded results in every section of the country prove it.

Dead Shot is always the same unvarying quality. You can always depend upon it at all times and places under all conditions.

Use **Dead Shot** and your powder will be sure, persistent and a considerable factor in your best success.

All loading companies use it. Be sure to get it.

Oklahoma State Tournament.

LAWTON, Okla., May 12.—The three-day shoot ended yesterday. This was the twelfth annual registered tournament of the Oklahoma State Sportsmen's Association. The weather was anything but perfect. Hot and dry; strong, dusty winds, which made good scores impossible. The State shoot for 1912 will be held at Perry, Okla. Dates to be anounced later.

In the State championship event at 50 birds, L. E. Reed, of Pond Creek, and John Donald, of Lawton, tied on 47 kills. In the shoot-off, Reed broke his 25 straight and Donald lost 5 targets, giving Reed the championship and the $60 gold watch. Scores:

Northern Kentucky Gun Club.

THERE was a small attendance at the shoot on May 28. The day was another hot one, although the sun was obscured by heavy clouds; and the heat, as well as the threatening aspect of the weather, kept some of the regulars from coming out. Then, too, most of the local men had had all the shooting they wanted at the State shoot last week, and were resting up. George Dameron was in fine form and broke 96 out of 100, which is about what we expect from him when he is all right. Holaday came second with 94, and in one event from 20yds. he broke 23 out of 25. He is practicing at this long distance so as not to be caught napping by the G. A. H. handicapping committee. Stacy used to be one of the regulars, but has not been shooting for some time, so that his score of 18 was not at all bad. All he needs is practice to bring him back. Holaday, Sr., comes out often, and once in a while takes his place on the firing line, when he generally makes good. He is one of the old guard, and used to be one of the leaders. Thornhill, Ertel and Ford were guests of the club. They are not very regular attendants at the shoots, but are always welcome. On June 18 there will be a money-back tournament on the Cincinnati Club's grounds, and this is expected to be a record-breaker for these parts, as many shooters will stop over on their way to the G. A. H. for a last bit of practice before that classic event. There will be a big bunch of the local shooters to go to both the State shoot and the G. A. H. if half of those who have already signified their intention of going stick to their word. That big purse looks good to a lot of our amateurs, and they will have a try for it.

Thornhill	21	21
Holaday	22 .. .. 25 23 24	94
Ford	17 18 19 21 23 15	113
Ertel	18 18 22 18	76
Dameron	25 22 25 24	96
Holaday, Sr.	23	23
Stacy	18	18

Audubon Gun Club.

THE annual Decoration Day shoot of the Buffalo Audubon Club was very successful, more than fifty shooters taking part, representing Rochester, Cohocton, Syracuse, Bradford, Toronto, Hamilton, Niagara Falls and Lockport. The majority of the events were won by the local members. Frank S. Wright, the New York State champion, was, as usual, in good form and carried away the cup offered to the high average, he breaking 139 out of 150. A. E. Conley, another member; Sim Glover, the professional, and F. F. Connelly, of Bradford, were only one bird behind, and C. D. Henline, also of Bradford, and C. L. Frantz, of Seneca Falls, each broke 137.

The merchandise event was well patronized, forty-one shooters entering. It resulted in a tie between Fish and Henline, they breaking 24 from the 20yds. mark. In deciding the tie, miss-and-out, Fish missed his third target, while Henline broke his, thereby winning a high-grade gun.

As was expected, the ten pairs of doubles furnished the excitement of the day. This event started about noon and immediately three 18s were made. Finally Wright broke 19 and Covert did the same. On re-entering again Wright broke 10 pairs straight, while the best the others could do was 17 and 18, and as this event was scheduled to close at 5 o'clock, Wright was declared the winner. Scores:

Bergen Beach Gun Club.

TUESDAY, MAY 30, found a number of our members on the grounds at 11 A. M. Wind about southeast. Targets thrown the full 50yds., with an erratic left-quarterer partly with the wind at not too acute an angle. It seems to be the fashion now to ape the pop-up semi-angles of the automatic trap. Nothing to it, for clay target practice originally was begun to imitate the flight of the real thing, and they were not near straightaways by any means. What's the use? It needs good judgment to negotiate the sharp angles, as in the old days. The main event to-day, 100 targets per man, handicaps 16, 18 and 20yds., for a dozen prizes, cut-glass, silver and other useful articles. Mr. John H. Vanderveer, shooting from scratch, made a runaway race of it in the first half with 48 and landed first choice ultimately with 89 out of 100. Mr. John Voorheis, shooting regularly, was a close second with one less, and Mr. F. R. Long, 18yds., with some of his old-time ability, landed in third place with 85; 83 was marked up for Mr. Van Valer, 16yds., and Capt. Foster, 16yds., who both deserve credit, as they seldom have the time to compete. Scorer, Billy de Long; Referee, Sam Short; office, Schortemeier. Scores as follows. Extra events at 16yds. Number of shooters, thirty-six. Targets thrown, 4,725.

MANHATTA.

York City Gun Club.

YORK, Pa.,, May 31.—Local trapshooters tried out the Squier money-back system at the first registered tournament under the new Interstate Association rules, held on the grounds of the York City Gun Club yesterday. The tournament was the greatest event in the history of trapshooting in York, barring the Pennsylvania State shoot held here seven years ago. Fifty-three different marksmen competed and forty-four of them shot through the entire program of 200 targets. There were many good scores and every participant was pleased with the conditions generally. The members of the York City Gun Club were complimented by the visitors, of whom there were quite a few, for the excellent entertainment afforded. The traps worked fine.

Hyde Park (Ohio) Gun Club.

THE grounds were almost deserted on May 27, only two men showing up. The weather was unusually hot for this time of year, the mercury standing up in the 90s, and not a breath of wind stirring to allay the heat in the slightest degree. De Mar and Holaday were the two faithful ones, and they each shot at 100 targets, the former coming out ahead with 80 to 75. The last event at 25 targets was a handicap, Holaday standing at 20yds. and De Mar at 17. The former had the best of it by one target, 17 to 16. Schaefer came out in his car, but did no shooting except on the revolver range. He made some very nice targets from 20yds. Later in the season an effort will be made to hold a combination tournament, revolver and target shooting, and it is hoped to make the affair a success.

New Haven Gun Club.

THE Decoration Day shoot of the Gun Club was a most successful affair, magnificent weather favoring the occasion, and over seventy gunners participating. The scores:

Eastern Handicap Entries.

SECRETARY T. E. DOREMUS, of the Du Pont Gun Club, is sending out the following "reminder" to prospective entrants to the Eastern Handicap, to he shot for under the auspices of the Du Pont Club, at Wilmington, on July 11, 12 and 13:

WILMINGTON, Del., June 3.—Dear Sir: May we give you $250, and perhaps a little more? That amount of money is guaranteed by the Interstate Association to the winner of the sixth Eastern Handicap event at 100 targets. All you bave to do is to enter and shoot your best; it's quite likely to be your purse. A valuable trophy also goes to the winner. The 1911 Eastern Handicap tournament is going to be a shoot that will go down in history as a banner one. We are doing everything that can be thought of to make the tournament pleasant and profitable to you. We want you to attend and it will be our pleasure to make your visit a memorable one. Remember the guaranteed $250. There are other things also. You will hear about them later.

Columbus Gun Club.

COLUMBUS, O., May 27.—Goodrich was high Saturday afternoon at the traps. A nice crowd was out. Most all the shooting was done from 20yds. and at doubles. The State shoot promises to be well attended. The Cleveland team will be down to shoot for the Shooting and Fishing trophy, also the same race will count as the return match that was shot in April, 1910—hetter late than never. Several teams will compete for this trophy, emblematic of the five-man championship, open to any club.

Eastlake Gun Club.

WILMINGTON, Del., June 4.—There was an interesting shoot at tbe Eastlake Gun Club yesterday afternoon. L. D. Willis was high man with 116 breaks out of 125. The scores were: J. D. Willis (125) 116, J. Spring (100) 71, H. Jones (75) 43, W. Fincher (75) 33, R. Whitworth (50) 35, C. Haverbeck (50) 34, E. Potter (50) 30, L. Beatson (50) 15, W. Jones (35) 16, R. Coffin (25) 12, M. Hopkins (25) 3, G. Gray (25) 2.

The PARKER GUN Again a Winner!

On January 11-13, 1911, The "OLD RELIABLE" PARKER GUN, shot by Howard D. Bates, of Ridgetown, Ont., again won the Grand Canadian Handicap at live birds, killing 25 straight and 9 in the shoot-off, from the limit distance of 31 yds. Mr. Bates shot at 54 birds during the tournament and killed them all. THIS IS SOME SHOOTING!

REPEATING RIFLE

You can buy no better gun for target work and all small game up to 200 yards. Without change of mechanism it handles .22 short, long or long-rifle cartridges, perfectly. The deep Ballard rifling develops maximum power and accuracy and adds years to the life of rifles.

The solid top is protection from defective cartridges—prevents powder and gases from being blown back. The side ejection never lets ejected shells spoil your bead and allows quick, accurate repeat shots. With simple take-down construction, removable action parts—least parts of any .22—it is the quickest and easiest to clean. A great vacation rifle. Ask any gun dealer.

The 136 page *Marlin* catalog will help you decide what rifle best suits your individual desires. Send 3 stamps for it today.

MORE LAURELS FOR DU PONT AT THE

Sixth Pacific Coast Handicap Tournament

Madera, California, May 25-27, 1911

THE HANDICAP EVENT

Won by Ed. Mitchell, shooting E. C. with a score of 93 x 100.

Other Honors carried off by shooters using the

DU PONT

OLD RELIABLE SMOKELESS POWDERS

SPECIAL DOUBLE EVENTS WON BY T. W. NEEL, SHOOTING E. C. SMOKELESS WITH A SCORE OF 86 x 100.

High Amateur Average on 16 yard targets won by F. M. Newbert, shooting Dupont, with a score of 365 x 400.

High Professional Average on 16 yard targets won by H. E. Poston, shooting Dupont, with a score of 368 x 400.

The other High Professional and Amateur scores were as follows:

Professional

Guy Holohan (shooting Dupont).....357 x 400
R. C. Reed (shooting E. C.).....354 x 400
E. Holling (shooting Ballistite).....353 x 400

Amateur

W. P. Sears (shooting Ballistite).....359 x 400
R. Bungay (shooting Ballistite).....357 x 400
M. O. Feudner (shooting Dupont).....355 x 400
T. Prior (shooting E. C.).....355 x 400

Did it ever occur to you that there's a reason for the preference shown by skillful shots for DU PONT powders?

High velocity—regular patterns—light recoil and general dependability are the qualifications that make a selection of a Dupont brand a matter of course. Get in line for better scores.

Rhymes of The Stream and Forest

FRANK MERTON BUCKLAND

One of the freshest, most delightful collections of outdoor verse offered for many a day. They are the outpourings of a spirit which loves nature, the woods and streams and growing things, and appreciates its charms.

Mr. Buckland's verse has a charm that is at once rare and delightful. This book will appeal to every outdoor man or woman, and particularly to the "Brethren of the Angle."

Its form is as attractive as its pages, closely simulating the appearance of the standard fly-book, printed on heavy laid paper with ornamental border designs of trout flies, pocket for clippings, and blank pages for copying or individual composition. It is just the thing for the den, for the pocket, or for a gift to the friend who loves the big world out of doors.

Postpaid, $1.25

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

Analostan Gun Club.

WASHINGTON, D. C., June 4.—The Analostan Gun Club held a very successful shoot on the afternoon of May 30. We had a merchandise shoot at 100 targets. Every man entered won a prize. Some good scores were made, the shooting of Dr. Stine, Hogan, Peck and Dr. Taylor being above the ordinary, where prizes are at stake. Following are the scores at 100 targets: Stine 94, Hogan 93, Peck 92, Dr. Taylor 90, Wagner 89, Avery 89, Brown 88, M. Taylor 87, Harrison 86, Parsons 85, Monroe 84, Wilson 82, Green 72, Bray 76, King 59, McQuillin 39, Pearcey (50) 27, Lohr (35) 18.

At our weekly shoot on June 3, the following scores were made:

Shoot for Wagner medal: Steubener 23, Harrison 22, Talbott 13, Wagner 23, Peck 24, Stine 22, Bray 18, Green 19, Drain 15, Parsons 24, Dufour 23, Wilson 21, Kahrs 18.

Shoot at 10 pairs: Harrison 9, Talbott 10, Wagner 14, Stine 11, Bray 11, Parsons 8.

Totals for the day: Steubener (shot at 170) broke 151, Harrison (115) 94, Talbott (115) 63, Wagner (100) 89, Peck (100) 88, Stine (100) 87, Bray (100) 80, Green (10) 71, Drain (100) 71, Parsons (80) 73, Dufour (50) 44, Wilson (50) 42, Kahrs (50) 37.

MILES TAYLOR, Sec'y.

Robin Hood Gun Club.

THE Robin Hood Gun Club held a very interesting shoot at Concord, Staten Island on Decoration Day, Rouley winning a leg on the Winchester gun after shooting off a tie with Bush. Rouley also won a leg on the Du Pont fob. Connelly won the Schoverling, Daly & Gales trophy. The scores:

Winchester gun, 25 birds, handicap: Bardes (5) 15, Bush (1) 23, Cleveland (3) 16, Hutchings (0) 22, Rouley (2) 23, Conelley (5) 22, Price (5) 20, Du Bois (5) 10, Moran (5) 15.

Du Pont fob, 25 birds, handicap: Bardes (5) 17, Bush (1) 21, Cleveland (3) 17, Hutchings (0) 18, Rouley (2) 23, Conelley (5) 19.

Schoverling, Daly & Gales trophy, handicap: Rouley (2) 18, Hutchings (0) 18, Conelley (5) 20, Price (5) 19, Bardes (5) 14.

Twelve pairs doubles: Rouley 13, Conelley 16, Bardes 8, Hutchings 16, Cleveland 10.

GEO. CONELLEY, Sec'y.

Clinton Gun Club.

NORTH LANCASTER, Mass.—The Clinton Gun Club held a registered shoot on Decoration Day, with scores as below:

	Shot at.	Broke		Shot at.	Broke
Kirkwood	150	130	McLellan	150	106

The Fred Macaulay Business Men's Gun Club.

NEWARK, N. J., May 30.—Business men had lots of fun shooting at the Speedway traps Decoration Day, and some creditable scores were turned in by the gunners, considering the dark cloudy weather and the high wind which blew across the traps. James E. Wheaton was high gun of the day, killing 183 clay birds out of a possible 250. The scores:

George A Ohl	12	21	19	18	16	14	17	16	20	8	12
Peter Bey	14	18	15	20	16	17	22	17	10	19	..

SMOKELESS.

Belvidere Gun Club.

BELVIDERE, N. J., May 27.—A registered shoot was held here to-day with an attendance of thirty-one shooters who shot through the entire program. The day was ideal for the sport, and many ladies graced the occasion with their presence. Lloyd Lewis was the efficient cashier, and all hands voted it the nicest shoot held in northern New Jersey. A bountiful lunch was served gratis. Scores:

Amateurs—Drake 81, Cane 113, Cortright 115, Hess 127, Quick 96, Hilliard 132, Heil 136, Taylor 128, Englert 142, Schlicher 144, Young 123, Wilson 138, Moore 126, Raisner 90, Boardman 102, Geiger 139, Coffin 141, Page 134, Gardner 119, Byram 133, Kinney 85, Flummerfelt 97, Welsh 93, Dereamer 135, Clark 128.

Professionals—H. Stevens 138, Neaf Apgar 142, L. R. Lewis 138, F. Lawrence 126, J. Fanning 138.

Sikeston Gun Club.

SIKESTON, Mo.—Out of 50 pigeons the following scores were made on Friday, June 2: L. R. Bowman 45, H. A. Smith 45, Dan McCoy 44, Clem Marshall 44, Dr. D. E. Sawyer 44, W. H. Tanner 42.

Chicopee Falls Rod and Gun Club.

CHICOPEE FALLS, Mass., June 2. The first shoot under the Lewis class system was held Saturday, May 27, on the grounds of the Chicopee Falls Rod and Gun Club, Chicopee Falls, Mass. It proved to be one of the best Saturday shoots that we have held on the grounds. Thirty shooters were present from different parts of the State. The prizes for the four classes in the Lewis class system were silver spoons, and were won by Dr. S. A. Lewis, Class A; Jordan, Class B; Smith, Class C; and L. A. Rodin, Class D. These shoots will continue through the summer every other Saturday. The Du Pont trophy shoot will also start Saturday, June 10, to run for four shoots.

High gun for the day was Mr. Chapin, who broke 114 out of 125, 91¼ per cent.

A special event of 100 birds was also run off, which resulted in a tie between Mr. G. S. Lewis, of Chicopee Falls, and P. O. Osborne, of Boston. In the shoot-off Osborne won. The scores for the day were:

Event 1, 25 birds: Darton 24, Chapin 22, Blodd 22, Sheldon 21, Lewis 20, Montgomery 20, Sawin 19, Osborne 17, Fay 15.

Event 2, 25 birds: Sawin 24, Chapin 24, Lewis 22, Osborne 22, Darton 21, Cowing 20, Twiss 18, Fay 16.

Event 3, 25 birds, class shooting: Dr. S. A. Lewis 22, Chapin 22, Darton 22, G. S. Lewis 21, Blood 21, Osborne 21, Jordan 20, Sawin 19, Sheldon 19, E. Smith 18, Twiss 18, Cowan 18, E. Lathron 18, Snow 18, Rodier 17, Mulvaney 17, Montgomery 16, Steere 16, Hopkins 15, Fay 15, Hawes 15, P. Lathrop 14, McElroy 11, Butler 9, P. Blood 9, Green 6.

Event 4, 100 birds: P. Osborne 87, G. S. Lewis 87, Blood 83, Snow 75.

F. E. H. SHELDON, Sec'y.

Philadelphia Trapshooters' League.

PHILANELPHIA, Pa., June 4.—Frank S. Cantrell, Jr., yesterday afternoon captured the individual championship of the Philadelphia Trapshooters' League over the traps of the S. S. White Gun Club at Holmesburg Junction, by breaking 94 of his quota of 100 targets. It was a post-season League shoot, for those who had broken 42 or better in any regular League shoot. Without detracting in the least from Cantrell's victory, it was, in a measure, a hollow one, as of the fifty-one members qualified to enter, less than one-third competed, and numbered among the absentees were several shots that would at least have insured a good race, even if any one of them failed to beat Cantrell out. It was an unusually poor turnout for so important a shoot. The conditions were 100 targets, divided into five 20-bird events, and with sliding handicap of from 16 to 21yds. Cantrell also captured a $5 gold piece for high man in Class A, the same prize for the leader in Class B going to A. J. Renner, who broke 87. Scores:

Class A—Clegg 80, Anderson 80, Bender 28, Griffith 87, Cantrell 94, Severn 67, McKean 75, W. B. Watson 83, Sloan 85, Pflegar 75.

Class B—Wakeman 72, Lindley 66, Sidebotham 85, Fenn 68, Renner 87, Wiley 75.

Unclassified—Rowland 82, Pratt 78, Betson 74, Jones 85, C. C. Watson 60, Crothers 82, Abbott 70.

A Courageous Trapshooter.

Two or three years ago Mrs. Hood Waters' name was often seen in the list of trapshooters at various events, and reports and articles from her pen were frequently printed in FOREST AND STREAM. The Boston Evening Herald of May 31, tells of a heroic rescue by Mrs. Waters at Branford, Conn., on Decoration Day. The account says:

"Fully clothed, Mrs. Hood Waters, of New York, jumped into the Sound yesterday afternoon and rescued Albert Pischino, a three-year-old child, who had fallen into the water while walking with his mother. The rescue occurred a short distance from Ocean Point, and was witnessed by a large number of people, who were spending the holiday boating in the Sound.

"The young child had been playing near the water and fell over the stone embankment. The tide was running out at the time, and seeing the child's plight, Mrs. Waters took off her pumps and dove into the water. Mrs. Waters is a strong swimmer, and in a few minutes reached the side of the child. Throwing the youngster's arm around her neck. Mrs. Waters swam back against the tide to the shore. With her clothing wringing wet, Mrs. Waters was compelled to go to the station in order to keep a business engagement in Boston.

Registered Tournaments.

PITTSBURG, Pa.—Tournaments registered with the Interstate Association during the week ending June 3:

June 29.—Revelstoke (B. C., Can.) G. C. A. J. MacDonel, Sec'y.

July 1.—Vancouver (B. C., Can.) G. C. Chas. L. Burtch Sec'y.

July 7-8.—Lethbridge, Alberta, Can.—Alberta G. C. H. D. Johnson, Pres.

June 12-13.—Winnipeg, Manitoba, Can.—Fort Garry G. C. E. H. Houghton, Mgr.

THE F. W. KING OPTICAL CO., Cleveland, O.

A Classic for Sportsmen

AMERICAN BIG GAME IN ITS HAUNTS

Boone and Crockett Club Series

Edited by GEORGE BIRD GRINNELL

An invaluable work not alone for the sportsman, but for the student and lover of wild life. Treats of big game preservation and protection in the broader sense; tells of the habits, habitat and life history of the larger wild animals; touches upon the problem of the public forest domain, and is rounded out by interesting hunting reminiscences by such leaders in the fraternity of big-game hunters as Madison Grant, Paul J. Dashiell, George Bird Grinnell, Jas. H. Kidder and W. Lord Smith. Bound in cloth, library edition, heavy paper, richly illustrated, 497 pages.

Postpaid, $2.50

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

AMERICAN BIG-GAME HUNTING

BOONE AND CROCKETT CLUB SERIES

Edited by George Bird Grinnell and Theodore Roosevelt

A thoroughly stimulating book dealing with American big-game hunting, East, West and under the Arctic circle, including every phase of sport with the rifle. "American Big-Game Hunting" is a compilation of the experiences of some of the most widely known sportsmen in America. Among the sketches are: The Story of the Buffalo, Capt. Geo. S. Anderson; The White Goat and His Country, Owen Wister; Old Times in the Black Hills, Gen. Roger D. Williams; Coursing the Pronghorn, Theodore Roosevelt; After Wapiti in Wyoming, F. C. Crocker; In Buffalo Days, George Bird Grinnell; Blacktails in the Bad Lands, B. Rumsey.

Forest Preserves and Game Refuges are also considered. Aside from the surpassing interest of the narratives, the book is invaluable for reference. Cloth, heavy paper, library edition, richly illustrated.

Postpaid, $2.50

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

THE NARRATIVE OF A SPORTSMAN

INTER-OCEAN HUNTING TALES

EDGAR F. RANDOLPH

A series of hunting reminiscences of rare charm for the sportsman and for the wider circle which delights in true tales of outdoor life. With none of the high coloring and exaggeration which give a false note to so many hunting stories, Mr. Randolph's book is never lacking in interest.

He covers the field of sport with the rifle, east and west, drawing a vivid word picture of life in the open, subordinating his own exploits to the main incidents of outdoor experience, giving much valuable information on camp life, hunting and the habits of wild game, and continually delighting the reader with the freshness of his viewpoint.

This book will strike a sympathetic chord in the memory of every big-game hunter of experience and will prove of real value to the novice who is planning an excursion into the wild.

Cloth, 170 Pages. Richly Illustrated. Postpaid, $1.00.

FOREST AND STREAM PUBLISHING COMPANY, 127 Franklin Street, NEW YORK

ARE YOU A GUNNER?

Do you love to follow your good dog over the fields in search of quail or chickens, or to struggle through swamp or along thick grown hillside, expecting to hear the roar of the ruffed grouse or the twitter of the fall woodcock? If so, you should have this new book.

AMERICAN GAME BIRD SHOOTING

By GEORGE BIRD GRINNELL

(New—Just Published)

This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys.

The first part of the volume is devoted to a description of the various species and their habits—the way in which they live their lives.

The second part of the book is devoted to upland shooting and treats of the methods by which all the upland birds are pursued and taken. The chapter "Aids to Shooting" describes the clothing, guns, and loads and dogs that the gunner may profitably use; while the last section of the book treats of the shooting of the future and the efforts to rear our native quail and grouse in domestication.

The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full page portraits of different game birds and hunting scenes, with a number of cuts in the text.

Cloth. About 575 pages. Price $3.50, net. Postage 25 cents.

This book is of inestimable value. It contains the genuine hunter-naturalist facts given in the most entertaining and interesting style.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK CITY

Newtown Gun Club.

NEWTON, Ill., June 2.—Our two-day tournament ended this afternoon. The attendance was not what we had expected. Gilbert and Graham tied for first with the cracking score of 291 out of 300. J. A. Penn was high amateur with 278. Scores:

C Franke	250	J A Penn	278
J S Boa	246	H Durbin	265
C H Albright	241	W H Haws	220
Geo E Roebuck	267	G S Batman	225
R J Gasserman	237	D B Haven	245
E E Neal	178	F A Albright	142
G L Robbins	277		
Professionals:			
F Gilbert	291	W Benton	276
G Mathews	273	A Killam	279
Ed Graham	291	H W Cadwallader	275

Mineral Springs Gun Club.

WILLOW GROVE, June 3.—A small attendance marked the regular monthly shoot of the Mineral Springs Gun Club at this place, but fairly good scores marked the event. Houpt won a special trophy. The scores:

First event, 25 targets: Houpt 22, Hiltebietle 16, Pierson 17, Carney 8, Nash 16, Mason 18, Felton 15, Ritchie 11, Andrews 13, Cooke 18.

Second event, 25 targets: Houpt 23, Hiltebietle 18, Pierson 18, Carney 10, Nash 15, Mason 16, Felton 15, Ritchie 18, Andrews 17, Cooke 19.

Third event, 25 targets: Houpt 24, Hiltebietle 16, Pierson 16, Carney 10.

Fourth event, 25 targets: Houpt 21, Hiltebietle 18, Pierson 20, Carney 10.

Houpt won high gun for the shoot with 90 breaks out of 100 targets shot at.

Trapshooting Tourney.

PHILADELPHIA, Pa., June 4.—The arrangements for the third annual camp of the sportsmen of Pennsylvania at Huntingdon on June 28, 29 and 30 are nearly completed. The trapshooting tournament will take two days, and it is arranged specially in the interests of novices and those who have never before shot from behind a trap. The program is so arranged that everyone, no matter how inexperienced, has a splendid opportunity to capture one of the valuable trophies without other payment than the usual tournament cost of targets.

The shooters will be divided into four classes, from which professionals are excluded from competing for trophies. They are experts, semi-experts, novices and those who never before shot at targets. This method insures equitable competition, and each man only actually contests with those of his own ability. Neither are the best prizes given to the best shooters, as it is the object of the makers of the program to make the trophies equal in value in each class.

The DuPont Gun Club.

WILMINGTON, Del., June 4.—There was a good attendance at the regular weekly shoot of the Du Pont Gun Club at Newbridge yesterday afternoon. It was a splendid day for shooting, and some good scores were made. Frank Mathewson had a run of 25 straight in the T. Coleman du Pont merchandise event, winning the silver spoon in Class A. J. B. McHugh also shot well, breaking 93 out of 100, also getting a run of 25. Isaac Turner, with a score of 21 out of 25, was the winner in Class B. In Class C, Louis Koerner took first place, 20 out of 25. Class D ended in a tie at 15 out of 25 between Dr. Bullock and S. Wood.

DOGFISH PLAYING HAVOC WITH NOVA SCOTIAN FISHING.

VETERAN fishermen working out of this consular district, says Consul Alfred J. Fleming, of Yarmouth, report dogfish more numerous than at any other period in the history of the fishing industry in this section.

They report them great pests, and that if something is not or cannot be done to destroy them, a few years will see the ending of that vocation so far as the south-shore fishing grounds along the Nova Scotia coast are concerned. The Yarmouth fleet in past years would go out 20 to 40 miles and with three or four days' good fishing weather would return with $500 and $600 worth of good fish. This season they are out fully a week and come in and feel grateful for half that amount.

They report that day after day the trawls are taken in loaded with little else than dogfish. This takes the bait, which is quite expensive, in addition to taking the fishermen's time, and constantly decreasing the fishing results. The past summer the dogfish-rendering works at Clarks Harbor, about seventy miles from here, has been operating double shift, night and day forces, and yet is unable to consume all the dogfish that the three or four chartered vessels bring in. Thousands of pounds of these fish have been reduced to oil and fertilizer substances, and yet the pests show no decrease, but rather a constantly increasing supply. Often the vessels at the local stations for gathering the fish for the works are unable to carry the fish on hand.

These dogfish not only play havoc with the cod, haddock, and other fish, but they are very detrimental to mackerel and lobsters, and if something is not done fishing in this immediate vicinity will end in a few years, as the increase of dogfish means clearly a decrease of food fish. No remedy other than the rendering works has been suggested. Fishermen from this section and from all south-shore sections must now go much further to get out of reach of the dogfish rendezvous.

These dogfish not only take the bait and escape, but when "hooked," it is not possible for the men at sea in their dories to destroy them, as they do not often have the time, especially in high seas, or when a storm is coming. They are also very destructive to gear, causing much loss of money in that way. The mackerel industry in this section has been bad for a number of years, all charged to the dogfish. Fishermen would hail with joy some one who would come forward with some practical method of doing away with these pests.

EXPERT OPINION.

THE Angler—Is this public water for fishing?

The Native—Oh, aye!

The Angler—Then it won't be a crime to land a fish?

The Native—No; it 'ud be a blooming miracle! —The Tatler.

HITTING *vs.* MISSING

By S. T. Hammond ("Shadow").

Cloth. Price, $1.00.

Mr. Hammond enjoys among his field companions the repute of being an unusually good shot, and one who is particularly successful in that most difficult branch of upland shooting, the pursuit of the ruffed grouse, or partridge. This prompted the suggestion that he should write down for others an exposition of the methods by which his skill was acquired. The result is this original manual of "Hitting vs. Missing." We term it original, because, as the chapters will show, the author was self-taught; the expedients and devices adopted and the forms of practice followed were his own. This then may be termed the Hammond system of shooting; and as it was successful in his own experience, being here set forth simply and intelligently, it will prove not less effective with others.

Nursing *vs.* Dosing

A Treatise on the Care of Dogs in Health and Disease. By S. T. Hammond ("Shadow"), Author of "Training vs. Breaking." 161 pages. Cloth. Price, $1.00.

Mr. Hammond believes that more dogs are killed by injudicious doctoring than by disease, and the present work is a protest against the too free use of medicine when dogs are sick. The author has given special attention to many of the troubles which especially afflict small dogs kept in the house, and likely to suffer from lack of exercise and from over-feeding; and boys and girls owning dogs—as well as children of larger growth—may profitably study and ponder this volume.

Contents: Importance of Nursing. Cleanliness Out-of-Sorts Dam. Puppies. Diet. Other Foods. Kennel and Exercise. Common Ailments. Teething Diarrhea. Convulsions. Epilepsy. Distemper. Eczema. Need of Proper Care. Sour Stomach. Vermin Canker of the Ear. Mange. The Nervous System. Abscesses. Colic. Worms.

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

SAFETY.—While the dictum that "there's safety in numbers" may be true in so far as it concerns individuals, it is certainly wrong when applied to parts of mechanisms; here the simplest is always the best, and the perfect gun is that which does its work effectually with the fewest parts. **Simplicity has always been the Keynote of Greener Guns,** and is clearly exemplified in the **Greener Side Safety.** This consists of a simple trigger-locking spindle absolutely infallible and possessing the following advantages over all other systems. It does not weaken the "grip" as is the case with the Top Safety in its weakest part; a hole 3-16 inch diameter through the "head," the strongest part of the stock, is all that is necessary to accommodate the Greener Side Safety; it is placed in the most rational position for use, just where the thumb falls naturally; it cannot be pushed on or off accidentally; it is a "safe" safety, always there when you want it, but never balking the unexpected shot.

Of course you must have it fitted to a Greener Gun to obtain fullest satisfaction.

This is but one of the many outstanding improvements on Greener Guns. Send for free catalog and let us tell you about the others.

Price 10 Cents

TAKE A SLANT

at these few paragraphs—hotstuff news for the man who is really looking for a gun that will deliver the most satisfaction at the traps.

Southern Handicap, Charlotte, N. C.
Every Stevens Repeating shot-gun went through the entire program without a hitch or a slip.

Berkshire Gun Club, Pittsfield, Mass., May 30th. Ernest Sawin, was second high amateur with 180 out of 200—Stevens Repeating shot-gun of course.

Chattanooga, Tenn.
A beautifully engraved medal was won on the 13th by Mr. O. F. Chichester with a "Trapshooter" Stevens Repeating shot-gun.

New Haven, Conn., May 30th.
Fred M. Fay, (a beginner in the shooting game), made 82%. Stevens Repeating shot-gun again.

North Lancaster, Mass., May 30th.
Walter Snow (another tenderfoot), shot third in a field of twenty-five shooters with a Stevens Repeating shot-gun.

Is **your** name printed at the top of the list or do they bunch you with the "also rans"?

If you will try shooting with the Non-Balkable, Non-Blurring, Self-Pointing Stevens you will find your percentage going up like a thermometer on a hot day.

J. STEVENS ARMS & TOOL COMPANY

Dept. 326 *The Factory of Precision.* **Chicopee Falls, Mass.**

ARE YOU A GUNNER?

Do you love to follow your good dog over the fields in search of quail or chickens, or to struggle through swamp or along thick grown hillside, expecting to hear the roar of the ruffed grouse or the twitter of the fall woodcock? If so, you should have this new book.

AMERICAN GAME BIRD SHOOTING

By GEORGE BIRD GRINNELL
(New—Just Published)

This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys.

The first part of the volume is devoted to a description of the various species and their habits—the way in which they live their lives.

The second part of the book is devoted to upland shooting and treats of the methods by which all the upland birds are pursued and taken. The chapter "Aids to Shooting" describes the clothing, guns, and loads and dogs that the gunner may profitably use; while the last section of the book treats of the shooting of the future and the efforts to rear our native quail and grouse in domestication.

The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full page portraits of different game birds and hunting scenes, with a number of cuts in the text.

Cloth. About 575 pages. Price $3.50, net. Postage 25 cents.

This book is of inestimable value. It contains the genuine hunter-naturalist facts given in the most entertaining and interesting style.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK CITY

A BAG OF GRAY SQUIRRELS.

WHEN larger game is lacking, the North American gray squirrel (*Sciurus carolinensis*) yields to no animal of its size in point of sporting value to those who pursue it with a small-bore rifle. The shotgun, excellent though it be for birds, is undesirable for killing the gray squirrel, which is essentially a mark for the more subtle weapon. In my opinion, says a Field correspondent, a .22 caliber single-shot rifle, fitted with Lyman sights, and with a trigger pull of about 2½ pounds, is the most satisfactory to use, although many good squirrel shots prefer the clumsy .32 and a pull-off of factory resistance. For fine shooting with a light rifle, however, the trigger set can hardly be too slight, and in the hands of a careful man a rifle of this description is a highly accurate and perfectly safe weapon.

Of late years the gray squirrel has decreased alarmingly in numbers throughout its range, and in many localities where once it abounded even local shooters now regard themselves as lucky if they find two or three in a season. Moreover, it is a limited migrant, moving about from one locality to another in obedience to the exigencies of its food supply. Thus a large area of excellent squirrel country may suddenly be denuded of its squirrel population, while a contiguous area, where these animals have not been seen for years, may as suddenly be overrun with them. On several occasions I have known this to happen with the suddenness of a border raid, but only once have I actually been a witness of a migration of sufficient magnitude to be instantly recognized as such. That day was a red-letter event in my squirrel-hunting experience, for between sunrise and an *al fresco* breakfast I had killed eleven, while four more found their way into my game pocket ere I wended my way by devious woodland cart tracks back to lunch at my cousin's country house on a hill overlooking the Housatonic.

Although in my journal the incidents of that day are restricted to a dozen words, in my memory every trivial detail stands out with pristine vividness, possibly because otherwise the season proved to be a peculiarly unlucky one for me. I was staying with my cousin among the Berkshire hills until it was time for us to go after moose in New Brunswick, and on the day in question, as he had been called to New York to fetch his wife from the steamer, I was left to my own bent. As (in the words, though not in the strict sense, of Don Quixote's knightly phrase) arms are the only things I value, the basis of my day's work was already assured, but I determined on a little variation from the eternal round of bird shooting. I found some "long rifle" cartridges for my cousin's Stevens-Pope barrel, and these secured, with a breakfast stowed in a roomy pocket of my shooting coat, I swung across a field or two, climbed a snake fence, and entered the "great lot," once farming land, but now grown up to mixed pine and hardwood, interspersed with numerous birch thickets beloved of grouse, and with here and there patches of oak, hickory, and chestnut, just beginning to be of vast interest to squirrels.

The sun was gilding the horizon as I entered the "great lot," and only those who have had experience of the beauties of a perfect autumn morning in the New England States can appreciate in fancy the loveliness of the woodland under the early matutinal spell. Walking along the alder-fringed causeway between two vapor-shrouded swales, I turned down through a narrow belt of plantation pines and entered a chestnut grove that skirted the river. Here, where in the perfect calm the sudden tremor of a twig would have betokened animal or bird, not a leaf stirred; but about 200 yards away on the thither side of a dry huckleberry swamp, thick set with clumps of stunted cedars like the tufted pate of a negro, I saw a commotion in the top of a walnut tree, and, making a careful approach, secured the first gray squirrel for an expenditure of two cartridges. My first shot was the clean miss of over confidence; my second, directed by a chastened spirit, passed

Men and Women when fishing, hunting or camping should wear

Living in the Open

"We just live out of doors."

How often have you heard the delights of a favorite resort summed up in these words, as if they told the whole story of an ideal holiday?

But how about the wife, the mother, the sister—the one who does the cooking for the party and spends two or three hours each day in a hot kitchen? Does she get her full share of "living out of doors"?

With a New Perfection Oil Cook-stove no one suffers in the kitchen. In the first place, a New Perfection does not overheat a kitchen as other ranges do, so that even if you stay there you keep as cool and comfortable as in any other part of the house. In the next place, the New Perfection is so easily portable. You can move it where you please—get the air near an open window, or take it right out to a corner of the porch.

It saves a lot of work, too. You have no wood to chop, no coal to carry, no ashes to clean up. There is none of the trouble of building up a fire at meal times. The New Perfection is ready for use at any minute.

It is smaller than most other stoves; it is lighter; it is cheaper. But it cooks food to perfection.

New Perfection
WICK BLUE FLAME
Oil Cook-stove

Made with 1, 2 and 3 burners, with long turquoise blue enameled chimneys. Handsomely finished throughout. The 2- and 3-burner stoves can be had with or without a cabinet top, which is fitted with drop shelves, towel racks, etc.

Dealers everywhere; or write for descriptive circular to the nearest agency of the

KEEPING POSTED

1. As you read Forest and Stream through each week, you are frequently reminded of one thing or another that you desire to purchase. Such and such must be supplied to make your Shooting, Fishing, Camping or Cruising outfit complete.
2. Possibly you need waterproof shoes, or waterproof clothing. Or a new tent? It is your intention to take a much longer trip this time, than usual. And you may be located where you do not have access to sporting goods houses where all of your wants can be filled. In fact, even the best of us are often in doubt when it comes to knowing **where** to get the **thing** we want at the **right** price. You wish you had a friend at your elbow to suggest.
3. **Our** experts are right at your elbow. It does not cost you a penny (except your postage) to take advantage of their knowledge. They know **where** to **buy** and **how**. It is their business—and your advantage.
4. Glance carefully over our advertising columns. If you don't see what you want, write in to our Information Department. You will receive a full detailed reply—post haste—we're always on the job.

Isn't this worth while, if for no other reason than to get the **right** information on **how** to reach your destination by the quickest and surest routes—what railroads or steamship lines to take?

Don't put this off. Co-operate with us by telling your relatives and friends, what we can do for them.

Keep posted. Write to

Building Motor Boats and Managing Gasolene Engines are discussed in the book

HOW TO BUILD A LAUNCH FROM PLANS

A complete, illustrated work on the building of motor boats, and the installing, care and running of gasolene motors. By Charles G. Davis. With 40 diagrams, 9 folding drawings and 3 full-page plans. Price, postpaid, $1.50.

The author is a builder and designer of national reputation. All the instruction given is defined and comprehensive; 40 diagrams, 9 folding drawings and 3 full-page plans. That portion of the book devoted to the use and care of gas engines should be most carefully perused by every individual who operates one. The book is well worth the price asked for it.

FOREST AND STREAM PUBLISHING CO.

through the squirrel's neck and brought it somersaulting to the ground.

The sun was brightening the higher treetops as, ten minutes later, I climbed the "great lot" bars into the "hill lot," where colonial furrows were still traceable among the heavy timber, and where an occasional gnarled apple tree yielded its worthless nubbins yearly to the grouse. The hill lot was a huge tract, made up of swale, dry maple swamp, and hummocks of mixed pine and hardwood, having on the east another forest-grown farm known as the Titter Joe Dean place (an eponymous title bestowed in honor of a long dead farmer noted for foolish giggle), and on the west a vast reach of woodlands extending to the New York State line. The 'hill lot" was never good squirrel country, but one had to cross it to get to the walnut grove on what was called the Holmes place, and there was a delightful footpath to follow. It was midway the length of this footpath, in a belt of oaks between two narrow swales, that I encountered the migration.

There must, I think, have been between forty and fifty squirrels altogether, but the commotion they caused in the treetops as they leaped nimbly from branch to branch was apparently the work of a hundred. They made a sound at a distance like a strong isolated breeze, and for a moment such I thought it was. Then the patchy character of the disturbance became visible, and a moment later I saw a gray form hurtling through the space between two trees. As the animals were traveling directly toward me, I had but to stand still to gain the advantage of the ambushes.

A squirrel moving rapidly in the treetops is none too easy a mark for a rifle, however, and, in spite of everything being in my favor, my first shot was a disgraceful miss. At the report every sound was stilled; the squirrels vanished like phantoms. I stood like a statue, and presently here and there in the foliage sudden quivers betokened sciurine restless or curiosity. Then with a startling scratch and bark a big gray squirrel concluded his private inspection of me from behind an adjacent tree trunk and bolted for the leafy safety overhead. Halfway up he paused for a moment, like Lot's wife, for another look, and was immediately turned, if not into salt, at least into something that would presently require it.

Thereafter for an hour or more I was busy. The first five squirrels were killed within a circle not over 100 feet in diameter, but then the animals scattered, and I had increasing difficulty in keeping in touch with the main movement. Finally, after ten minutes' delay, caused by a particularly artful specimen in the top of a hemlock tree, I lost track of the migration, and, though I spent an hour or more in trying to find it again, I had at last to acknowledge myself beaten. I therefore gave up the search, and, seeking out a comfortable seat, ranged eleven gray forms before me on the ground, that in their inspiring presence I might make a heartier meal of ham sandwiches. Afterward I wandered haphazardly through the woods, picking up a straggler here and there, till at midday, when I started lunchward, I had fifteen gray squirrels stowed in the capacious pockets of my shooting coat. Laid out later on the loading table in the gun-room they made a brave show, and when magically cooked by an old plantation negress they proved to be as pleasing in the assimilation as they had been in acquisition. Gray squirrels are now extremely scarce in the Old Bay State, and my cousin, a keen and observant sportsman, tells me that he has seen but two in the past twelvemonth.

GREAT EXPECTATIONS.

"WHERE are you going with that goat, little boy?" "Down to the lake. Come along if you wanter see some fun. This here goat has jest et a crate of sponges, an' I'm going down an' let him drink."—Toledo Blade.

Ten Days on a Houseboat on Alabama Rivers

By ROLAND M. HARPER

In Two Parts—I.

IN October, 1908, it was my good fortune to be invited to join a party of geologists for a cruise on the rivers of Western Alabama from the head of navigation on the Warrior to tide water on the Tombigbee. The expedition was organized by the State geologist of Alabama who had long been familiar with the ground which was to be covered and participated in by several other Southern geologists who wished to get his point of view on some important geological problems which these rivers present.

At the beginning our party consisted of three State geologists, one former State geologist of two different States, now retired; one assistant State geologist, two members of the United States Geological Survey, a young Methodist minister who is an amateur conchologist, a navigator or chauffeur, a negro cook or chef, and myself, the botanist of the expedition. One of the Government geologists left us on the third day, and a little later we were joined by another State geologist and a man who is a Birmingham capitalist and mining engineer by vocation and a conchologist by avocation. One of the State geologists, on account of his profound knowledge of gasolene launches and the navigation thereof, was soon nicknamed "the Commodore," and another one, probably on account of his dignified bearing, "the Senator." The retired geologist, although the oldest member of the party (three score and ten), was one of the most active. The preacher was of course called upon to say grace at each meal, but otherwise we were not reminded of his profession, not even on the Sunday we spent on the river, when we traveled and worked the same as any other day. He published an interesting account of our trip in his church paper, the Alabama Christian Advocate, about a month later, and even mentioned in it that he had been collecting fossils much older than Adam. The chauffeur and chef were experts in their respective professions and gave entire satisfaction. Perfect harmony prevailed throughout the journey.

The voyage was made in an old houseboat which had been bought and refitted for the occasion. It had been built originally as a miniature stern wheel steamboat, but had long since been stripped of its machinery, and the motive power was supplied for us by a launch. The cabin of the houseboat was about 8 by 18 feet, with seven windows on each side, and the rear four or five feet partitioned off for a kitchen. A pilot house about four feet square in front of the cabin, opening directly into and projecting about two feet above it, was used for storing our baggage, cots, bedding, tools, etc. On either side of this a narrow door opened out on to the deck, which projected about six feet beyond the pilot house in front and was about a foot wide on the other three sides of the cabin. A barrel of gasolene for the launch, two large water bottles, a gangplank, a pump, some ropes, folding chairs, buckets and wash basins were placed on the forward deck, and the bulkier geological specimens gradually accumulated in the same place. Poles for pushing and sounding were placed on the roof and sometimes on the narrow side decks. Inside the cabin a board was placed on trestles for our dining and study table during the day and stood on edge against the wall at night. The kitchen was just large enough to contain a range and a few days' supply of wood and provisions, and leave room for the cook to move about.

The launch was about twenty-five feet long with most of its length roofed over and protected by side curtains. It carried a four-cylinder twenty horsepower engine, a whistle blown by the exhaust, and a small acetylene searchlight. Its draft was about 2½ feet and that of the houseboat something less than two. The two boats were lashed together side by side, the launch at the left, and a small skiff was towed

THE PARTY AT WHITE'S BLUFF ON THE WARRIOR RIVER, FIFTY-TWO MILES BELOW TUSCALOOSA.

behind. With this outfit and the full load of passengers and baggage, we could make about five miles an hour in still water.

The problem of sleeping accommodations for a dozen men in such small quarters was solved as follows: The six oldest men slept on cots placed crosswise of the main cabin, which they almost filled, and the cook had his bed in the kitchen. The preacher and I slept side by side in the launch, just aft of the engine, where the space was so narrow that the edges of our cots overlapped an inch or two. The navigator, who owned the launch, lay on the floor between the seats forward of the engine, and over him three planks placed across the combing and suitably secured supported one cot during the first few nights and later another one when the membership of our party was increased by one.

We had no adequate protection against mosquitoes, a fact which caused some of us some apprehension, but we were assured by the more experienced members of the party that we would not be troubled by these pests at all, and their predictions proved to be correct. The nights on the river at that season were rather cool and damp, and the early morning hours foggy, but most of the days were simply perfect as far as weather was concerned.

We embarked on the Warrior River at Tuscaloosa on Oct. 7. About the only witness of the departure of this memorable expedition was the photographer of the Alabama Geological Survey, who took some pictures of us and promised to have prints waiting for us at the first place where we called for mail. We were pretty well equipped for snapshots ourselves, having five or six cameras with us, of various sizes up to 5 x 7. One or two of the men also had guns, with which they hoped to add some of the waterfowl to our larder.

Tuscaloosa is 361 miles from its seaport, Mobile, by water (about half that distance in a straight line), and as the river falls only about ninety feet in that distance, when the water is low the current is rather sluggish, perhaps a mile or two an hour. In spring it often rises as much as sixty feet at Tuscaloosa and a proportionate amount further down, but at this time the river was very nearly at its lowest stage, a condition which gave us the best possible opportunities for examining the banks, but seriously hindered our progress at some places. We of course traveled only in the day time, and the greatest distance covered in a day was forty-nine miles. We had with us excellent maps of these rivers, with every mile marked, so we always knew exactly what progress we were making.

For the first two or three miles below Tuscaloosa the river happens to be straight, but beyond that we could hardly ever see more than a mile ahead, and usually not more than half a mile. The average width of the Warrior for a hundred miles or so below our starting point is probably a little less than a hundred yards. The banks for the first fifty miles are mostly clay, but either high or densely wooded or both, so we could see very little of what kind of country we were passing through. Few houses are built close to the river, and we sometimes traveled for hours without seeing one. Ferries were more frequent and steamboat landings still more so, but some of the latter were visible only to the practiced eye, as they often consisted merely of a small clear space on a sloping bank with perhaps a tree or two near by showing the marks of ropes. About four hours after starting we passed under the only wagon bridge there is on this system of rivers below Tuscaloosa. After leaving Tuscaloosa county the river forms a county boundary all the rest of the way to the Gulf, and there is probably not enough communication by wagon between two counties to warrant the expense of a drawbridge. A man who happened to be crossing this bridge at the time gazed at our strange craft in astonishment until we disappeared around the next bend.

The most conspicuous trees at the water's edge were willows, and where thousands of these had been drowned by the slipping in of clay banks, their dead tops effectually prevented any landing. Where the banks were a little firmer, a small crooked tree known as the water elm usually overhung the water. A little further back multitudes of cottonwoods, sycamores, birches and white maples were nearly always in sight with occasionally a few cypresses.

On the higher banks above the reach of floods short leaf pines, water oaks and sweet gums could usually be seen. Mistletoe grew on most of the broad-leaved trees along the river, especially the cottonwoods. On low and muddy banks the swamps were generally effectually screened from view by canebrakes or a dense tangle of vines. Swamps, however, are few and far between in Alabama, the rivers there nearly all having high banks.

We saw more birds in the first two or three days than we did later. Diedappers (a species of grebe) could nearly always be seen swimming in small flocks, but as their flesh is not considered fit to eat, we did not molest them. Ducks, sandpipers, herons and kingfishers were also frequent, and two of the ducks were shot and eaten at different times, but one of them turned out to be pretty old and tough. This was the only wild game we secured on the trip. Fishing was not attempted.

At every bluff which looked at all interesting to the geologists we tied up to the most convenient tree and stopped from a few minutes to an hour or more, so that we averaged only twenty-six miles a day. On the first day there were few rocks to be seen, and in spite of our rather late start we made thirty-six miles. It was almost dark when we stopped, but our searchlight was brought into requisition and enabled us to find a suitable tree to make fast to. A steamboat had passed up the river a few minutes before, making waves which shook us up somewhat, but we had no disturbance of that kind during the night.

The next morning we awoke to find a gentle rain falling, which continued most of that day and the next. The principal effect of the rain on our work, besides its interference with photography, was that whenever we went ashore on that day and for a few days thereafter, we brought back to the boat about a pound of mud on each foot, which made the deck rather slippery and the gangplank disagreeable to handle.

At breakfast time we passed through the first lock below Tuscaloosa, which is called Lock 9, as it is to be the ninth counting from tidewater. This form of river improvement, the necessity for which is one of the penalties of reckless deforestation, has been used more extensively in Alabama up to the present time than in all the other Southern States combined. Seven of the nine locks between Tuscaloosa and Mobile were completed at that time, one of them so recently that ours was the first boat of any consequence to pass through it, we were told. The fall at each lock is about ten feet. Attracting the attention of the lock tenders to our approach (the principal purpose for which our whistle was used), making fast to the cribs at the head of the lock while it was being filled, and then to the inside of the lock while it was being emptied, etc., usually took us about twenty-five minutes, during which time we were asked the prescribed questions about our tonnage, cargo, destination, number of passengers, and we always took advantage of the opportunity to ask a few questions ourselves.

On this second day we saw a dead alligator floating near one of the locks, but no live ones were seen on the whole trip. They probably never were very numerous so far inland, and if we passed any the noise of the engine would have given them plenty of warning of our approach. Lock 8 was passed just after noon on Thursday, and Lock 7 about an hour before we stopped for the night at Choctaw Bluff, which was about forty-five miles from where we started that morning.

By this time we were in the black belt or prairie region, where the whole country is underlaid by the so-called rotten limestone, which makes steep chalky bluffs on the rivers and a gray clayey soil on the level uplands. This soil is or has been very fertile, in which empty wagons have been known to become stalled. On the morning of the 9th, one of the two Government geologists had to leave us in time to catch a 9 o'clock train at Eutaw, six miles away across the prairies, and there was no way of getting there at that hour except on foot. We were powerless to assist him further than by giving him directions about the road, and what to do if he got stuck in the mud, and we had to go on and leave him to his fate; but the fact that it had then been raining only about thirty hours and not very hard was in his favor, and we learned afterward that he made the desired connection.

The bluffs in the prairie region, although quite interesting from a scenic standpoint, are all much alike and poor in fossils, and the sticky mud deterred us from doing much exploring on foot, so on this third day, Friday, we made our best day's run, forty-nine miles. Two locks were passed, but we found them both full of water already, probably indicating that the last boat preceding ours had gone in the opposite direction; one of them detained us only twenty minutes and the other still less. About 100 miles below Tuscaloosa we first caught sight of the Spanish moss, which is so characteristic of the forests of the low country of the South, especially in damp or calcareous regions. This "moss," which is really a flowering plant and belongs to the pineapple family, did not appear in abundance, however, until we got into the Tombigbee.

In mid-afternoon we drew near to Demopolis, the largest river town (and at the same time the only one right on the banks of the river) between Tuscaloosa and Mobile. It is 131 miles from the former and 230 miles from the latter by water, and is located where the Warrior River empties into the Tombigbee, and on the left or

east side of both streams. Two miles east of Demopolis by rail and six miles above the town by river is a big plant for the manufacture of Portland cement from the rotten limestone, located just here on account of the combination of river and railroad transportation facilities with an unlimited supply of raw material.

The rain having stopped by this time, four of us landed and spent some time in looking through the cement works, the first and as yet almost the only one of its kind in the State; then walked on to town and called for mail and telegrams and bought a few supplies, while the boat was going around the six-mile loop and through Lock 4. We picked up the man from Birmingham who had arrived by rail shortly before, and went down to the steamboat landing on the west side of town, expecting to find the rest of the party there ahead of us, but no boat was in sight. After waiting about an hour I started up the left bank of the river to seek tidings of the missing ones, and I had gone scarcely half a mile before I met the leader of the party coming down the river in a skiff with a negro boatman to announce to those waiting at the landing that our troubles had begun.

The boats had passed through Lock 4—which is just below the mouth of the Warrior River and about a mile above the Demopolis landing—all right, but immediately below it the water was so shallow on account of the dry season and the uncompleted condition of the next two locks below that our progress was halted for the time being. There seemed to be water enough for the houseboat, but not quite enough for the launch. Darkness came on about the time this state of affairs became known to all of us, and after considerable discussion of ways and means with the lock tenders, who happened to be friends or acquaintances of some members of our party, we retired, preferring to survey the situation more thoroughly in the morning.

We were now on the Tombigbee River, a placid stream about 200 yards wide, which, although not exactly far-famed, has excited the admiration of naturalists and the eloquence of statesmen. At least one oration inspired by it in recent years has become a part of history. On Feb. 1, 1907, one of the Congressmen from Mississippi, in which State the Tombigbee rises, made a speech in the House of Representatives on behalf of an appropriation for deepening this river, and the other members were so charmed with his eloquence that they gave him unanimous consent to continue beyond the allotted time. He is quoted as saying among other things: "I love the Mississippi, * * * but the Mississippi, my friends, sinks into insignificance in its grandeur and its beauty * * * in comparison with the Tombigbee. * * * I have heard its murmuring waves as they went singing their beautiful song toward the Gulf since early childhood, and they have continued to sing along the path of my life and have given me inspiration to love the beauties of nature." The New York Times the next day devoted three-quarters of a column to this speech, its Washington correspondent saying in part: "One of the most tremendous speeches in the history of that body was delivered in the House of Representatives this afternoon. The members rose and clapped their hands in gleeful admiration at the eloquence of * * *, who spoke as no man has before spoken upon the beauties and glories of the Tombigbee River. Poor old DeSoto! His bones, washed these 400 years by the Father of Waters, were impelled to heave in envy and regret that the Mississippi after all these years must be laid in the shade by the grandeur of the Tombigbee."

Saturday morning dawned bright and clear. While some of us were discussing plans of campaign, and watching to see if the rains of the last two days were having any effect on the river, others spent the morning walking about the city, sending off mail, or botanizing along the river banks. At Demopolis the chalk cliffs of the prairie region are seen at their best. They are as much as fifty feet high in some places, very steep and smooth, and afford no foothold to any one who should essay to climb them without digging tools or other artificial aid. The rock of which they are composed is the rotten limestone previously mentioned (also called Selma chalk by geologists), light bluish gray in color, and soft enough so that one can dig into it with a knife. These cliffs are a favorite subject for the local dealers in souvenir cards.

Shortly after dinner a delegation of three or four prominent citizens, having just learned of the presence of our distinguished party in their vicinity, came out to the lock with carriages and offered to drive us around and show us the sights while we waited. But we were then nearly ready to attempt the passage of the first shoal, and did not feel like taking any more time for diversions, so we thanked them kindly and dismissed them as courteously as possible.

Most of the afternoon was spent in a strenuous—and successful—attempt to move our boats down to the Demopolis landing. But for the generous assistance of the lock tenders, who first opened their water gates to temporarily increase the depth of the water below the lock a little, and then piloted us through the dangerous swift shallow places, we might have had to abandon the expedition there, or wait for the winter rains to give the river sufficient depth. The launch was taken first with a 500-foot rope attached to its stern and paid out slowly from trees and stumps on the bank, so as to keep it from swinging broadside to the current whenever the bow ran aground. Those who accompanied it had to do some swimming and considerable wading, not without danger to themselves and considerable anxiety on the part of those who had to stand and hold the upstream end of the rope and could not see plainly what was going on at the launch.

Bringing the launch over the mile of gravelly shoals between the lock and the landing was finally accomplished in about two hours. Then those of us who had stayed with the houseboat brought it down over the same course, a comparatively simple process, requiring only the constant use of poles to keep it away from the banks and shallowest places and pointed in the right direction. This took about forty minutes. The fourth State geologist had arrived meanwhile on the afternoon train, and was waiting patiently at the landing, hardly knowing what the trouble was. By the time he had been assigned to his quarters, the boats lashed together again, some groceries and gasolene put aboard, and the water bottles refilled from an artesian well near by, darkness had come on and we enjoyed a well-earned rest from our labors.

As we had been informed that there were still some troublesome shoals ahead of us, we thought somewhat of leaving our launch at Demopolis and engaging one of lighter draft to take us down the Tombigbee, but we were unable to find one to our liking, and finally decided to push on with what we had and take the chances, knowing that conditions were bound to improve gradually as we approached the next completed lock which, however, was still 120 miles away.

Sunday morning the weather continued fine, and after making a few more inquiries about the shallow places ahead, we got under way. We soon left the chalk bluffs behind and came to others of purer limestone, the damp shady portions of which were beautifully decorated with maiden hair ferns and other comparatively rare and interesting plants. We had no trouble worth mentioning with shoals that day, but were obliged to proceed cautiously in several places. Shortly before 2 o'clock we reached Moscow Bluff, on the right bank of the river, about fifteen miles below Demopolis, where the geologists found so much to interest them that we spent the rest of the afternoon there.

Just below Moscow Bluff, Sucarnochee Creek comes in from the west, bringing a quantity of sand and gravel which makes the river very shallow (in dry seasons) for several hundred yards. At the time we passed one could easily wade across. The first thing to be done at this and similar shoals was to send two men ahead in the skiff to find a channel deep enough for the launch. One was finally located which would answer the purpose, except for a space of several yards near the lower end, where it was just a few inches too shallow. A sharp bend in the channel near the shallowest part also complicated matters somewhat, but we had to make the best of it. This channel being too far from either bank for us to make use of trees to fasten our long rope to, we drove a stout stake in the middle of the river, where the water was only a few inches deep, and stationed one man there to keep it in place and manipulate the rope. Getting the rope in position in the swift current was no small matter and consumed considerable time. However, the launch was finally guided through the crooked channel by the same method used at Demopolis and without mishap. When the shallowest place was reached, as many of us as could conveniently take hold of the boat—already lightened of as much of its load as possible—lifted it over the bar "by main strength and awkwardness," and then our worst trouble was over. The houseboat was quickly made fast to the launch again, and at 4:15 we got away from the Sucarnochee Shoals.

Half an hour later we came to Black Bluff, on the west side of the river, where the geologists found enough to keep them busy until nightfall. Black Bluff is about sixty feet high and composed of a dull black shale, which weathers into fine soft flakes of the same color, reminding one of the refuse from a coal mine. Scattered through this are many dark ferruginous concretions of various sizes and curious shapes, mostly flattish and rounded, some of them looking very much like turtle shells at a little distance. The fossils in this bluff curiously enough are nearly white, and therefore easily picked out of the black flakes among which they lie loosely. The Black Bluff formation weathers into a stiff gray clay which is the characteristic soil of a narrow strip of country in Alabama and Mississippi known as the post oak flatwoods.

Lands of the Antarctic

By GEORGE BIRD GRINNELL

[In these modern days it seems that few spots remain on the earth's surface that are not being utilized by man, and fewer still where man has not penetrated and reported something on their life and topography. The North Pole has been found, and brave efforts are made to reach the South Pole. Within the last few years the Dark Continent has been opened up from many sides, and, except in portions of the north, is coming to be full of civilized people. The Arctic regions of Alaska have been overrun by hordes of prospectors, miners and settlers. Railways are being built through portions of America a few years ago hardly known. South America supports a large and constantly growing population. Perhaps only in the most arid regions of Asia, or among the stupendous mountain peaks of the Andes or Himalayas, are there still locked secrets about the main physical features of the earth's surface.

More astonishing, perhaps, than anything else is the way in which the extreme northern and southern portions of the earth's surface are being turned to man's account. It is announced that a variety of crops may be grown in interior Alaska, and that in Canada wheat may ripen almost as far north as the land of little sticks. Far away in the South Seas and toward the Pole are the fertile islands of New Zealand, and still beyond them those barren regions whose character is indicated by the name of the largest member of the group, Desolation Island—the Kerguelen Archipelago. Even these islands are to be subdued by man and to contribute to his support.

Here are two accounts, separated by thirty years of time, which show interesting contrasts.]

THE EXPLOITATION OF DESOLATION ISLAND.

KERGUELEN or Desolation Island is one of a small archipelago which lies about midway between Australia and Cape of Good Hope near the borders of the Antarctic Ocean. It is the chief island of this group and contains over 1,200,000 acres. It is largely covered with mountains, between which steep-sided valleys run down to the sea, and a considerable area in the center of the island is covered with extensive snow fields, from which many glaciers reach the salt water. The mountains range from 2,400 to over 6,000 feet in height, the coast line is irregular, and there are many well sheltered deep and safe harbors. The scenery is wonderfully beautiful. Kerguelen Island was discovered in 1772 by a French navigator, Kerguelen Tremarec, who supposed that he had discovered a great southern continent. It was visited by Capt Cook and by Sir James C. Ross, and in 1874 a number of scientific expeditions called there for the purpose of observing the transit of Venus.

The center of the island has not been explored, but it is known that there is no timber on the island, though at one time it must have been thickly clothed with forest and other vegetation, which has been destroyed by volcanic action and possibly by the submergence of the land. Situated at a great distance from any other land, the island possesses many biological features of interest. The birds are almost all sea fowl—penguins of various species, a teal duck peculiar to Kerguelen and to the Crozets, together with a multitude of petrels, gulls, albatrosses, terns and a sheathbill.

Though in old times a great resort for whalers and sealers, of late years it had been little visited by such ships. Fur seals were once found there and so, too, are elephant seals, those curious and great beasts which have often been so nearly exterminated for the oil they yield. The climate is very moist, and the growth of grasses, mosses and other plants luxuriant. A peculiar plant is the Kerguelen cabbage which grows everywhere. It looks somewhat like a garden cabbage and its roots are partly above ground.

In the struggle to find new lands to settle, Kerguelen Island was long overlooked. This is not strange since it lies in latitude about 49° and was long reported as possessing an arctic climate and being covered only with moss. Nevertheless, for a number of years two Frenchmen, brothers named Bossiere, have been endeavoring to interest the French Government and French capital in exploiting the island. It came about in this wise. The brothers had spent the years 1881 and 1883 in Southern Patagonia, where they found the conditions very favorable to the industry of sheep raising. Millions of sheep are now grown on the pasturage of Patagonia and the plains of Northern Tierra del Fuego, lands formerly supposed to be mere deserts. This discovery suggested to the brothers the possibilities of Kerguelen, and they endeavored to secure the aid of the French Government for this enterprise. The Government declined to furnish financial aid, but gave them a concession of the islands and all accruing profits for a term of fifty years. René Bossiere, the elder brother, is a ship owner, and his father was the last Frenchman engaged in whaling, which has not been practiced by the French for nearly fifty years.

The brothers, after a study of conditions in Patagonia, succeeded in enlisting from French capitalists financial support to the amount of $150,000. An expedition with two small vessels was sent to the island and René Bossiere, who had gone to Patagonia, was to have been picked up at Magellan Straits. He waited there three months, only to learn that the timid commander of the ships had turned back to France, deciding that he had started too late in the season. This failure so discouraged the French capitalists that they withdrew their support. Nevertheless, the brothers set to work to do it all over again, pointing out especially the possibilities of the whale fisheries in the waters near Kerguelen.

Finally some Norwegians took an interest in the matter and money was raised to fit out two small French whalers, while the Norwegians sent a steamer of two thousand tons burden. The Bossiere vessels reached there and landed and turned loose some stock as an experiment—twenty ewes, two rams, three horses and some hogs. Feed was found in abundance; enough to support many thousands of sheep. The sheep and hogs were left there and in the following year the sheep were found to have doubled, and the lambs seemed strong and hardy. The fodder provided for the hogs was neglected, the animals eating the roots of the Kerguelen cabbage. The winters are by no means severe, the mean temperature being but little under the freezing point; in fact, Mr. René Bossiere describes the climate as somewhat resembling continuous autumn. The lowest temperature observed by two men who spent the winter of 1908-09 on the island was —17.6 F.

The whale fishery has proved very successful, for 232 whales were captured during the first season. Among them was a whalebone whale, a species which had been supposed to be extinct in Southern waters. The seal fishery is likely to be important and the capture of sea elephants, which are reported to be extraordinarily abundant, may be very profitable. Coal has long been known to exist on the island, but the extent and value of the deposits have not yet been determined. The coal is good enough to burn well in stoves and in the furnaces of the steamers, and will thus furnish fuel for the inhabitants of the island.

On the whole, however, the brightest prospects for success and profit seems to lie in the breeding of animals. Sheep, cattle and hogs ought to do well.

CAST AWAY ON HEARD'S ISLAND.

A very different story of the Kerguelen Archipelago—a tale of thirty years ago—was published long since in FOREST AND STREAM and deals chiefly with Heard's Island, which lies a little to the south of Kerguelen Island but has the same climate and similar conditions. It is told by John Easmond, the second officer of the bark Trinity, 317 tons burden, which sailed from New London, June 18, 1880. The ship was owned by Lawrence & Co. She had fifteen hands. At the Cape Verde Islands nineteen Portuguese negroes were shipped. She was bound for Heard's Island for sea elephant oil.

Easmond was an old seafaring man, born in Newfoundland in 1835, and more accustomed to making entries in a ship's log than to writing manuscript for the printer. His quaint English reads almost like that of De Foe, and his account might be a chapter taken from Robinson Crusoe.

The old Trinity had fair weather until she reached latitude 42° south, "and then we had to encounter hurricanes, heavy gales and strong storms of sleet, hail and rain at times, with sea according, but the old Trinity braved it well." Further to the southward the weather grew worse, but when it was not blowing hard "we could see the penguins in great quantities in the water, going after the fashion of leap frog, and at night, in fair weather, their splashing could be heard at the distance of half a mile."

They reached the island of Desolation, but before they could make harbor a hurricane came up and drove them about seventy miles to the southeast. At last, however, Sept. 4, 1880, they moored ship in safely in five fathoms of water at Pot Harbor. Here they remained some little time, sending down their upper spars and making ship light for anchorage. They landed three month's provisions, and then awaited a favorable time to sail for Heard's Island, which they reached on Oct. 2, at Crinton Bay. There they landed four men, with three months' provisions and left them to kill what elephants they could find, and pack the blubber in casks. The ship was to return and take them off about the first of January, 1881.

From Crinton Bay they sailed down the coast to the southeast end of the island and anchored ship off the main beach. The sea was too high to permit boats to land "and each day the weather was no better nor the water any smoother." By Oct. 16 there was every indication of a storm and on the morning of the 17th the wind blew stronger and stronger; "the gale still increasing to a hurricane we veered out all the cable on both anchors. The ship now began to drive and drag her anchors toward a dangerous reef. She was shipping much water and was leaking; pumps duly attended."

As she continued to drag her anchors, labored heavily and was leaking, the captain called a council of officers and crew in his cabin to decide what was best to be done. It was impossible to clear the land on any tack and the conclusion reached was to run the ship on shore to save lives, so at 9:30 A. M. they slipped the cable and ran the ship for the beach.

"We were then a hard crew to look at—with a wild sheet of water on the starboard bow, and before us a wild beach to make, with death staring us in the face. At 9h. 40m. A. M. the ship grounded about fifty yards from the beach. The sea was very rough, and we could not lower the boat. Antonio, one of the Portuguese, volunteered to go ashore, and accordingly jumped overboard with the lance warp and made his way to land with the rope. Then, by hauling the main yards back, the ship wore around and brought her side to the beach, which made the water smooth enough to lower a boat in which many hands landed. Then we began to haul ashore what provisions we could get a hold of. Some lost all their clothes and all hands lost some, more or less; but we all landed safe, and got out about two months' prog with four casks of coal. None of us suffered severely, though seven of the negroes were frost-bitten. At about 9:00 P. M. all hands went to a shanty, where we made a fire, dried our clothes and then lay down to rest.

"At midnight I got up and walked out to see if our provisions were safe from the water. The wind had hauled around to the westward, and now blew a hard breeze off shore. When I came opposite the ship she gave a roll to windward, and a heavy sea coming in at the time, she floated and went off from the beach. I watched her for about half an hour and never saw her afterward. Her yards were clewed down, her sails not furled, her canvas adrift, gangways open and hatches off. She had eighty casks of coal aboard and must have sunk soon."

When the provisions were inventoried next morning, the castaways found that they had taken from the ship six casks of bread, four of coal, one barrel of molasses, one of sugar, eight of pork, some coffee, five pounds of powder and a bag of shot, with eight months' supply of tobacco. In other words, these men, ninety-five hundred miles from home, had two months' provisions.

Heard's Island, says our chronicler, is 312 miles from Christmas Harbor, Island of Desolation. It is thirty-five miles long and from three to five miles wide, narrowing to a sandy point on the southeast. A range of ice-covered mountains with a volcano 6,000 feet high in the center, extends across the whole breadth of the island six miles from its southeast point, and this range cut off the castaways from their companions at Crinton Bay. In summer, in the glaciers which covered this range, were seen great cracks, the bottoms of which could not be seen, and which prevented crossing in summer, while in winter the weather could not be depended on. Cliffs and peaks of ice extended out over the sea and from time to time huge masses of this ice would fall into the water.

There are no trees nor bushes on the island and so no fuel, though there are tangled grass and briers, and a plant which they called wild cabbage, and ate as such. Four shanties built some fifteen years before by elephant hunters from New London contained each a stove, and there were two sets of tryworks with several hundred casks. The crew was now divided up into five gangs and went to killing sea elephants, to barrel up the oil to be shipped whenever Captain Fuller should come, for Captain Fuller, of the Pilot Bride, and Captain Williams, of the bark Trinity, had promised to look out for one another.

The nineteen Portuguese negroes who had been shipped at the Cape Verde Islands, says Captain Easmond, "had never seen frost nor snow before, but they stood the cold very well and were a match for me, and when I say that, all seagoing men who know John Easmond know what it means. They wore nothing but canvas pants to their skins, shoes with wooden soles and skin uppers and no stockings. They were strong fellows and good workers, and would lug six or eight pieces of blubber weighing 150 pounds suspended on a pole three feet long on their backs. They stood hardships better than the average of the white men.

"Being busy with our work of killing the elephants—we got altogether before leaving the island five hundred barrels of oil—the weeks passed away and it came time to expect Captain Fuller in the Pilot Bride. Then I remembered the words of the Apostle Paul, 'keep wide awake and watch, for you know not what time the ship may come.' This was on the 28th of December, but no ship did come and we thought it bad that we should be left on that solitary island to spend a winter on account of Captain Fuller's neglect. We had not much books to pass away the time, only a few pages of

TOURISTS AND YELLOWSTONE PARK BEARS.
From a photograph by J. Berry.

Harper's Weekly, which we would read in stormy weather, and for outside amusement we would be patroling the beach for something to eat, of which we always found plenty, such as it was, elephants, penguins and wild cabbage. We would burn the blubber of the elephants as fuel for cooking.

"We had a trifle of powder and duck shot and in one of the cabins I found a Remington double-barreled gun, which had been left there some years before. In cleaning it, I broke the feather spring of the lock, so that the trigger was of no use; but I managed to shoot by holding the hammer under my thumb until I could level her on the object and then letting go. After a short practice this answered about as well as if I had had the use of the trigger. When my shot gave out, I used small stones for ammunition. My gun lasted until August, 1881. I had no timepiece nor compass, but plenty of nautical instruments, so I set to work to supply myself with a time-keeper. With a cooper's compass I drew a circle on a board eighteen inches in circumference and put a peg in the center of it. Then with my quadrant I found the apparent time and marked it off where the shadow of the peg showed on the circle, and by repeated observations I made a good time-keeper; in fact, the Captain used to come over from his shanty to set his watch and clock by my sundial. I also made a compass by the sun's amplitude. So I was well equipped."

And now came a serious trouble, for while five of the white men went to Rocky Beach, about six miles distant, for elephant meat they were overtaken by a heavy storm of rain and sleet, and at night three of them returned, so exhausted that they could give little account of the other two. A search party the next day found the two dead men, who were buried there.

In May, 1881, there was a terrible eruption of the volcano, and John Easmond says, "I was pretty badly scared. There was a great deal of excitement on the island while this thing lasted, and we all watched the flames with much anxiety, until finally the blaze died down and so did our fears vanish. This eruption was a grand and awful sight to see, but the next time I want to be further off."

They had now been a year on the island, and in all this time had heard nothing from their companions in Crinton Bay, for the chain of glaciers which lay between them kept the two groups of men apart. At length, however, the loneliness of the small party at Crinton Bay became too much for them; they built a boat from boards pulled off their shanty, and two of the white men paddled along the coast to the southeast point of the island. Their boat was a strange model, either for safety or speed. She was square built, 7 feet 7 inches long and 3 feet 3 inches wide and about 1 foot deep. After a few days' stay they made their way back again.

All this time the main party had little to do except to hunt for food. This kept them busy much of the time, and "when we were not robbing the penguins' nest or killing elephants, we were looking out for a ship to heave into sight and take us off the island, or else we were finding fault with the weather, which was bad all the year round, being foggy and windy and rainy and chilly, with sand storms blowing that will in time wear through the boards of a shanty if it is not kept well banked up with tussock and turf. In November of this year we had a sorry game of baseball, using a wooden ball to play with; but there was no fun in it for us and we did not try it more than that once.

"First when we began to hunt penguins, when they would see us, they would come toward us; but it did not take them long to know our character, and then they would give us a wide berth. There are four kinds of penguins on this island, the Johnnies, maccaronies, rock-hoppers and kings. These birds have wings from eight inches to a foot long; they cannot fly nor run very fast on the land; any man can catch them; but when they get into the water and get their flippers into motion they would run down any locomotive.

"The king penguins were from 2½ to 3 feet in height, and a right proud bird to look at. They did not breed on the island.

"The maccaroni penguins, smaller than the rock-hoppers, went away from the island for nine months in the year, going off to the south, so people must conclude that there is land to the south of Heard's Island; and, for one, I should like to go down there and explore for it.

"The Johnny penguins were the most common; they were there in great numbers, and stood up in long lines, a quarter of a mile long—truly a cruel* sight to look at in any Christian country. They came ashore and stayed all day in the breeding season. The best time to catch them was just after sunset. They live on fish and were not so good to eat as the sea hens, but we thought them pretty good because they were all we had to stand by. They sleep lying on their bellies. It was always very hard to catch a penguin asleep, for they would be sure to hear you. They bred on the level tussock, of which their nest was built; and they would go right on making their nest when we were standing by within ten feet of them. They would lay two eggs each when we gave them a chance. Their eggs were our principal food. To be sure and have them fresh, we would rob the nest one day and then go over the same ground in two or three days again. The Johnnies would keep on laying as long as we would rob their nests. They would keep at it until their eggs had no yolks; and when they could not lay any more they would roll a stone into the nest and sit on that. They did not propose to move so long as they were accommodated, even if their furniture was taken out of the house. We wanted fresh eggs all the time, but at last we would find only stones; but in November we generally got enough eggs to last us through December. The rock-hoppers would only lay one egg; if this was robbed that was the end of it.

"About the first of November the penguins would begin to lay, but the eggs were not plenty until the fifth or sixth of the month. Then it was useless for any one to get sick, as we had to go to Rock Beach, six miles away, for the eggs. About 150 of these eggs made a fair load for a man to bring. When the weather was fair we would go in gangs for this glorious food.

"Many of the eggs that I stored in my shanty would be broken, and I scolded my Portuguese for their carelessness, but we found one day that the rats were to blame for it. When we first landed on the island there were only a couple of rats in the shanty, and by the time we left there were two hundred of them.

"The gale birds came Nov. 18 and were with us until December. There were millions of them. They would come flying in for three hours at night, one-half hour after dark, or on moonlight nights for an hour. They are a white bird with black saddle on back and red beak and feet. They bred on the island, burrowing into the level tussock and some of them into the banked-up sides of our shanties. These burrows go down about three feet, slanting into the ground, and are just about large enough at the entrance for a man's hand to get into. The he and she both went into the burrow. It was wonderful how when they came ashore they would pitch right down, each one at the mouth of his own burrow and dive right in. When they came out again they would fly from their burrows directly out to sea. They lay one egg, and when the young bird comes up out of his hole, he waddles around two or three hours and is then ready to go to sea—the first time he sees the light he is just as good as his parents, except that he hasn't seen so much of the world—and he won't see much of it either if a sea hen gobbles him up and takes him down, feathers and all. The gale birds look much like a small chicken; when you take their feathers off they weight about a quarter of a pound; they did not pay for the picking. They have a squeaky note, and are in fact good for feathers and noise and nothing else. We made beds of their feathers, and I gathered about two hundred pounds of them. Gale bird is their most common name because they are always seen in a gale, or when seen it's a sign that a gale is coming, but all New London and New Bedford sailors call them whale birds.

"The ice partridges were with us from June 1 to Sept. 1. Some of the men called them white paddies, they are a guide for sailors to show them where the seals are on the ice. They ate meat and the seeds of the cabbage. They were very tame; we could kill them with sticks and sometimes I shot them from my cabin; their meat was very tender. About the first of September they would fly up the island, but whether they left the land I don't know, but think not, for there was no other land nearer than Kerguelen and the prevailing wind was from the north, so that while they might have come from Kerguelen it would have been tough work for them to go back again.

"The sea hens came in September, built nests like the partridge, laid two speckled eggs and hatched in December and left the island the first of June. Their flesh tasted very much like that of tame duck, of which they were the size. We usually boiled them about an hour. They would at first be very tame, but after a month ashore they came to know our ways. We killed some with the shotgun; when one was dead we threw it up and the rest would hover around it; but we got the most by snaring them. We would take a line thirty fathoms long, and making a noose at one end, would put into it on the ground a piece of blubber, then when they stepped into the noose, we would haul away on it, often getting two hens at a time.

"Other birds that stopped on this island all

*Strange or wonderful.

the time are called the stinkers. They are carrion birds, and, of course, not good to eat. They are about the size of a turkey, and would eat blubber until not able to fly. The stinkers were with us all the year round, and many a barrel of blubber they scoffed (ate). They have a very keen sight; sometimes when we would kill an elephant, no stinker was to be seen in any quarter; but within five minutes they would heave in sight and soon would be squatting around waiting to take their turn at the carcass. I remember that one time a barrel of blubber was left unprotected for an hour and when we came back there was none there, the stinkers had made way with it. They were a terrible nuisance and gave us much trouble. The captain saw them breeding at Long Beach.

"The shags had a rookery on the iceberg near the water. Every morning about daylight a crew of them would start off and make a circular flight about fifteen miles out to sea. They are thus a good guide to the mariner making Kerguelen or Heard's. The shags would be gone on this voyage two or three hours, when they would come ashore, and another crew would go out. They lay on the bare ice or in the tussock, breeding in January and into February and leave the island the last of March, from which time to January again they would live on the sea. They were fishy and tough, and though we tried, we could not eat them. Two or three of the Portuguese once ate a couple of shags that had been boiled a long time, but they did not know what it was."

There were a few other birds on the island, gulls which bred high up on the cliffs, cape pigeons and a few Mother Carey's chickens that stayed no length of time. Few fish were seen, yet on two or three occasions after the fall of some tremendous pinnacles of ice some fish would be hove ashore dead or so stunned as to be easily caught.

For fifteen years there had been here no seals, it was said, but nine fur seals were taken which came in February, and, if they had not been killed, would have left in May. A few sea leopards—also seals—visited the island from time to time. The blubber is poor, but good use was made of the skins for mittens, stockings and bootlegs.

"As I have before said, we had nothing on Heard's Island for amusement but to be patrolling the beaches for something to eat; and as the weather during all these months was mostly cheerless and gloomy, we all came to be in despair of keeping up our spirits. Heard's Island is as barren and bleak and dreary a bit of land as Desolation and deserves the name equally with that.

"But the thing that troubled us most of all was that we did not know whether we should ever make out to get off from our island prison, nor whether we should ever see our wives and children any more; and we thought it hard that neither Lawrence & Co. nor the Government should send a relief ship to take us off the island. But none came; and so it went on until we had been castaways fifteen months; and it was a sorry New Year's day we had when 1882 came and found us still in our cabins, or making our way along the shore on the lookout for a vessel. What added much to our misery was that we had been now eight months shut up on this island without tobacco; and many of the men thought that this was the greatest hardship of all, as in truth it was.

"Among the Portuguese was a big black fellow called Bernaline, an artful rogue, who was always up to some deviltry. He once gave a false alarm of a ship in sight, and for some prank of his, on a certain occasion I had forbidden him ever to set foot in my shanty again. He never dared to show himself there until one day, the 12th of January, he came running in, greatly excited and grinning all over.

"'Get out of this, you black rascal,' said I, starting toward him to throw him out, 'and never let me catch you in this shanty again.'

"'You see ship?' cried Bernaline.

"'Ship? Where?' and I ran out.

"'There!' and looking to the northwest where he pointed, sure enough I saw a man-o'-war rounding to, for the gangs in the other shanties had already seen her and hoisted their signal, at which she had hove to.

"But it wasn't half a minute before I had the flag run up to the peak of my own signal pole, and when the ship saw this she made it out to be the true signal, and rounding the point of the island, she came to and anchored a mile to the eastward of my shanty and a half mile off shore.

"We were all too happy then to sleep much that night, and by daylight next morning all hands had assembled on the beach near my shanty. At seven o'clock the boat's crew came off from the ship. Taking up a big sea elephant's bone, I held it high and carried it along the beach until I came to a safe place to land, where I dropped it and then the boat came ashore.

"'Man-o'-war?'

"'Yes.'

"'English?'

"'No; American.'

"'Have you any tobacco?'

"And when the officer handed it over, it did not take us long to get it into our mouths, either, as far as it would go among so many.

"The ship, as we then learned, was the United States ship Marion, which, upon petition of our families, had been despatched by the Government 'to go to 53° S. 70° E., Heard's Island, in search of the crew of the bark Trinity, supposed to have been cast away there,' and the Marion had found us.

"We were then taken off from our solitary abode; and all hands went aboard the Marion. Then indeed all our troubles were at an end as we steamed away from Heard's Island with the Stars and Stripes over our heads and bound for our far distant home. All our old tattered rags were hove overboard, and each one of us was dressed in a navy suit of blue.

"We put in at Crinton Bay and took off the gang there and then held our course to Island of Desolation; and thence put out for Cape Town. I speak for every man in the Trinity's crew when I say that we shall always remember with gratitude the officers and men of the Marion who were so kind to us, and we shall always love and regard the Stars and Stripes."

The Inspector Said

By NEWTON CHAPIN

"NO," replied the Inspector, as he sank companionably into the seat beside the Doctor, while I rearranged my knees to alternate with his in the narrow space between the train seats: "No, I don't know as I can tell you much about the trout streams here nowadays. I used to whip them myself now and then, when I was younger, and there was some things that happened in them days—but there, I guess you ain't looking for history."

My cigar case came out at once, while the "Judge"—his profession was the law, whence the appellation—simultaneously extracted his match-box and completed the conquest. The ensuing formalities over, we settled back to drink in whatever oracular statements might be forthcoming. We were on our annual fishing trip to Lake Obabika, and the subject about to be expounded was uppermost in our thoughts.

The narrator was the Canadian Inspector of Customs and had gone through the coaches at the border to look over the hand-baggage. He passed our bags and rod cases, and a cordial invitation from the Doctor brought him back to us when his tour was finished. He looked to be a promising fourth to our party, as he took the remaining space in our doubled train-seat. He was to ride as far as Welland, where he would take the next train back to the border.

There was just about an even six feet of spare, lanky frame, surmounted by a grizzled head, erect on a corded sinewy neck. His eyes, gray-thatched, and deep set in the rugged, weather-beaten face, looked out over a hawk-like nose with a glint of steely-blue, although a suspicion of a twinkle lurked at the corners, due, perhaps, to the numerous lines and wrinkles that focused there. In addition he possessed that authoritative bearing that invariably goes with a uniform, from an elevator-boy to the commander of an army. Whether this bearing is the influence of the uniform on the wearer, or its effect on the unofficial beholder, I have never quite decided. There is a little experience of the Doctor's, in this connection—but I must get on. In short, then, the Inspector seemed the embodiment of the Canadian wilderness. The "Judge," with an eye to a long contemplated June outing, had opened the conversation with a question as to the likeliest trout streams in this section:

"No, there ain't no trout these days like we used to get when I was a boy on the farm. Our place was twenty-five mile or so west of Hamilton, and they was several good-sized runs in the neighborhood. What with the farm work and the chores we didn't get much chanst to go fishing, but once in awhile maybe we had a half day or so. The old man had learned me

how to tie flies and all that, and I used to practice casting sometimes in the duck-pond.

"I remember one time we was clearing timber a couple of mile back of the house, and had brought our lunch along, so we could make a full day of it. When noontime came along we lay off on the grass alongside a big pool in the Big Sandy, to eat and rest up. While we was talking the old man tossed in a bread crust, and it sank under and stayed under—never came up. I wasn't noticing especially, only I had that queer feeling in my mind that you get when something happens that ain't quite regular, and yet you don't take it in. The old man threw another crust in, and that one acted the same way. Then it come to me that they must be reason in the bottom of that pool why it didn't come up. I didn't say anything, but I crept up behind a big rock and dropped in a good sized piece, watching close. It went under, all right, and then a big dark shadow come up out of the bottom and there was a swirl, and the crust was gone. I called over the old man, and he watched another go the same way. 'Gosh,' says he, 'they must be all-fired hungry.' Then I asked him if my little brother Sandy and me couldn't come and try our luck the next morning. He was a little excited himself, so he said he guessed maybe we could.

"That night I got out my flies and tackle, and put them all in shape, and went to bed with my head full of trout. I woke Sandy up about three the next morning, and we started off, reaching the stream about sunrise. I saw the day was going to be bright, so I tied on a gray-hackle and a silver-doctor. I had picked out a big rock at the head of the pool that stood in the middle of the stream breast-high, dividing it in half, as it hid the best part of me and also faced the sun. I put Sandy over on the bank to the right with the landing net. I had an eleven-foot split bamboo rod that weighed ten and a half ounces—a shade heavy, maybe—but it gave me a good long swing for my cast. Then I was ready. I waded very quiet around behind the rock, got a good foothold, and began working out my line, a little at a time till I had about thirty-five feet, or maybe forty, and then I let her go for the middle of the pool. Gentlemen, as I sit here, them flies never touched the water. Three trout shot up from the bottom of that pool two feet clear, it seemed, of the water. It may have been a few inches less—I was too excited to notice carefully. Of course, they was only flies for two, and one of them got shouldered aside and flopped back disgruntled-like. The other two caught a-holt, and I was so dumbfounded I give a jerk that would have lifted a saw-log. There was a snap and one trout was gone, taking the fly with him. The other one sailed clean over my head into the white water back of me. By this time I had got back my head and I worked him back down stream into the pool and over to Sandy, who landed him and strung him up.

"Well, then I made up my mind that if they was more trout in that pool as hungry as them three they wa'n't no call for art and science, but I'd best get right down to a business basis. So I told Sandy to walk up stream till he was about thirty-five feet back of me on the same right-hand bank. Then I wired on the old gray-hackle with some fine piano wire. I turned a little so I could just reach Sandy on the back cast and the center of the pool on the forward cast. I was satisfied, this time, with one fly.

"I started in. At the first cast the hook caught a trout in the middle of his leap out of water, and I swung him carefully over my head to the bank, where I had put Sandy. He had him off the hook in a second, and back swung the hackle toward the pool. Another trout, and another swing to Sandy, and then back again to the pool. Sometimes the fly would lay on the water a half second before the strike came. Most always, though, it would be from six inches to a foot in the air. After the first dozen or so I found that if I gave a quick forward twist of the rod just before the fish landed on the bank behind me I could shake him off the hook, without waiting for Sandy to get him free. Then it was just one continuous movement, back and forward, back and forward, over my head, like this"—and the old man demonstrated with long sweeps of his arm—"and a trout at every swing. I never did see anything, not barring a pack of hungry wolves at the tail end of winter, as vicious as them trout.

"My arm was getting mighty tired, and I was just about to quit, having enough trout for a whole lumber gang, anyway, when all of a sudden Sandy let out a yell and the next thing I knew his bare legs was flashing past me like the spokes in one of them autymubble wheels. I glanced over my shoulder upstream, and there come lumbering over the rocks, with wicked red eyes a-gleaming, and white teeth a-showing, the nastiest looking black bear I ever see. I didn't wait to introduce myself nor pass the time of day. I hiked out after Sandy, leaving my rod on the rock and all them beautiful trout on the shore. There was a long stretch of straight water ahead, without a bend, and I kept to the left bank. I stumbled over a root and fell onto my hands. As I scrambled up I glanced back over my shoulder. The bear had stopped at the heap of trout. I knew he would never pass them up, and my nerve came back. Sandy was out of sight, and safe, so I thought I'd see what would happen. The bear was making a free lunch, chawing down the best catch I had ever made two at a gulp. I don't know how many they was, as I had been too busy to count, but when he finished his meal they wasn't even a head or a tail in sight. Then he yawned nice and lazy a couple of times, looked up at me and licked his chops, and then his mouth stretched out in the nearest thing to a grin I ever see on an animal's face.

"I had about four feet of line in my pocket, and a couple of hooks, and they was good young hickory about, so I cut a rod and rigged it up. Then I got out my knife and dug around in the soil, the bear keeping a lazy eye on me all the while. I turned up a couple of worms after awhile, and baited up. There was some brush overhanging a quiet spot in the stream and I stuck the rod through and let the worm sink gently in the water. Sure enough, it was taken, and I landed a pretty fair trout. I noticed the bear was getting interested. I tried again, and got another. The bear got up and began to edge up a little. I got nervous, but didn't give ground, and pretty soon I had three more. The bear walked slowly toward me. I tried a couple more times and got two more trout, and then I decided that they was only room for one where I was standing, and the bear seemed to like the place better than I did, so I strung my trout and left it to him. He wasn't hurrying—just seemed interested—so I didn't hurry. I saw him sniff around the holes I had made digging; then he commenced to claw up the ground. Pretty soon he stopped, sat back on his haunches, and seemed to be fooling with his claws. I couldn't make out what he was doing at first—looked as though he was trying to put on gloves. Then it struck me—that bear had dug up some more worms and had got them stuck on his claws. The last I seen of him, as I turned the bend, he was laying flat on his belly over the stream, with both forepaws stretched out through the branches, dipping in the water. I met father coming up with a gun and little Sandy, and——"

"Welland!" yelled the brakeman, and with a hurried "Good-by, gentlemen—my station," he made for the door. We watched him walk down the platform as our train gathered headway, expectorating a beautiful spiral across the full width of the twenty-foot boards. He seemed at peace with all the world and he never even glanced in our direction.

THE TOP RAIL.

SOME owners of prism binocular field and marine glasses object to their bulk, as they are thicker than the old binoculars, and cannot be carried as snugly in a pocket. A foreign firm claims it has obviated this in its new glasses, which are made in four parts, hinged. In use they are similar to other prism binoculars, but when "folded" flat, in which shape they fit into a pocket case the size of an ordinary small book, they are very compact. In a sectional view they resemble two complete links of a motor cycle chain. Whether the power and definition are good is another matter. It often happens that one feature which is excellent is offset by others that are indifferent. One of the British glasses, which used to appeal to sportsmen because of its compact form, had lenses inferior to those of the dollar telescope.

* * *

ONE night a pretty yacht hove to in the middle of the Hudson and began to whistle. Two boatmen lounging ashore raced out to her, to find a dapper old fellow waiting at the gangway, eager to be put ashore in time to keep an engagement. To the boatman who arrived first he presented a ten-cent piece when he reached the boat landing. And he said that he might call him again for similar service. The boatman said nothing audible at the time, for his sense of humor is keen; but the next time that yacht whistled for a boat no one responded. "Aw," said the boatman of experience, "that's that ten-cent yacht." To this day she is known a'ongshore by that name and no other.

GRIZZLY KING.

GAME BAG AND GUN

How Wild Things Die.

AMONG wild creatures, unless the balance of nature is so seriously disturbed as to threaten extermination, deaths occur with about the same frequency as births. This sounds trite, but the average observer probably seldom realizes, when he sees every spring, many young among his furred or finned or feathered friends, that those of their kind which have fallen out of the race during the year were just as numerous.

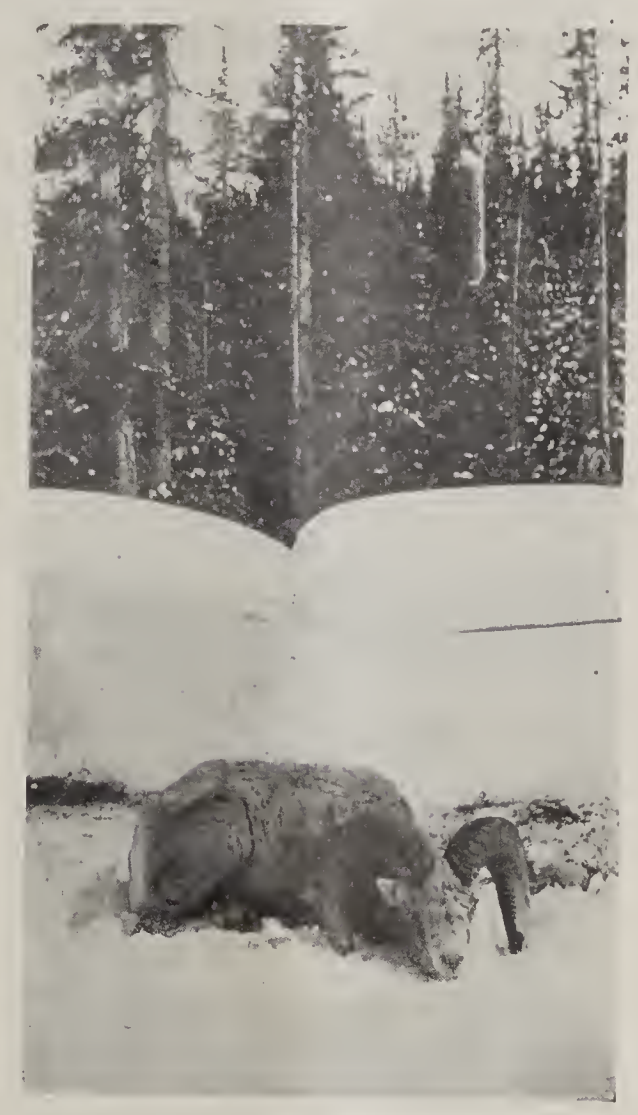
In the case of the protected birds and mammals, which rarely fall to the hunter's gun, dissolution must come from accident, or from natural causes, or from the activities of predatory enemies. All are important factors, and it is impossible to estimate which is the chief.

In Jackson Hole, Wyoming, where the elk congregate every winter at the very doors and about the haystacks of the ranchmen, it has been observed that the bulls which have failed to recuperate quickly after the rutting season, or the cows with a limp, or feeble calves, are down and out before the advent of spring, and that owing merely to the stress of short feed and cold weather. And it is well agreed that the slightest falling in strength or vigor in bird or beast signs its death warrant.

The powers that prey are ever on the alert. They follow the line of least resistance, nearly always attacking those individuals which bid fair to become the easiest victims. The wolf, a daring killer, prefers cattle to elk, and calves or young stock to three-year-old steers. Even in salt water, while the onslaught of such destroyers as bluefish or albacore upon an unresisting mass of menhaden or mackerel or sardines is sheer butchery, it is always the cripple that goes first to his doom. It is probable that throughout nature, except where the advent of man or some other cause has stamped out the special enemies of birds or beasts, deaths from sheer old age among the non-predaceous are comparatively rare. Yet they do undoubtedly occur even where such enemies still exist.

A large irrigation company in Northern Colorado has extensive works near the very top of the Continental Divide, about Mount Richtofen, between the headwaters of the Platte and those of the Grand. It is almost a virgin country, but for the company's ditches and the cabin for its men. The snowfall is often so heavy that the cabin itself completely disappears, and it would seem as if no living thing larger than a squirrel or marten could survive. But such is not the case. This section is rather noteworthy for the number of its mountain sheep. They brave out the winters in spite of the snow, subsisting upon the scanty herbage found in sheltered nooks among the rocks or on ridges swept bare by the wind.

One recent winter, when the snowfall had been rather heavy, two of the company's men, stationed at the cabin, heard a furious barking from their dog. He had found in the snow and brought to bay near the cabin a fine old ram. The poor creature was nearly dead from lack of food. The storms had evidently covered up his range, and being old and feeble, he had been unable to follow the more vigorous members of his flock to pastures new. The old monarch was rescued from the dog, tied up and offered hay in plenty. But his teeth were nearly gone and the diet was unaccustomed, so he could do little with it, succumbing after a few days from sheer inanition. As that region has many mountain lions, it is quite remarkable that death came to him from the disabilities of old age and not by violence. He was indeed a handsome old fellow as the accompanying pictures show.



THE RAM FOUND BY THE DOG.

Everyone who spends much time in a game country sees evidence of these tragedies in plenty, and sight of them and of the sufferings, which wild animals undergo in hard winters, coupled with the knowledge that extermination waits on all Rocky Mountain game, has led me for one to be extremely chary of taking the life of the poor beasts. W. B. S.

North Park, Colo., Then and Now.

A GENERATION ago there were great areas of the Rocky Mountains of which very little was known. One such area was Northwestern Colorado, a country then abounding in game.

In the year 1879, there was published in FOREST AND STREAM a series of letters describing a trip to North Park, then absolutely without settlers, though a man named Pinkham had a cabin in the "neck" of the park—on the road which led to it, south through the mountains from Laramie, Wyoming—and two or three men had already gone into the park and had done a little placer mining on Owl Creek. In those days thousands and thousands of antelope fed on the sage brush plain and rounded hogbacks of North Park, elk and blacktail deer were abundant in the mountains, sheep were plenty on the peaks and signs of bear were to be seen everywhere in the timber.

Shortly after the writer of the series referred to left the park, came an outbreak of the Utes, in which a number of people were killed.

A letter recently received from a resident of North Park speaks of present conditions there and tells of some changes which thirty years have wrought. The letter says:

"There are very few elk. Blacktail deer are getting very scarce. Hunting has almost become a thing of the past, but there are still quite a number of mountain sheep high up in the mountains. All game is protected. There are plenty of fine trout in the streams—rainbow and salmon trout.

"The country is greatly changed. There are many ranches, and most of the land is taken up and the country fenced. It is only a stock, cattle and hay country, but a good one. Farming has been tried here with very little success as yet. As you know, the valley of the park is from 8,000 to 9,000 feet above the sea level. The very hardy vegetables do quite well and ranchers are trying the hardier grains, and I think will ultimately succeed, for it is being tried year after year, and some years beardless barley heads out very heavily. A railroad is coming through the park, the Laramie and Hahn's Peak Railroad. They are heading toward a coal bank, where the vein is said to be sixty-five feet up and down and nobody knows how long it is. There is plenty of coal here—all of it bituminous coal.

"Antelope used to go down the Platte by the thousand, and thousands of them used to stay in the park in winter. To-day I do not think there is a single antelope left. There was one man who at one time averaged eight per day, killing them for their hides. It makes one ashamed to look at the wanton slaughter of game. I feel that every ranchman should have what game he requires for his own use, both summer and winter, but no more than just what he needs. He is settling up the country and putting up with all the many hardships of a new region. If we had protected the game in the early days we might now have what we really need for our own use. The Indian always had what he wanted for his use, for he never slaughtered for hides, until the white man gave him the idea. Then I suppose he wanted his equal rights, too.

"The horse is stolen, and we have locked the stable door too late but it seems to me that if the Government would allow the farmers and ranchmen to try to raise deer, elk and antelope it would be a good thing. The two last, I think, would do the best; for I have seen some very tame antelope.

"There was one that we called Billy. He was the best hunting dog that I ever saw. As soon as he saw you take up your rifle, he would come with you, whether you wanted him or not.

Even if you got away without his seeing you, and had been gone fifteen minutes, he would be after you on the jump. He was a good hunter. As soon as he saw a bunch of antelope, he would go toward them and stop and feed around. All one had to do was to lie behind a brush, and Billy would keep bringing the antelope closer and closer, until he thought he had them in the right place. Then one would do all the shooting he wanted for that day.

"We always had a red rag tied around Billy's neck, and we all knew him by that wherever we saw him. But one day some tenderfeet came along and shot poor Billy, and had the impudence—and ignorance—to fetch him up to the ranch and ask, 'What kind of an animal' that was. The woman there told them what it was in pretty plain language, and with tears that lasted for some time. The men were out working, and the pilgrims thought it best to move on as soon as possible—I guess perhaps the best thing they could have done.

"If the ranchers were permitted to raise game, that would help to preserve it, and a small piece of meat comes in handy in summer time. After a while the game would become domesticated and every one would be able to have a taste of it. "E. B. G."

Archers to Hunt Big Game.

A DISPATCH to the New York Times from Atchison, Kan., says:

James Challis and Z. E. Jackson are going hunting in the wilds of British Columbia armed only with bows and arrows. They expect to go after mountain lions and grizzly bears if the opportunity should arise.

"I expect the most enjoyable time of my life on that trip," said Mr. Challis recently. "I am sure we will enjoy hunting with our primitive weapons more than the man who can stand a mile away and bring down a deer or a bear with a big express bullet. There is the same difference between hunting with bow and arrow and with a rifle as between catching fish with a fly and in a seine."

Mr. Challis and Mr. Jackson will leave Atchison July 7 for Seattle. There they will be joined by Harry B. Richardson, of Boston, who holds the world's archery record, and William H. Thompson, of Seattle, also an expert archer. From Seattle they will sail up the coast of British Columbia 400 miles, and when they have reached a point which appears favorable for hunting, they will go ashore and push into the interior.

A large supply of arrows which the party will take has been made here at odd times during the last spring and winter.

Train Hits a Moose.

AT Woodstock there is a Canadian Pacific railroad locomotive to-day with a badly broken front, says a press dispatch from Ottawa. When the night express from St. Stephen was en route to Woodstock, the locomotive struck a giant bull moose which had apparently been driven out of the woods by forest fires. The moose was killed and the repairs to the locomotive will cost $1,000.

All the game laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

The Newspapers and Bird Protection.

IT is gratifying to note the continually growing interest in bird protection and the greater attention that is being given to it in the newspapers. A recent example of this appears in Puck of May 24 last.

Puck, though called a comic weekly, has long been a force for good in the land and its strong pictures and keen satire have helped to remedy many abuses. In the issue named, it devotes its middle two-page colored cartoon to a picture entitled, "The Woman Behind the Gun." A fashionably dressed woman wearing a hat crowned with egret plumes is aiming a gun at white herons in trees, on or near nests containing eggs or young. The birds aimed at are wearing the plumes known as aigrettes. At the woman's feet is a pile of dead and dying birds of various sorts and two dogs, labeled French Milliners, are bringing dead birds to the heap.

Of course the idea is that the fashionable, or would-be fashionable woman, by her purchase of the spoils torn from dead birds, is destroying them as truly as if she shot them with a gun.

The Louisville Courier Journal recently devoted nearly a column to suggestions about bird protection, pointing out that the true way to lead the American youth to protect birds is to educate him. This is a part of the work already being done by the Audubon Societies, and it should be constantly extended. Col. Watterson says in part:

"Ingram Crockett suggests that schools might aid the Audubon movement to protect song birds by teaching children to love such songsters as the redbird and woodthrush.

"The suggestion seems eminently a proper one. We have law enough upon the statute books to encourage ornamental birds and song birds to multiply and replenish the woods and fields, but there are comparatively few parents who set about in the right way to teach their children not to enjoy killing them. Whipping a boy who is caught with a murdered oriole or catbird in one hand and a flobert gun in the other teaches him deceit and rebellion rather than humanity and a love of wild things. If he were taught in earlier years why he should not want to kill birds whose presence adds to the charm of life in the country, and even to a certain extent in cities, he might grow up with a mental attitude toward them that would render it as unnecessary to correct him during the flobert gun period of his life as it is now ineffective to do so.

"The success of the boy scout movement shows how a little tact and intelligence may divert the overflowing energies of lads from destructive to constructive channels. Might not the introduction of a simple course in natural history as a part of the curriculum in grammar schools and high schools, with a view to implanting a love of useful and ornamental birds and a desire to destroy pests, prove efficacious as a means of protecting many varieties of birds that are declared to be not only harmless and attractive, but also beneficial to agriculture as enemies of insects?

"It is not the fault of the freckled-faced youth in knickerbockers that he goes about robbing nests and killing birds. The fault lies with those who have failed to train him by some method more effective than merely laying down a criminal code and telling him what the penalties are, and that they will be applied without mercy if he violates its provisions.

"How attractive the suggested course in natural history might be may be easily imagined. The beauty of the plumage or notes of the varieties of birds found in the region and their functions as insect destroyers might be dwelt upon in the elementary course. Popular errors as to the destructiveness of certain varieties of small birds of prey might be corrected with the progress of instruction. For example, most of us were taught a generation ago to regard all hawks and owls as our natural enemies, but naturalists now find that some of them live chiefly upon field mice and other undesirables and rarely, or never, attack the poultry yard.

"The popular idea that wild life must naturally give way before civilization is a popular idea only in Western countries where there has been no moral forces operating to prevent the extermination of species of birds and animals that should be encouraged to survive and allowed to multiply unmolested. The schoolboy who shoots a cardinal with an air rifle or flobert gun, or kills his neighbor's tame squirrel with a stone, is not vicious, but he is ill-educated. His energies are misdirected for lack of wise direction. To educate him properly would do more good than all of the law that could be piled upon statute books by legislators who take no interest in such laws and enact them in response to the activity of members of Audubon societies, upon whom they look as harmless but impractical persons who should be humored, although the measures they are backing cannot be taken seriously."

For One Commissioner.

BOSTON, Mass., June 10.—*Editor Forest and Stream:* Yesterday Governor Foss sent to the Legislature a message advocating the uniting of forestry, fish and game work, and placing it in charge of one man instead of three commissioners and a State forester, as at present. He expresses a willingness to approve appropriations for these purposes equal to the amounts appropriated last year for the two departments, but no more, refusing to approve the appropriations now pending. He says the Department of Fisheries and Game involves an annual expenditure of $62,000, of which $47,000 is used for the enforcement of laws, including the pay of fish and game wardens. The policy of this commission in raising forest seedlings to be transplanted to furnish shelter for game birds he regards as of doubtful expediency, and if valuable it would seem better, he says, to carry it out under the direction of the State forester.

His expert examiner, C. H. Scovell, finds no reason for the continuance of a three-headed commission on fisheries and game, the nature and scope of whose work he considers such that it would be well administered by one competent man. The Governor declares that he concurs with the examiner's opinion and recommends the reorganization of the board of fisheries and game.

Mr. Scovel lays much stress upon the State's neglect thus far to employ fire wardens as well as wardens for the enforcement of fish and game laws, and declares that it would seem reason-

able to apply some of the money now paid to game wardens to the more urgent need of fire warden service. While admitting that it is debatable whether the combined duty could be performed by one set of men, he nevertheless believes it feasible to combine all this work—as it is done in New York—under a central management of forestry, fish and game. This proposition will doubtless be thoroughly debated in the House and Senate.

Members of the Massachusetts Forestry Association and the Boston Chamber of Commerce were in attendance at a hearing at the State House yesterday by the committees on constitutional amendments and taxation sitting jointly to hear arguments in reference to the Governor's recommendation relative to taxation of wild and forest lands. Among the speakers were Henry James, Jr., representing the Forestry Association, and E. Blakely Hoar, of Brookline, who appeared for the Chamber of Commerce. The hearing was adjourned until June 13.

HENRY H. KIMBALL.

New York Legislature.

ALBANY, N. Y., June 12.—*Editor Forest and Stream:* Senator Fiero, of Greene county, has introduced in the Legislature by request a bill providing for the appointment by the Governor of a commission to consist of three members to investigate the State's claim of title to lands in counties containing portions of the forest preserve. The members of the commission are to receive compensation at the rate of $25 for each day they are actually employed, in addition to their actual necessary expenses. The commission is given power to employ a stenographer and other necessary assistance; to require the attendance of witnesses and the production of records; and to hear and determine, after notice, the application of persons claiming title adverse to the State for the cancellation of tax sales made by the State comptroller. But no order of the commission cancelling any tax sale is to be valid until approved by the comptroller. The bill carries an appropriation of $5,000.

The Assembly has passed the bill of Assemblyman C. W. Phillips, relative to pheasants.

The Assembly has passed Assemblyman Gurnett's bill relative to the distribution of copies of the forest, fish and game law to persons procuring hunting licenses.

The Assembly has passed Senator Fiero's bill relative to hooking suckers through the ice in Ulster county.

The Senate has passed Assemblyman Brereton's bill relative to pike perch and angling through the ice in Lake George.

The Senate on June 2 passed the Long bill to extend the season for shooting wild waterfowl on Long Island from Jan. 10 to Feb. 1. There is no change made in the date for the beginning of the open season, Oct. 1.

The Assembly without discussion substituted for the Sheide bill Senator Long's wildfowl bill and passed it.

Governor Dix has signed the bill of Assemblyman McDaniels, providing that any fish, except black bass and pike perch, may be taken in a certain portion of Cayuga Lake by spearing from April 15 to June 15.

Governor Dix has signed the bill of Assemblyman Evans, amending the forest, fish and game law by permitting the propagation of skunks.

Catbirds Exempt.

HENDERSONVILLE, N. C., June 7.—*Editor Forest and Stream:* As usual I have been reading with very much interest the several articles and letters in my favorite weekly magazine, FOREST AND STREAM. Among others of interest is one from

ANOTHER ONE OF W. B. S.'S PICTURES OF THE CAPTURED MOUNTAIN SHEEP.

Toronto, by "A Canoeist," who speaks of the "pot-hunters of the Southern States" and says: "We are aware of the fact * * * that they have nearly exterminated every insect-destroying bird that nests in the North and migrates to the South in winter."

I think he is rather local as to this. I have never seen the catbird, thrush and other song birds shot or killed even by pot-hunters down here, and to-day they are quite plentiful, and personally as far as I can see as many as fifty years ago in this neighborhood. I rather believe these birds have met far worse enemies in the new foreign population north of Mason and Dixon's line than even the negroes south of it.

We have a perfect concert here every morning, the woodthrush, robin, catbird, song sparrow, cardinals and thrashers vieing with each other. This begins now each morning at the first dawn of day, the robins and woodthrushes being the first to pour forth their sweet songs. True, many robins have been shot, but these from the Gulf to the Great Lakes, not solely in the South.

The pot-hunter is everywhere, I think, and he did his work pretty thoroughly with both the buffalo and passenger pigeons, the first in the far West, the latter very largely in the Middle West, the South no doubt shooting some of them, but most were trapped by men from the large cities of the North and Middle West, or others in their employ.

It is quite true we have in this State the poorest system of game laws one can find in any part of the United States—county game laws, with no machinery of Government to enforce them; yet even with this so we have plenty of songsters here in this State.

True it is that Americans have been and are still very short-sighted as to the inevitable results of promiscuous bird shooting, but this is not wholly in the South.

I sincerely wish our State Legislatures would take a lesson or so from Canada, for there is ample room for improvement.

ERNEST L. EWBANK.

Helpless Wildfowl.

FILLED with compassion for the hundreds of starving ducks that lie helpless on the Marin shore from the effects of crude oil dumped in the bay, Town Recorder Herbert de la Montanya has converted his home into a refuse for the birds. His friends are bringing them to him by the score and De la Montanya spends his spare moments cleaning the oil from their feathers with hot water and wood ashes.

Aided by his three sons, he has built coops for his feathered patients. His artistic country estate has taken on the appearance of a duck ranch. In one portion of the inclosure the town recorder has erected a shed which serves as a receiving hospital for the ducks.

The feathers of the birds are glued to their sides from the thick coating of oil. Recorder de la Montanya places the birds on an improvised operating table and scrubs them with ashes and water. When the oil is removed he gives them a good feed and places them in a coop.

The free duck hospital is divided into wards, ducks being housed together according to their species. Canvasbacks, teal, widgeon, bluebills, each have their special department. When the ducks are fat and well again De la Montanya will turn them loose in San Pablo Bay for the good of the sport.—San Francisco Call.

The FOREST AND STREAM *may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.*

FOREST AND STREAM
A JOURNAL OF OUTDOOR LIFE.
TRAVEL. NATURE STUDY. SHOOTING. FISHING. YACHTING.

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,
127 Franklin Street, New York.

GEORGE BIRD GRINNELL, President,
CHARLES B. REYNOLDS, Secretary,
LOUIS DEAN SPEIR, Treasurer.

CORRESPONDENCE.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Terms: $3.00 a year; $1.50 for six months. Single copies, 10 cents. Canadian subscriptions, $4.00 a year; $2.00 for six months. Foreign subscriptions, $4.50 a year; $2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davis & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line ($2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line.

A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be received by Saturday previous to the issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

THE WORK OF A STORM.

LAST Sunday was a day of great excitement in bird land. The severe wind and electrical storm of Saturday night upset the domestic arrangements of many feathered families, and sent the parent birds forth at daybreak to seek the missing and succor the distressed.

Robins were hard hit by the wind and the tropical downpour, which affected most the heavy-foliaged trees in which were sheltered their young almost ready to fly. All day the old birds were heard in groves, parks and wood lots, calling for the little ones that were lost in the flooded woods or were hopping about on the ground, chilled and almost helpless.

Bluebirds with broods of little ones were equally concerned, and their unmusical twitter was heard about the edges of villages and on the farms where they nest. Even quail were sadly disturbed, for a few were heard calling in places where it is most unusual to hear their notes. Prowling cats, seeming to know that the wind which had broken down great trees and wrecked nests was no ill wind for them, were early abroad despite the water-soaked grass and undergrowth, seeking tender morsels in short feathers.

The heavy downpour of rain on the nights of Saturday and Sunday did much to relieve a situation that was critical so far as towns and cities were concerned. The dry ground was saturated and the surplus raised streams, filled ponds and affected slightly the supply of springs, so that reservoirs received a portion of the water so badly needed. Trout fishing, which in many sections has been disappointing, will be greatly improved for a time.

One of the saddest effects of the storm was the destruction of whole groups of trees that had been preserved solely because of their age and beauty. Other veterans, standing alone, were broken and twisted or upturned.

A UNIVERSAL ANGLING ASSOCIATION.

ONE of the oldest, most conservative and influential anglers' organizations in the English-speaking world has endorsed FOREST AND STREAM's suggestion relative to the formation of a universal angling association.

Shortly after our recent comments on this subject had appeared, the Fly-Fishers' Club of London held its annual general meeting, at which the attendance was large. Following regular business the retiring president, R. B. Marston, introduced the subject by saying:

> At a time when America and Great Britain are trying to arrange a "See if we can't get it right before we fight" treaty, it is pleasant to find our American contemporary, that excellent sporting paper, FOREST AND STREAM, suggesting the formation of a universal angling association. I feel sure British and Irish anglers all round the world will cordially welcome this idea. If among the anglers of America, Britain, France, Germany, Japan, Russia, etc., the desire for such an association can be roused, that alone is a fine thing—even if practical realization is difficult.

After outlining the proposed plan Mr. Marston, following favorable discussion, proposed that "this meeting of members of the Fly-Fishers' Club is in general sympathy with the suggestion for the formation of an international association of anglers." Unanimous approval was accorded, whereupon the president added that he was delighted that the old club was first on their side of the water to express sympathy with the proposition. He felt, he said, that his last act as president was perhaps the best he had been able to perform.

Mr. Marston's successor is General Sir Desmond O'Callaghan.

LONG ISLAND DUCK SHOOTING.

THE members of the Long Island delegation in the New York Legislature possess at least the virtue of persistence, and faithfully strive to carry out the wishes of a part of their constituency. Though twice defeated in the effort to secure the passage of a law permitting spring shooting on Long Island, Messrs. Long and Sheide have continued their efforts, and the Legislature has now passed the bill extending the open season for duck shooting on Long Island from Jan. 10 to Feb. 1, an increase of three weeks.

Some persons will see in this action an effort on the part of Long Island gunners to reach the old-time spring shooting conditions by gradual approaches and will expect next year to see an attempt to lengthen the season fifteen or twenty days or more, this process to be repeated until finally shooting shall be permitted all through the winter and spring.

There is probably no special danger that this will happen. The feeling of New York sportsmen on this subject is pretty well ascertained, and it is not likely that there will ever be a return to old-time conditions.

On the other hand it is often the case that mild autumns and winters prevent any shooting in the Great South Bay up to about Christmas time, and it does not seem unreasonable that to provide for such contingencies a few weeks shall be added to the open season. If the law is changed, according to this bill, the open season for ducks on Long Island will last four months, a season longer than some sportsmen might wish, but on the other hand a marvelous improvement over those conditions which existed only a few years ago when the open season for ducks lasted there for all the time that the fowl were with us.

THE BOW FOR BIG GAME.

MANY years ago archery was an active sport in the United States and Canada, and in many towns and villages there were clubs for shooting at the target with the long bow. Not a few enthusiasts hunted birds and small animals with the bow and arrow, and of this sport the late Maurice Thompson was long the chief apostle. His contributions often appeared in FOREST AND STREAM, and in the monthly magazines.

A newspaper dispatch now tells of two Kansas men who purpose to start out on a big-game hunt in British Columbia, armed only with bows and arrows; and the story, if true, possesses much interest. Improvements in fire-arms have been so great that to-day a man may sit on a hill and continue to bombard fleeing game while it is passing over a mile or two of country, and the danger to wild animals has been met by increasing wariness and ability to take care of itself on the part of the game. It is obvious that vastly more skill is required to approach and kill big game with a bow and arrow than with a rifle, and one of the reported hunters is quoted as having said that there is the same difference between hunting with a bow and arrow and a rifle as there is between catching fish with a fly and with a seine.

Because it is practically an unknown weapon, the power of the bow in expert hands is not at all understood. Yet in old times the Indian, armed with a bow, at forty or fifty yards was more dangerous to his enemy than the average white man armed with a revolver.

If men would take to hunting big game with a bow and arrows, there might be again bred up among us a race of hunters like those of old times—a race which now has almost or quite disappeared from the land.

IN another column a correspondent relates an occurrence that merits special mention. It tells of a real sportsman. An Oklahoma angler fared forth at daylight and shortly found himself the captor of seven large bass. The day was still young and the opportunity to make a great day's record, both for size and number, was tempting. Many another man would have striven eagerly to make such a record, knowing that its accomplishment would have been heralded far and wide as praiseworthy. As for Mr. Gast, he went to camp, satisfied. To him all anglers should doff their fishing hats; there are too few Gasts.

THERE will be no international casting tournament at London this year. The British Amateur Fly- and Bait-Casting Club, under whose auspices it had been planned to hold such an affair some time in July, has decided to postpone it until 1912. This in view of the coronation ceremonies and other special attractions.

Birds and Mammals of Desolation Island.

IN 1874, long before the old Trinity was cast away on Heard's Island, the United States ship Swatara carried to Kerguelen Island various parties that had been organized for observing the transit of Venus in the Southern Hemisphere. With a party of observers which landed in the southern part of Kerguelen Island was Doctor J. H. Kidder, who reported on the life of the island. The only land mammal found there was the common house mouse, no doubt imported by early sealers, but upon Cat Island, one of those bounding Three-Island Harbor, the domestic cat has for many years existed in the wild state. It preys upon sea birds and their young. In former years all these islands had been favorite breeding places for the sea elephants which, however, had at that time become very scarce. Dr. Kidder secured one specimen—which was afterward lost—that measured twenty-three feet in length. The seal leopard and a fur seal have been reported.

John Easmond's paddy is called in the books the sheath-bill (*Chionis minor*). It is an odd form which Drs. Kidder and Coues believed formed a connecting link between the gulls and the shore birds or waders. Dr. Kidder found this bird abundant, very tame and very inquisitive. They were observed to feed on the soft green seaweed, but one kept for some time on shipboard broke with its beak the shells of eggs as if accustomed to do this. "When taken home alive they showed no fear, but when let loose in the house took food readily, and oddly enough fought fiercely among themselves, using only their bills, however, and not the wing spurs. None of us ever saw them fighting in the open air."

This species is late in pairing and nesting. No egg was found until Jan. 10, which, of course, in the Southern Hemisphere is equivalent to our July 10. Captain Fuller reported to Dr. Kidder that the sheath-bill is famous for its skill in concealing its nest, that they build in crevices of the rocks and the nests are constructed of dried grass. The eggs are the size of a small hen's egg, slate-colored, blotched with dark brown.

The "sea hen" of the whalers is a skua. They are large and daring birds, acting for all the world like a hawk, even trying to steal the game killed by the gunner whom they habitually follow. They attack and kill the great petrels known as "stinkers," and these birds seem much afraid of them, but if unhurt can escape by flying. Dr. Kidder speaks of the sea hens as avoiding the water and preying solely, so far as he could observe, on other birds. On the other hand, he saw one flying about the ship Monongahela when she was about 300 miles from the nearest land. On a few occasions he saw one alight in the water, and when it did so it held its wings up perpendicularly like a butterfly.

Of the "Johnny" (*Pygoscelis tæniata*), whose lines John Easmond declared to be "a cruel sight to see in any Christian country," Dr. Kidder found many. He says:

"Two or three of the birds were captured by the boat's crew which went on shore after the eggs, and brought back to the ship, where they created a good deal of amusement. When walking away from the spectator, swaying from side to side, with flippers hanging well away from the body, they bear a ridiculous resemblance to small children just beginning to walk, who have put on overcoats much too long for them. A rookery was found about two miles from our station, which I visited Sept. 16, finding many eggs. It is established from the seaward extremity of a high rocky ridge running nearly parallel with the trend of the shore and abutting upon the sea in lofty bluffs." The penguins land at a little rocky cove and are obliged to climb up the steep slopes of a hill. They have worn paths in the meadowland near the sea in some cases almost four feet in depth. The eggs resemble in size and shape those of the duck and the birds have been so constantly robbed of their eggs that Dr. Kidder estimated that those which he collected must have been of the ninth or tenth laying since the season began.

"No living thing that I ever saw expresses so graphically a state of hurry as a penguin when trying to escape. Its neck is stretched out, flippers whirling like the sails of a windmill, and body wagging from side to side as its short legs make stumbling and frantic efforts to get over the ground. There is such an expression of anxiety written all over the bird; it picks itself up from every fall and stumbles again with such an air of having an armful of bundles, that it escapes capture quite as often by the laughter of the pursuer as by its own really considerable speed.

"On the 3d of December near the landing cove already mentioned, about the time of hatching, I observed a school of these penguins progressing by leaps clear of the water; one following another in so rapid succession that two or three were always in the air, and with a motion so like that of a school of porpoises, that I at first took them for those marine mammals. In the water, indeed, all awkwardness at once disappears; their speed in swimming being almost incredible and surpassing, of course, that of the fish upon which they feed."

Dr. Kidder declares of the rock-hopper that the whalers' epithet is particularly well applied, since they are "the most agile of all penguins, skipping from rock to rock, climbing very steep inclined surfaces and getting over the ground with great speed. It is worthy of notice that these penguins always hop, using both feet at a time, like a sparrow and never walk as do other genera."

The sea elephant had been exterminated there, except for one stretch of beach, limited at each end by precipitous cliffs, across which it is impossible to transport oil in casks, and inaccessible from the sea for boats or vessels, because the beach is on the west coast and so exposed to the full violence of the wind. On this beach the animals still haul up every spring and breed in numbers.

Five years previous to 1874 these elephants had been so scarce on the Crozets Islands that it had not seemed worth the while of any sealers to work them for the oil. From this it happened that the animals being unmolested were found there very numerous in 1874, which shows how rapidly these creatures of the sea will increase, provided they are not exterminated on their breeding grounds. At the time of Dr. Kidder's visit to Kerguelen Island two schooners and a bark were collecting oil at Heard's Island to the south.

Field Museum of Natural History.

THE annual report of the director of the Field Museum of Natural History to the board of trustees tells an interesting story of progress. Dr. Frederick J. V. Skiff, who makes the report, is assisted by an able force of men whose activities cover the department of anthropology, botany, geology and zoology. Both museum work and research work receive much attention; popular instruction is given by the free lecture courses of spring and autumn, and publications are frequently issued.

During the year there have been many accessions to the museum's collections, and in all departments. Various expeditions were sent out by the museum to collect material, and these expeditions brought together interesting collections from various parts of the world. Of especial interest are certain fossil mammals coming from a portion of the so-called Uinta desert, lying in the basin of White River in Utah.

The work of preparing beautiful and instructive groups of birds and mammals goes on constantly and W. H. Osgood is at work on the preparation of a group of beaver. Efforts are being made to complete and to exhibit the local life of the regions of the Great Lakes.

Dr. Skiff's report is beautifully illustrated by photographs of various specimens and models on exhibition in the museum. Of peculiar interest is a group of mounted skins of the gorilla from the Congo region, and another group showing the skeletons of these same gorillas.

Many interesting groups of native birds on exhibition in the museum are here reproduced, and to the courtesy of the museum we owed the group of wild turkeys which appeared on the cover of FOREST AND STREAM last week, credit for which, by regrettable inadvertence, was not then properly given.

International Fur Seal Conference.

THE international conference, which for a month or more has been in session in Washington, considering the protection of mammalian life in the North Pacific Ocean, and specifically the preservation of the seal herds, has not made very satisfactory progress. The four countries chiefly interested are the United States, Great Britain, Japan and Russia Each of these nations has a pretty positive idea of its own interests and rights, and those on the western side of the Pacific, Japan and Russia, seem disposed to be wholly unyielding.

All these countries are willing to prohibit pelagic sealing—which all acknowledge must be done if the seals are to continue to exist—but

as yet no agreement has been reached as to the compensation to be received by any nation in return for giving up the right to take seals at sea. The United States owns the Pribilof Islands, Russia the Commandorski group, and Japan, Robben Reef—the latter a small rookery from which it has more than once been supposed that the seals had all been exterminated.

Twenty years or more ago the pelagic sealers, and the seal pirates who raided the rookeries, were chiefly subjects of the United States and of Great Britain, but since the Paris conference of some years ago, pelagic sealing by these people has almost ceased, while the Japanese sealing fleet has greatly increased, and on a number of occasions the crews of Japanese sealing vessels have raided the rookeries on the Pribilof Islands in the most high-handed manner.

It is reported that the United States is willing to pay to Great Britain in consideration of her giving up pelagic sealing twenty per cent. of the profits of the seal rookeries, but the Japanese delegates demand that the other nations interested shall purchase the fifty vessels now in the Japanese sealing trade, paying for them $375,000, and further that Japan shall be paid one-third of the net proceeds received by the land sealing nations from their prosecution of the sealing industry.

To this proposition Russia very positively declines to assent, and what the outcome will be still remains uncertain. It is clear that unless some arrangement be made by which pelagic sealing shall be wholly stopped, the seal herds will decrease until the point is reached where there will be no profit whatever in pelagic sealing and of course none in land sealing. On the other hand there is no immediate likelihood of the actual extinction of the northern fur seals, so long as the governments that own the lands to which the seals resort to have their young, protect those rookeries.

New Publications.

HUNTING THE SEA OTTER, by Alexander Allan. Cloth, 168 pages, illustrated, 7s. 6d. net. London, Horace Cox.

Many of the accounts of hunting the sea otter have been written by men who have engaged in the pursuit as a business, but Mr. Allan's book gives the impressions gained by a sportsman in a hunting cruise among the Kurille Islands in the North Pacific Ocean. It is a pleasing narrative of adventure.

The affection of the sea otter for her young, he says, is extraordinary. "It is very seldom that she will desert it, as she almost invariably clings to it with the truest maternal devotion to the last. Impeded with the object of her ceaseless care, the long bold dives for freedom are no longer possible. Hampered with a charge whose plaintive cries strike deeper, deadlier than the hunter's bullet, her sole, unselfish anxiety is centered in her offspring. Sometimes, during the extreme crisis of the chase, the little fluffy ball would be left to its own resources, but none who saw could doubt that this was but the choice of a lesser evil. Warned by the hushed plaint and catching breath, she knows that but a few more dives beneath the protecting element and the life of what she loved so well would be taken. And now she is free, at liberty to test her speed

SEA AND RIVER FISHING

Minnesota Bass Fishing.

Editor Forest and Stream:

During the past few days some very fine strings of fish have been taken from Minnesota waters. Rains have roiled the waters of a great many small lakes and ponds that are fed and drained by creeks and rivers, and it seems that the fish have taken to striking anything that wiggled in the water. Trout are not taking the fly, so the casters tell me, as they were earlier in the season. The only explanation offered is that they are getting so much natural food.

Frogs have been scarce all the early part of the bass season and have not grown appreciably plentiful of late. There are many instances of boys selling them at five to ten cents each and now they range about forty to fifty cents. The dry sloughs and puddle holes of early spring have had much to do with the shortage of the frog crop. Bass are taking frogs now in fine style. They make rushes for this bait that go to show it is a real bass staple.

Charles Stapf, of Prescott, Wis., who is making that place famous with his bass spinner, and as a fishing resort on the upper Mississippi, took out a couple of fishermen from Iowa recently and used a piece of bass belly as bait, cutting it in the shape of a minnow and attaching it to the hook, the bait being attached to fly line and rod, and showed them how to catch small-mouth black bass along the government wing dams that have been built in the river. He landed three in fifteen minutes which showed his skill and his ability to bring them to net quickly. He is glad to give advice about places to fish for these bass on the upper river, and there is no better posted man in the country on good small-mouth bass waters. These bass were of about three pounds' size and very gamy. Mr. Stapf has graduated from bait-casting, so he says, and now uses nothing but a fly-rod for his bass fishing, either for small- or big-mouths. He is a very clever caster, and knows the haunts of fish and their feeding times and places.

Eugene Walter, the playwright and author of "Paid in Full," is outfitting here to go into the Yellow River country, Wisconsin, and spend the summer with his family and friends, fishing virgin waters which are pretty hard to get at. Mr. Walter is a thorough fisherman and outdoor man, and is now in the country locating his summer camp which, when placed advantageously, will give him a chance to return to St. Paul to further select the duffle that he needs for the summer's sport. On his first trip up into the lake region about what is known as the Yellow River country, the light tackle he used was cut all to pieces by the immense muskies and pickerel that abound in the waters. He has equipped himself with heavier tackle and will attempt to take the big ones for sport and return to the waters the smaller ones he does not need for camp use. A number of the bigger lights of the dramatic world will probably visit his camp during the summer. From time to time I shall try to tell the readers of FOREST AND STREAM just what luck they have in taking record fish.

Boating on the upper Mississippi has opened up in earnest. We have had the rains to swell the smaller streams emptying into the Father of Little Wets, and now that creeks and smaller rivers are all going again, there is promise of them keeping on the flow. Motor and shanty boatmen are running off on cruises of some duration and the pearl buyers have been chartering the boats not already hired. Some fine pearl catches have been reported. One buyer brought about three thousand dollars' worth of them to St. Paul after a week's trip among the clammers. I shall write more about the clammers in another article, and will send some interesting photographs of them at their work. It is a business of itself and one that has many followers, all looking for the time when they will open the big gleamer.

AMOS BURHANS.

Stopped When He Had Enough.

MUSKOGEE, Okla., June 8.—*Editor Forest and Stream:* Along in March when I brought in a three-pounder together with several others of respectable size, and later, when Joe Haskell, son of ex-Governor Haskell, got out of the maiden class by landing one weighing six and a quarter pounds and followed it a week later with another tipping the beam at five flat, we were unanimous in agreeing that its full quota of piscatorial honor had fallen on this section of the country, but it remained for Felix L. Gast, of this city, to demonstrate that the unalterable law as applied to things without a limit is alterable and now includes a third in the form of bass fame.

Mr. Gast, who is an active member and a trustee of the Wauhillau Club, located on the Barren Fork of the Illinois River, forty-five miles northeast of Muskogee, performed a feat enviable in more ways than the mere concrete evidence of the sport he enjoyed. It had been his intention to fish a distance of about eight miles, ending the day's efforts at the club, but starting casting a wooden minnow at daybreak, he had in less than an hour landed the following phenomenal string of big-mouth black bass: two of four pounds each, three of three pounds each and two of two pounds each, whereat he displayed his tenaciousness to the highest ideals of sport and stopped.

I want to lay stress on this point because Mr. Gast and I have talked of his exploit with mutual friends and from the majority of them come expressions of surprise that he desisted at the most interesting time. Possibly our explanation of his very sportsmanlike conduct will instill another with the gospel of fairness in sport and another recruit be added to the lamentably small army of protectors of game. To assist in ever so small a way in setting the highest standard in a given line of sport is a source of personal satisfaction, and ocular demonstration has always been a successful method in promoting an idea.

PAUL H. BYRD.

International Casting Tournament.

THE advance program of the fifth international bait- and fly-casting tournament, under the auspices of the National Association of Scientific Angling Clubs, has been received. It will be given by the Anglers' Club of Milwaukee at the Anglers' Pool, Washington Park, Milwaukee, Aug. 17, 18 and 19 next.

The casting events will be as follows:

Thursday, Aug. 17.—8:30 A. M., light tackle dry fly accuracy; 11 A. M., light tackle distance fly; 2 P. M., accuracy fly; 4:30 P. M., distance fly.

Friday, Aug. 18.—8:30 A. M., accuracy bait, quarter ounce; 1:30 P. M., distance bait, quarter ounce; 4 P. M., salmon fly.

Saturday, Aug. 19.—8:30 A. M., accuracy bait, half ounce; 2 P. M., distance bait, half ounce.

Schedule subject to change for lack of time or unfavorable weather. Entry fee, $2 each, for any four entries, additional entries at $1 each. To one for the second. See general program for rules and events relating to these awards. For rules and regulations governing all events apply to C. P. Clifford, Secretary N. A. S. A. C., First National Bank, Chicago, Ill.

Down town headquarters will be at the Plankinton House. Walnut street cars to the park pass the east end of the hotel, and Vliet street cars run on East Water street, one block cast of the hotel. The Pfister is three blocks east of the Plankinton and the Republican House two blocks north. Reasonable rates and excellent service may be obtained at any of these places.

The national executive committee will meet Wednesday evening, Aug. 16 in Room 148, the executive office of the Engineer's Society of Milwaukee. The annual business meeting of the N. A. S. A. C. will be held Saturday evening, Aug. 19, in the Colonial room, the use of which has been kindly donated for the evening by the Engineers' Society.

We hope before our next contest to have completed a wide gravel walk around our pool which will give us much added space from which to cast in practice while a contest is taking place and from which regular events may be cast from any angle the wind may happen to blow from.

BAIT-CASTING IN CENTRAL PARK.

E. B Rice casting a 2½-ounce weight A. Jay Marsh casting a half-ounce weight.

From photographs by Edward Farnham Todd.

reach the casting grounds take Walnut street cars to Fortieth street and walk one block south, or Vliet street cars to Fortieth street and walk three blocks north.

Amateur championship trophies will be awarded for first place in each of the events scheduled. They will be of solid gold and fully up to the standard established by the last tournament committee at Chicago. Silver trophies for second place and bronze trophies for third place in each event will be awarded. These trophies will be of the same type and design as those offered for the championship. Suitable ribbon trophies will be awarded for fourth, fifth and sixth place in all events, and in the accuracy bait events these trophies will be extended to and include tenth place. The N. A. S. A. C. club pennant for 1911 will be awarded to the affiliated club making the highest number of points under the rules followed in 1910. See general program for particulars. The N. A. S. A. C. blue button will be awarded to each contestant making a grand or total average of 98 per cent. or better, figured from his score in accuracy fly, light tackle, dry fly accuracy and half and quarter-ounce accuracy bait.

There will be two cups awarded in the all around high competition, one for first place and

Tournament Committee: M. A. Beck, Chairman, 294 Greenbush street, Milwaukee; C. L Tolfson, Secretary, 1232 Summit avenue, Racine, Wis.; H. W. Lewis, Alb. Lahmann, Chas. A. Rhine, G. C. Schoenlaub, J. H. McBride; H. Wheeler Perce and Chas. P. Clifford, N. A. S. A. C. (ex-officio).

The Anglers' Casting Club of Chicago.

CHICAGO, Ill., June 4.—*Editor Forest and Stream:* Below are the scores made in our half-ounce contest to-day. Wind gusty and variable, clear sky and trees for a background. We had a good turn out of members, but only a few visitors to compete. The scores were, generally speaking, not up to the average of the club, but Mr. Linder showed us how.

We believe that C. Lingenfelter's average for five casts in the distance event is a record for Chicago, and although two breaks in his regular event marred his score for the first five casts, he came back and made five casts of 218, 236, 203, 212 and 202 in his re-entry. Scores:

	½-ounce, Accuracy.	Distance.
Place	98.3	186
Place (re-entry)	98.7	153.2
Campbell	97.4	.....
Campbell (re-entry)	95.7	.....

Come out, brother anglers, and visit us, as the latch string of our club is always on the outside.

E. M. TOWN, Sec'y-Treas.

Illinois Casting Club.

CHICAGO, Ill., June 5.—*Editor Forest and Stream:* Our club contest, scheduled for June 3 and the following day, was cast off in regular order as cast.

Weather during accuracy bait, clear sky; wind, southeast; approximately ten miles; conditions fair:

*Re-entries. †Visitors.

Attention is called to Wm. Stanley's score in the half-ounce accuracy bait 99.7, which establishes a new record. Who says one cannot come back? We hope to hear from Charles Eaton in the near future. Attention is called to the next regular club contest, June 17, quarter-ounce accuracy bait, quarter-ounce distance bait, delicacy fly, light tackle accuracy, dry fly. Re-entries of the postponed contest of May 20 can be made on that date. L. V. TOURNIER, Sec'y.

To Fish the Nipigon.

J. W. BRAMHALL and W. F. Stine, members of the Kansas City Bait- and Fly-Casting Club, expect to leave on June 9 for Nipigon, Ontario, for two weeks' trout fishing. Both Mr. Bramhall and Mr. Stine fished the Nipigon last year and had exceptionally fine success and will surely get the fish, as both are experts with the fly-rod.

Some News and a Little Gossip.

THE Fife designed schooner Waterwitch, owned by G. Cecil Whitaker, will not visit these waters this season. He stated in London this week that it would be impossible for him to accept the invitation of the New York Y. C. this year, and this seems to imply that he may come with his yacht next season. It is late in the year to plan to make a trip across the Atlantic. The yacht is only just now having her first trials under sail. To bring her here would mean dismantling and putting on a sea rig. Then there would be three or four weeks lost on the ocean. Here it would take two weeks to fit the yacht out again, and by that time the season would be more than half over and Waterwitch would not be in racing trim. Then, too, it is coronation year in England. Many handsome prizes are offered for the yachts, and it is Mr. Whitaker's ambition to win a coronation cup. He will have to meet some of the best sloops in commission, and they are fast, too, and if he can win, his boat will be well tried and will be in fine fettle to come here and race next season, should he decide to cross the Atlantic.

Westward is home again and very soon she will be in racing trim. Just when she will first race has not been announced, but it is possible that she will be ready for the race of the Eastern Y. C. from New London to Marblehead for which Commodore Clark has offered a cup valued at $1,000. Already several entries have been received by the regatta committee for this event. Among them are William E. Iselin's Enchantress, Morton F. Plant's Elena, Commodore F. Lewis Clark's Emerald, E. Walter Clark's Irolita and Dallas B. Pratt's Sea Fox. In the smaller classes are H. E. Morss's Vision, W. S. Eaton's Taormina, E. J. Bliss's Venona, Daniel Bacon's Avenger and Chester C. Rumrill's Adventuress. This race will be started at 1 o'clock from a line off Sarah's Ledge at the entrance to the harbor of New London on July 1 and the finish will be at Marblehead Rock.

Captain Joshua Slocum, the famous New Bedford skipper, who has cruised around the world in the 35-foot sloop Spray and has published a book on the trip, has been heard from in an indirect manner from the Orinoco River, South America. He left New Bedford last November, headed for South America, and a few days later a southeast gale created the fear that he had been lost. No word has been received from him since that time, and many have been of the belief that he had been drowned.

Captain Slocum himself has not been heard from, but through the officers of a steamer, which got word from the natives along the headwaters of the Orinoco River, it has been learned that a boat with a single white man in it, answering the description of the Spray, has been seen where no white man ever appeared before.

Captain Slocum had cherished the desire of going up the Orinoco River and down the Amazon for years before he finally made the start. He had heard the stories of many attempts in which those who tried it had been killed by hostile Indians and was desirous of exploring the country. He started alone. The fact that the appearance of a white man on the river has created enough interest among the natives for the news to reach the coast gives rise to the belief that Captain Slocum is accomplishing his task and may unexpectedly turn up within a few months at the mouth of the Amazon or at some South American city.

Atlantic Y. C.

SUELEW, the Class Q yacht, owned by Commodore E. F. Luckenback, and built from designs by C. D. Mower, won the race of the Atlantic Y. C. in her class last Saturday off Sea Gate. It was a light weather day and a shift in the wind rather spoiled the course. The yachts were sent from Sea Gate to Bensonhurst, Fort Hamilton, Buoy 7 and home, 11.5 miles. The wind was southwest, but it hauled later and the windward leg became a close reach. Grayjacket took the lead on the first reach, but down the wind to Fort Hamilton, Suelew took a commanding lead with Soma second and Spider third. Reaching to the third mark, Alice moved up into second place, and on the last leg before the wind, Suelew just managed to get home first by 16 seconds.

In Class S, Dr. Atkinson's Cyric defeated Wink by more than 2 minutes, and M and F was third. Joy finished first in the handicap class again, but was beaten on corrected time by La Cubana. Merry Widow won in the knockabout class and Skeets won the race for sailing dinghies. Three in this class were disqualified for starting wrongly. The summaries:

Sloops, Class O—11.5 Miles—Start, 3:05.

Suelew	5 07 41	Soya	5 09 56
Alice	5 07 57	Spider	5 10 05
Grayjacket	5 08 32		

Sloops, Class S—11.5 Miles—Start, 3.15.

Cyric	5 28 59	M and F	5 42 44
Wink	5 31 24	Gunda	5 42 55

Handicap Class—11.5 Miles—Start, 3:10.

Joy	5 12 53	Miana	d.n.f.
La Cubana	5 20 10		

Corrected times—La Cubana, 1.57.53; Joy, 2.02.53.

Sloops, Class X—8 Miles—Start, 3:20.

Merry Widow	5 22 32	Skylark	5 25 29
Scud	5 22 49	Lassie	5 28 05
Mouse	5 23 21	Chico	5 28 17
Pike	5 25 19	Slow Poke	5 30 19

Sailing Dinghies—4 Miles—Start, 3:25.

Skeets	4 20 07	Bullfinch	Disqualified
Aries	4 24 21	North Star	Disqualified
Viva	Disqualified		

Corinthian Y. C.

THE Corinthian Y. C. opened its racing season at Marblehead last Saturday. Four of the 31-raters met and raced in a light fluky wind from south at the start and shifting to north and northeast toward the finish. Italia, George Lee's new boat, easily defeated Timandra, Amoret and Wianno. Ellen II. sailed her first race against Seal Lady and Panther. Ellen is a new sonder boat built for C. P. Curtis, and Seal is a new boat carrying a lug rig mainsail, owned by H. M. Sears. The elapsed times:

Class M—Nutmeg, 2.22.10.

Class P—Italia, 2.10 25; Timandra, 2.16.58; Amoret, 2.17.28; Wianno, did not finish.

Class Q—Gringo, 2 25.47; Tabasco II., 2.27.05.

Sonder Class—Ellen II., 2.21.31; Seal, 2.24.26; Lady, 2.24.35; Panther, 2.27.50.

Sea Bird Crossing the Ocean.

SOMEWHERE out on the broad Atlantic, perhaps about 700 miles between Nantucket Shoals Lightship and the Azores, the tiny yawl only 19 feet on the waterline is battling with wind and seas. On board are Thomas Fleming Day, T. R. Goodwin and Fred B. Thurber, three enthusiastic small boat sailors. They sailed away from the Rhode Island Y. C. house at Pawtuxet on Narragansett Bay last Saturday afternoon, June 10, bound for Rome, Italy. They intend to stop first at the Azores, 2,200 miles, Gibraltar, 900 miles, and then by way of the straits of Bonifacio reach Rome, 900 miles further.

Some time ago the King of Italy offered a prize for a race between auxiliaries from this country to Rome. Another prize was also offered for this contest. Mr. Day tried to interest yachtsmen, but failing, decided to go himself, and he has started. He first had a 3 horsepower Knox motor installed in Sea Bird to make her an auxiliary and he expects to sail up the Tiber in about forty days.

This is somewhat of a daring undertaking, and if Sea Bird successfully makes the voyage, it is hard to see what is gained. Men have crossed the ocean in dories, but their success has simply proved that they have nerve and are capable seamen and navigators. Captain Slocum circumnavigated the world in his 35-foot sloop Spray, so that there is nothing remarkable in a small boat crossing the Atlantic, and Sea Bird has shown on several occasions that she is a staunch, able boat. Many years ago men like Columbus, Cook, Drake, Hawkins and the earlier visitors to this new country crossed the ocean in small boats. They suffered all sorts of trials and discomforts, but it was because they had to do so. The art of ship building was then crude compared with what it is to-day, and those daring pioneers were willing to bear hardship and discomfort to win honor and fame. Those days, however, are gone and now it really seems like tempting Providence to attempt to cross the wide Atlantic in a boat as small as Sea Bird.

The three yachtsmen held a reception at the Rhode Island club house on Saturday morning. They stowed their cargo and this had to be done carefully, and at 2 o'clock, with the Italian flag at the mast head, the American ensign at the jigger, they got under way and started amid the booming of cannon and the cheers of friends. A fleet of motor boats accompanied Sea Bird down the Bay, and at 3:20 o'clock Sea Bird passed the Brenton's Reef Lightship and stood out to sea.

Thomas Fleming Day, who promoted nearly all the long distance races for small boats, and who helped to make them successful by sailing in them himself, has for a long time wanted to cross the ocean in a small boat. Once he made plans, but had to give up the idea because his crew withdrew. Now he has induced two reckless amateur sailors to accompany him in a cruise across the Atlantic.

Mr. Day, who is an honorary member of the Rhode Island and forty-seven other yacht clubs, is the skipper of this cruise. He is accompanied by Theodore R. Goodwin, president of the Narragansett Bay Yacht Racing Association, and Fred B. Thurber, a member of the Rhode Island Y. C. Mr. Goodwin is an able yachtsman and has done considerable sailing, and Mr. Thurber has sailed in many an ocean race and was one of the crew of the Kitcinque when that boat was burned two years ago while racing from Bay Ridge to Marblehead.

Sea Bird is 25 feet 5 inches over-all, 19 feet on the waterline, 8 feet 4 inches beam and 3 feet 8 inches extreme draft. She spreads 400 square feet of canvas in her working sails and in addition can set a squaresail when the wind is favorable. The area of this sail is 120 square feet. Recently Sea Bird was equipped with a three horsepower Knox engine. This turns a 16-inch propeller. She has thirty gallons of kerosene in tubular tanks under the cabin floor, five gallons in the cockpit and three gallons of gasolene for starting.

Sea Bird was designed by C. D. Mower and Thomas Fleming Day in 1901 for offshore cruising. Her construction was worked out by L. D. Huntington, who built her at New Rochelle. She is very heavily built and strongly fastened, and after having been sailed thousands of miles shows no signs of weakness. Her standing rigging is phosphor bronze, with bronze turnbuckles and blocks, and her running rigging was spun especially for her. She is painted white on the top side, with green under body.

She has three compasses, one seven inch spirit, one five inch oil and one small boat compass. The total weight of the stores, water, fuel and crew is 2,400 pounds. She has three ten-gallon tanks filled with water.

She was in the first small boat ocean race from New York to Marblehead for the Lipton cup, and she was the first yacht reported by wireless passing Nantucket Shoal light vessel the day after it was installed in 1903. She sailed around the lightship in a gale and much surprised the occupants of that vessel.

Manhasett Bay Y. C.

IN the annual regatta of the Manhasset Bay Y. C. last Saturday there were fifty-seven starters. The starts were made off Execution Rock and triangular courses were sailed. Early in the day there was little wind and the start was postponed for half an hour. Then a light southwester came in which held true all the afternoon. The feature of the race was the victory of Joyant. She defeated Corinthian, Windward and Veda, a Newport 30-footer, which had an allowance of five minutes. Commodore Childs handled Joyant and was in second place nearly all around the course. Near the finish she seemed to get just a little bit better wind and she sailed by Corinthian, winning by thirteen seconds. Nine of the New York 30-footers started and Rowdy won with Phryne second. The finishing times:

Sloops, Class P—15¾ Miles—Start, 12:45.

Joyant	3 56 51	Windward	4 04 04
Corinthian	3 57 04	Veda	4 36 38

N. Y. 30-footers 15¾ Miles—Start, 12:50.

Rowdy	4 08 27	Alera	4 27 10
Phryne	4 11 03	Juanita	4 30 43
Nepsi	4 21 28	Carlita	4 31 40
Caprice	4 22 11	Yolande	4 34 40
Ibis	4 25 55		

Handicap, First Division—9 Miles—Start, 12:55.

Interim	2 47 00	Sally IX.	2 50 09
Alert	2 41 40		

Corrected times—Alert, 1.46.40; Sally IX., 1.46.47; Interim, 1.46.48.

Handicap, Second Division—9 Miles—Start, 12:55.

Red Wing	2 48 23	Scud	2 57 41
Fearless	2 55 25	Naiad	3 01 04

Corrected times—Red Wing, 1.53.23; Scud, 1.58.41; Fearless, 2.00.25.

A. Y. C. Raceabouts—9 Miles—Start, 12:55.

Cliphora	2 58 27	Maryola	3 00 51

Raceabouts—9 miles—Start, 12:55.

Chinook	2 57 42	Amanita IV.	3 07 09

Handicap, Fourth Division—9 Miles—Start, 1:00.

Kenosha	3 08 44	Grace II.	3 16 00
Sybilla	3 09 04	Insurgent	3 20 22
Dolly	3 13 58	Robin Hood	3 32 08

Corrected times—Kenosha, 2.08.44; Grace II., 1.55.52; Sybilla, 2.08.00; Dolly, 2.13.58; Insurgent, 2.18.20.

Sloops, Class R—9 Miles—Start, 1:05.

Pachita	3 13 32	Hoyden	3 20 02
Ogeemah	3 24 14	Hamburg	d.n.f.

Sloops, Class S—9 Miles—Start, 1:05.

Drena	3 20 06

Manhasset Bay Class—9 Miles—Start, 1:10.

Scylla	3 20 50	Mlle. Boss	3 25 08
Ardette	3 21 25		

Glen Cove Class—9 Miles—Start, 1:10.

Aquamarine	3 23 27	Garnet	3 31 22
Jade	3 31 18		

Inter-Club Class—9 Miles—Start, 1:15.

Wild Thyme	3 11 56	Le Cygne	3 24 22
Salas	3 13 38	Dagmar	3 27 19
Lewanna	3 16 21		

Manhasset Knockabouts—6 Miles—Start, 1:20.

Mayfly	3 42 21		

Port Washington Class—6 Miles—Start, 1:25.

Gogo	3 23 54

Dorchester and Savin Hill Y. C.

A REGATTA was sailed last Saturday off Fox's Point for the city of Boston classes under the joint auspices of the Dorchester and Savin Hill yacht clubs. There were five sailing classes and two for motor boats. Instead of winning the races on speed, the motor boats won on reliability. There were two rounds of the course, and the boats making the most even times won the prizes. The sailing yachts raced in a light northwest wind, but encountered a northeast squall before the race ended. The corrected times follow:

Class A—I. X. L., 50.46; Juanita, 51.13; Flirt, 52.55; Tomboy, 57.47; Moth, 59 03; Emerell, 1.05.08; Peggy, 1.07.04; No. 34, No. 1, No. 15, No. 12 and No. 31, not measured; Javelin and Topsy, withdrew.

Class B—Novice, 1 04.18; Wawenock, 1.07.47; Zoe, 1.08.58; Winona, 1.09.50; Flirt, 1.09.53; Eleanor, 1.11.00; Beryle 156, 1.12.12; Caprice, 1.15.11; Mildred II., 1.15.58; Smilax, 1.17.13; Annie B., 1.17.23; Sentinel, 1.19.39; Mabelle, 1.27.26; Kitten, 1.38.39; Thordis, disabled.

Class D—Geisha, 1.10.00; Doric, 1.23.28.

Class E, Small Power Boats, Two Rounds—Cygnet, 27.21, 27.20; Spark, 23.39, 23 36; Waban, 27.12, 27.17; Vera, 17.13, 21.19.

Class F, Large Power Boats—Earl, 31.24, 31.00; Beachcomber, 27.32, 27.03; Scout, 35.42, 36.11; Harold, 31.44, 31.14; Restless, 34.20, 35.44; Emlyya, 33.55, 33.09; Aloha, 39 05, 40.08; Valeria, 33.34, 32.10; Beatrice, 35.27, 36.43; Queokh, 22.43, 20.59; Heatherbell, 36.13, 38.36; Myrah, disabled.

Class I., Elapsed Times—Reina, 1.31 00; Chercot, 1.32.35; Dorchen II., 1.35.09.

Class X—Teaser, 1.07.03; Elizabeth, 1.10.32; Question, 1.13.38; Spray, capsized.

East Greenwich Y. C.

THE regatta of the East Greenwich Y. C. was sailed last Saturday in light fluky winds. Isuelo won in the Q class on elapsed and corrected time. In Class E, Netor finished first, but was beaten on corrected time by Bother. In the absence of Wanderer, Answer won the knockabout race with Dorothy second. There were two races for motor boats. The corrected times, except in Classes I and C, when they are elapsed times, follow:

Class Q—Isuelo, 2.45.02; Paloma, 2 46.39; Molly, 2.57.34; Gazelle, 3.02.45; Rova, 3.08.02.

Class D—Ciara, 2.06.19; Mblem, 2.33.30; Marguerite, 2.42.08.

Class E—Bother, 2.37.41; Netor, 3.24.38.

Class I—Answer, 2.08.45; Dorothy, 2.30.05; Bat, 2.35.05.

Class C, Second Division—Mystery, 2.39.03; Question, 2.42.20.

Class X—Scud, 3.23.07.

Class Z—Bud, 2.23.02.

Class D for launches Handicap racing boats: Hobo wins by 11 seconds over Buzz.

Open launches under 60 rating: Akhaaha, 1.43.00; Helen, did not finish; Winnie, 1.57.13; Regina, 1.53.54.

Power cruisers under 60 rating: Iola D., 1.49.52; Raymar II., 1.56.30; Frances E., 2 04.07; Ibis, 2.05.14; Spindrift, 2.11.42; Happy Day, 2.16.14.

Yacht Sales.

THE Hollis Burgess yacht agency has sold the Herreshoff knockabout Little Robin, owned by Charles S. Eaton, of Boston, to Phi lip M. Reynolds, of Boston, who will use her in North Haven, Me. Also the 25-foot racing sloop Early Dawn III., owned by J. E. Dohorty, of Boston, to John V. Bacot, of Morristown, N. J., who will use her in Camden, Mo., to race against Sally VII.

Stamford Y. C.

THE boats of the Stamford Y. C. one-design class sailed over a course 6½ miles long last Saturday. The elapsed times were: Killie, Bartholomew Jacob, 1.34.06; Hart, 1.38 06; Osprey, 1.38.29; Curlew, 1.38.44; Fiddler, 1.40.17; Snapper, 1.40.18; Kittiwake, 1.41.07; Kelpie, 1.42.09.

Lloyd's Register.

THE ninth annual edition of Lloyd's Register of American Yachts has been published. It differs from its immediate predecessor only in the increasing predominance of power over sail and of the gas engine over the steam engine, the proportion of the power craft being still greater than last year, while individual examples show the rapid growth in size of the gas-propelled type.

In spite of its lessening numbers and tonnage, the sailing division of the fleet claims first notice this year through three important additions to the schooner class, Enchantress, Elena and Karina. The first, designed by Cary Smith & Ferris and built by the Lawley & Son Corporation, is for William E. Iselin, who last year sold the yawl Vigilant which he had used for some years. The new yacht is of steel, 136 feet over-all, 100 feet on the waterline, 27 feet breadth and draws 15 feet without her centerboard. She was built to Lloyd's rules, classing 100 A1, and she represents the latest advance in yacht construction. By way of a minor detail the metal work of blocks and fittings is of specially imported steel.

Karina, designed by Theodore D. Wells, and built by the Staten Island Ship Building Company, for Robert E. Tod, replaced the well known Thistle, and like her is designed for offshore cruising. She is of steel, 198 feet 7 inches over-all, 150 feet on the waterline, 33 feet 9 inches breadth and 17 feet draft with no centerboard. She has three masts with fore and aft rig.

Elena is a new racing schooner for Morton F. Plant, a successor to the schooner Ingomar, which he raced with such success abroad and at home half a dozen years since. She is of steel, a keel vessel, designed by N. G. Herreshoff, and built at the Bristol shops, 136 feet 6 inches over-all, 96 feet on the waterline, 26 feet 8 inches breadth and 17 feet draft. Her dimensions are closely identical with those of last year's Westward, which yacht will meet her this season in home waters, but while Westward was built to the international rating rule with its strict limitations for racing abroad, in Elena Mr. Herreshoff has been free to cut the weight of construction and at the same time has had to consider only the American rule with its less onerous restrictions The relation of these three modern yachts to the gas engine is in itself most interesting. Elena is strictly a sailing yacht, and her owner has already the ocean cruiser Iolanda, of 1,647 tons. As a special tender to Elena he has a new twin screw steamer of 141 tons, of 138 feet over-all length, designed by Charles L. Seabury, and built by the Seabury Company, with two 6-cylinder 11 x 12 Speedway engines. Enchantress is thus far a sailing yacht, but fitted for the ultimate installation of gas engines, and Karina is similarly designed. The former, however, is now fitted with a 25 horsepower gas engine providing power for the electric sail hoists, capstans, lighting system, etc. In contrast with the addition of these three vessels to the list may be noted the passing of the once noted Jubilee, General Paine's cup defender of 1893, sold at last for junk after some years of idleness.

The most notable of the new power yachts is Sovereign, designed by Charles L. Seabury, and built at the Morris Heights works for M. C. D. Borden. This yacht is plated with bronze on steel frames, being designed and built under a guarantee of thirty-five miles per hour, which speed she easily exceeded on her initial trial. She is 166 feet over-all, 160 feet on the waterline, 16 feet 6 inches breadth and 4 feet 6 inches draft, being intended for use between New York city and Mr. Borden's home on the Shrewsbury River. In view of the good work of her immediate predecessor, Little Sovereign, and her obvious perfection of form and surface and the amount of her power (two four-cylinder triple steam engines), she is likely to make a record for actual service speed.

The latest development of the gas-driven yacht is found in the new La Belle II., a steel yacht with triple screws and engines, designed by Cox & Stevens and built by J. A. Dialogue & Sons for Alexander Winton, of Cleveland. She is of the conventional steamer type, 140 feet over-all, 117 feet 6 inches on the waterline, 19 feet 3 inches breadth and 7 feet draft. The engines, designed by her owner and built at the works of the Winton Motor Car Company, are of the four-stroke type, six cylinders 9 x 12¾.

In the smaller division of the sailing fleet the additions are limited to the 31-foot and smaller classes and are of little more than local importance. The power division, however, includes many new cruising yachts of all sizes from 100 feet downward, practically all equipped with gas engines.

The Register is but slightly larger than last year, a very thorough revision resulting in the dropping of many old yachts. The book contains 486 pages and forty-five colored plates, the yacht list proper including over 3,500 vessels. The particulars of 472 yacht clubs and thirty-one associations within the limits of the United States, the Dominion of Canada and the West Indies are given, with the burgees of 456 clubs and associations. As closely as can be estimated there are at the present time at least 600 yacht clubs within the territory mentioned, but many of the younger clubs in remote localities fail to reply to requests for the particulars necessary for their entry in the Register. The list of yacht owners includes the names of 3,300 owners, with the full address wherever it can be obtained, as well as the clubs to which each belongs and a reference to the yachts which he owns.

It has always been the custom to include in the Register a list of yacht designers, yacht builders, engine builders and others connected with the building and equipping of yachts. This year these lists appear in a new and extended form, making a very complete directory of the yachting trade. In view of the very large number of miscellaneous fittings and appliances which go to make up the modern yacht, even of the smallest size, it is hoped that this list will prove of permanent value to yacht owners as an index of what is offered them by manufacturers and dealers.

The style of the book is unchanged, the familiar blue and gold binding which is the standard for club use and the larger yachts, and the plain canvas designed for use on the small cruisers.

Chicago Y. C.

THE officers of the Chicago Y. C. for this year are: Commodore, Wm. Hale Thompson; Vice-Commodore, George O. Clinch; Rear-Commodore William A. Lydon; Secretary, A. Sheldon Clark; Treasurer, Murdock MacLeod; Trustees—George J. Charlton, Edward M. Mills, William B. Mundie, Dr. Thos. L. Gilmer; Judge Advocate, Charles E. Kremer; Fleet Captain, A. M. Andrews, Fleet Surgeon, Dr. C. Pruyn Stringfield; Measurer, Otto Schoenwerk, Jr.; L. M. Y. A. Delegates, A. Sheldon Clark, C. E. Soule, Jr. I. L. Y.A. Delegate, C. A. Sweet. The Regatta Committee—Chas. E. Soule, Jr., Chairman; Dr. Richard H. Street, George N. Woodley, Laurence C. Woodworth, Edward P. Farley —has arranged the following events for the season:

June 17—(Columbia Y. C., Michigan City race), open.
June 24—Members' day.
July 1—Chicago Y. C., race to Milwaukee. Motor boat races, all classes to Milwaukee, open.
July 3—Chicago Y. C. race from Milwaukee to Chicago for Herbst cup.
July 15—Chicago Y. C. open race, all classes, for Lipton trophy.
July 22—Chicago Y. C. open race, all classes, Mackinac cup.
July 29—Columbus Y. C. open race, all classes, to Macatawa Bay.
Aug. 4—Macatawa Bay Y. C., L. M. Y. A. regatta and Venetian night.
Aug. 5.—Macatawa Bay Y. C. second day, L. M. Y. A. regatta.
Aug. 7—Power boat race, Macatawa Bay to Muskegon.
Aug. 12—Columbia Y. C. open race, Stratford cup, Macatawa to Chicago.
Aug. 17—Columbia Y. C. open race, Sir Thomas Lipton cup.
Aug. 18—Columbia Y. C. open race, second day.
Aug. 19—Columbia Y. C. open race third day.
Aug. 24—Chicago Y. C. open race, Sir Thomas; Nutting cup.
Aug. 25—Chicago, Y. C. open race, second day.
Aug. 26—Chicago Y. C. open race, third day.
Sept. 1—Chicago Y. C. open race, Chicago to St. Joseph. First leg, triangular race.
Sept. 3—Chicago Y. C. open race, St. Joseph to Michigan City. Second leg, triangular race.
Sept. 4—Chicago Y. C. open race, Michigan City to Chicago. Finish of Triangular race.

Interlake Y. R. A. Regatta.

THE 1911 regatta of the Interlake Yachting Association under the administration of Commodore Alexander Winton, bids fair to rival and even eclipse the great regatta of 1908, which was held under the administration of Commodore George H. Worthington, and which holds the record to date.

The prize list announced for the sailing events is the largest ever put up, and is bound to bring in as many entries in the races as those of 1908. The aggregate purse for all the sailing events amounts to $1,700. The yachts will be divided into eight classes, with prizes for each event as follows:

Class A, modern cruisers—First prize, $150; second prize, $90; third prize, $60. Winner of series will receive championship flag.

Class D, veteran cruisers—First prize, $75; second prize, $45; third prize, $30. Winner of series to receive championship flag and a silver cup presented by the Buffalo Y. C.

Class F, 21-footers, restricted—First prize, $150; second prize, $90; third prize, $60. Winner of series to receive championship flag and the George W. Gardner cup.

Class H, 18-footers, restricted—First prize, $85, and championship flag; second prize, $45; third prize, $30.

Class J, 16-footers, restricted—First prize, $60, and championship flag; second prize, $40; third prize, $25.

Class K, 14-footers, restricted—First prize, $60, and championship flag; second prize, $40; third prize, $25.

Class C, catboats, restricted—First prize, $60; second prize, $40; third prize, $25. Winner of series to receive championship flag and a silver cup presented by the Buckeye Lake Y. C.

Class R, yachts—First prize, $150; second prize, $90; third prize, $60. Winner of series to receive championship flag and silver cup presented by the I. L. Y. A.

Three races are scheduled and will be held on Tuesday, Wednesday and Friday, July 18, 19 and 21, for all classes, the first and third race to be over a triangular 9-mile course, starting at a point off the eastern end of Gibraltar island. A short course of 4½ miles is laid out for classes C and K. The second event will be a leeward or windward race, 4½ miles out and back, or nine miles in all, for all classes except C and K, which will be the same over a short course of 2¼ miles out and back.

The same rules as governed the races of 1908 and 1910 will be used this year, applying to classes A, D, F, J, H, K and C. Class R will sail under the restricted rules of that class, which will appear in the 1911 program.

This is a new class, which is being fostered by the I. L. Y. A. this summer, in an effort to provide a more wholesome racing boat that will also meet cruising requirements. This type has had great success on Lake Ontario and on Long Island Sound, and the association is assured of four of these boats racing at the regatta this summer, two from the Lakewood Y. C. and a representative each from Toledo and Detroit.

Seawanhaka Corinthian Y. C.

THREE 15-footers took part in last Saturday's race at Oyster Bay. Their times over the course were: Iris, 1.43.15; Thelema, 1.48.45; Imp, 1.49.

Westward at Bristol.

ALEXANDER S. COCHRAN'S schooner yacht Westward arrived at Bristol last Saturday afternoon from Southampton England. She had a very stormy passage of eighteen days and twenty hours and sailed close hauled every day except the last two, when the wind was free. She experienced gale after gale on the trip. The best day's run was last Thursday, when she made 213 miles.

Captain Chris Christiansen, who was mate with the late Captain Charles Barr on Reliance and last year sailed Aurora, is in charge of Westward. The yacht dropped anchor near the Herreshoff shops and was soon surrounded by a fleet of motor boats. Captain Christiansen cleared the yacht at the Custom House, then the vessel was warped into the slip at Hereshoff's where the work of stripping her began at once.

The spars and sails and rigging of the yacht came across the ocean on a steamer. Some new spars and rigging have been made here and the work of fitting her out will begin at once. As soon as she is rerigged, the hull will be cleaned and painted, and by the end of the month she will be ready for racing. It is possible that she will sail her first race against Elena in the annual regatta of the Larchmont Y. C. on July 4.

Bug Class at Nahant.

The Nahant Y. C. members have a class of "Bugs" for this year's sport. The boats, ten in all, have been built from designs by William Gardner. This class originated in Manhasset Bay with George Corry, of the Manhasset Bay Y. C. in 1905, the hull of the "bug" being somewhat similar to the Departure, one of Mr. Gardner's earlier boats. The type resembles in its hull the half round skiff of the old Cow Boy order, but in place of the centerboard, as in the skiff, a fin and bulb were substituted.

The "bug" for 1911 is a reproduction of the original craft, but on a larger and more comfortable scale, embodying all the improvements suggested by five years' experience in racing the type. Dimensions of the new boat are 22.3 feet over all, 5.7 feet beam and 15 feet waterline. The leg-of-mutton rig measures about 263 square feet, the iron bulb weighing 800 pounds. There are forward and aft bulkheads of wood and plenty of watertight storage space. Steel standing rigging with bronze fittings will be especially made for the boats, and mainsail and jib will have sonder boat trim. Members of seven of the leading yacht clubs of Long Island Sound have given their orders for the boats, which are facetiously called the "marine insect" class because it has become the thing to name them after different bugs.

Owners of the new boats for Nahant, delivery of which is promised next month, will be Francis Gray, Warren Motley, David Sigourney S. E. Gould, J. S. Lovering, W. O. Gay, J. L. Motley, J. H. Foster, Nelson Whitney and A. S. Johnson.

For the Halifax Race.

ONE of the interesting boats of the season is Snapshot III., built by Simpson at the foot of 151st street and North River, for J. B. Lindemann, a member of the Colonial Y. C., from plans by Southmayed Hatch, a naval architect of this city.

Snapshot III. was designed primarily for seaworthiness and comfort, and with a six-cylinder, 36-horsepower Von Blerk engine she develops a speed of 12 miles per hour, and carries sufficient gasolene for a cruising radius of 300 miles.

The arrangement is simple and consists of the engine room forward under the bridge deck with accommodations for one man. The large open cabin, divided from the engine room by an extra heavy transverse bulkhead, has accommodations for sleeping eight people by a system of Pullman berths. On the starboard side in the forward part of the cabin is fitted a dressing case with large mirror and draws. Draws are also fitted under the transoms.

On the port side aft of the cabin is a large galley with all necessary cooking appliances and ice-box. Opposite the galley is a well ventilated lavatory.

The cabin is finished in paneled mahogany and green plush upholstery, making a very pleasing combination. The beams of the cabin are red gum wood finished natural.

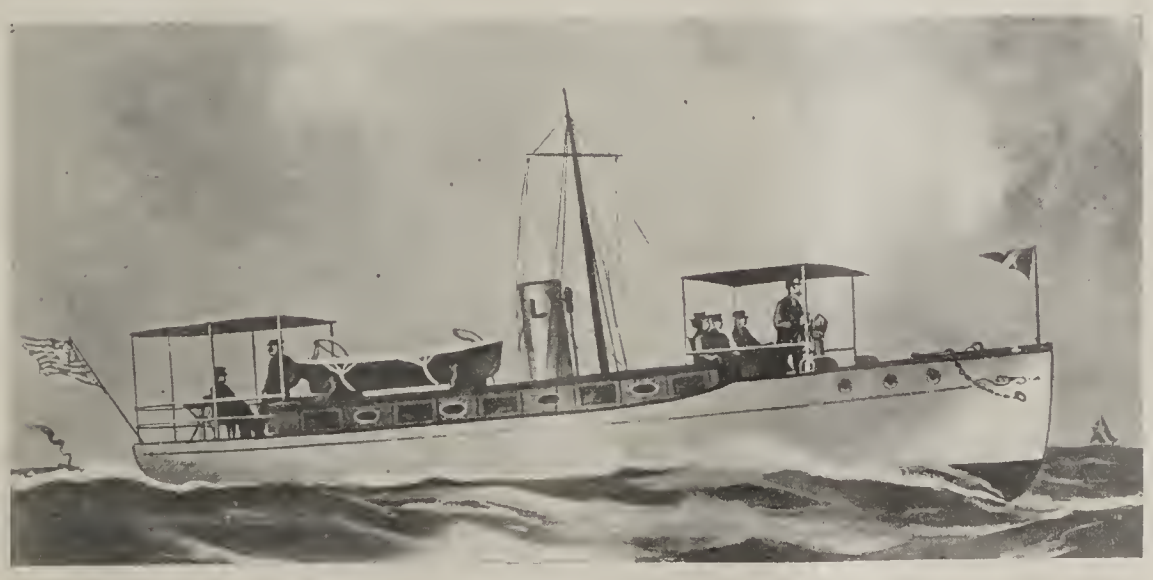
The gasolene is carried under the after deck in two separate tanks of the steel seamless cylindrical type, and are so protected that any possible leak will not run into the bilge of the boat.

Extremely large water tanks are fitted each side of the shaft under the cabin floor, and hold about 200 gallons. These tanks in addition to supplying the necessary water for cooking and washing, act as ballast tanks. In every instance the weight has been kept as low as possible to give the maximum buoyancy.

The boat will be entered in the Brooklyn Y. C.'s new Halifax reciprocity race, the Marblehead and other races for cruising boats of the type.

In the summer Mr. Lindemann will use the boat for cruising along the Hudson River, Long Island Sound and adjacent waters, and in the winter for hunting and fishing in the south.

Snapshot III. is 40 feet over all, 10 feet beam and draws 3 feet 6 inches.



SNAPSHOP III.—A HALIFAX RACER.

CANOE HANDLING AND SAILING
The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. Bowyer Vaux ("Dot"). Illustrated. Cloth, 163 pages. Price, $1.00. New and revised edition, with additional matter.
A complete manual for the management of the canoe. Everything is made intelligible to the veriest novice, and Mr. Vaux proves himself one of those successful instructors who communicate their own enthusiasm to their pupils.
FOREST AND STREAM PUBLISHING CO.

Columbia Y. C. Regatta.

THE first real racing of motor boats this season was at the regatta of the Columbia Y. C. last Saturday. The occasion was the formal opening of the club house and the members and their many guests, who lined the sea wall and the piazzas, thoroughly enjoyed themselves. The house is at the foot of 86th street and Hudson River and the races were watched by many from the Riverside Drive. There were four classes. The speed boats went to Ardsley and back, thirty miles, while the others went around a five-mile triangle, some twice and some three times. The regatta was in charge of S. Alling Halsey, W. W. Brinckerhoff, Russell Dart, Geo. N. Moran and Dr. D. B. Brinsmade, and they were assisted in the figuring by Morris M. Whitaker, the measurer. There were forty-four starters, and of these six were designed by Mr. Whitaker. Two of these, Bunk III. and Kitsix, were winners, so that it was a good day for the Whitaker boats.

Six started in the open launch class. Elise led all around the course followed by Traveler and Bunk III., but on corected time Bunk III. was the winner. This boat has a six horsepower Watertown motor and is a most attractive little craft.

There were so many in the cruising class that they were sent away in two divisions. In the first division, Frank D. Gheen's Kitsix finished first with Alabama second. Kitsix has a 30 horsepower Watertown motor and is intended for the Marblehead race. She should give a good account of herself in that race. In the second division Alisbe made the best time, but on corrected time Kitsix was the winner with Respite second and Alisbe third.

Four started in the speed class. Edith II., champion of last year, had engine trouble. Peter Pan, a new boat built by the Reliance Company, showed a fine turn of speed, but she had trouble with her ignition. She led all over the course, but was beaten on corrected time by Vita II, the winner of the Southern championship. Tiny Tad, a small hydroplane, did not show well. Peter Pan is a fine runabout, well modeled and well built. She can carry eight persons in chairs in her cockpit.

Only one boat finished in the class for semi-speed boats. The others had more or less trouble and withdrew. The summaries:

Class I, Open Motor Boats—10 Miles—Start 2:15

	Finish.	Elapsed.
Bunk III., Meakins & Frith	3 34 03	1 19 03
Elise, T. Kick	3 21 06	1 06 06
Bunny, Arthur Haas	3 40 09	1 25 09
Traveler, C. H. Dabelstein	3 32 56	1 17 56
Acciba, A. C. Bassett	3 41 52	1 26 52
Jessie, E. W. Keller	3 57 45	1 42 45

Corrected times—Bunk III., 1.04.22; Elise, 1.05.20; Bunny, 1.13..35; Traveler, 1.17.56; Acciba, 1.21.53; Jessie, 1.26.09.

Speed Boats, Class 2—30 Miles—Start, 2:30.

Peter Pan IV., James Simpson	4 01 15	1 31 15
Vita, J. Stuart Blackton	4 03 33	1 33 33
Tiny Tad, Dr. H. Z. Pratt	4 17 11	1 47 11
Edith II., A. E. Smith	Did not finish.	

Corrected times—Vita, 1.21.07; Peter Pan IV., 1.31.15; Tiny Tad, 1.45.47.

Cabin Cruisers—10 Miles—Start, 2:45—First Division.

Kitsix, F. D. Gheen	3 42 42	0 57 42
Alabama, J. H. Hoadley	3 43 48	0 58 48
Anna III., H. Van Dam	4 18 15	1 33 15
Caroline, M. F. Dennis	3 51 15	1 06 15
Gracelda, Dr. D. B. Brinsmade	4 16 10	1 31 10
Idylease II., E. H. Morris	4 17 26	1 32 26
Isis, Webb Floyd	4 10 45	1 25 45
Margo, Russel Dart	4 04 55	1 19 55
Migis, Dr. L. H. Gulick	4 16 52	1 31 52
Spark II., W. R. Brinckerhoff	4 19 05	1 34 55
Spindrift, C. R. Butler	4 00 12	1 15 12
Gadfly, A. J. McIntosh	Did not finish.	

Second Division—Start, 3:00.

Thistle, J. H. Wallace	4 12 46	1 12 46
Widgeon II., W. H. Master	4 11 52	1 11 52
Folly, Dr. L. O. O'Brien	4 31 08	1 31 08
Sylvermort, W. H. Israel	4 33 43	1 33 43
Amrita, J. V. Collins	4 17 46	1 17 46
Respite, Dr. V. C. Pederson	4 17 19	1 17 19
Osprey II., C. R. Runyon	4 08 27	1 08 27
Eronel, S. Cochrane	4 12 25	1 12 25
Ilisbe, G. R. Branson	3 57 00	0 57 00
Vagabond, G. C. Campbell	4 11 28	1 11 28
Irene, S. H. Becker	4 19 31	1 19 31
Hope II.	4 12 47	1 12 47

Corrected times for both divisions—Kitsix, 0.50.37; Respite, 0.51.30; Alisbe, 0.52.22; Alabama, 0.53.05; Amrita, 0.54.16; Widgeon II., 0.54.29; Spindrift, 0.54.47; Sylvermort, 0.55.30; Caroline, 0.55.55; Eronel, 0.57.58; Thistle, 0.59.47; Pracelda, 1.01.23; Margo, 1.01.49; Isis, 1.05.52; Spark, 1.08.16; Osprey II., 1.08.27; Vagabond, 1.10.04; Folly, 1.11.15; Migis, 1.15.47; Anna III., 1.19 20; Idylesse, 1.19.33; Irene and Hope II., not measured.

Semi-Speed Boats—15 Miles—Start, 3:15

Sispud, J. B. Cousins	4 20 30	1 05 30
Flinders, C. B. Rice	Disabled.	
Lady Betty, G. N. Moran	Disabled.	
Ink, Victor F. Ridder	Did not finish.	

Itasca II. Launched.

ITASCA II., one of the largest cruising motor yachts ever constructed, was launched this week at the ship yards of the Hudson Yacht & Boat Company at Nyack, N. Y. The vessel, which is 98 feet long with beam measurement of 16 feet 6 inches, was built for E. B. Hawkins, of Duluth, Minn., under the immediate supervision of her designers, Whittelsey & Whittelsey, of New York. Mr. Hawkins in a few days will take a party of friends in her up the Hudson and through the barge canal to the Great Lakes. Later in the season it is his intention to cruise in her down the coast to Florida.

The owner's wish was for a yacht of unusual strength, and his desires have been met in every particular. The keel and frame are of heavy white oak, the ribs being set much closer together than is customary. The deck beams are of the same material. Floor frames and keel are backed up by powerful keelsons and the whole of the structure work is through riveted. The deck is of white pine calked, with mahogany plank shear, waterways, etc. There are six watertight bulkheads, cutting the boat into seven compartments, and two other compartments with diagonal bulkheads, intended mainly to increase the vessel's strength.

Another notable feature of Itasca II. is the sumptuousness of her fittings. The interior decorations are mahogany and white. The owner's room is amidships. It has a large divan with alcoves and lockers above fitted to starboard and a double berth to port. To starboard is a private wardrobe and to port a private toilet room, a bureau being between. Abaft this large room to starboard by the companionway are a private buffet and ice box and a trunk room. There are two other commodious staterooms and a bathroom for guests.

The pilot house, also a handsomely fitted structure, is 20 feet long and 9 feet wide. It is furnished with a dining extension table and a large buffet. Quick and handy service from the galley is assured by a direct stairway to port of the buffet. There is a steering wheel at the forward end, but ordinarily the steering will be handled from the bridge. Ample accommodation has been provided for the captain, N. A. Swenson, the engineer and crew of three men.

Copper gasolene tanks of a capacity of 2,000 gallons are amidships in watertight and gastight compartments, with the supplies carried outside of the hull and the bottom of the compartments flushed with seawater.

In the engine room just forward of the gasolene tanks are two 100 horsepower air-reversing motors which will drive the vessel at a speed of fifteen miles an hour. To port is a large auxiliary motor which is used to drive the air compressor, dynamo and bilge pumps.

The feature of the outboard appearance is the low height of the pilot house and the long sweep of the deck from the funnel aft, giving the owner and his guests practically half the vessel's total length of 98 feet as deck space. There is a spar with crossyards which adds to the appearance of the vessel, but will be used only for signalling purposes.

New Motor Craft Building.

THE designing department of Messrs. Cox & Stevens report unusual activity for this season of the year. They have a number of new vessels under construction on which good progress is being made, among these being the following:

Steel cruising motor yacht La Belle, owner Alexander Winton, Commodore of the Lakewood Y. C., 141 feet by 19 feet by 7 feet 6 inches, having three 200-horsepower Winton motors, has been launched and will go in commission in about two weeks' time.

The twin screw cruising power yacht Lexington II., owner W. P. Scott, of Wilmington, having two 30-horsepower Twentieth Century motors, has been launched and will be delivered to her owner next week.

The twin screw cruising power yacht Nemaha, owner Huston Wyeth, of St. Joseph, Mo., 100 feet by 6 feet by 4 feet, having two 100-horsepower Standard motors, was launched Saturday and will be completed in about two months' time.

The cruising power yacht Northwind, 100 feet by 17 feet by 4 feet, with two 100-horsepower Standard motors, owner C. M. Clark, of New York, is partly finished and will be delievered to her owner in the fall.

The twin screw cruising power Tuna, 100 feet by 16 feet by 4 feet, having two 100-horsepower Standard engines, is under construction and will be delivered to her owner, Captain J. Inglis, of Jacksonville, Fla., in the fall.

The twin screw cruising power yacht Reomar II., 98 feet, having two 70-horsepower Twentieth Century engines, is about half completed and will be delivered to her owner R. E. Olds, of Lansing, Mich., in the fall.

The fast Class R sloop for a western syndicate, which is to race for the Lipton cup, is practically completed and ready for trial trip, which will be made under direction of designers.

National Y. C.

THE usual weekly race for motor boats of the National Y. C. resulted in a victory for the Suis Moi, owned by Robert Heinke. Four started and went over a course of 17 miles in length. The corrected times were: Suis Moi, 2.09.39; Neptune, Jr., 2.13.02; Sim Too, 2.17.03; Kathleen, 2.24.20.

Canoeing.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Central Division.—Joshua N. Robinsteen, 410 Colonial Bldg., Wilkinsburg, Pa., by H. D. James.

Eastern Division.—Leonard B. Allen, Medford, Mass.; R. L. Mapplebeck, 49 Madison street, W. Medford, Mass.; J. J. Daly, 11 Monument st., W. Medford, Mass.; Herbert W. Smith, 121 Park street, Medford, Mass.; Henry E. Hartweil, 39 Washington street, Lawrence, Mass.; George H. Shinnick, 44 Osgood street, Lawrence, Mass.; Thomas Farnsworth, Jr., 33 Hudson avenue, Lawrence, Mass.; Chester E. Bigelow, 11 Foster street, Worcester, Mass.; J. Orton Buck, P. O. Box 234, Bridgeport, Conn.; Ralph L. Day, 97 Monument street, West Medford, Mass.; J. W. Sheridan, 11 Cambridge street, Winchester, Mass.; J. Merle Whitney, 598 High street, West Medford, Mass.; Charles L. Patterson, Lawrence, Mass.; Percy A. Goodale, 8 Old Mystic street, Arlington, Mass.; all by Wm. K. Irving; William O. Reinhardt, 18 Bayside avenue, Edgewood station, Providence, R. I., by James W. Welsh; Fred A. Riese, 8 Richfield avenue, Cranston, R. I., by John C. Kendrick; Frank H. Gerlach, 48 Everett avenue, Winchester, Mass., by J. A. Newman; Lester D. Cushman, 30 College avenue, Medford, Mass., by Arthur G. Mather; Robert J. Durward, 32 Auburn street, Woburn, Mass., by Fred E. Leathe; Charles Elmer Clapp, Highland street, Dedham, Mass., and John Shaughnessy, 25 County street, Dedham, Mass., both by B. L. Goodwin; John F. Cummings, 86 Lake avenue, Worcester, Mass., and Harry L. Wardle, Westboro, Mass., both by John Kecnan; G. T. Lowden, 86 Barrows street, Dedham, Mass.; A. H. Smith, Dedham, Mass.; and H. R. Lannihan, Westwood, Mass., all by E. A. Rolland; S. Sawyer, 31 Chestnut street, Worcester, Mass., by J. B. Howard.

MEMBERS RE-INSTATED.

Eastern Division.—6045, Edward A. Garvin, 28 Crosby street, Lawrence, Mass.; 5560, Henry S. Perrin, 67 Wareham street, Medford, Mass.; 4682, Charles A. Temple, 866 Elm street, Manchester, N. H.; 6002, Frank T. Wiswall, 107 Coolidge street, Lawrence, Mass.; R. A. Woodcock, 165 South Broadway, Lawrence, Mass.

Oct. 25-26.—Kansas City, Mo.—Big Four League's tournament. Dave Elliott, Sec'y.
Nov. 28-29.—Rising Sun (Md.) G. C. H. L. Worthington, Vice-Pres.

DRIVERS AND TWISTERS.

The aggregation of Newark (N. J.) shooters heretofore known as the McCloud Gun Club, have changed their name to the Speedway Gun Club.

The date of the Revelstoke Gun Club's registered tournament, scheduled for Revelstoke, B. C., Canada, has been changed from June 29 to June 28.

Secretary-Treasurer Elmer E. Shaner writes us: "For the benefit of gun clubs applying for or holding registered tournaments, please announce that, on account of the Grand American Handicap tournament, the office of the Secretary-Treasurer of the Interstate Association will be closed from June 17 to 24, inclusive."

The Family Club, of San Francisco, and the Claremont Country Club, of Oakland, lined up at the traps of the latter organization across the Bay on the afternoon of June 3, to settle the question of superiority in the matter of marksmanship. Teams were selected, and it was at first agreed to have each man shoot at 100 targets. Before the meet had progressed far this was cut down to 50 targets, and it was late then when the last one was broken. When the scores were counted up it was found that the Oakland Club had 636 to its credit, as compared with 517 for the visitors. J. Cadman, of the Claremont Country Club, secured the highest score, breaking 45 targets out of 50, and three others made more than 40.

G. A. H. Entries.

PITTSBURG, Pa., June 11.—Herewith inclosed we send you a list of entries received to date for the Twelfth Grand American Handicap, 323 all told. You will, of course, understand that this list will be added to, as all entries received in envelopes bearing post marks of June 10 will be accepted as regular entries.

ELMER E. SHANER, Sec'y-Treas.

Iowa City Gun Club.

THE registered shoot of the above club was shot at Iowa City on May 30 with an attendance of forty devotees of the sport. Secretary C. Bothell was high amateur with 142 out of 150; F. M. Hamblin second, with 138. W. R. Crosby hung up a professional score of 144. The program consisted of 10 15-target events, and all shot the program through. Totals were:

N Muncy	128	L E Hahn	128

PACIFIC COAST HANDICAP

— WON BY —

WINCHESTER

"Leader" Shotgun Shells

The long list of winnings by Red W guns and shells garnered since the present trap shooting season begun was augmented by winning the Interstate Association's Pacific Coast Handicap, held at Madera, Cal., May 26-27.

E. L. Mitchell, of Los Angeles, won the big event with a score of 93 x 100 from 17 yards. He wisely shot Winchester "Leader" Shells. J. R. Converse, also shooting Winchester shells, was second with 92 from 19 yards. F. M. Newbert of Sacramento, shooting a Winchester Repeating Shotgun and Winchester "Leader" Shells, won High Amateur Average for all targets shot, with a score of 528 x 600; and High Amateur Average for 16-yard targets, breaking 365 x 400.

This important victory, coupled with the many that have gone before, should influence the thoughtful shooter to

Shoot Red W Guns and Shells at Columbus.

Audubon Gun Club.

BUFFALO, N. Y., June 3.—The Decoration Day shoot of the Audubons was evidently enough shooting for some of the members, as the attendance at yesterday's shoot was rather poor, and yet the shooting was quite up to the standard, particularly so with W. H. Smith and Jack Reed, representing A and B Classes. They each broke 76 out of their 80, and so divided the honors for high average. Their next nearest competitors only scored 70.

In the badge shoot, Fish, of Lyndenville, won Class A with a score of 19, beating Smith, Talcott and Covert, who each had 18, and he again repeated the dose to Smith for the Reed handicap trophy. The scores:

	Shot at.	Broke		Shot at.	Broke
W H Smith	80	76	Dr J M Burke	80	65
J Reid	80	76	E Cox	80	62
J L Talcott	80	70	Dr N Wilson	80	57
F D Kelsey	80	69	Chas Rogers	80	50
C F Lambert	80	69	W F Waldow	80	50
B V Covert	80	68	J Ebberts	80	41
G M Fish	80	66	E Smith	60	41

E. REINECKE, Sec'y.

Cincinnati Gun Club.

THE directors of the club met for organization on June 3, and incidentally did a little shooting. The scores were not quite up to the usual mark, and only seven shooters took part. M. Johnson and J. A. Payne tied for high scores on 89, which is lower than these men generally finish. Hellman was close second with 87. The board of directors organized with the following officers: President, Dr. A. B. Heyle; Vice-President, Dr. R. Lee Bird; Secretary, H. S. Connelly; Treasurer, C. Hellman; Captain, Emil Hammersmith. The other members of the board are: M. Johnson, J. A. Payne, D. Pohlar and E. Sampson. The club's next money-back tournament will be held on June 18, and a big crowd is expected.

	Shot at.	Broke		Shot at.	Broke
Johnson	100	89	Sampson	85	70
Payne	100	89	O Pope	75	58
Dr Bird	75	69	Connelly	100	83
Hellman	100	87			

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

Ohio State Shoot.

COLUMBUS, O., June 10.—One of the best, and in some respects, the best, annual tournament ever given by the League was the twenty-fifth, held under the auspices of the Columbus Gun Club on June 7 to 9. The weather could not have been improved upon during the entire week, nor could everything run more smoothly from start to finish. Manager Lon Fisher has put in much time and work in order to perfect the arrangements, and he succeeded admirably. There was not a hitch of any sort during the shoot. The events started promptly, and with the exception of the stop for lunch, there was no cessation of the firing after the first shot until the last event was finished. He had charge of the office himself, receiving valuable aid from W. R. Chamberlain, a well known trade representative. His field force was efficient and did not a little toward the success of the shoot. The events were run off over three traps. At No. 1, J. Ream was the referee, with Wm. Brudlove scorer; H. Gesse and F. Newkirk acted in the same capacity at Nos. 2 and 3, with F. Fisher and L. Markel scorers. The pullers were Bud Collins, G. Ream and C. Stickleman, and the trappers, Geo. Berry, Dick Templeton and Gilbert Drisbeck.

The trade was represented by W. Henderson, C. A. Young, W. R. Chamberlain, R. O. Heikes, F. Shattuck, J. R. Taylor, T. G. Barstow, R. W. Clancy, C. North, L. J. Squier and Bert Call.

The attendance was good on all three days, but not quite what had been expected, as it seldom is. The money-back system kept a large proportion of the shooters through the three days, and proved once more to be all that its inventor ever claimed for it. The team matches and championship events attracted much attention from shooters and spectators, and very few left the grounds until they had been decided each day. The annual meeting was largely attended, and there was considrable rivalry as to what club should give the tournament in 1912. The feeding of the shooters and visitors was in the hands of a local caterer, and he furnished a bountiful dinner at a reasonable price, which was satistory to all.

The program was the same on each day, and consisted of ten 15-target events, with $1.40 entrance, purses divided Rose system, 5, 3, 2, 1. There was also an optional $1 sweep in each event, divided 40, 30, 20 and 10 per cent. Two special 25-target events were added to the regular program, but did not count in the average; entrance in each of these two events was $2.50, and was optional with the shooters.

Tuesday, June 6, was practice day, and forty-five shooters took advantage of the opportunity to get a line on the traps and kind of targets that Manager Lon Fisher was going to hand out to them during the tournament. No fault could be found with either, the traps worked to a charm and the targets were thrown the regulation distance, and at fair angles. The day was comfortable, clouds hiding the sun for a portion of the time, and a fresh breeze helping to allay the heat, but not being strong enough to interfere with the flight of the targets. Good scores were the rule, C. Doolittle leading the amateurs with 98; five targets behind him were F. M. Edwards, F. Foltz and George Volk; and then came F. H. Hall, F. C. Koch and J. A. Flick with 91 each. Woolfolk Henderson was high man among the professionals with 99, missing his 94th target; J. R. Taylor was second with 97, and C. A. Young third with 96. Fred Shattuck, a recent addition to the ranks of the professionals, broke 94. W. Webster was not in as good trim as usual, and fell a little below the mark he has been setting lately. C. Doolittle was unlucky in missing his 32d and 87th targets, thus spoiling a long run, the best he could get was 54. "Kid" Randall watched the sport a while and then broke 96 per cent. of the last 50 targets. W. R. Chamberlain handled the office to-day, and everything went smoothly, of course, and the winners were all paid within ten minutes of the close of the last event. The program consisted of four 15-targets and two 20-target events, entrance in the 15s $1.40 each, and $2.00 in each of the 20s; money divided 40, 30, 20 and 10 per cent.; no average money.

*Profcssionals.

First Day, June 7.

Wednesday, the opening day of the tournament, was cool, a most delightful change from the heat of the past few weeks. The sun was hidden part of the time by clouds, and a strong wind blowing toward the shooters caused the targets to perform some puzzling flights at times, and hurt some of the scores. The manager, Lon Fisher, put over a surprise on the boys, by starting the first event at 9 o'clock, a full half hour ahead of schedule; this fact is worthy of mention, as it has never happened anywhere, barring the G. A. H. Lon says it wasn't his fault, Charlie North was to blame. The attendance was fairly good, over seventy shooters facing the traps, but when one has been expecting—or perhaps only hoping more, this number seems small. Charlie North was on hand to prescribe for any trap disorder, and as there was nothing doing in this line, he helped out in the office in various ways. Shattuck came in late; "lost his train," he said, so they took his money and let him shoot up.

The shoot for the Shooting and Fishing 5-man team trophy caused some discussion, as to who was eligible for a place on a team. No one seemed to know the original condition, so it was decided that only amateurs were eligible to win, and the race was shot under these conditions. The score bulletin occupied a part of Squier's spare time, and as long as he stayed on the job it could be depended upon as correct.

Charlie North put his name on the squad sheets and shot through the program. In some events he was not a bit afraid to tell his scores. Lank Grubb is making plans to attend the G. A. H., as he says the "prospects for honey is good." Charlie Young started the tournament nicely with a run of 82, and with the last 27 of the practice targets had a continuous run of 109. "Roundy" Chamberlain comes pretty near to being wise. He had one of the nicest schemes for letting another shooter earn money for you.

The events to-day were run off without a hitch. Lon had a near-strike to settle among the pullers, but it caused no trouble and few knew of it.

The team match had four teams entered, but only three contested for the trophy. The Columbus team had a comparatively easy time in winning. In the first round they secured a lead which they maintained the rest of the time, winning with a score of 214 to 208, the score of the nearest competitor.

W. Webster was high amateur with 144; C. G. Westcott, 141; W. R. Randall, 139. The professionals were headed by C. A. Young, who missed but three targets; W. Henderson accounted for 144; J. R. Taylor, 141.

*Professionals.

The Shooting and Fishing trophy, emblematic of the five-man team championship of Ohio, was presented to the League by the publishers of Shooting and Fishing. At Canton, on June 14, 1905, it was won by the Columbus Gun Club team—Rhoades 45, Young 49, Alkire 46, Webster 42, Cumberland 31; total 214 out of 250. In 1906, on June 14, at Dayton, the Dayton team won with 210—R. O. Heikes 45, Clark 46, W. Watkins 38, E. Watkins 40, Carr 41. At Columbus, June 6, 1907, the trophy was won by Columbus team No. 1 on a score of 204—Alkire 36, Webster 45, Rhoades 44, Cumberland 39, Chamberlain 40.

Team match, Shooting and Fishing trophy, five-man teams, 50 targets per man.

Columbus—Webster 45, H. E. Smith 42, Van Fossen 41, Fisher 45, J. H. Smith 41; total 214.

Cleveland—Rogers 44, Doolittle 43, Brown 41, Flick 42, Burns 38; total 218.

Springfield—Young 48, Downey 40, Downs 36, Pool 32, Winkler 36; total 192.

Two special events, 25 targets each: F. Kingsbury 42, Doolittle 43, Miller 45, Webster 45, Woolard 39, Coburn 42, Edwards 47, Koch 41, W. Shattuck 41, Kistler 44, Rogers 44, H. E. Smith 42, Penn 42, Volk 47, B. S. Cooper 48, Downey 40, Young 48, Graist 42, Brown 31, Metzger 40, Chamberlain 41, Taylor 48, Van Fossen 41, Payne 46, Burns 38, Flick 42, Grubb 44, Brainery 42, Pool 32, Winkler 36, Westcott 49, C. Henderson 43, Phellis 40, Fisher 45, McCarthy 39, F. Foltz 43, B. Downs 36, J. H. Smith 41.

Second Day, June 8.

The second day was the same weather continued, but the shooters seemed to have become accustomed to the wind, for the scores improved somewhat. There was again a good crowd during the day, and a few more shooters were present. The program was the same as on Wednesday, the two-man team race being the extra attraction for the day. This contest had twenty-two teams entered, Columbus putting in eight and Cleveland three. The race was interesting, and the returns were closely scanned when put upon the bulletin board. Five teams—Portsmouth, Dayton, Cleveland No. 2, Toledo and Columbus No. 1—finished in a tie on 48. The shoot-off attracted the crowd, and it was an exciting contest, only one target separating the winning team from two others. The Portsmouth team scored 47 in the shoot-off and won the trophy and the two-man team championship of the State. Doc Wm. Shattuck and F. M. Edwards, winners of the trophy, were named "The Gold Dust Twins" by one of the contestants, because they are workers, and they clean things up when they start.

Squad No. 1—Kingsbury, Cooper, Doolittle, Henderson and Webster—made to-day's squad record, going through event 2 without a miss.

Woolfolk Henderson won a Du Pont professional long-run trophy to-day with a continuous run of 152. He finished Wednesday's program with a run of 55, and added the first 97 to-day.

Elmer Shaner was at the grounds in the morning, taking a last survey of the scene of his next week's battle, and making final arrangements. He took away a pocketful of entries, for, as the "Daily Bulletin" announced, "He needed the money."

C. G. Westcott shot a close race with Henderson for high gun honors of the day. He did not quite make it, finishing one target behind; but he was high amateur, 146. Webster came next with 145; A. I. Brown and B. Cooper 143; F. M. Edwards 140. Henderson was high professional with 147. J. R. Taylor and R. O. Heikes 145 each; L. J. Squier 144.

The Review trophy, emblematic of the team championship of Ohio, was presented to the League by the Sportsmen's Review. The first contest took place on May 11, 1892, and was won by the Buckeye Gun Club, of Dayton. The winning team was challenged by the Grassy Point Gun Club, of Toledo, and lost the cup by default. This club was challenged by the North Baltimore Gun Club, which was defeated on Aug. 10. The third contest was between the Grassy Point and Sherman Gun Club, of Columbus, and was held at Columbus, the home team winning by a score of 177 to 170. On Oct. 12 of the same year the Plain City Gun Club challenged and was defeated at Circleville, 172 to 145. At Columbus, in May, 1893, the Sherman Gun Club's team No. 2 defeated No. 6 of the same club by a score of 95 to 88. This was the fifth contest for the trophy, and the numher of men on a team was reduced from four to two. The sixth contest, June 27, 1894, was won by the Buckeye Gun Club, defeating the Sherman Club team by a score of 181 to 180; four men shot on each team, 50 targets per man. The winners were challenged by the Sherman Club, and the seventh match was shot on Oct. 5 of the same year, the Buckeyes winning, 152 to 126. The eighth contest took place at Dayton during the League tournament, May 14, 1895, and resulted in a tie between the Cleveland Gun Club team; the Cleveland team won the shoot-off, 41 to 40; the teams consisted of two men, shooting at 25 targets each, and this condition was made permanent. The ninth match was held at Dayton on June 10 of the same year, the Buckeye Gun Club team winning with a score of 49. The tenth contest was held at Springfield, in 1897, and the Buckeye team was again victorious with a score of 49. The next contest was also held at Springfield, on June 1, 1898, and resulted in a tie between the Buckeye Gun Club team of Dayton, and the Mechanicsburg Gun Club team, 49 each; the Dayton team won the shoot-off, 48 to 45. At Columbus, June 6, 1899, the twelfth contest was won by the Sherman Gun Club team No. 1, total 48, after shooting off a tie with a team from Springfield. The tournament was held at Columbus, June 5 to 7, 1900, when the thirteenth contest took place. This year the contestants were given a handicap of added targets. The Columbus team scored a total of 50,

CONTESTANTS AT THE OHIO STATE SHOOT.

their handicap of 5 targets giving them a perfect score. They were tied by the Cincinnati Gun Club team, which also had a handicap of 5, giving them a perfect score. In the shoot-off the former team again scored 50 with their handicap to the latter's 49. At Circleville, June 5, 1901, Alkire and Rhoades won the fourteenth contest with a score of 49. The fifteenth contest was held at Cleveland on June 4, 1902, and was won by Heikes and Rike, each breaking 24, a total of 48. The sixteenth contest was held at Cincinnati, June 10, 1903, and was won by Rhoades and Young with a score of 47. At Akron, June 15, 1904, the seventeenth contest was won by Galt and Kreider; score 49. The eighteenth contest was held at Canton, June 14, 1905, and was won by the Newark team with a score of 49. At Dayton, June 14, 1906, the Dayton team tied the Newark team on 48. The former team won the shoot-off, with 46 to 39. The twentieth contest took place at the League tournament held at Columbus, June 4 to 6, 1907, thirty-seven teams being entered, and was won by Geo. Volk and F. Foltz on a score of 47. The winners received a silver loving cup as a memento of their win. In this contest C. A. Young (25) and L. H. Reid (24) with 49 were high team, but it was decided that they were not eligible for the trophy. The twenty-first contest was held at Columbus during the League tournament, June 2 to 5, 1908, twenty-two teams being entered. The Toledo team was again the winner with a score of 48. The Portsmouth team came second with a score of 47. The League tournament was again held at Columbus, in 1909, and twenty-four teams entered the twenty-second contest for the trophy. The result was a tie on 50 straight between the Toledo team (winner of the two previous contests) and a team composed of R. O. and H. Heikes. In the shoot-off the latter team won, with a score of 49 to the former's 48. The twenty-fourth annual tournament was held at Cleveland, June 1 to 3, under the auspices of the Cleveland Gun Club. The interest was not so great as in previous years, only eighteen teams entering on June 2. The Toledo team tied with the Pomeroy team on 48, each of the four men scoring 24. The latter team was given the trophy, as the Toledo team failed to shoot off the tie.

The annual meeting of the League was held at the Northern Hotel, at 8 P. M. It was the best attended and most enthusiastic meeting that has been held for years, and things were done. The roll call showed the following clubs represented: Dublin, Pomery, Washington, Ideal, Utica, Lorain, Mechanicsburg, London, Portsmouth, Greene County, N. C. R., Dayton; Wilmot, Cincinnati, Yellow Oak Meadow, Salem, Cleveland, Celina, W. Toledo, Galion, Springfield—twenty-seven in all.

President Smith presided at the meeting, and Secretary Kingsbury was also present. After the opening business of the meeting, the secretary read a new constitution, prepared by a committee, and a motion to accept the same was carried.

A motion by F. M. Edwards to make the championship event 100 targets, was carried.

Requests for the 1912 tournament were made by the Columbus Gun Club, Cincinnati Gun Club, N. C. R. Gun Club, Dayton, and the Cleveland Gun Club. One objection to the Cincinnati Gun Club was that the grounds were in Kentucky. A ballot was taken and Dayton was selected for the tournament next year.

The election of officers resulted as follows: R. R. Dickey, Dayton, President; E. Cain, Vice-President, Dayton; J. M. Markham, Dayton, Secretary-Treasurer; Executive Committee, J. H. Smith, Columbus; E. S. Rogers, Cleveland; J. J. Anderson, Lima; Geo. Volk, Toledo; F. M. Edwards, Portsmouth.

Third Day, June 9.

Friday was another pleasant day, but warmer, and with not a particle of wind to temper the heat. There was a slight haze in the air which made rather a trying light at times. The scores compare favorably with those of the day before. Rolla O. Heikes was the star performer to-day. He broke his first 137 without a miss, giving him the long run record for any day of the shoot, and, with his last 43 of Thursday, a continuous run of 180, entitling him to a Du Pont professional long run trophy, and the longest continuous run made during the week.

The program was started at 9:30 promptly, the ten regular events being finished soon after noon. No stop was made for dinner, but the championship event was started at once, and the last squad sheet was brought into the office before 4 o'clock. L. J. Squier was in charge of the cashier's sheet to-day, which accounts for the promptness with which the moneys were figured, and the winners paid. Long before 5 o'clock the grounds were practically deserted, and the 25th annual was a part of history.

In the championship event five shooters tied on 48 and a shoot-off was necessary. This was at 25 targets. Valk was the first to miss, his 6th target getting away. Edwards was the next to miss, failing to hit his 10th and 22d targets. Burns lost his 12 and 13th, leaving Doolittle and Kistler still in the fight. They kept together until the 21st target, which Doolittle missed. Kistler went out with a straight score and won. Valk and Doolittle 24 each. The winner, G. Kistler, of Celina, was warmly congratulated on his display of skill.

The money-back purse amounted to $772.25. This sum consisted of the $300 added by the Interstate Association; $301.45 for the targets trapped; $170.80 from the extra entrances and 10 cents per event from those who did not shoot in all events on the three days. The total losses were $303.20 in sums ranging from 15 cents to $25.15. The surplus, $469.05, was divided among the thirty high guns. Once more the money-back has proved a good system for expert as well as poor amateur shots. It has come to stay, without question.

E. M. Stout, of Circleville, O., won a Du Pont amateur long run trophy with a continuous run of 106. He got the first 98 this morning, and had the last 8 of Thursday. He felt pretty good over his record, as it was the first time he ever broke 100 straight; 89 was his best previous work.

Squad No. 2, Heikes, Coburn, Edwards, Cain and W. Shattuck, carried off squad honors with a score of 148 out of 150, made in events 5 and 6.

The number of shooters fell off a little to-day, sixty-five men facing the traps during the day. Of these several came late for the purpose of shooting in the championship event.

High amateur honors went to E. M. Stout with 147. He was in the class with Heikes and Taylor, who tied for high professional score. C. G. Wescott was second with 145, and J. A. Flick came third with 144.

For the three days, Henderson was high professional, Taylor and Heikes following in order. C. G. Wescott was high amateur with 432. W. Webster got in second on 427. F. M. Edwards next with 419, and J. A. Flick following with 413. After the tie was shot off, the trophy winners were called in front of the club house and President J. H. Smith presented them with the trophies. His remarks were short, and to the point, congratulating the winners on their display of skill, and wishing them continued success.

Manager Fisher and the club officers are entitled to credit for the excellent manner in which the shoot was conducted in every detail. Mr. Fisher has worked hard and may feel assured that his efforts to make things pleasant for the visitors were appreciated.

Remington Gun and Rifle Club.

ILION, N. Y.—The trapshooting tournament, held May 30, under the auspices of the Remington Gun and Rifle Club, was unquestionably the most successful shoot ever held in this section of the Mohawk Valley. The weather conditions early in the morning were not encouraging—rain falling at intervals for some hours, which, no doubt, was the cause for many remaining away. Afterward, however, the rain ceased and the sun shone brightly for the remainder of the day, and conditions for shooting were ideal. The club spared no expense to make sure that shooters would have all the comforts possible. The shooting stands were covered in a manner to protect the shooters from sun or rain, a fact much appreciated by the shooters.

Visitors were present from Fulton, Clinton, Utica, Syracuse, Cloversville, Rome, Chadwicks, Cooperstown, Herkimer, and a more gentlemanly lot of shooters would be difficult to find.

There were ten 15-target main events, and a 25-target merchandise event in which sixty prizes were offered. The first prize, a Remington repeating shotgun (Trap special), presented by the cluh, was won by Gammage, a club member, after a beautiful race with Fellows, of Syracuse. These shooters tied with 24 each, and in the shoot-off, again tied with 23 each. It looked very much like Fellows in the shoot-off, he having broken 20 straight, while Gammage had lost two; however, at post No. 1, Fellows drew two very sharp left-quartering birds and lost them both. They then shot miss-and-out, and after breaking 7 Fellows overshot an easy straightaway and Gammage did the trick. Barker, of Gloversville, won high average, closely followed by Corfield, of Utica, and Hobbie, of Fulton, they breaking respectively 143, 142, 138 out of 150. Scores:

	Shot at.	Broke		Shot at.	Broke

Kenmare (N. D.) Gun Club.

THE preliminary tournament of the Kenmare Gun Club was held Tuesday, May 30, and high scores were recorded, due to favorable weather. James Collins, of Grand Forks; C. M. Roberts, of Devil's Lake, professionals, were on hand. The individual championship for the northwestern part of the State, at 100 single targets, was the big event of the day. The winner turned up in A. R. Chezik, of Portal. Along with the championship, he was presented with a handsome silver loving cup, donated by the citizens of Kenmare. The record-breaking scores turned out by Jack Duis, of Devil's Lake, were a caution, and made the boys sit up and take notice. As he was not eligible to shoot for the cup, living in the eastern part of the State, he had to be content with first money.

Duis was high gun for the day with a total of 242 out of a possible 250.

The totals of the ten 15-target regular events were as follows:

	Shot at.	Broke		Shot at.	Broke
A R Chezik	150	139	J F Duis	150	145
A W Chapin	150	127	E H Gross	150	131
L Harrison	150	128	C H Parker	150	134
H F Turner	150	130	W H Holmes	45	35
Professionals:					
Jim Collins	150	119	C M Roberts	150	86

For the championship of Ward, Mountrail, Divide, Williams, Burke, Renville and Rottineau counties and trophy, at 100 single targets, scores as follows: A. R. Chezik 95, A. W. Chapin 86, L. Harrison 87, H. Turner 80, A. B. Gary 90, F. H. Gross 92, C. H. Parker 90, W. M. Holmes 84. J. F Duis scored 97 in this event, but was not eligible for the championship.

Chenango County Fish, Game and Gun Club.

THE annual registered tournament of the Chenango County, Fish, Game and Gun Club was pulled off yesterday according to schedule, about thirty enthusiastic wing shots taking part. The weather was threatening in the morning, and a little rain fell during the day, but it proved on the whole to be a splendid day for shooting, and some high scores were made.

Mr. J. A. R. Elliott, who holds the world championship medal for wing shooting, was high, with 143 out of 150. The other two professionals, Mr. Simon Glover and Mr. H. H. Stevens were tied for second place, each breaking 141 birds. Mr. W. E. Corfield, of Utica, was high amateur with a score of 139, while Messrs. Frantz, of Syracuse, and Wheeler, of Manlius, were tied for second place among the amateurs, with 137 birds. Among the Norwich contestants, Mr. J. C. Brooks was high, with 131 birds to his credit. The merchandise event was headed by a Winchester repeating shotgun, which was captured by Mr. Wheeler, of Manlius, with 24 out of 25 birds, Mr. W. E. Race, of Waterville, being second with 23 out of 25.

The success of the tournament was largely due to the energy of the secretary of the Club, Mr. Elmer D. Borden. The scores were as follows:

	Shot at.	Broke		Shot at.	Broke
C L Frantz	150	137	B G Lawrence	150	112
J A Munroe	150	110	G Jones	150	119

Missouri State Shoot.

THE fourth annual State tournament of the Missouri State Trapshooters' Association, held at Moberly, Mo., June 6, 7 and 8, proved to be the largest held in the Middle West so far this year in the number of amateurs in attendance who shot throught the program. Over forty amateurs shot the entire program, and had the usual number of professionals been present, the entry list would have been over fifty. As it was, with only five professionals taking part, the entry list hovered around the 50 mark for the entire three days.

On the first day, June 6, Arthur Killam led the professionals with 143 out of the regular program, closely followed by Spencer and Maxwell with 141. Riley Thompson led the amateurs with 144, and A. C. Connor was next with 140.

On the second day, June 7, Maxwell led the professionals with 146 in the regular program, Killam and Spencer trailing with 144. That good shot and splendid sportsman and twice winner of the Grand Missouri Handicap, T. M. Ehler, of Slater, Mo., led the field of amateurs and professionals with 148 out of 150 and had a run of 123, the longest of the meet. Riley Thompson was second with 143, Eaton with 140 being third.

In addition to the regular program of 145 targets the club had provided a team race at 25 targets per man, two men to a team and requiring teams to be from same town and members of the Missouri State Trapshooters' Association. This brought an entry of seven teams, the club adding $10 in cash to the purse and a pair of handsome solid gold cuff buttons to the winning team. The Charleston cracks were easy winners with Howlett 25 and Pottinger 24, they taking down $19 as first money. Clapp and Hickerson, of Moberly, and Joe and Will Gray, of Farber, divided second with 47, Floyd and Shoop, of Novinger, third with 46.

On the third day, June 8, Spencer again led professionals with 144, Maxwell second with 141, Gilbert third with 140, giving Spencer the average for the three days with 429 out of 450, was second for the meet with 428, and Arthur Killam third with 424.

Of the amateurs, Connor and Dixon tied with 143, Ehler second with 138, Veach also 138 and Collier third with 137. But for three days Riley Thompson topped the list of amateurs with 420 out of 450, Harvey Dixon second with 419, A. C. Connor third with 418, Claib Eaton fourth with 416 and T. M. Ehler fifth with 414 The complete scores of the three days follow:

THE F. W. KING OPTICAL CO., Cleveland, O.

Grand Missouri Handicap.

This is Missouri's classic event each year, and draws a heavier entry list than any other event shot in the Middle West, outside the Interstate Association's handicaps. This was the fourth, and the club, as usual, holding this meet, adds $100 and a trophy, the entrance being $10, and the handicaps 16 to 22yds., at 100 targets. The first of these was shot at Macon, in 1908, and was won by Denny Holland. The second was shot at Moberly in 1909, and was won by T. M. Ehler. The third was shot in Kansas City last October, and T. M. Ehler was again returned the winner under most severe conditions, from the 21yd. mark. This year's winner proved a dark horse in the person of Mr. E. S. Collier, a modest little gentleman from Shelbyville, Mo., a newcomer to the game, but a splendid shot, who will be heard from in future if he sticks to the game. Second money went to Winzenreid, also from 18yds.; third to A. C. Connor from the long mark of 21yds.; fourth was divided between John McGrath, 18yds., and Marion Shoop, 19yds., on a score of 88; fifth place went to Veach, 21yds., and Mulford, 18yds., on a score of 87, and sixth money went to Harvey Dixon, 21yds., and H. T. Moore, the only 16yd. man to get a place, with the score of 86.

As there were thirty-two paid entries and the club added $100, the total purse amounted to $356. Collier took $89 and the gold watch, Winzenreid $71.20, Connor $53.40, McGrath and Veach $26.70 each for fourth place, Veach and Mulford $26.70 each for fifth, and Dixon and Moore $17.80 each for sixth. The money was divided 25, 20, 15, 15, 15 and 10 per cent., class shooting. Scores:

Notes.

The annual meeting of the Missouri Trapshooters' Association was held in the parlors of the Merchants Hotel on Wednesday evening, the 7th, and eleven clubs, two individual members and a total of over thirty amateurs were present. A most enthusiastic meeting was held, and the Audrain County Gun Club, of Farber, Mo., was awarded the fifth annual State tournament and grand Missouri handicap. Ed Gray, of Farber, was elected President; Marion Shoop, of Novinger, First Vice-President; James Thomas, of Pleasant Hill, Second Vice-President, and Harry E. Snyder, of Kansas City, Third Vice-President, and Russell Glynn, of Farber, Secretary. The Audrain County Gun Club, of Farber, will hold the next annual tournament at Mexico, the county seat, the little city being better located than Farber as regards railroad facilities and hotels. The name of the Missouri Trapshooters' Association was changed to The Missouri State Trapshooters' Association, and it now consists of some nineteen clubs, Louisiana and Milan having joined at this meeting.

The Princeton bunch of six contestants, the Farber bunch with five and the Novinger bunch with three all the way through the tournament certainly made the larger towns look as though the country is the place for shooters after all. Princeton made a strong bid for the next annual tournament, being defeated by only two votes.

The seventh squad was a cosmopolitan bunch, and a greater lot of fun producers and kidders was never gotten together, and they also gave a pretty fair exhibition of shooting. They were Mackie, of Scammon, Kas.; Harve Dixon and Clay, of Missouri; Bill Veach, of Nebraska, and A. C. Connor, of Illinois. They had a barrel of fun out of the cashier and the record for foolish questions was broken many times. But they were welcome and the town was theirs. They would have taken it anyway, so we just gave it to them.

Charley Spencer did not shoot quite up to his form, but for that matter neither did any one else, or else the game was a little stronger than usual. However, he landed the first high professional average.

Fred Gilbert was indeed welcome. It was his first visit to the city, but we hope it won't be his last. His scores were low for him, but his witty sayings made a hit with the spectators and new shooters who had never met him.

The Charleston pair, Howlett and Pottinger, are a pair of good ones, but did not shoot up to form, except in the team race. We hope to see them in this part of the State again.

Joe Holland came a long way to see his brother, Denny, and old Moberly friends and every one was certainly pleased to see him. Joe has a nice business out in Oklahoma, and is a factor in the target game in that State.

The Squier money-back system proved very satisfactory to those who contested through the entire tournament and was a revelation to some who had not heretofore participated in the averages under this system. There was $648.25 in the entire money-back purse, and as the scores were not high, it required $283.85 to pay back the losses. This left $364.40 surplus to be divided among twenty-three high guns.

Geo. Nicolai is a treasure at any shoot. Yon don't have to ask George to do anything. He sees it beforehand and has it done. He knows traps and things, and if one got a little cranky, George usually had her in shape in a few minutes. What a welcome visitor! Never a kick, but always helping. May his kind grow in numbers.

L. R. HULEN, Sec'y.

Jewell (Iowa) Gun Club.

JEWELL, Ia.—Two days of good sport was had at the Jewell Gun Club's registered tournament on June 1 and 2, with scores that are a credit to the amateurs of the club.

Northern Kentucky Gun Club.

FIFTEEN shooters took part in the money-back tournament on the 4th of the month, the extreme heat and the fact that there was a ball game on being responsible for the small attendance. The conditions were good and some excellent scores were put up. The program was ten 15-targets event, a total of 150 targets. C. G. Westcott was high man with 141, and captured the trophy for high average. Next to him came Payne, one of our local shooters, with 136, and Dan Pohlar followed with 135. The office was in charge of Elmer Lamb, who is becoming an expert in handling the financial end of a shoot. The money-back purse was ample to pay all losses and left a nice little surplus toward the trophy for the high average man.

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring.**

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

LEFEVER
SHOT GUNS

20 Gauge. Price $28.00

ITHACA

FEEL THE QUICK SNAPPY PULL

If you are shooting holes in the air and leading your birds several feet because your gun has a creepy trigger and a slow lock, you'd better pass the "old timer" along and get a down-to-date ITHACA.
Our new gun has a quick, snappy pull, and the hammer travels less than half an inch and falls in 1-625 of a second.
We figure it will increase your score at least 5 per cent.
Beautiful catalog FREE; 18 grades, $17 75 net to $400 list.
Our 5 1-4 lb. 20 bore is a howling success.
ITHACA GUN CO., Box 25. ITHACA, N.Y.

SAM LOVEL'S BOY

Sam Lovel's Boy is the fifth of the series of Danvis books. No one has pictured the New Englander with so much insight as has Mr. Robinson. Sam Lovel and Huldah are two of the characters of the earlier books in the series, and the boy is young Sam, their son, who grows up under the tuition of the coterie of friends that we know so well, becomes a man just at the time of the Civil War, and carries a musket in defense of what he believes to be the right.

Meadow Springs Gun Club.

PHILADELPHIA, Pa., June 11.—Hillpot, Gideon and Soley were the high men and also the prize winners in the combined shoot of the Meadow Springs Gun Club, shot yesterday afternoon at Fifty-seventh and Lancaster avenue. Hillpot won the three points alloted for the high score in Class A in the yearly competition shoot, and also captured the silver spoon donated for the gunner who made the best score out of his 100 bluerocks, he breaking 94 of his century of clay pigeons. Gideon grabbed the three points offered for the high score in Class B, while Soley made the wonderful score of 24 breaks on 12 pairs of doubles, an exceptional record for an amateur.

A big field faced the traps for the day's sport. Very little wind, a clear sky and easy working traps were an alluring incentive for high scores, and many of the perspiring, powder-marked gunners found that their eyes for distance were of the professional order. The yearly shoot calls for 25 targets, dead bird added handicap, class shooting, points being awarded in each class, three, two and one, for the three high scores in each class. Hillpot smashed 23 of his 25 bluerocks, and with one deal bird, totaled 24, beating out Henry and Clegg by a bird, each gunner getting 23. Henry and Clegg were allotted 2 points for finishing second, and Murdock got the one point by finishing with a 22 score.

Gideon outshot the entire field. His score of 25 could not be touched by any of the gunners on the field, he losing but one of his quarter century of marks, and having one as a handicap, reached the perfection mark. Stone with 23 was awarded 2 points for finishing second with 23 breaks, and E. G. Garret landed the solitary point by finishing third.

Smith Gun Club.

NEWARK, N. J., June 11.—State Champion F. R. Wicks and Russell Bercaugh tied for first honors in the monthly merchandise prize shoot held yesterday afternoon on the Smith Gun Club traps in Bloomfield avenue. Bercaugh won out in the draw for first prize, with Wicks second. Each man broke 47 out of 50. Former State Champion Charles T. Day, Jr., followed closely in third place, with 46 out of 50. Another tie was scored by Charles Thomas, John W. Davis and H. Trowbridge, when each broke 43 out of 50 for fourth, fifth and sixth prizes. The men drew. Thomas got fourth, Davis fifth and Trowbridge sixth. Seventh was won by Henry Higgs after drawing for a tie with B. M. Shanley, Jr., and William Hassinger, each of whom broke 41 out of 50.

During the afternoon more than twenty-five shooters faced the traps, and over 2,500 clay birds were thrown for the contestants.

The following are the scores in the prize shoot:

	Yds.	T'l.		Yds.	T'l.
O Yeomans	22	37	F Pohlman	17	38
B M Shanley, Jr.	22	41	John Erb	17	40
C T Day, Jr.	21	46	J Wheaton	17	37
R C Hopper	21	31	C T Day, Sr.	16	31
W M Hassinger.	19	41	H Keogel	14	32
W Trowbridge	19	43	Chas Thomas	20	43
Bercaugh	19	47	F Compton	16	40
F R Wicks	18	47	H Hassinger	16	28
J Davis	18	43	C von Lengerke.	16	42
I Castles	18	40	A L Perkins	16	38
H Higgs	17	41	J J Murphy	16	40
S Thornton	17	39	W N Drake	16	36

In addition to the prize event, some interesting sweepstakes were shot off, the scores of which are as follows: O. Russell 22; J. Wheaton 15, 16, 15, 20, 19; R. Bercaugh 14, 21, 21.. Henry Keogel 19, 18; H. Higgs 21, 22, 25; C. von Lengerke 24, 20; S. Thornton 16, 20; F. Compton 21, 19; W. N. Drake 20, 16, John Erb 17, 15, 20, 19, 21; R. Hopper 20, 21; William Trowbridge 22, 19, 19, 19; William Hassinger 24, 23; F. R. Wicks 19, 23, 18, 18; C. Thomas 23, 21; B. M. Shanley 20, 21.

Highland Gun Club.

MINEOLA, L. I., June 11.—W. Simonson led the gunners yesterday at the Mineola traps. Nine members participated at 16yds., 100 targets each, in strings of 25. W. Simonson scored 92 and won, while J. F. Simonson secured second place with 81. The scores:

Events:	1	2	3	4	
Targets:	25	25	25	25	Total.
W Simonson	24	24	22	22	92
J F Simonson	21	20	21	19	81

F Godesky	16	19	..	..	35
S Lein	20	19	..	..	39

Chicago Gun Club.

CHICAGO, Ill., May 30.—This was an ideal day for trapshooting, and consequently many good scores were made. The best work of the day was MacLachlan's run of 99 straight. There were fifty-six shooters present during the day. The scores in the regular program events follow:

	Shot at.	Broke		Shot at.	Broke
A MacLachlan	150	145	W A Davis	150	122
J R Graham	150	145	B L Kammerer.	150	116
C E Shaw	150	145	H Thwaite	150	107
J S Young	150	144	J G Parker	150	102
E O Graham	150	143	Mrs Cutler	150	99
J B Barto	150	141	C C Emery	60	56
W S Cutler	150	129	W F Kiley	60	54
J Nimetz	150	139	T P Bus	60	49
Geo Roll	150	138	J E Erwin	60	48
R Einfeldt	150	137	Mrs Fetherston.	60	46
H A Collins	150	135	Dr S Shaw	60	46
J Wilcoxen	150	135	O W Crocker	60	40
C W May	150	132	O Kausche	60	35
W Einfeldt	150	132	Mrs Taggart	60	28
J H Shrigley	150	125	L R Keller	40	27

Special event No. 1, was at 50 targets, sweepstakes; Nos. 2 and 3, 25 targets at 21yds.; Nos. 4 and 5, 12 pairs.

A number of practice events were also run off.

June 3.—The pleasant weather induced quite a number of shooters to come out to-day. An incoming wind made the shooting rather hard, and the marksmen had to go after them quite lively in order to get very good scores:

Events:	1	2	3	4	5	6	7	8
J S Young, 21	..	42	41	18	..	..	21	..

WM. F. MERKLE, Supt.

Columbus Gun Club.

COLUMBUS, O.—Most of the shooting on the afternoon of June 3 was done from 20yds., hence the poor scores:

	Shot at.	Broke		Shot at.	Broke
H E Smith	110	93	Hill	75	58
Buchanan	100	90	Camp	80	62
Black	125	99	Shore	100	68
Kingsbury	110	85	Shilling	90	79
Webb	100	88	G Smith	75	49
Taylor	125	114	Joyce	65	53
J H Smith	70	60	Fisher	50	45
Van	150	136	Call	100	91

LON FISHER.

The Palefaces.

BOSTON, Mass., May 30.—The holiday shoot of the Palefaces lacked a large attendance, but the few that were in evidence thoroughly enjoyed themselves. Charlie Marden placed a dandy 96 to his credit, which included a run of over 50. This was 3 too many for Clarke, whose third event was the one that prevented a tie. Ray Richardson proved equal to the occasion of winning third average. Mrs. Park was the only lady shooter present, and had 84 for a total. The fourth event seemed to be her hoodoo, or otherwise the 90 per cent. mark would have been given a scare. Scores:

Marden	96	Williams	69
Clarke	93	Chapman	55
Richardson	91	Faye	45
Muldown	89	Dr Lyons	37
Mrs Park	84	Clapp	34

May 31.—The last shoot for May on the Paleface grounds was held to-day, and as a special attraction an impromptu team match between the Paleface team of Coots and the intercollegiate team of Beetleheads was arranged. Both teams appeared to be on their mettle, and some very good scores resulted. For the college boys, Heard and Mixter led with 92 and 91 respectively, with Charlie Morse close by with 89. For the Palefaces, three of their members were of the "pro." class—Dickey, Sibley, and Kirkwood, the latter signalizing his entrance with a clean score of 100. Geo. Hassam, of the amateur ranks demonstrated how to make high averages. Dickey with 91 was the other Paleface to secure a place in the coveted 90 per cent. ranks. Scores:

Coots.		Beetle Heads.	
Dickey	91	Wigglesworth	85
Hassam	93	Morse	89
Charles	80	Heard	92
Sibley	82	Lockwood	86
Kirkwood	100—446	Mixter	91—443

June 7.—With all the regular Palefaces at the Maine State shoot at Rangeley, just seven of the stay-at-homes presented themselves for the 100 target program. While the attendance was small, it nevertheless was an enjoyable shoot, and it is safe to say that no one went away dissatisfied. Mr. Chas. D. Cook, of Providence, again visited the grounds and kept things coming in the last 50, and with a 16-target handicap, was some 3 birds ahead of his nearest competitor, Charles, at the finish. Sam Mixter, one of Harvard's brilliant lights, won the amateur average for the afternoon.

One of the particular features of the afternoon was to see the way that Young with a 20-gauge gun and shooting gun-below-the-elbow, punched those targets. It sure looks as though some day the small bores will be in evidence at this game, and supplant the 12-gauge, which has held sway for years now. Scores:

Kirkwood	94	Charles	85
Mixter	88	Cook	80
Frank	87	Young	67
Wigglesworth	87		

Added target handicap race:

Cook	16	96	Kirkwood	0	94
Charles	8	93	Mixter	4	92
Wigglesworth	4	91	Frank	0	87
Young	20	87			

Hudson Gun Club.

JERSEY CITY, N. J., June 4.—The regular bi-monthly shoot of the Hudson Gun Club had an ideal day for the sport, some very good scores being returned. Clarence Durkee, with a total of 84 breaks managed to lead the bunch, beating out Carl von Lengerke, who scored 83, for first place.

In the Du Pont and Western trophy events there were several who managed to make straight scores with their handicap allowances; and for the club prizes Kurzell, Durkee, Williams, Jr., and Doc. Groll were the lucky ones to score 6 points.

June 18 is our next shooting date, and everybody is welcome to shoot with us. Targets are trapped at one cent each, and all brands of ammunition is for sale at our grounds.

Take the Turnpike car from the P. R. R. station at Jersey City, or at any point in Newark, get off at the west side of the Hackensack River bridge and walk north to the club house, where you will always find the bunch ready to welcome a stranger.

Our grounds are only twenty-five minutes from the Hudson River tubes at Cortlandt street, New York, so if you like trapshooting, come out some Sunday morning and give it a trial.

The ***Marlin*** *Model 20*

REPEATING RIFLE

You can buy no better gun for target work and all small game up to 200 yards. Without change of mechanism it handles .22 short, long or long-rifle cartridges, perfectly. The deep Ballard rifling develops maximum power and accuracy and adds years to the life of rifles.

The solid top is protection from defective cartridges—prevents powder and gases from being blown back. The side ejection never lets ejected shells spoil your bead and allows quick, accurate repeat shots. With simple take-down construction, removable action parts—least parts of any .22—it is the quickest and easiest to clean. A great vacation rifle. Ask any gun dealer.

The 136 page *Marlin* catalog will help you decide what rifle best suits your individual desires. Send 3 stamps for it today.

Rhymes of The Stream and Forest

FRANK MERTON BUCKLAND

One of the freshest, most delightful collections of outdoor verse offered for many a day. They are the outpourings of a spirit which loves nature, the woods and streams and growing things, and appreciates its charms.

Mr. Buckland's verse has a charm that is at once rare and delightful. This book will appeal to every outdoor man or woman, and particularly to the "Brethren of the Angle."

Its form is as attractive as its pages, closely simulating the appearance of the standard fly-book, printed on heavy laid paper with ornamental border designs of trout flies, pocket for clippings, and blank pages for copying or individual composition. It is just the thing for the den, for the pocket, or for a gift to the friend who loves the big world out of doors.

Postpaid, $1.25

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

Indianapolis Gun Club.

INDIANAPOLIS, Ind., June 3.—Mr. J. C. Dixon achieved a notable victory to-day over the hard-to-beat Smoke in the running contest for the President's cup, and did it in spite of a handicap of 2yds. In practice Fayette led with 94 per cent.; Smoke second with 92.

Practice:

	Shot at.	Broke		Shot at.	Broke
Moller	85	73	Parry	85	80
Lewis	60	44	Neighbors	60	43
Britton	80	71	Edmonson	80	67
J C Dixon	85	74	Treat	80	65
Smoke	85	78			

President's cup:

	Shot at.	Broke		Shot at.	Broke
Parry, 20	50	44	Britton, 16	50	44
Lewis, 20	50	40	Smoke, 16	75	67
Moller, 18	50	43	Neighbors, 16	50	35
J C Dixon, 18	75	69	Edmonson, 16	50	39

June 10.—The hottest June day but one in forty years greeted the trap devotees to-day. Fortunately, it was tempered by a strong west wind, else the conditions would have been unbearable. All shooting was at 16yds., and Parry led both in practice and in the trophy event. Lewis was second in the one and Mr. Dixon in the other. Barr got away on the right foot and ran 83 before missing.

Practice:

	Shot at.	Broke		Shot at.	Broke
Dixon	80	73	Neighbors	80	61
Smoke	100	91	Moore	25	14
Denny	40	28	Wilcox	90	73
Lewis	40	37	Johnson	70	57
Parry	60	57	Barr	110	105
Edmonson	100	81	Granberry	25	11
Britton	85	78			

Du Pont trophy, 50 targets:

Dixon	47	Parry	48
Smoke	45	Neighbors	45
Denny	41	Edmonson	43
Lewis	43		

Lehigh Valley Shooting Association.

ALLENTOWN, Pa., June 10.—The shoot was fairly attended. H. J. Schlicher scored 149 as high amateur and had a straight run of 116 unfinished. A. S. Heil was second with 146. Good for Al. This will enable him to get married now after his return from the Grand American. Schlicher drew $33.50, while Heil drew $26.10. Kramlich, Ball and Gerhert tied on 143 as third amateur guns.

Englert fell shy some to-day, but John holds on to the cottontail. Luddy had charge of the office and kept the ball a-rolling. "Butch" forgot his red tie, so bagged 140. "Zig" missed 5 in the first event, but broke straight in fifth and ninth events. Hawkins won high professional on 148, and had a straight run of 140. Cumberland and Apgar tied on 146 as second professional. Lewis was third with 135; well done for Lloyd, as he assisted Luddy in the office. Coffin, from Newark, made them sit up and take notice, winning fourth honors. Bitterling shot a good clip, considering his eyesight.

Everybody happy, looking for the next tournament. Heil and Englert registered for the Grand American.

C F Kramlich	150	143	R S Jarrett	150	140
J L Englert	150	136	H German	150	137

Pottsville Game and Fish Association.

POTTSVILLE, Pa., June 9.—The Game and Fish Association held its registered tournament to-day, with thirty-two amateurs and five professionals to face the traps. Schlicher was topnotcher of the amateurs with 192, and Hawkins scored 194 for the professionals. Half of the program was shot on a trap patented by Nathan Benner, of Mahanoy City, Pa., and was used with satisfactory results. The money-back system worked out in good shape. The total fund amounted to $140.50; losses paid, $69.50, leaving $71.00 surplus for six high amateurs. Scores:

The DuPont Gun Club.

WILMINGTON, Del., June 11.—One of the most interesting shoots since early spring was held at the Du Pont Gun Club's grounds at Newbridge yesterday afternoon. Seventy contestants participated in the afternoon's sport, and the crowd of spectators was the largest in several months. Severn did the best shooting of the day, breaking 25 straight in the single targets, and 41 out of 50 in double targets. J. Cox, of Avondale, Pa., was also on the job, and broke 46 out of 50.

Messrs. Severn, Pratt and Slear from Philadelphia, were among the participants, as was J. W. Hessian, formerly of this city, but now of Stamford, Conn.

The club's new addition to their club house is nearly completed, and will be ready for the Eastern Handicap in July. A big shoot will be held on July 1, as a sort of preliminary to the big contest. Nearby clubs will be invited to send teams that day.

The results of the T. Coleman du Pont merchandise shoot were: Class 1—J. B. McHugh and A. H. Lobb tie at 24. Class 2—Henry Winchester, Isaac Turner and George Godwin tie at 23. Class 3—Won by D. J. Dougherty, 22. Class 4—Won by E. H. Anderson, 15.

The scores: D. J. Dougherty 22 out of 25, Guy Lambert 7, Winchester 20, Anderson 15, Bedford 15, Poffenberger 15, Smith 12, Martin 15, Hessian 20, Jones 13, Turner 23, Magahern 18, Robison 23, Lord 11, Lyon 13, Severn 20, Pratt 21, McHugh 21, Hessian 19, Joslyn 22, Reed 18, Dr. C. Jefferis, Jr., 17, Coyne 19, Curley 5, Leedom 22, Godwin 23, Rutter 13, Lukens 23, Pennington 15, Wood 17, Jensen 13, David 13, Slear 20, Mitchell 13, Wilson 18, Nickel 7, Prickett 16, Mathewson 18, Lofland 19, Spring 19, Davis 19, Robison 4, Wright 17, Grier 20, W. Jones, Jr., 13, Trott 18, Cox 23, Dr. Rumford 22, Dr. Betts 12, Doremus 16, Casey 16, Speidel 9, Hawk 16, Lobb 24, Waugh 13, Haverbeck 9, Beatson 4, Carlen 19, Wishart 8, Kenworthy 14, Dr. Darlington 8, Dr. Steele 20, Vance 16, Tuchton 18, Lindsay 19, Kerby 13, Dr. A. Patterson 16, G. Lindsay 19.

In the event for 25 pairs of doubles, the scores were Severn 41, Lukens 34, Mitchell 33, Skelly 41, Carlin 33.

Analostan Gun Club.

WASHINGTON, D. C., June 11.—Warm weather lessened the attendance at the shoot on the Analostan Gun Club grounds on the 10th. A stiff wind prevailed during the afternoon. Steubener was high gun with 91 out of 100. Dr. Stine was runner-up with 86. Everett Dufour shot well on 50, breaking 48 of them. He ran 39 straight. Drs. Harrington and Taylor were trying out new guns, and both feel well satisfied with their "single stickers." Following are the scores:

	Shot at.	Broke		Shot at.	Broke
Wagner	125	101	Hill	80	56
Harrison	110	88	Dufour	50	48
Parsons	105	86	Dr Taylor	50	44
Steubener	100	91	C S Wilson	50	43
Stine	100	86	Baker	50	31
Peck	100	85	Latimer	25	11
Green	100	71	Smith	15	10
Sharpe	80	20			

At 10 pairs the scores were: Wagner 14, Parsons 15, Hill 8, Dr. Taylor 14.

The Fred Macaulay Business Men's Gun Club

NEWARK, N. J., June 6.—Members of the Fred Macaulay Business Men's Gun Club enjoyed their sport between showers at the Speedway traps to-day, although it was dreadfully dark, with the rain interfering, making accurate shooting almost impossible. Exceptionally good results were obtained. Wm. Trowbridge was high gun, as well as high average gunner. He was the only marksman who managed to break 25 straight and breaking 153 white fliers out of a possible 175. William Wayne was a close second with 151, and B. M. Shanley, Jr., was third with 127. The following are the shooters and their scores:

B M Shanley, Jr.	17	22	23	23	20	22
Wm Trowbridge	17	20	22	25	23	24
Wm Wayne	18	23	24	18	22	22
James Wheaton	14	17	15	14	14	..
James Murphy	19	18	18	15	20	..

SMOKELESS.

Thornburg Gun Club.

THORNBURG, Pa., June 10.—This shoot was for a gold watch fob donated by M. D. Ullery and was won by Hickey on a tossup.

PAUL T. EVANS, Sec'y.

Sikeston Gun Club.

SIKESTON, Mo., June 6.—Out of 50 pigeons the following scores were made to-day: Clem Marshall 45, Dan McCoy 45, L. R. Bowman 43, C. H. Yanson 42, H. A. Smith 42, W. H. Tanner 41.

June 9.—Out of 100 pigeons shot at to-day the following scores were made: Dr. D. E. Sawyer 92, H. A. Smith 87, Clem Marshall 86, Wm. H. Tanner 86, L. R. Bowman 85.

At 50 pigeons: Dan McCoy 45, C. H. Yanson 43, Bert Mitchell 37.

WM. H. TANNER, Sec'y.

SMITH GUNS
HUNTER ONE — TRIGGER

THE mechanical precision of the adjustment of a Hammerless Smith Gun approximates perfection. By reason of it a Smith Gun cannot shoot loose. The longer you shoot it the tighter it gets. And so by far the greater number of your gun-troubles are eliminated.

NEVER in the long history of gun-making has there been made so great an improvement as the *Hunter One-Trigger attachment*, which can be put on all Smith Guns. It stands for the greatest accuracy—and is helping to make world's records. Your dealer should be able to tell you all about it. So will our new and handsomely lithographed Catalogue, which you may have on request.

The latest product exemplifying Smith Gun perfection is our *20-Gauge Hammerless*—just out—and almost as light as a feather. In reality it weighs from 5¾ to 7 lbs. It shows what can be done in making a fine gun at a low price. It is simply *all gun and no frills.*

THE HUNTER ARMS CO., 90 Hubbard St., Fulton, N. Y.

The Angler's Workshop

RODMAKING FOR BEGINNERS

By PERRY D. FRAZER

A unique work, bringing the science of rodmaking up to the very moment and epitomizing the knowledge and the experience of experts for the guidance of the average man. The evolution of bait-casting principles has made Mr. Frazer's book supersede all previous publications on the subject.

Every angler—young or old—who is fond of adapting his rods and tackle to his own ideas of what they should be, will find in this book a large fund of information gathered by the author in years of study, experiment and practical experience in fishing, tournament casting and at the work bench. He theorizes and speculates not at all. He tells "the how" of everything connected with rodmaking in a way that makes results certain. All explanations are simple and easily followed.

Separate chapters are devoted to each of a half dozen types of bait-casting rods; to tarpon, surf and light salt water rods; bass and trout, salmon and tournament fly-rods. Complete specifications of well known types are given, and the chapter on split bamboo rodmaking is the most comprehensive treatise on the subject ever published. Indispensable in the angler's library.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid, $1.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

ANGLING MEMORIES

Seasonable Books for the Sportsman's Library

MEN I HAVE FISHED WITH MY ANGLING FRIENDS

Both by FRED MATHER

These two volumes are a source of endless delight to the fisherman. They deal with every phase of the gentle sport from bent pins and willow poles to salmon flies and special rods—with every kind of fish as well.

They are full of a quaint philosophy, written with a rare appreciation of human nature, and comprising sketches of angling "characters" as well as well-known men who were Mr. Mather's brethren of the angle. Much of other sport and adventure beside fishing will be found between the covers of these books. These two large, splendidly bound, splendidly printed, and richly illustrated volumes of 400 pages each regularly sell for $2 each. While they last we offer

Both together, postpaid, for $3.00

AMERICAN BIG-GAME HUNTING

BOONE AND CROCKETT CLUB SERIES

Edited by George Bird Grinnell and Theodore Roosevelt

A thoroughly stimulating book dealing with American big-game hunting, East, West and under the Arctic circle, including every phase of sport with the rifle. "American Big-Game Hunting" is a compilation of the experiences of some of the most widely known sportsmen in America. Among the sketches are: The Story of the Buffalo, Capt. Geo. S. Anderson; The White Goat and His Country, Owen Wister; Old Times in the Black Hills, Gen. Roger D. Williams; Coursing the Pronghorn, Theodore Roosevelt; After Wapiti in Wyoming, F. C. Crocker; In Buffalo Days, George Bird Grinnell; Blacktails in the Bad Lands, B. Rumsey.

Forest Preserves and Game Refuges are also considered. Aside from the surpassing interest of the narratives, the book is invaluable for referenc. Cloth, heavy paper, library edition, richly illustrated.

Postpaid, $2.50

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

A Classic for Sportsmen

AMERICAN BIG GAME IN ITS HAUNTS

Boone and Crockett Club Series

Edited by GEORGE BIRD GRINNELL

An invaluable work not alone for the sportsman, but for the student and lover of wild life. Treats of big game preservation and protection in the broader sense; tells of the habits, habitat and life history of the larger wild animals; touches upon the problem of the public forest domain, and is rounded out by interesting hunting reminiscences by such leaders in the fraternity of big-game hunters as Madison Grant, Paul J. Dashiell, George Bird Grinnell, Jas. H. Kidder and W. Lord Smith. Bound in cloth, library edition, heavy paper, richly illustrated, 497 pages.

Postpaid, $2.50

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

The Game Book

STANDARD BIG GAME MEASUREMENTS

Every man wants to compare his trophy with those of other big-game hunters. But comparisons are useless unless there is a fixed standard.

The game book of the Boone and Crockett Club, the foremost organization of hunters of American big-game supplies this. Compiled by J. H. Kidder, it provides directions for standard measurements of the large game animals of America, with spaces carefully arranged for complete data regarding the kill, locality, time, conditions, etc.

It is handsomely and durably bound pocket size. It is an invaluable record for every man who goes into the wild for sport with the rifle, a handy book, a camp companion, and a library reminder of days afield. Leather.

Postpaid, $1.50

FOREST AND STREAM PUBLISHING COMPANY, 127 Franklin Street, NEW YORK

Rifle Range and Gallery.

New York Schuetzen Corps.

THE fifty-fourth annual shooting festival of the New York Schuetzen Corps, Captain, Diedrich Ficken, will be held at Schuetzen Park, Union Hill, N. J., on June 21 and 22. The shoot is open to all comers, and all riflemen and lovers of the sport are cordially invited to participate. On the ring target there will be twenty prizes, from $25 down to $2; tickets of 3 shots, $1; tickets unlimited; two best tickets to count for the first five prizes. On the bullseye target tickets are unlimited, 10 shots for $1, and prizes will be awarded to the shooters making the best bullseye according to measurement. There are premiums for the most flags, best five-ring tickets, etc. The king and eagle shooting is open only to members of the N. Y. Schuetzen Corps. Shooting on first day, 1 to 7 P. M. Second day, 9 A. M. to 7 P. M.

PUBLISHERS' DEPARTMENT.

The mounted poster or "hanger" just issued by the A. H. Fox Gun Company is a splendid reproduction in color of their F-grade gun. Its size is 21 by 14 inches, and is an artistic and true picture of a very beautiful shotgun.

NEW PUBLICATIONS.

Continued from page 940.

against the hunter's skill; but one short mile, only three powerful dives, between her and security. The breeze that brings yon fogbank down, moving over the waters like a wall of snow, bears to her ear the tide rip's roar, within the range of whose tumultuous waves experience tells her there is refuge sure. Such might be a temptation of selfish humanity, but her instincts are of nobler order. Hanging on the outskirts of the boats, she seeks, with a boldness foreign to her nature, to lure the hunters from her young; and when at length she deems her ruse successful, back she dives with caution to her nurseling's side. The exigencies of our situation and the excitement of the chase might check for a time those feelings of pity which would otherwise have been uppermost, but such unselfish devotion could not but raise within us the strongest admiration."

A NEBRASKA PANTHER CAVE

A PANTHER'S den with ten kittens cuddled up in it was found a few days ago on the ranch of H. T. Richards, a few miles west of South Bend in Cass county.

Mr. Richards and some of his men noticed a cave in the side of the cañon. After enlarging the opening one of the men, Grover Otte, entered. Back in the cave ten or twelve feet he found the ten kittens. When one of them was brought to the entrance it was found to be a baby panther.

Mr. Otte is now raising the kittens at his home. Since the discovery of the kittens neither of the parent animals has been seen. Several times a strange animal has been seen in the vicinity of South Bend and farmers complained about the mysterious disappearance of suckling pigs, lambs and chickens.—Kansas City Star.

PERILS OF THE DEEP SEA.

EXPERIENCE in being wrecked and then in danger of drowning, or being burned aboard their blazing craft, gave thirty anglers a thrilling hour off Rockaway recently. The men were aboard the thirty-foot gasolene launch, Peg, and were returning to shore after their fishing sport when the Peg ran between sunken piles and nearly capsized.

The launch was held fast, and after the excitement quieted the cook began to prepare a meal, awaiting high tide.

The stove exploded, sending a shower of blazing oil all over the craft. Most of the fishermen fled to the bow in a panic and raised the after part until it was feared the Peg would be swamped. At last the men quieted and in a half hour, after the fire was put out, they were all rescued by a police launch.—Herald.

For Sale.

Small-Mouth Black Bass

We have the only establishment dealing in young small-mouth black bass commercially in the United States. Vigorous young bass in various sizes, ranging from advanced fry to 3 and 4 inch fingerlings for stocking purposes.

HITTING *vs.* MISSING

By S. T. Hammond ("Shadow").

Cloth. Price, $1.00.

Mr. Hammond enjoys among his field companions the repute of being an unusually good shot, and one who is particularly successful in that most difficult branch of upland shooting, the pursuit of the ruffed grouse, or partridge. This prompted the suggestion that he should write down for others an exposition of the methods by which his skill was acquired. The result is this original manual of "Hitting vs. Missing." We term it original, because, as the chapters will show, the author was self-taught; the expedients and devices adopted and the forms of practice followed were his own. This then may be termed the Hammond system of shooting; and as it was successful in his own experience, being here set forth simply and intelligently, it will prove not less effective with others.

FOREST AND STREAM PUBLISHING COMPANY

A Problem's Solution

LOG CABINS & COTTAGES;

How to Build and Furnish Them.

A seasonable book when all minds are bent on the problem of getting close to nature. Mr. Wicks in this delightful book offers timely advice to every one who wants to build a simple summer home at one with its surroundings of wood or stream or shore.

This is a thoroughly practical work, treating of the how, the where, and the with what of camp building and furnishing. It is helpful, too, in regard to furnishing, and withal a most beautiful work.

Cloth profusely illustrated, $1.50 postpaid.

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener Tumbler Bolting Safety.—Of course you are convinced that the Greener Side safety is a sine qua non of the perfect gun, yet to make assurance doubly sure your gun should be fitted with an internal or "tumbler bolting" safety, operated automatically and entirely independent of the shooter's volition. A safety that will safeguard the user of the gun and his companions against all risk of accidental discharge.

The Greener Tumbler Bolting Safety is almost human in its ingenuity, yet consists of but two limbs operating in such a manner that it is a mechanical impossibility for a Greener gun fitted with this safety to be fired unless the triggers are actually pulled Should the locks by any mischance jar out of bent, the "silent sentinel" checks the fall of the tumbler instantly and effectually. Should the tumbler through dirt or other cause fail to go properly into bent, the safety prevents its fall upon the cap. When the trigger is pulled voluntarily, a projection of the trigger blade depresses the rear end of the Safety, lifting it clear of the tumbler's path and permits the gun to be fired in the usual manner

Look at the drawing, it explains the simple working of the device exactly; of course you will have this safety fitted to your new Greener gun *Catalog free.*

American Game Bird Shooting

By George Bird Grinnell

This new book covers the whole field of upland shooting in America as this field has never before been covered, and is intensely interesting and useful to everyone who uses the shotgun. It deals with the birds followed with dog and gun by the upland shooter, and describes the habits of the woodcock, snipe, all the North American quail, all the grouse and the wild turkeys.

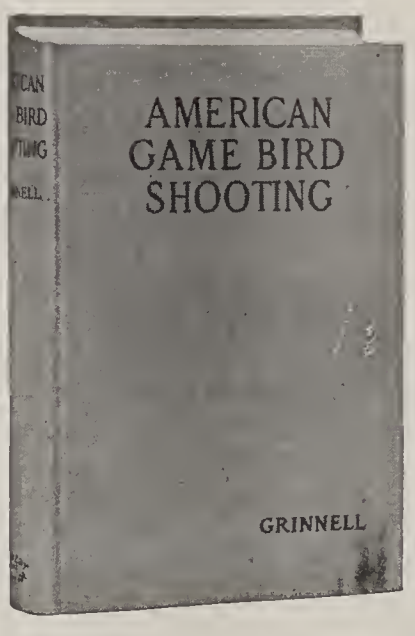
The completion of this book was a large task, requiring exceptional qualifications, knowledge and experience, and was never before accomplished by any other author.

It is the companion volume to Mr. Grinnell's book, "American Duck Shooting." Thus the two books cover the entire field of game birds taken with the shotgun, with complete description of their natural history features.

"A very complete monograph for sportsmen and naturalists....with anecdotes, of his own and others....the book will be enjoyed not only by sportsmen but by the general reader."
—The Sun, New York.

"An important, thoroughly reliable and well written book; a work that will be read with interest and pleasure by sportsmen. The work is the first complete one of its kind."
—The Boston Globe.

"No book as good as this on the subject treated, nor so fully covering the field, has been produced." **—The Salt Lake Tribune.**



"This volume is especially welcome—a treat to every man who loves to tramp the uplands with dog and gun." **—Inter-Ocean, Chicago.**

"Each bird is taken up in turn, the best methods to hunt, the selection of guns and loads, clothing and dogs are set forth simply and fully."
—Baltimore American.

"It is, I think, a model of what such a book should be—but so seldom is. It is, indeed, much more than a treatise on field sports, for it furnishes such full and excellent life histories of the birds of which it treats that it should find a place in every library devoted to pure ornithology."
—William Brewster, Cambridge, Mass.

PART I. Describes in detail the ways of life of all the American Game Birds; woodcock, snipe, bobwhite, mountain quail, California quail, Gambel's quail, scaled quail and Mearn's quail; dusky grouse, Franklin's grouse, Canada grouse, ruffed grouse, all the ptarmigan, pinnated grouse, sharp tail grouse and sage grouse, and the wild turkeys.

PART II. Is devoted to upland shooting. Here are described at length and in detail all the various methods of taking all the birds mentioned above, and the various aids to shooting, such as guns and loads, dogs and clothing.

PART III. Deals with the shooting of the past and future; tells of the efforts to introduce foreign and native game birds to restock our covers, and of the successful attempts by Dr. Clinton F. Hodge to rear in captivity the ruffed grouse and bobwhite.

The volume is handsomely illustrated. There are colored plates of the ruffed grouse and the quail, made by America's greatest bird painter, Louis Agassiz Fuertes, and 48 other full page plates, most of them photographs from life, showing portraits of different species of birds and interesting shooting scenes. In the text are a number of useful and interesting line cuts. Everyone who delights in the outdoor life and rejoices in tramping the field and woods with dog and gun should possess this handsome volume, which speaks the final word on upland shooting, as its predecessor in this field did on wildfowl shooting.

Cloth. About 575 pages. Price $3.50 net. Postage 25 cents.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

TURTLES IN FISH HATCHERIES.

TURTLES are a menace to fish hatcheries and do a lot of damage. They are cannibals when it comes to eating fish, and because of their murderous inclinations fish wardens and students of fisheries are a unit in favor of their extermination from hatching ponds.

At the State fish hatchery at Pratt, Kas., the lake is fed from the Ninnescah River and turtles get into the ponds from that stream. They are known to be fish killers, so means are being devised to get rid of them. There are two ways, shooting and trapping, the latter being the more efficacious.

Some time ago a lot of turtles appeared in the Pratt hatchery. Prof. L. L. Dyche, State Fish and Game Warden, decided to shoot them, and since the neighborhood had a young boy of some 12 years who was an expert shot with the rifle, Dyche found him.

"Say, son," he said, "I will furnish all of the ammunition for you if you will shoot turtles. They are sticking their heads up every morning now and the shooting ought to be good."

The youngster took up the proposition gladly, for it furnished fine sport for him. The turtles come to the surface and poke up their heads and at such times the youngster did his firing. When a turtle's head is struck or knocked off by a bullet the body drops back into the water immediately. Then in about two days the body comes to the surface and floats.

The youngster shot about 300 times in one day. But there were no bodies visible. Two days later, however, the water was littered with them, and when they were gathered up in a boat it was found that the boy had killed eighty-seven, a rattling good record.

The most effective way that is being worked out on a large scale is a series of traps to be located at the intake of the water from the river into the ponds. The trap is a unique contrivance. Large boxes are to be built of half-inch meshed wire. On the river or lake side boards some six inches in width are to be laid on the sides of the wire boxes, making a sort of runway, slanted at an angle of perhaps forty-five degrees. Across the top of the boxes connecting the two runway planks will be two more planks made into trap doors. The planks are narrowed and weighted on one end with lead and set on an iron balance rod.

A turtle is a peculiar creature. It likes to crawl up on things, and these runways will tempt him. The turtle will get up on top and crawl out on the trap boards. Another will come along and push the first turtle a few inches further along. A third will about make enough weight to tip up the trap board, and down into the wire box the game will be dumped. On the four inside walls of the wire box sheet metal of some kind will be used as lining, over which the turtles cannot crawl because they cannot get a foothold.

But the biggest and meanest turtle of them all, the old snapping turtle, is a pretty bright chap. He doesn't take to crawling up on boards or doing any aerial stunts of that kind. The traps won't work on him once in fifty times and other means have been devised by the Kansas fish and game warden to capture him. He gets into the pond and there meets his Waterloo.

An iron stake is run through a fish and the stake is then driven down into the bed of the lake near the shore. Of course the whole fish is put under water. Right under the stake is placed an old-fashioned steel trap securely anchored. The old snapping turtle makes for the fish and enjoys his dinner, but in probably 50 per cent. of the cases while wading around enjoying his repast he sticks one of his short, stocky legs into the trap and is caught. You would think that a snapping turtle would fight and pull loose, even though it meant the sacrifice of a leg. But he doesn't. He yields and quits. When caught your Mr. Snapper is always a quitter. He is much like a mountain lion in that respect. A lion will raise Ned until caught in a trap and then he yields like a baby.

Also your snapping turtle is very much of a sucker. Suppose he is fortunate in eating the

The "Game Laws in Brief" gives all the fish and game laws of the United States and Canada. It is complete and so accurate that the editor can afford to pay a reward for an error found in it. "If the Brief says so, you may depend on it." Sold by all dealers. Price, twenty-five cents.

"Supper Ready"

When you get back to camp, tired and hungry, you do not want to spend the rest of the evening getting supper ready. You want a stove you can start up in a minute—that will cook quickly and well.

For camp, houseboat or bungalow, a New Perfection Oil Cook-stove is the ideal cooking device. It is ready for use in a moment. It saves all the trouble of cutting wood and getting in coal. It does not overheat or make dirt in a kitchen; there are no ashes nor smoke. It requires less attention and cooks better than any other range.

New Perfection
WICK BLUE FLAME
Oil Cook-stove

Made with 1, 2 and 3 burners, with long, turquoise-blue enameled chimneys. Handsomely finished throughout. The 2- and 3-burner stoves can be had with or without a cabinet top, which is fitted with drop shelves, towel racks, etc.

Dealers everywhere; or write for descriptive circular to the nearest agency of the

Standard Oil Company
(Incorporated)

KEEPING POSTED

1. As you read Forest and Stream through each week, you are frequently reminded of one thing or another that you desire to purchase. Such and such must be supplied to make your Shooting, Fishing, Camping or Cruising outfit complete.
2. Possibly you need waterproof shoes, or waterproof clothing. Or a new tent? It is your intention to take a much longer trip this time, than usual. And you may be located where you do not have access to sporting goods houses where all of your wants can be filled. In fact, even the best of us are often in doubt when it comes to knowing **where** to get the **thing** we want at the **right** price. You wish you had a friend at your elbow to suggest.
3. **Our** experts are right at your elbow. It does not cost you a penny (except your postage) to take advantage of their knowledge. They know **where** to **buy** and **how**. It is their business—and your advantage.
4. Glance carefully over our advertising columns. If you don't see what you want, write in to our Information Department. You will receive a full detailed reply—post haste—we're always on the job.

Isn't this worth while, if for no other reason than to get the **right** information on **how** to reach your destination by the quickest and surest routes—what railroads or steamship lines to take?

Don't put this off. Co-operate with us by telling your relatives and friends, what we can do for them.

Keep posted. Write to

fish on the stake and getting away without being caught in the trap. He will come right back to that stake again looking for more food, and a second bait will most often mean his finish.—Kansas City Journal.

AFTER RED BEAR IN KASHMIR.

WE were a party of four on the march up into the high mountains of Baltistan after ibex. By "party" I do not mean that our interests were only for the common good, for we each had our own servants, shikaris, ponies, and "bundobust" generally; but, though we traveled together, it was a case of covertly racing for our destination to secure a good nullah which should not be too far distant. This racing was rather amusing, for each man's shikari got his master up and on the road betimes, and at the halting place the last men on the road would generally pitch their tent furthest to the front, giving as a reason that the site was drier, warmer, more sheltered, etc.

Our party formed by chance at a staging bungalow under the first pass we had to cross. Two men had been there some days, unable to cross, and had spent the time in looking for red bear, which the ground round about was supposed to hold in good numbers. Still, they had had no luck beyond giving their nether limbs some first-class practice in walking on a hillside. Therefore, on our arrival we all determined to push on the next day, in spite of the route being hardly open.

There was an early start to cross the snow on the top of the pass before the sun had become powerful enough to make it bad going for our heavily laden ponies. Liking walking for its own sake, I, being on foot, soon left my companions behind, since they were riding, and their mounts found much difficulty in crossing the steep, stony nullahs and banks of frozen snow. At the start the scenery was very fine. Looking down from the bungalow one saw a long, grassy valley, with a big torrent now and then losing itself under a snow bridge—a remnant of last winter's severity—on each side rugged, precipitous hills covered with snow, and at the end of the vista a beautiful conical peak—its summit all a rosy red from the dawn—filled in apparently the whole end of the valley. On the other hand was the road to Gilgit and the west, winding up the snowy pass behind the bungalow. Our road, however, was not up this, but at right angles, up a steep ravine to the north. Here the scenery was rugged and wild without being grand, for the view was confined to the rocky walls of the winding ravine we were going up. The only wild life were some birds, something like larks and a few marmots, who screeched defiance from a distance; but they were too wary to allow themselves to be shot, darting down their holes with an extra little screech of "Sold again," so as to say, at every attempt of the stranger to draw closer.

At the top there was a very fine panorama of snowy mountain tops, conspicuous among which was Nanga Parbat—the naked mountain, thus named on account of its peak soaring up into the sky—looking beautiful in the early morning light, with the sun shining on its thousands of feet of snow and glacier. This mountain lies on the boundary of Astore and Chilas, and must have been fifty miles distant, in spite of which its general shape was beautifully clear and distinct.

It was just here I overtook another man who had also been looking for bear in these hills under the pass, and, having had no luck either, he was pushing on. So we went on together, holding an animated conversation about various mutual friends we had, as he was in a station I had till lately been living in. This we reached the brow of the pass, and were scanning the prospect of the Deosai Plateau—and a more bleak, bare, inhospitable place it has not been my lot to behold. The whole place is quite devoid of life, and is a bare plain surrounded by a ring of freezing, snow-clad peaks, not a bush, or tree, or even flower, only grass. Suddenly my tiffin coolie caught my arm. "Look, sir, red bear!" and there, sure enough, some 1,200 yards away, merely two small brown splodges, which moved about among the patches of snow below.

The bears were feeding—on the very road we were marching along. There was a lake covered with soft, pulpy snow on the right, and on the left a steep slope upward, covered with snow and intersected by several small ravines running down into the lake. At our feet was a steep snow slope, down which we glissaded for some 200 yards, and thence we moved along the slope above the bears, crawling over the snow and recovering our breath in the depressions till a position 500 yards from the quarry was reached. But from this place we had then to traverse some sixty yards of perfectly open ground in full view of the bears before reaching a very small friendly nullah which ran obliquely toward them. My companion's shikari, who was quite a young man, insisted on our firing at once. We replied that that was a useless procedure, for if we did hit the animals they would only be wounded, and probably escape, to die a lingering death far away, and we should never get their skins. Much better to try for a fair shot, and if they escaped while we were getting nearer, they might afford gratification to some other man another day.

So singly we worked our way forward into this depression in front, and slowly got up to a favorable position only 200 yards away. The bears, quite unsuspecting, had their backs turned to us. My companion whispered, "Which will you take?" As I was on the left, I said I would take the one on the left. At that moment his animal turned broadside on to him, and he fired. I fired also, though I only had a Mannlicher (with a 12-bore loaded with Lyons' bullets in reserve), and the only part of the animal I could fire at was the tail, as he was looking the other way. However, he went and sat on the edge of the lake; so, giving him a second bullet, I rushed closer, thinking him done for. But as the second bear was slowly making away up hill, and not wanting to get close underneath him, I fired three or four bullets at him, when the other man, going close, finished him off.

Then looking round at my beast, what was my astonishment to see him making off at a slow trot. Greatly excited, I also dashed in pursuit, instead of quietly firing, for after a hundred yards' running at an elevation of 13,000 feet, I got hopelessly winded, after which trying to shoot was a farce, with the foresight describing circles of a foot and more in diameter.

So the only thing to do was to follow up the tracks, which was easy in the snow. The animal, after skirting the lake, crossed several small hills, up each of which he went, inclining to the right on the slope, as his near hind leg was useless, and then at the top he doubled back along the top. This gave me the impression that he wanted to get to some place on the left. After a time, on the last ridge, which was a rocky one with no snow on it, we lost the tracks, and the tiffin coolie was all for going back, as he said the animal must have gone right away. But as the hill dominated a wide plain, which we searched without result with the glasses, and from the way he had gone up the intervening hills, I thought he must have made off to the left.

So to the left we went, and at the very end of the hill we saw him lying up in some rocks high up. Getting close to make sure this time, I let him have two bullets, whereupon he got up with a grunt, toppled over the top of the ridge, and we found him dead below.

My shikari, arriving soon after, saw the capture with great delight, saying that now, having killed the first animal we had seen, we should have good luck on our trip, which turned out true, for a wonder. The first bullet we found had broken the hip joint and raked three-parts of the body. Nevertheless, he had led us a chase of several miles over several steep hills, thus exhibiting that tenacity of life characteristic of most wild animals.—The Field.

The FOREST AND STREAM may be obtained from any newsdealer on order. Ask your dealer to supply you regularly.

3 in One

lubricates properly the sensitive mechanism. With perfect action the reel never fails at a critical moment. "3 in One" wont gum, dry out, contains no acid. "3 in One" prevents rust on every part, adding years to the life, and brightness to the beauty of even the finest. Good for the rod too—preserves the wood, promoting pliability—protects the metal. Good for fisher also—the delicate, pleasant odor keeps off mosquitos.

THE NARRATIVE OF A SPORTSMAN

INTER-OCEAN HUNTING TALES

EDGAR F. RANDOLPH

A series of hunting reminiscences of rare charm for the sportsman and for the wider circle which delights in true tales of outdoor life. With none of the high coloring and exaggeration which give a false note to so many hunting stories, Mr. Randolph's book is never lacking in interest.

He covers the field of sport with the rifle, east and west, drawing a vivid word picture of life in the open, subordinating his own exploits to the main incidents of outdoor experience, giving much valuable information on camp life, hunting and the habits of wild game, and continually delighting the reader with the freshness of his viewpoint.

This book will strike a sympathetic chord in the memory of every big-game hunter of experience and will prove of real value to the novice who is planning an excursion into the wild.

Cloth, 170 Pages. Richly Illustrated. Postpaid, $1.00.

Camp-Fires on the Florida Peninsula

By C. A. V.

IN one of those charming books written by ex-President Roosevelt, reference is made to the Peninsula of East Florida as "the land of the cypress, palmetto and live oak, of open savannas, of sandy pine forests, and impenetrable, interminable morasses." Nowhere in so few words can be found so complete a description of the topography of this land of fruit and flowers—a land of which so much has been written and of which so much yet remains untold.

Ages ago the briny waters of the Atlantic rolled where now stretch those limitless pine and palmetto-studded plains, for sea shells are found everywhere in the loose white sands. When the waters receded a race of Indians came and made the peninsula their home, leaving us mute reminders of their presence in the shape of huge shell mounds, in structure resembling the earthen mounds of the Ohio Valley. Skeletons and pottery have been found in great quantities, the former sometimes in long rows and face downward.

Ponce de Leon first set foot on the East coast in 1513, and the first settlement was begun at St. Augustine long years before the vessels of the Dutch or Puritan fathers furrowed the waters of the Hudson River or Plymouth Bay, but in spite of this early settlement, the more southern portions of the great peninsula were until a late day as darkest Africa to the major part of our people. The Rockies, the great plains and the vast, gloomy forests of the far North were long ago exploited by hunters and campers, while Florida with her many attractions was neglected, but those days are now past. The beautiful lagoon-like expanse of Indian River, Lake Worth and Biscayne Bay—those long ago haunts of buccaneers and wreckers—now echo to the chug-chugging of the motor boat, while the sailboat, too, is still in evidence. Back from the settlements and railroads the camper may still find peace and quiet and freedom from conventionalities. This is still the country of the cowboy, the 'gator hunter and the Seminole.

Here in the South as elsewhere, the fondest memories of life in the open are centered about the camp-fire. Here again are lived over the events of the day and here also you make your plans for the morrow. The joys of the day come back to you a hundred fold, while the vexations and disappointments vanish and are forgotten in the genial glow of the fire. Fred Mather once said that in referring to his notebook on one occasion he was surprised to find that during a certain trip "the mosquitoes were of large size, of great subcutaneous penetration and in vast numbers." His mind had retained no recollection of mosquitoes at all, but he could very easily recall the pleasant incidents of the

IN THE LAND OF PALMETTO AND CYPRESS.

trip, and so it is with us all—the discomforts are forgotten but memory fondly restores all the roses to the utter exclusion of the thorns. Nevertheless, the Southern camper has discomforts aplenty at times. Mosquitoes thrive in Eastern and Southern Florida and often at night you must choose between choking yourself with a smudge, smothering under a blanket or being devoured alive by the pests unless you have the foresight to always carry along a piece of netting.

Bad water is a great discomfort at times to those hunting big game on the dry prairies or flat woods sections. It is not a bad idea to boil all your drinking water during a camping trip in the wilds. Impure water, warm weather and mosquitoes are bad when combined, but add a spell of sickness caused by drinking impure water and your misery is complete, so it is always well to be careful. Medical supplies should always be taken on a camping trip. They take up little room and you never know when they may be needed.

All discomforts, however, are well repaid by the pleasures you have in outdoor life and not the least of these pleasures is the preparing of the evening meal after a hard day in the field.

Then there is the glorious camp-fire, fed with knots of resinous pine, flickering and sending tiny sparks heavenward. The embers glow and die away as you watch them dreamily from your soft blankets. Your companions moving about throw weird hobgoblin shapes upon the dark wall of forest trees which rings you round. Fancy is given free rein and you are soon lost in thought, then sleep. When you awake the fire is out, only a few coals remain to mark the place where it has been, you feel cold and damp, your companions are all asleep and you roll up tightly in your blankets, feeling just a trifle foolish and for just what reason you hardly know.

The camper in the Florida flatwoods is subjected to great extremes in regard to water. Sometimes the entire country is flooded with six inches or more of water and campsites are at a premium, while again you are obliged to dig for water. The following is the story of a trip during one of the periods of overflow:

One fine November evening a few years ago with four companions and two dogs I set out in a two-horse wagon to enjoy a few days' outing in the wilds. We took along a large tarpaulin which we intended to use in lieu of a tent, but it rained almost constantly, and it did not answer the purpose very well, making it a wet camping experience indeed.

Water was encountered before we were a mile from the settlements, and through water we floundered for four or five miles. It was hard work for the horses, and so we halted for the night. Next morning the march through the water was resumed and by noon we were on a high sandy, spruce-covered ridge and there we decided to camp. For a wonder, no rain fell

that night and we were fairly comfortable, our slumbers being disturbed only three times, once by the horses raising a fuss, once by the dogs barking and scrambling over us none too tenderly and lastly by a drove of razorback hogs which wandered into camp, and upon discovering us, ran away with a chorus of sniffs and grunts.

Did you ever hunt or camp with a lazy man? If you have you know what a nuisance one of the breed is to have along. Well, we had one of these abominations with us and he became so unbearable that we all united in making it so unpleasant for him that he longed to be back home. He stood the persecution two days and then left us, saying that he was unwell and had business which needed looking after.

The skies wept copiously and everything was wet. The greater part of our provisions were soon spoiled and we were put on a meat diet. We hunted faithfully along this ridge and in the flatwoods, but not one deer did we start. Every few hours the rain would descend in torrents and we often floundered in water up to our waists. On the higher ground quail and snipe were abundant and kept getting up all around us. I do not remember ever seeing so many quail before. Once with a single companion I became separated from the rest and saw no more of them that day. We tried stalking a few sandhill cranes without success, but a big fox squirrel ran up in a tall pine, and when the rifle cracked, he tumbled to the ground. As our larder was very low we returned to camp and got our shotguns, intending to take a try at the quail and snipe.

The quail behaved beautifully, getting up by singles and in pairs. Each killed his first bird and thus encouraged did some good work. There was much nice open shooting, but just at dark we raised a covey which flew into a dense thicket where we had much difficulty both in routing them out and in finding them when killed.

It was by this time quite dark and so we started for camp, but by some mischance we missed the ridge. We waded a great slough for several miles but saw no sign of the ridge on which the camp was situated. Finally away off to the eastward we heard the report of a gun and presently made out the faint glow of the camp-fire. Our friends, becoming anxious, were firing signals. We turned and made a bee-line for the distant fire, only to be confronted by a seemingly impassable morass of saw grass. Without hesitation my companion plunged in and began floundering across it and I followed and was soon sorry enough. The water was several feet deep and the ground underneath of such a miry unstable nature that I was often compelled to grasp the blades of saw grass which grew up in rank profusion to prevent sinking under altogether. At a point somewhere near the middle of the slough I laid my gun across two tufts of stiff saw grass, and using this as a rest, recovered my breath for the final effort. When we finally did reach the opposite side we were tired, wet, muddy and in bad humor. During the struggle my leggins had came unbuckled and were lost in the mud of the slough. They are somewhere in that marsh yet so far as I know, for I made no effort to recover them but hurried on to camp.

More days of rain and fruitless hunting followed and giving up at last, we returned home; empty-handed so far as venison was concerned, but with a rich fund of memories of happy, if disagreeable, days in the wilderness.

In striking contrast with this trip was one that followed soon after, for this time instead of hunting for a spot dry enough to camp on we were obliged to search much the same territory very carefully in order to procure enough water for ourselves and horse, and when we did find water, it was so warm and stagnant that we could hardly use it. My friend J. and myself had long planned this outing, and when the fruit crop was marketed our opportunity came. Packing our tarpaulin, bedding, guns and grub into a little light wagon, we mounted to the summit of the pile and drove away one beautiful moonlit evening. We traveled about six miles that night and went into camp near a little stagnant pond. Next morning the march was resumed. Our destination was a beautiful camping place near a large hammock where game and good water were supposed to be plentiful, but although we reached it in due time and searched thoroughly for good water, none was to be found, although we even dug down in the center of an old dry saw grass pond. We had neglected to bring along a shovel and were obliged to dig with an old bucket, which, to say the least, was a slow and laborious proceeding. We then concluded to push on to a swamp called the Horseshoe Cypress—so named on account of its shape—but thought first to secure some fresh meat for our larder.

J. took the rifle and I the shotgun, and thus armed, we pushed off through the woods in opposite directions. Pretty soon I heard the crack of J.'s rifle and knew he had found some squirrels. At the same time I espied a squirrel scampering among the branches of a large live-oak nearby, and just as I was about to shoot, a turkey called from the top of the same tree, and stepping carefully aside, I saw it perched upon a limb close to the body of the tree. It saw me at the same time and squatted to fly. It was a little too far away for the light shot I was using but I let it have a charge and tumbled it off the limb, but it recovered itself and made its escape into the thicket. Several squirrels barked and frisked about in the nearby trees, but just then I wanted turkey and refused to be comforted by the killing of such common game and so returned to the wagon empty-handed. J. came in with squirrel soon after and we moved on to the Horseshoe Cypress.

While I rigged up a sort of tent out of the tarpaulin, J. prepared a dinner of squirrel and stewed prunes. I then dug a small well which gave us a limited supply of muddy water and we were happy in the belief that we were at last located when a Seminole Indian rode by within a quarter of a mile from us with his rifle resting across his horse's neck and a long rope trailing behind. Pretty soon another swarthy son of this interesting and vanishing race made his appearance, firing the tall prairie grass as he came.

The object of these men was apparent at once; they were going to burn out the swamp and drive out any deer that might be using therein. It was also very plain to us that our camp was in danger, for the high prairie grass and dry palm fans would burn fiercely in the stiff breeze that was blowing, so pulling down our tent and packing up our belongings as quickly as possible, we began our retreat. Reaching a strip of prairie which had already been burned over, we finished our interrupted meal. Looking back over the smoking prairie to the south of us we passed some very uncomplimentary remarks about the red race and the Seminoles in particular.

Camp was made that night among the giant palms along the Sebastian River. It seemed as though every night prowler among the winged creatures for miles was attracted by the light of our camp-fire and assembled about it. All sorts of birds sang, hooted and croaked from among the tall pines and palmettos while bull bats swept about overhead uttering their queer noises.

Next morning I took the rifle and strolled along the river bank. Ospreys screamed from their nests in the tall pines, water turkeys scampered out of sight among the moss-laden cypresses, and cranes, curlews and other water birds flopped noisily away from their perches on dead limbs overhanging the stream, water moccasins were sunning themselves on the muddy bank, sliding down into the water as I approached. Finally I espied a big alligator taking his sun bath, but he saw me, too, and slid into the water like a flash. Another big fellow came tearing down the bank, plunged into the water and swam for the opposite bank. Only a small part of his head was visible, but I put a bullet into his eye. With a tremendous splash he disappeared in deep water. When I returned to the place later, however, he was lying dead in the shallow water near shore and I pulled him out. Several more 'gators made their appearance, but I did not succeed in killing any more. As I wandered along I scared up a half dozen or more of those beautiful but fast vanishing birds — the summer or wood-ducks.

Gypsy-like, J. and I did not remain long in one camp, and despite our pleasant surroundings, moved on to the Red Bear cypress swamp, at the edge of which, on a high sandy ridge, we pitched camp. A number of pleasant days were passed at this place, shooting birds, rabbits and alligators or simply idling about. One evening I announced my intention of eating fried alligator for supper. J. at first ridiculed the idea, but at last acquiesced. We had thirteen of the ugly brutes to skin before cooking the evening meal and by the time we had completed the job my appetite for 'gator steak was gone entirely. Late that night, after I had retired to my couch and was resting comfortably, J. wandered off through the pines to look after the horse, when suddenly he called out, "Come here quick!" Throwing off the blankets I ran to him, with visions of scorpions and rattlesnakes dancing before my eyes. When I came up I found no snakes, but there piled in a heap and glistening in the pale moonlight in all their hideous ugliness were the decapitated and flayed carcasses of the thirteen alligators. There are times when the English language utterly fails to portray one's feelings, and when J. laughlingly remarked that he had only called me out to select a choice steak for breakfast, I simply turned in silence and started back to the camp-fire. Presently my bare feet came in contact with a cactus, and then the

tension became too great to stand longer. I have no recollection of what I said, but I danced a war dance on my other foot with energy to spare.

When the time came for starting home we were both sorry indeed and many were the resolves made to try it again sometime. It is heart-breaking work to strike camp, and to my notion there is no sadder picture in the outdoor world than a deserted camp-site.

The Right Fly

By HUGH C. CURRY

NO one of Heacock's three friends is ever prompted him to make a small wager of rpompted him to make a small wager of a dinner for four that he would catch a two-pound trout in Buckalew's Creek before the end of the week they had set apart for a spring outing.

The four fishermen had come to a Pennsylvania resort during the second week in May and secured accommodations at a little country hotel.

A SHELL MOUND IN FLORIDA.

The day just ended had been fishless. So also had the two preceding days, as regarded any considerable number or size of trout taken, and no one in the party seemed to be sanguine of much exceeding the legal limit of six-inch fish during the two remaining days of their stay.

As this is a true story, the facts must be set down carefully, because it illustrates that the habits and customs of fish—in this instance trout—cannot always be relied upon to be followed. Reams of stuff have been written about the ways of animals and fish, but the only infallible truth about them thus far is that they still produce their young. During the growing-up period, and after the year of discretion has been reached, no nature faker may assume to say, with absolute accuracy, just what any living thing will do.

Therefore, when Heacock, with nothing but half a dozen six and seven-inch trout to his credit during the three days that had passed suddenly said, as he began refilling his pipe: "Boys, I've got a hunch that I'll take a two-pound trout out of this creek before the week is ended, and I'll bet dinner for all," every man in the party simply said, "You're on."

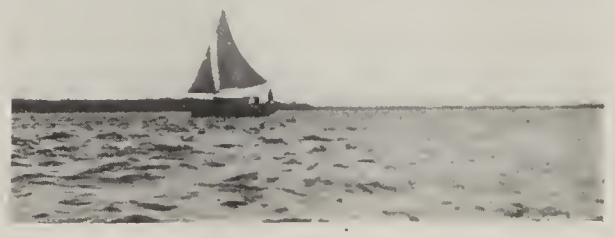
"Now, I'll tell you," said Heacock. "This is as you know a pretty hard brook to fish. You also all know that just below the Devil's Drive is about fifty feet of water we have always had to give the go-by. Eh? Well, I clum——"

"Climbed," said Ellis.

—"a tree by that piece of water to-day. Don't know why I did, but you fellows had gone on down, and as I sat there I thought I'd like to see what that water looked like. So up the tree I went, and as it hung out over the creek I had a good look at it, and I found out that an old path or a little waterway used to run down to the brook on the opposite side from me. I was very quiet while in the tree—just sat there thinking and enjoying the beauties of the stream, when all at once, guess what? Sneaking along the shore, about three feet from the edge of the water, was the slyest looking mink you ever saw. I had seen only one in my life before, but I recognized the gentleman. Looking everywhere but up into my tree he slowly got closer and closer to the water. If I hadn't seen him and followed him from the start I doubt if he could have been pointed out to me by any one with any assurance that I could locate him. But having my eyes on him I kept them there. At least I thought I did, but suddenly there was a flash—a dark flash—and that fellow went into the water so fast that he didn't make a hole—just like you'd cut it with a knife. He was up again almost before I knew he'd gone, and in his mouth he had about the nicest looking fifteen-inch trout I've ever seen. Therefore, I've got an idea."

As Heacock had said, the brook was a difficu't stream to fish, but that statement was not applicable to the entire length of Buckalew's Creek. The water has a descent of probably 300 feet in three miles, but when it is considered that during that distance three perpendicular drops of about thirty feet each are encountered with the customary rapids just above and also below the falls, it must of necessity follow that plenty of smooth water would be found by one going the entire distance. When such stretches of the quieter waters were met, one cou'd see for a distance of from eighty to one hundred and twenty feet a brook of clear, cool water, about eight to ten inches deep, just seeming to gurgle and laugh over a bottom covered with brown and with white pebbles. It is a great pleasure—and the work probably causes an added thrill—to fight one's way through brush and over rocks, and deftly drop a line into a forbidding looking pool and feel a tug without at the time seeing the fighter, but certainly nothing can excel the joy of standing, early in the spring, in the center of a brook about twenty-five feet wide, arched with trees just showing buds, and watching a trout as he thrashes back and forth, always in plain view at the end of a thirty-foot line swirling about over the ripples. The sensation does not occur often enough in one's lifetime to become irksome.

The next morning Heacock's fishing outfit was augmented by a heavy knife and a small saw, and after agreeing that the rest of the party should join him later at the place he had selected, Heacock proceeded down the brook. It took him two hours to cut and saw a passage way through the briers, undergrowth and shrubbery to the water's edge. Taking a little time to eat his lunch, and to give an opportunity for quiet to settle down where he had been sawing and hacking, Heacock fished other parts of the brook for half an hour or so, and finally returned to his pet location. For three hours he faithfully fished that fifty feet of creek. First a fly, then worms were tried. Back again to another fly, and still other flies, hoping and ever hoping, Heacock fished as he never had fished before without result. A whistle from somewhere back from the creek notified him that the rest of the party had called to accompany him



A SAILING CRAFT ON THE INDIAN RIVER.

home, and that the day was waning, and reluctantly and shamefacedly he slowly made his way through the bramble to the top of the bank.

"No luck, eh?" Heacock was asked as soon as he appeared. He looked so sorrowful that he did not receive the chaffing he was prepared to take. "Never mind, old fellow, you've still got to-morrow."

"No," replied Heacock, "I lose. I've had all I want," and he began to lead the march back to the hotel, when a shout attracted the attention of all to their landlord, seated in a buckboard, waiting a few rods further down stream on a rough log bridge.

"Now, then," he shouted, "one of you fellows get in here. I've got room for the one that's done the most work. What luck?"

"Nothing to speak of," was the reply of one of the party, as they approached and exhibited their different catches. "Mosquitoes and gnats are getting a little troublesome in the woods now, and they'll soon keep one busy if the fish don't."

"Yes, that's so. There's a hoss-fly sucking the blood out of my mare's neck now. First I've seen this summer," said the farmer.

"Just hold still a minute," said Heacock, "and I'll kill that fellow," and giving it a clip with his cap he knocked it to the ground. "Wait till I unjoint my rod," he continued, "and I think I'll claim that scat alongside you. Guess no one's worked harder to-day than I have. That fly seems to be a tough customer."

Stooping down he picked the fly out of the dust and held it by the feet, watching it work its wings. Unreeling about ten feet of line, Heacock carelessly hooked the fly just back of the head, stepped to the edge of the bridge and cast down stream into one of those pebbly bottoms. Swish! Everybody wanted to help. Whir-r-r went the reel. Heacock grabbed for the line and dropped the rod, and it fell into the water. It took him just about three seconds to run around and fall down the bank into the stream. By this time he had recovered his nerve, and clutching the rod he prepared to fish his trout. But it did not require any expert handling, apparently. Back and forth, up and down, with sometimes scarcely water enough to cover him, and not a rock or tree to hide him, the fish tugged and pulled till exhausted, Heacock calmly letting the trout have his own way, "because," as he remarked, when asked why he did not land him, "I've never had this experience before, and I never hope to have it again."

"Biggest fish I ever saw in this brook," said their landlord, when the trout was finally laid out on the grass, the hook still deep in his gills, "and on a hoss-fly. Well, of all things in Israel," which was the farmer's extreme expletive. "He'll make you a fine meal."

"He'll do nothing of the kind. That fish is going on my dining room wall down home, and although he was wholly unexpectedly hooked, and somewhat ungracefully handled, he will serve to remind me of the meals some other people will not eat—on me. Someone else may have my seat. I'm going to walk now."

The Rill.

There's something so cheerful
With yonder queer rill,
That always will chatter
And never be still.

It breaks on the view
Like a radiant smile,
And cheers me each time
That I hop o'er the stile.

Or winter or summer,
Or spring or the fall,
Its musical story
It babbles to all.

As it winds 'mid the cresses
And forget-me-nots,
Or slips in the winter
Thro' frost-bitten plots.

Full oft, when I ponder
O'er knolls and thro' dells,
'Mid patches of cedar,
Or grass in the fells,

With spirit bowed down
With the sorrows of earth,
My heart is made lighter
At sound of its mirth.

'Tis like the sweet blab
Of a meaningless child,
Whose very weak lisp
Makes the sternest man mild,

Whose aimless sweet talking
Oh—never can pall,
But makes this dull living
Worth while after all.

DARIUS DALRYMPLE.

On a Houseboat on Alabama Rivers

By ROLAND M. HARPER

In Two Parts—II.

ON the 13th we made only 11½ miles during the day, being delayed by several gravelly bars or shoals where the skiff had to be sent ahead to make soundings. We had no trouble at all comparable with that of Saturday and Monday, however, and some of these delays gave those of us who were not doing the sounding a good chance to take pictures, examine our specimens or write up our notes. About dinner time we passed the site of Lock 3, still far from complete, though the work was being pushed as rapidly as possible. There we were able to send off some mail, buy a few provisions from the commissary, and refill our water bottles. Up to this time we had been getting artesian water at the locks and more important landings, but Lock 3 had no artesian well as yet, and we were given cistern water instead. This naturally had a sort of dark brown taste, but most of the scientists preferred it to branch water, which could have been obtained almost anywhere, because they were afraid of malaria in the latter (regardless of the mosquito theory).

At this lock one of the engineers in charge of the construction kindly offered to go with us and pilot us through a shoal a few miles below after which he expected to take a short cut across a bend of the river and get back to his quarters in less time than it took to come down in the boat. The channel at this shoal must have shifted since he had last traversed it, however, for in the midst of it we suddenly ran aground without warning. In this emergency the first thing to be done was to cast off the houseboat and float it to a place of safety. We then fastened one end of the 500-foot rope to the stern of the launch as usual and took the other end to the nearest bank and walked upstream with it as far as possible. By the united strength of ten men we were then able to pull the boat back off the bar and let it drop down to one side, where the water was a little deeper. All this delayed us nearly two hours, and doubtless made our accommodating friend, the engineer, late to his supper.

We tied up for the night at Beck'ey's Landing, which is about a mile from Myrtlewood, the end of a branch of the L. & N. R. R. Wednesday morning the preacher and I, wishing to see more of the country than was possible from the river, and not caring so much about the bluffs as the geologists did, decided to walk over to Myrtlewood and across the country to Naheola, which was about fifteen miles down the river, but not more than half that distance in a direct line. We started early enough, but took the wrong road through the post oak flatwoods by mistake and went three or four miles instead of one to get to Myrtlewood, where we sent off some mail again and bought a few light groceries. From there to Naheola our route was mostly through river bottoms, inhabited only by negroes whose knowledge of the geography of the country was very rudimentary. Some of those we interrogated had apparently never heard of Naheola—which is, indeed, a very sma'l p'ace, scarcely a settlement at all—but by good luck we managed to keep the right road through the bottoms, and reached the ferry opposite Naheola at noon, which, however, was a couple of hours later than we had anticipated. No boat or human being was in sight, but as our comrades had promised to wait there for us if they arrived first, we concluded that they too had been delayed considerably beyond their expectations. There seemed to be nothing for us to do but wait. After forty minutes we were surprised to hear the whistle of the launch down the river, and hastening down the left bank we found our party at a bluff on the opposite side, about a quarter of a mile below the ferry and just out of sight from the place where we had been sitting. We afterward learned that they had also met with some delay, and had been waiting only about an hour, during which time they had found plenty to occupy them at the bluff, so our failure to arrive on time caused no derangement of their plans.

Our troubles with shoals were now over, and for the next hundred miles or so we had plain sailing. The only drawback to our perfect enjoyment from now on was that some of us had to be called away from our contemplation of the scenery once or twice a day to pump out the hull of the houseboat, which had seen years of service and was naturally somewhat leaky. Lock 2, which was not more than half completed, was passed during the afternoon. The river by this time was about twice as wide as the Warrior between Tuscaloosa and Demopolis, and the banks not so high, but the appearance of the vegetation had not changed much.

Wednesday night we tied up opposite Tuscahoma, a cotton warehouse landing 190 miles from Tuscaloosa and 171 from Mobile. Having heard that one or two steamboats were expected to pass during the night, we fastened our craft securely to two snags which happened to be in just the right position several feet from the bank, so that we would not be pounded against the bottom by the waves. The steamboats passed without disturbing us much, but some time during the night we were awakened by the voice of a negro who had probably rowed across from Tuscahoma, ostensibly in quest of tobacco, but perhaps bent on robbery. He was immediately ordered away in a stern voice, with a threat to put a hole through him, or something to that effect, and was not heard from again.

Thursday morning was foggy before sunrise as usual, but clear and pleasant later. We did a little geologizing at Tuscahoma b'uff, bought a turkey, which was shot for us on the spot, from the people at the warehouse, and started off about 8 o'clock. We were now approaching the long leaf pine region, and log, stave and wood landings became frequent, and logging railroads were occasionally seen. We also passed a few cotton warehouses every day, these usually on top of a bluff, with a cable track leading down to the water's edge at an angle of 30 to 45 degrees. Although the Warrior River below

Tuscaloosa runs through a famous cotton country, it seems to have no cotton landings on it, probably because navigation on it has hitherto been almost impossible in the fall, when the cotton is being shipped, on account of low water. Then, too, the navigable part of the Warrior has railroads within ten miles of it the whole distance, while on that part of the Tombigbee, where we were now, there was no regular railroad within twenty miles. The steamboats which passed us from now on looked much like those on the lower Mississippi.

We stopped about two hours at Wood's Bluff, a noted fossil locality, where the leading conmirror, and at the same time shuts off most of the breeze. We indeed found it a warm place, but not uncomfortably so, on account of the lateness of the season.

Later in the day we got several glimpses of the "mountains" of Southwestern Alabama, which are sandstone ridges rising 200 feet or more above the river and giving a pleasing diversity to the landscape. The same ridges extend northwestward past Meridian, Miss., where they can be seen very plainly from any of the railroads passing through that city, most of which have to wind about considerably.

Shortly before sunset, after a run of fortynorthern slopes of the mountains were densely clothed with virgin hardwood forest in which two species of magnolia and several rare ferns were prominent. The plowshare which was suspended from a corner of the pilot house to serve as a bell had to be tapped a good many times to call us all in from this beautiful place.

At noon we reached Lock 1, 251 miles from Tuscaloosa and 110 from Mobile, where one of the sons of the Nestor of our party, as well as one or two other young men from Tuscaloosa, were employed. They had heard that we were coming, and of course gave us a cordial reception. Among other things we were shown a

BRIDGE AND POOL AT MILFORD, PA.

Photograph by H. B. March.

chologist of the party gave us each a paper bag with instructions to collect everything in sight, especially the little shells a fraction of an inch in length, for those were the least known. The lowest few feet of the bluff are now permanently submerged by water backed up from Lock 1, thirty-nine miles below, which of course the geologists regretted very much, but the part above the water is a perfect mass of beautifully preserved and easily detached shells. When the spoils were counted that night, about 150 species from that locality were listed, a few of them perhaps new to science.

According to our leader, Wood's Bluff is one of the hottest places in the world, and he had poured out many a gallon of sweat there in former years. It forms almost a semi-circle, concave toward the south, and focuses the rays of the mid-day sun something like a concave

three miles, we stopped at Coffeeville landing. Our water bottles were nearly empty again, but neither artesian water nor rain water was to be had here, so we filled them from a small clear rivulet near by despite the prejudice of some members of the party against branch water.

Friday we wanted to make up some of the time lost at the shoals, so we got under way at 6:30. At that hour it was a little too chilly to be comfortable on deck and too foggy for us to do justice to the scenery, but the sun soon came out bright and warm as usual. Eight miles below Coffeeville we stopped at Hatchetigbee Bluff, the abrupt end of one of the "mountains" just mentioned, which rises about 150 feet above the river. The view of the river from the top of this bluff reminded one very much of that of the Tennessee River from Lookout Mountain near Chattanooga on a small scale, and the

curiosity in the shape of an artesian well whose water was both too hot and too briny to drink, and emitted gas besides in sufficient quantity so that it could be ignited at the top of the eight-inch pipe where the water came out. No use had yet been found for the unexpected products of this well, and it was all going to waste. For a distance of several miles around Hatchetigbee, where the strata, which are elsewhere nearly level, are folded into an anticline, there is said to be considerable salt in the water of deep wells and springs, and this formed the basis of an important industry during the Civil War, when the South was almost shut off from foreign commerce.

The tide is said to come up to Lock 1 when the river is very low, but we did not stop there long enough to verify this. About two miles below this last lock we came to the site of historic

old St. Stephens, the first capital of Alabama. Here there is a perpendicular bluff of soft whitish limestone 100 feet high, an important spot for geologists, for it is the best known section of the formation which takes its name from this very place, the St. Stephens limestone. On its summit the Spaniards, thinking that the place was south of latitude 31 degrees, the boundary of their domains in North America, built a fort about 1789, and occupied it for ten years until the United States boundary survey showed that it was about thirty miles too far north. The fort was then evacuated by the Spaniards, and soon afterward became an Indian trading post. By 1817, when Alabama Territory was separated from Mississippi, and St. Stephens made the capital, it had become a town of 3,000 inhabitants with the necessary administrative buildings, land office, schools, hotels, a bank, theater, market, etc., but no churches, it is said. In 1819 Alabama was made a State, and the capital was soon moved to Cahaba on the Alabama River. St. Stephens then began to decline, and later when railroads were built near enough to take away its trade without sensibly increasing its accessibility, its doom was sealed. At the present time no buildings are in sight from the river there, not even from the top of the bluff, but about three miles away there is a village still bearing the same name. At the time of our trip St. Stephens was still the county seat of Washington county, but even that distinction has since been taken away from it, and the seat of justice moved to Chatom, a station on a new railroad near the center of the county, so the old place has now little reason for continuing to exist.

Shortly after 4 o'clock Friday the railroad bridge near Jackson was sighted, and we tied up at the steamboat landing, about a mile and a half from the town, which is on top of a hill and not visible from the river. Here the party disbanded, as there was believed to be nothing of special geological interest along the river in the remaining 100 miles between us and Mobile, and we had already spent about all the time that could be spared from our regular occupations. Baggage and fossils were hustled to the station before dark, and seven members of the party went off on the train that night and three the next morning. The houseboat was left at Jackson to be sold, and the navigator and cook stayed with the launch until it could be brought back to Tuscaloosa.

Thus ended one of the most memorable and enjoyable trips in which it has been my good fortune to participate, and no doubt all other members of the party entertain similar sentiments.

Fish Farming

By WILLIAM S. WICKS

IN various sections of the country there exist many springs, brooks, streams and ponds, and these waters may be used for the profitable and pleasurable industry of fish-culture. The spring is the forerunner of the brook, the brook is the feeder of the pond, and they together form the home of the trout. With these homes habitated, they will supply profit to the farmer or owner and supply an anglers' paradise.

A small brook runs through a farm, an inconsequential affair at first, not a foot in width, and at times with very little water. At points in its course by placing cross embankments, ponds may be made. These ponds add to the landscape, make watering places for the cattle and rearing places for fish.

These small waters offer opportunities for a fish garden, the same as a plot of ground near the house offers space for a house garden, and advantage of the opportunity should be taken. Food fish are as valuable as fowls or vegetables; all farmers raise the latter two at considerable expense of planting and continuous care—why not raise fish at very little initial expense and no great continuous care?

Think of the sport for your friends and yourself in catching the fish.

Probably the best fish to propagate in small waters is the speckled brook trout (*Salvelinus fontinalis*). They may be purchased from the hatcheries fingerling size; that is, from two to three inches long in the early fall at the rate of one and one-half to two and one-half cents apiece, the price ranging according to the supply and the demand.

If these trout are placed in the waters in November, then by the following August they will be about seven inches in length; in the second year they will each weigh about one-half pound, and in the third year they will each weigh about one pound. The growth, of course, depends on good natural food conditions, and most waters will supply such a condition. Thus a fish costing so little and with no great amount of labor, will in the course of three years sell for many times its cost. Many fishermen will be very glad to get them at $1 a pound, and even if not so sold, the owner or his friends will have the pleasure of fishing with a certain surety of success, and will obtain food of as much value as if bought in the market in the way of meat or fish. Here is an opportunity at present taken advantage of by a few which might obtain to many.

Trout are raised in the hatchery by stripping the female trout of their eggs and impregnating with the milt stripped from the male trout. This process of stripping and impregnating occurs usually in November at the time when the fish mate. The eggs are at once placed on screens in running water, gradually they change in appearance and life. In January the fish forms and eyes show very plainly and in February they are hatched and swim off the screens into the troughs. At this stage each tiny fish is supplied with a food sack under the body on which it feeds for a couple of weeks. Soon after the sack disapears and the fish takes readily to other foods.

The fish grow very rapidly from the sack stage through the spring and summer, and by the fall of the same year become fingerlings. A great many hatcheries sell the fish at all times, extending from the fry until the fingerling stage. The loss to the purchaser is very great at the fry stage, gradually decreasing until the fingerling stage, when it is practically nil, and for this reason the purchaser is more successful in his trout rearing project if he puts off his transplanting, so to speak, until fall. No one will buy chickens until they are big enough at least to care for themselves. Chickens have pips, gaps and what not, and they are preyed on by rodents and caught by animals very readily until they are big enough to scamper away and so care for themselves. Thus it is with the young trout; some thrive and some do not. When small they have many enemies, and if put out too young are unable to withstand the changes in the temperature in the water or to protect themselves from being eaten by cannibal fish or other enemies. While at the fingerling stage they are big enough and lively enough to care for themselves.

Many hatcheries like to sell their young fish in the fry stage, because they may hatch more ova in their troughs than they can rear as trout, and hence they wish to make room. It is an easy matter for a fish establishment to hatch out many more eggs than they may care for when the fry become fish of fair size.

If the State wishes to make the propagation of fish certain, it should not transplant its fish until the fall of the year in which they are hatched. A law to the same effect also could well be applied to private hatcheries.

It is stated that an equal amount of water used in trout farming is more valuable than an equal amount of arable land, and so it is that a farmer may add the industry of fishculture to his other pursuits, and reap a good harvest of pleasure and profit.

Opening of a New Country.

By the opening of a recently constructed railway across the Sierra Nevadas, a hunting country, reported to be very good, and many streams and lakes abounding in game fish, has been rendered more accessible to the ordinary traveler.

Singularly enough the recently completed line of the Western Pacific Railroad between Salt Lake City and the Pacific ocean, crosses this range—often so jagged and threatening—by the wagon trail used nearly two generations ago by the emigrants from the East seeking the gold fields of California, and along this trail occurred many tragedies of early travel now long forgotten.

The descent on the western side follows the Feather River, choosing a course of extraordinary ease, reported to have been picked out more than forty years ago by a Scotch engineer, but not discovered by railroad people until very many years later. The grade is said to be only one foot in a hundred.

The mountains through which this railroad passes yield deer and bears, while in the country to the northward there are said to be bears, deer and panthers or mountain lion. That country contains not a few lakes large and small, which during the season of migration are great resorts for duck and geese, while upland birds are reported abundant. Many of the mountain streams and lakes abound in trout of different kinds. Altogether the region is one into which more and more sportsmen are before long likely to find their way.

Fly Fallacies

By J. BERRYMAN

THE old hand with a fly-rod, when he sallies forth to get fish as well as other enjoyments, takes with him as the best part of his equipment his lesson book of experience. Careful glances at the road over which we have trodden cannot fail to help us in the way we are treading, though a new one. The old path may have been very pleasant and full of interest, but who would pass just that way again if a better can be found affording fresh enjoyments and new knowledge?

Years ago a constant fishing companion and myself took delight in possessing and using every pattern of fly published, all tied by skilled fingers, and many sworn to loudly by their special devotees. It afforded us immense interest, many cocksure arguments, rare pastimes, a few charming successes and battalions of disappointments.

The old pathetic looking books still exist, crowded with carefully assorted and wondrous patterns, over a hundred of them tied to gut long rotten and the flies and felt leaves moth eaten, a sad memento of faded pleasures—and most pleasant fallacies. When the innovation of eyed hooks appealed to us, the books with their precious accumulations were laid aside, cases purchased and a new collection begun. That collection might have gone on till now had not bewilderment at last provoked rebellion. We who had been trying arduously for a dozen years to discover something of the ways of trout with flies, only found that we were very much at sea, that the experience of each contradicted itself, and the experiences of either contradicted the other. The more we studied the matter and tried to arrive at a few, if only a few, sure and reliable facts the more confusian became confounded. The only deduction we could make from all our careful notes and experiences was that the particular pattern of the fly itself had very little to do with the number of fish we carried home.

Then we went on a new hypothesis: that trout, after all, rarely take our artificials for the naturals we intend they should imitate. We were gradually convinced of it by many proots and experiments. Among our early investigations was the tying of the most ridiculously unlike-nature patterns ourselves and succeeding with them as well as we had ever done with any others. This led us to make a long tank with a glass bottom and see for ourselves how various artificial patterns compared with the natural as seen from below, floating and sunk, against the sky or a tree background, and how they must appear to the trout. As regards the wet fly—motionless with its hackle extended or moving with it bunched to the hook shank—the experiment exploded many of our remaining notions at once. Nothing we could get or make resembled at all any creature that the water breeds. All these years we had thought, if we thought at all, that, going by the patterns of the beautifully-got-up catalogues and the wisdom of many writers, we had been offering the fish something they would recognize as of a tribe they knew well. We saw what complacent ignoramuses we had been. For the moment I am alluding to the wet fly distinctively.

The next step was to prove a theory which the experiment could not fail to suggest; namely, that the trout took our lures not for what we intended them to look like, but for something they knew nothing about! This opened up a wide field for experiments, which culminated in my comrade making me a challenge, utterly violating all traditions. Not being quite so ardent a revolutionist, I accepted it a little disdainfully.

"Let me," said he, "choose a fly from your case blindfolded, and I won't change it. If I don't catch as many as you, call me what you like."

"Come," I said, "don't fumble all day." He was feeling among a hundred or so.

"I'm not going to choose a large one, nor yet one with too much body. I've noticed the smaller the fly the more the fish," he added sagaciously, "and numbers count to-day."

He was a little horrified at choosing a North country nondescript which I had been using on the shallows of Loch Awe, and now we were on a Somersetshire brook. I beat him by two fish that day, but verily believe it was only because I never fished with more keenness. I had stuck to my usual fly—a coachman, sometimes dry and sometimes wet, its bedraggled white wings often drawn or jerked against the stream. Where could be the resemblance to anything in nature?

On another occasion during lunch time he held up a fly with wings and hackle nearly all worn off and said, "There! I caught my last on that. Bet you I'll catch one on a bare hook!"

"Done!" I said, "I'll wager you a luncheon basket you don't." In ten minutes he flipped out a fingerling. The bet was won—and paid. Since then we have both caught older and more wary ones on a naked hook.

On another occasion a controversy sprung up between another friend and myself on this subject. I stripped a Palmer, and begged him to tie any sort of fly he liked, or could, upon the hook and promised that I would use nothing else the whole evening. He laughlingly pulled a thread from his stocking and soon handed me an ugly bunch of knotted worsted, saying, "You certainly don't mind wasting your time if you intend insulting them with that." When, with his permission, I had sheared it a little with my scissors it did not frighten me nor the trout. We each caught two brace and a half, though his were the bigger fish, and he had numerous short rises. I experimented chiefly on the most "stickley" water. At all events the trout took it.

What conclusions must be drawn? I have made similar experiments for years and the conviction has been forced upon me by such experiences that we do not deceive the trout, only ourselves; that they do not take our fanciful lures for the particular creatures we invite them to; they take it for something unknown to them, but something they can afford to taste and blow out instantly if objectionable. I do not believe the particular shape and coloring of our imitations have any special inducement or have much to do with their decision to seize it; not a tenth part so much as the way we work it. Movement is quite another and an all-important side of the art worthy of lengthy treatment, but our point here is pattern.

How is it that particular patterns kill best on certain rivers and at certain times? My experience would justify less moderation than the words I am going to use. I believe it to be a fallacy. If a fly has a reputation it is because it has had a better chance by being most used and because being most used, therefore most killing because most recommended, and for that reason only. How it gets its reputation is not difficult to understand when we consider salmon fly history. Salmon flies are creatures of men's imaginations and utterly unnatural. Some one ties a fly to his fancy, uses it, succeeds with it, and swears by it. Immediately we hear "that's the fly for this water," and we must find the eagle or the albatross that provides the particular hackle or wing or body if we want to succeed. What credulity! I go to Loch Leven or to a Cornish stream and say, "What fly?" "That is the best fly here," is the pith of all the answers. Sometimes I smile, sometimes I frown, but nearly always do I seem to half offend my kind adviser by putting on something quite opposite. It springs from a "cussedness" born of long learning; but the unvarying result is the reason my convictions are so strong. A good "driver" may almost choose his fly haphazard. Sometimes a companion says he has found the fly after failing with several. My amusement then is to use any one of those he has failed with previously and soon we are able to agree that it was not the fly but the changing mood of the trout, or other circumstances.

The sum of it is this: except on chalk streams I never budge from one of three patterns—the coachman, the alder, and the blue upright. Will any man meet me with his case full and compare notes at the end of the day?

The Complete Angler.

"JOHNNIE, come in to dinner!"

Mrs. Slater stood at the door of her cottage, looking toward a small boy who was fishing with a bent pin and a bit of thread on the brim of a puddle.

"John-nie—dinner!"

Still the boy went on fishing.

"Johnnie!"

No answer.

"If you don't come into dinner at once, my son," threatened Mrs. Slater, "I won't give you any at all."

Only a sudden tension of the small boy's frame as he gazed eagerly into the depths of the murky puddle.

Mrs. Slater's patience was at an end. Silently she crept up behind the delinquent, and then suddenly seizing him by the shoulders, shook him violently to and fro.

"You little rascal!" she cried. "Didn't you hear me call?"

"No, mother," replied the youngster, stoutly, "I didn't hear you the first three times, and the last time I had a bite!"—Exchange.

Bass Fishing

By ROBERT PAGE LINCOLN

ONCE having outfitted to suit his taste, the bass fisherman whose experience is limited to stray trips taken now and then, is ready for the finny brethren of the lake. I see no need of the stack of outing clothing and caps some of the wise ones rig themselves out with, for the fish will not bite the better because of them.

The novices are just about of the same class the world over. They wait until they are right on the scene of the day's fishing to learn how to handle the rod, and then they start in with a meed of oaths characterized to bring the fishing pastime to the right level. Some who are more sane have the unusual foresight to practice beforehand at home on the lawn or on a field nearby, and their day of sport goes along more smoothly in consequence. It is a good idea to practice several evenings before the eventful trip with a weight of about the heft of the frog attached to the line. Of course, it is best to learn to cast on the water, but this is not really necessary. The preliminary practice will help materially. Some scoff at the idea. Casting looks easy to the man who is not actually in the game, but let him take the rod and try to cast; he will find that it is not easy.

One must learn to place the bait where he wishes, with a careful gauging of the distance and without haste or blunder. And that takes practice, plus a certain amount of ingenuity, when you come to study the fish you are after. I have seen an amateur send a bait over the water like a shot, the bait skidding along the surface and finally sinking to the bottom, while the fisherman was busy untangling the line, which overran on the reel.

Having jointed the rod, fasten the reel firmly on the seat, thread the line through the guides and fasten on the weight, presumably a piece of lead. Then take a position facing the open space with the rod held easily, tip down. The bait should be reeled in to about six inches or so from the rod top and the line should run out easily without the click on. The right thumb is held firmly on the line. The rod is swung backward then forward sharply, and the thumb is allowed to gradually ease on the line, but is not removed, since it entirely controls the bait. When it is seen that the bait is close to the water, the thumb pressure is increased gradually and the bait drops.

In reeling in the line, place the butt of the rod against the stomach with the tip slightly up. The thumb and forefinger of the left hand guide the line into place on the spool while you are reeling in with the right. Hasty reeling is often the cause of a backlash in the cast that follows, since the line may be spooled unevenly, and is easily tangled when brought forth in a smart cast; therefore, care should be taken to spool the line evenly. This is easy to learn; much of the success lies in making the thumb obey one's will. If the reel spins easily, then the thumb must be pressed on the line a certain space before the bait strikes the water.

The bait should not be allowed to sink, and changing the rod from one hand to the other should take place quickly. With practice this becomes easy and clock-like in its regularity. When you have attained a general knowledge of the trick, it becomes fun, pure and simple. Always there is the satisfaction of knowing that each cast is a mite better placed than the previous one, and there is the constant expectation that a big bass may be taken.

I think that the best thing to do is to work the thing out yourself. I have derived not a little satisfaction in reading books by the authorities, finding things already known to me, and, then again, striking a fund of knowledge that I had not realized. We always learn, and there is not a veteran fisher who will say he is a master of the subject. Bass are so uncertain in their habits that it is impossible to get them listed correctly. Bass are easier to be caught the first two or three weeks in June or earlier than in the open season. They then take bait with avidity. They are in the shallows at that time and live bait is sure to bring them in. I have often cast a live frog, allowing it to sink to the bottom, and then hiding, watch a big fellow come along and gather it up. One who fishes each day for two weeks will find that luck is with him sometimes in the stormiest weather, when it is almost impossible to cast a bait with skill. In stormy weather I often hunt out coves or little bays where the water is quiet. There beside the rocks I have often landed some nice ones. Let the boat creep into the bay or cove and make your cast carefully. Early in the morning, just as the sun has topped the eastern heavens, the bass will take bait, later they may refuse. Then again at noon one may have success, but it is uncertain. At twilight they again come into the shallows, and by rowing a boat just outside of the weeds and casting inshore there may be luck for the angler. They often lie beside weeds and lilypads. The frog should be lively, since only action attracts the bass. The bait should drag alongside the weeds or a little to one side. Most bass do not strike instantly, but follow up the bait and nip at the legs. The usual method is for one man to row the boat while the other does the casting. When the bass strikes, an upward movement of the rod tip will set the hook firmly in the jaw of the fish. The black bass has a reputation for being a staunch and true fighter, and once realizing that he is held, he sets about to free himself. He may be inclined to go around in a slow circle; then he gathers momentum and rises, shaking his head viciously in an attempt to dislodge the hook. The man at the oars should help the man fighting the fish. Slack line should be avoided, as much as possible, for it is under these circumstances that many good bass are lost. Often the fish will make a dart for the boat and get under it, in which case the oarsman must do some quick work, and the angler must keep cool and collected, or there will be a mess of the whole business. When the fish is brought up to the surface the oarsman should have the net ready and scoop him out. Fish should be kept in a basket filled with leaves or wet grass, as then they will be in better condition than when hung out over the end of the boat and allowed to trail in the water—a method I am not much in love with.

If the bass refuse to take in shallow water, it is a good idea to row out a little further where the water is deeper and still-fish for them with angleworms hooked on in small bunches to make a crawling mass. Or helgramite or frogs may be used. In still-fishing bass may be caught long after dusk. While the artificial minnow is good in some lakes, it is just the opposite in others. In the Northern lakes they are undoubtedly the best thing to be used—but in Minnesota they are not infallible. As a rule, our bass are taken with live bait. Fly-fishing is rather rare, though there are excellent places for this purpose in the State.

THE TOP RAIL.

A CURIOUS device has been made by an Englishman who calls it a shot cork. It is intended not for use in a gun, as its name implies, but in the angler's kit. It consists of a cork cylinder closed at one end, while for the other end there is a stopper; in fact, a cork. Filled with split shot, it will not disturb the meditations of silent fishermen—for the maker calls it the silent fisherman's shot cork — hence it is assumed that noisy anglers will have none of it. The price should not prove prohibitive, for it is only four cents.

Why does not someone make a waterproof matchbox in the same way? Good cork is impervious to water, and it will float, which cannot be said of most of the so-called waterproof matchboxes. Besides, the stopper can be manipulated without using a Stillson wrench, and with one hand. When one is waist deep in a swift trout stream, and wishes to light his pipe, he wants a match at once, and in a receptacle that can be managed with one hand. In sailing a canoe, also, a third hand to light one's pipe would be handy. When you are hiking out to windward on a long sliding seat, one hand on the tiller, the other assisting in your acrobatics, if not ho'ding the main sheet, and the desire to smoke seizes you, you are like the woman who, when her horse ran away, loosed the reins and hung on to her picture hat. To do one thing at a time, and do it well, was an aphorism invented before the time of sliding seats and picture hats. But she saved the hat.

There is perhaps no better pocket matchbox than two brass shells—a 10 and a 12 gauge, or either one with a cork stopper; but for one who smokes as Nessmuk did, two navy gun shells would be nearer the correct size, and that would call for a swivel and sling strap.

* * *

NESSMUK'S story? It was to'd by Charles L. Schember who, on first meeting the little veteran, informed him that he had read all of Nessmuk's books and articles with a great deal of pleasure; but he added, his only criticism was that Nessmuk used so many periods.

"Well, I'll tell you," said Nessmuk; "when I am writing I forget all about my pipe and it goes out. And every time I stop to light my pipe I've got to put a period to the sentence."

GRIZZLY KING.

GAME BAG AND GUN

Game Matters.

BERKELEY, Cal., June 12.—*Editor Forest and Stream:* The announcement has been made that a number of sportsmen from Los Angeles, headed by Walter Armstrong, had secured on option on a tract of land east of Oroville on the North Fork of the Feather River, and that this would be used as a game preserve. Deer and quail abound there and a fine trout stream runs through the property. Old placer diggings are also located on the property, and it is the idea that those who tire of hunting and fishing can find amusement in working these.

The board of supervisors of Alameda county has just passed an ordinance opening the deer season in that county on July 16. In the past the season has opened on July 1, but the deer there are fast disappearing, and the season has been curtailed as a result. The season will close there on Aug. 1.

Miss Libby, of Southern California, the members of the Audubon Society, who rendered good service at the recent session of the State Legislature, and whose influence saved the meadow lark from wholesale slaughter, has been made a deputy by the Fish and Game Commission and is spending her time lecturing on bird life before the pupils of the public schools.

Visitors to the great bird reservation in Northern California and Southern Oregon, established by former President Roosevelt, state that more birds are now breeding on Bird Islands in Lower Klamath Lake than ever before, these including ducks, geese, pelicans, cranes, cormorants, gulls and small birds in great numbers. One small island has been taken by the Caspian tern, said to have been a rare bird in that section formerly. Last year some Klamath Falls parties staked out guano claims on certain of the islands, but they have not been allowed to take the guano away.

The Government is planning to establish a game preserve in Trinity county and the lava beds of Northern California. Cattlemen have objected to this, but have been informed that the grazing privileges would not be curtailed.

The game farm of M. G. Crellin, near Hayward, is to be stocked shortly with elk, a herd of twenty-five young ones to be brought here from Southern Nevada. There are now on the farm over 800 pheasants, many mountain quail, and next season several other varieties of game birds will be raised.

In Fresno county, and several of the counties of the San Joaquin valley, crusades have been commenced to exterminate the ground squirrel, this work being in charge of the Federal officials. It has been definitely established that bubonic plague exists among the ground squirrels in ten counties of the State, and the rodents are to be thinned out as much as possible. Some objections have been made to the commencement of this campaign on the grounds that the scattering of large quantities of poison is always dangerous and results in much loss of bird life. The Federal officials, however, promise that modern methods will be used and that wherever possible gases will be used to kill the squirrels.

GOLDEN GATE.

Depositions Required.

UTICA, N. Y., June 16.—*Editor Forest and Stream:* Judge F. H. Hazard, of Oneida county, has handed down two interesting decisions.

Henry Gardner was caught hunting without a license last autumn by Protector Charles Worden, of Oriskany. He was tried before a justice, found guilty by a jury and fined.

Henry's brother, George Gardner, was arrested by Worden and Warden John Willis, of Oneida, for killing a great American bittern. The defense claimed that the bird was a mudhen, and as it was taken in November during the open season, that no misdemeanor had been committed. Two naturalists from Syracuse testified that the bittern is sometimes called a mudhen by those who do not know any better, but this bird was a bittern and the jury believed them. George was fined $45, which he paid.

The Gardners appealed to the county court and won on a technicality. The lower court was reversed in each instance, and the fines ordered remitted. The attorney for the defense maintained that the warrants were sworn out "on information and belief" that the alleged violation had been committed. He said that this was all right so far as they went, "but according to a line of decisions through the Supreme Court to the Court of Appeals it had been held that such a warrant should be accompanied by a deposition, stating what facts the protectors knew about the case and thereby giving the grounds for the arrest. The county judge held that this is plainly the law, and therefore reversed the justice court.

MR. DANVERS' AFRICAN TROPHIES.

African Trophies.

DENVER, Colo., June 1.—*Editor Forest and Stream:* Reading FOREST AND STREAMS carries me back thirty years to the excitement and privations of a hunter and prospector's life in many parts of big and silent Africa. Perhaps the accompanying photograph of an African collection of antelope horns may interest readers.

1. Gnu or blauw wildebeeste, shot at Mopies Post, Kama's country, N. Bechuanaland.

16. African buffalo bull, shot on the Pungeve flats.

17. African buffalo cow, shot 130 miles northwest of Post Beira.

15. Rei-bok, shot near Bredasdorp, Cape Colony.

18. Hippo teeth and tusks, shot on the St. Maria River, north of Delagoa Bay.

Koodoo bull measures (largest pair): Spread, 27 inches; curve, 53 inches; straight, 39 inches; base, 10½ inches.

Eland bull measures: Length, 28 inches; base, 13¼ inches.

Eland cow measures: Length, 31 inches; base, 7½ inches.

Gemsbok measures: Length, 37½ inches; base, 7 inches.

Roan antelope measures: Curve, 30 inches; base 9 inches.

7. Koodoo bulls, shot in Letaba district, Zoutpansberg, Transvaal, South Africa.

5. Eland bull, shot near Lake Kunua, near King Kama's old town, Mangwater, North Bechuanaland.

5A. Eland cow, shot at Shepadza's Kraal, Mazoi district, Rhodesia.

3. Oryx or gemsbok, shot northwest of Mafeking, on border of Kalahari Desert.

13. Roan antelope, shot at Cassenga, Portuguese West Africa, Post Mossamedes.

14. Water-buck or Kringgaat, shot on Pungese Flats, ninety miles northwest of Post Beira, Mozambique, East Africa.

2. African bush buck, shot at the Limpopo River, North Transvaal, also at Buzi River, Mozambique.

12. Springbok, shot near Mafeking, Bechuanaland.

9. Blesbok, shot near Kanya, Bechuanaland.

Bontebok, species of blesbok, is royal game, and license must be had to shoot these bucks. Shot near Bredasdorp, Cape Colony, South Africa.

6. Rooibok, shot at Letaba River, Zoutpansberg, North Transvaal.

11. Reidbok, shot at Koodoos River, Zoutpansberg, North Transvaal.

19. Rooi hartebeeste, shot near Mopies Post, Kama's country, Bechuanaland.

AUBREY DANVERS.

Never Too Late to Mend.

MONTICELLO, N. Y., June 17.—*Editor Forest and Stream:* My early boyhood days were passed amid the rugged hills of rockbound Sullivan, and oft have I tramped through the wild yet beautiful section of the great Empire State with dog and gun in quest of game, which twenty-five years ago was plentiful everywhere. To-day in the quiet solitude of my home, memory runs back to those good old days when in every little copse and swale, on every hillside and towering summit of the miniature mountains, so plentiful here, partridges or ruffed grouse were found in great numbers.

It is difficult now to imagine, after the lapse of a quarter of a century, conditions as they then existed throughout Sullivan county. One may tramp the entire day at the present time, and if a dozen birds are flushed, the sportsman considers himself in luck. I have shot six partridges in those days in less than twenty minutes and without a dog, too, while a few years later I well remember a local sportsman, who with his beautiful and well trained dog, Black Bess, shot in one afternoon forty-six ruffed grouse, and he to'd me the ground especially through a black alder swale which contained perhaps six acres, and where the greatest slaughter was made, was literally covered with feathers. Many of these birds were flushed and flew out on the hillsides and were again driven into the low ground and killed during the afternoon.

Do not for a moment think that we consider such wanton slaughter of those noble game birds sportsmanlike or right, for we do not. We have always condemned it both by voice and pen and will continue to denounce any method that tends to materially reduce game in our State. Nothing in nature could withstand such destruction.

Unless some active legislative measures be introduced and increased in forest preserves established throughout our State, the outlook for game in the future, so far as Sullivan county is concerned, is, to say the least, not bright. Nowhere within the borders of our State are conditions found more favorable for State forest preserves where game and fish of all kinds suitable for this section may be developed and protected than in Sullivan county. Nature has with more inspiration and a more delicate touch than a Raphael or a Michael Angelo painted and embellished our county with rugged and crude beauty. Our wooded hillsides with here and there a spring brook dashing down its slopes to join some larger stream in the valley; our beautiful lakes of pure water scattered everywhere throughout the county, nestling in quaint little nooks surrounded by woodland or high up on the mountain which casts its shadows far out upon the placid waters—these waters should be stocked and protected, something like our old-time conditions. Tanneries and saw mills, so destructive to fish, are gone and conditions are ripe for great improvements. The hills and valleys, now almost worthless, should be made a sportsman's paradise, and will be if progressive and protective measures are introduced.

Why not urge the State to acquire all these lands not suitable for agriculture, but charming in crudeness and natural beauty, and give to the weary, tired, over-wrought brains from our great centers of population a restful, beautiful locality in which to camp; and there amid nature's wildness—with a landscape which in variety and beauty, either in the valley or upon some hilltop or along some crystal, rippling brook filled with fish life as of yore, and with nature's forest life and activity about him just as they existed and were depicted by James Fenimore Cooper in his Leather Stocking Tales, and which is a possibility of the near future—should proper action be taken. What a boon to weary and discouraged humanity this would be.

Something must be done in this direction. Remember the fate of the passenger pigeon. Countless thousands of them were recklessly slaughtered in Sullivan county alone.

How many there are in our county at the present time who can remember the myriads of pigeons that semi-annually visited Sullivan county. We have seen the heavens black with them for hours. As one flock followed another, oftimes the sun was obscured, while farmers was in darkness and shadow, while farmers came out of every crossroad with wagons loaded down with them upon specially built boxes, en route to Newburgh or some other outlet to the New York market, every wagon containing from 1,500 to 2,000 birds which had been caught in nets. During the nesting season the trees in the town of Denning and adjoining towns in northern Sullivan were trembling under their weight, and the crash of broken limbs could be heard long before the nesting grounds were reached.

The nests were generally built quite low, of dry sticks and never contained but one egg or one squab. Men in those days from all parts of Sullivan, Orange and Ulster counties would visit these nesting places. Mingled with the constant noise of the pigeons and broken branches and treetops, which could not withstand the weight, the crack of guns on all sides told us beyond a question of doubt, that the slaughter had commenced, and the doom of these beautiful and graceful birds was sealed. Nor was this enough, for when night came these men would again visit the nesting grounds with torches and clubs and complete the destruction. Do you wonder that rewards of thousands of dollars are still offered for a passenger pigeon's nest and egg, and that reports sent in to the committee which has investigated have only proved to be nests of doves containing two eggs?

This picture is not overdrawn or unduly embellished. I have kept myself well within the scope of truth, and it could be written up even stronger and yet be true as many now living in Sullivan county can prove. But we hope what game is not extinct will have better protection, and we are getting it gradually. The varied and changing vicissitudes of politics have recently made a change in the game warden of the county and these changes are just, for to "the victor belong the spoils."

During the past few years Hon. Edward Bisland has represented our county as an officer of the Forest, Fish and Game Commission, and he made a thorough and efficient official, giving on all sides the best of satisfaction and meeting with the full approval of the commission. Recently the department appointed as custodian of our natural forest preserve and parks our honored townsman, ex-Sheriff David S. Avery. No wiser choice could have been made and no appointment in the State will meet with more general approval than that of Sheriff Avery. Mr. Avery is not only a thorough and experienced sportsman himself, but like his predecessor, is of high character, capable and competent, a man who will always have at heart the best interests of our State parks and the game and fish within them. He will show no favor to friend or foe, and no better guardian of our natural forest preserve could have been selected than ex-Sheriff David S. Avery, of Monticello. Under his administration as under that of Mr. Bisland whom he succeeds, there will continue to be an increase of fish and game in our State forest preserves, and wise appointments and competent officials such as Mr. Bisland was, and Mr. Avery's past record and character stamp him to be, and with increase of forest preserves in Sullivan county and elsewhere throughout our State, it should tend to redeem much of that which we have lost in the past by lax law and ruthless slaughter of game. J. F. C.

$25,000 a Year Declined.

A SPECIAL meeting of the board of directors of the National Association of Audubon Societies was held on Friday, June 16, for the further consideration of the offer from a group of gun and powder manufacturers of $25,000 a year for five years, to be used for game protection. Seven directors attended the meeting, among them Dr. T. S. Palmer, of Washington, one of the vice-presidents, and Frank M. Chapman, who for some months has been absent in South America collecting material for the American Museum of Natural History, and who had only reached New York the day before.

It will be recalled that when the offer of this money for this purpose was made to the Audubon Society, it met with much adverse criticism, chiefly from persons who did not belong to the Audubon Society, but to some extent also from members.

So active was this criticism that a member of the board who had previously voted for the acceptance of the donation moved a reconsideration of the resolution accepting it, and when this was passed, the question of acceptance was taken up on its merits.

Frank M. Chapman, who, having just returned, was ignorant of the whole question and of all the criticism, took the ground that the Audubon Society was primarily organized for the protection of song and insectivorous birds. He declared that at the time when the society was organized, there were many game protective associations which were expected to look after the protection of the game birds, but that the song and insectivorous birds were without friends and helpers until the Audubon Society was formed to look after their protection. Mr. Chapman believed that if it went into the work of game protection, the Audubon Society would be leaving its own field and taking up new work, and that its old and most important field might thus be neglected.

The matter was discussed at considerable length. Dr. T. S. Palmer made a really stirring speech in opposition to the acceptance of the gift. Gifford Pinchot and Witmer Stone, members of the advisory board of direction of the Audubon Societies, also spoke against it. When the vote was taken toward the end of the afternoon, it stood five to two in favor of declining the gift.

NATURAL HISTORY

Home Life of a Golden Eagle.

OF late years the camera has become so marked an aid in natural history study that the most beautiful illustrations no longer cause us surprise. Black and white halftones of photographs and even three color work, such as is seen in Mr. Chapman's beautiful volume, "Camps and Cruises of an Ornithologist," have come to be almost expected.

A volume illustrated in a somewhat different way is the "Home Life of the Golden Eagle," by H. B. MacPherson, which is illustrated by thirty-two halftones, mounted on heavy paper and bound in the back of the book. This is not a large volume, only forty-five pages, but it tells in extremely attractive fashion the story of two or three months of patient watching of the nest of a golden eagle in the Grampian Hills. It is published by Witherby & Co., of London.

It was in April, 1909, that Mr. MacPherson learned that the bird was sitting on two eggs, and by the last of May he had seen and photographed the eagle and had dug out for himself a shelter in the side of the rock ledge on which was the nest, building sheltering walls for concealment, and disguising them with heather and moss so that the birds scarcely regarded the change in the landscape. An opening gave entrance into this shelter on the side away from the nest, and there were peep holes through which the lenses of the camera projected.

MOTHER AND SON.
The Home Life of the Golden Eagle.

The story of the growth of the young eagle from the egg to the time when it spread its wings and finally left its nest, of the habits of the parent birds, of the way in which the young one occupied itself and the games it played, are extraordinarily interesting. To make these observations, and to take these pictures required great patience with a readiness to suffer cold and wet, and all the many other minor hardships which are the lot of the field naturalist.

Here is the record of half a day as Mr. MacPherson tells it:

"With a rush of wings she came again, and this time deposited a grouse ready plucked on the ledge. It was now 3 P. M. and the eaglet was hungry, but she evidently considered that it was too early for supper, and again departed. In less than five minutes the cock dropped in with another grouse, also plucked clean of feathers and headless, and as soon as he had departed, the hen returned with a third, and as quickly vanished. This store of food had evidently been accumulated by them somewhere outside the eyrie, and I subsequently discovered several places among the rocks where game had been plucked, for no bird is ever brought to the young without being stripped of its feathers. As we shall see later, hares are sometimes brought unplucked at another stage, but while the eaglets are still in the first down, both hares and rabbits are stripped of fur, but not skinned, before being brought to the eyrie. Other places were found later where the refuse from the nest was deposited, for during the first two months the eyrie was kept remarkably clean. These 'middens' were not used for plucking, but were kept for their own purpose as storehouses for refuse.

"The eaglet was now very excited and would not settle down again to sleep, searching the sky for his parents, his eyes rolling with anticipation of the coming feast. At 3:45 the cock appeared with a fourth grouse and turned sidewise upon the ledge, standing upon the prey with both feet. Suddenly, with a terrific blow of his powerful claw, he ripped the bird open from breast to tail, and then again took his departure.

"In a few minutes the female returned to the eyrie, and picked out the grouse which the cock had prepared, choosing it carefully from among the other carcasses. Seizing it in one foot, she shuffled forward toward the eaglet, and placed the prey in front of the expectant youngster with its legs sticking up into the air. The young one was now expecting to be fed, but she suddenly changed her mind and flew away once more.

"In the evening, about 6 o'clock, the female eagle returned once more to feed her young, and I secured a picture of her in a characteristic attitude. The light was now failing and dark clouds rolled up from the west, putting an end to all possibility of instantaneous work. The scene which followed was, however, well worth a long day's patience, for the eagle picked out the prepared grouse again and carried it to the far side of the eyrie in her beak. Here, beyond reach of the young one, she gorged herself upon the entrails, coming forward at intervals to the eaglet with a tidbit of liver or other dainty morsel, which he greedily pecked from her beak. When she herself was satisfied, she brought the prey nearer and proceeded to gorge the youngster till he settled down contented in the nest. She then seized the remains of the carcass in her beak and bore it away out of my sight.

"A moment later, having disposed of the refuse, she returned and again settled herself down beside the eaglet to shelter him for the night. As this position had been already photographed, I slipped quietly away without disturbing her, having slipped caps over the lenses to shield them from the rain."

The thirty-two plates which illustrate this book show the nest with its two eggs, the young eagle — one of the two hatched died — in all stages of its growth, and the parent bird in a great variety of positions. It is an exceedingly interesting piece of work, and, with a number of similar pieces of work done in the United States and the old world, is very suggestive. Details like those furnished by such long continued, and often hour to hour, observations give us an intimate knowledge of the every day life of our birds, such as may not be had in any other way.

To the Aleutian Islands.

A. C. BENT, of Taunton, Mass., a fellow of the American Ornithologists' Union, is organizing an expedition to the Aleutian Islands for the purpose of making a biological survey of that chain. It is hoped that the use of a revenue cutter may be secured for this purpose, and it is possible that the United States National Museum and the Biological Survey may be represented on the trip.

The Aleutian Islands are of peculiar interest to sportsmen because of the great variety of forms of ptarmigan found on them. The ptarmigan of the various Alaskan Islands, once perhaps all quite alike, became separated when the islands were formed, and have become specialized in a great variety of directions, so that now they are known by nearly a dozen different names.

FOREST AND STREAM
A JOURNAL OF OUTDOOR LIFE.
TRAVEL. NATURE STUDY. SHOOTING. FISHING. YACHTING.

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,
127 Franklin Street, New York.

GEORGE BIRD GRINNELL, President,
CHARLES B. REYNOLDS, Secretary,
LOUIS DEAN SPEIR, Treasurer.

CORRESPONDENCE.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Terms: $3.00 a year; $1.50 for six months. Single copies, 10 cents. Canadian subscriptions, $4.00 a year; $2.00 for six months. Foreign subscriptions, $4.50 a year; $2.25 for six months. Subscriptions may begin at any time.

Remit by express money-order, registered letter, money-order or draft, payable to the Forest and Stream Publishing Company.

The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davis & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS.

Inside pages, 20 cents per agate line ($2.80 per inch). There are 14 agate lines to an inch. Preferred positions, 25 per cent. extra. Special rates for back cover in two or more colors. Reading notices, 75 cents per count line.

A discount of 5 per cent. is allowed on an advertisement inserted 13 times in one year; 10 per cent. on 26, and 20 per cent. on 52 insertions respectively.

Advertisements should be received by Saturday previous to the issue in which they are to be inserted.

THE OBJECT OF THIS JOURNAL will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

THEIR CONTRIBUTION DECLINED.

THE Audubon Society, as reported elsewhere, last week declined to accept from a group of manufacturers a continuing contribution of $25,000 a year for five years, to be devoted to game protection. To some Audubon members, and to many persons who are not members, this action will be very gratifying, but to others who are genuinely interested in the progress of the Audubon work and the protection of wild life, it is more or less puzzling, if not alarming.

From the report of the meeting it is inferred that the contribution was declined because the directors believe that the work of the Audubon Society should be confined strictly to the protection of song and insectivorous birds, and that to go outside of that field will be to endanger the proper carrying out of this main work.

Such a narrowing of the work of the Audubon Society is quite unexpected. It does not seem at all to agree with the Society's course in advocating better game laws and plumage bills before legislative bodies, nor with the view generally held that the National Association of Audubon Societies—as its title declares—is devoted to the protection of wild birds and animals. This is the view held by William Dutcher, whose work is everywhere so admired and respected, and by many others whose efforts in behalf of bird protection cover at least a quarter of a century.

It is not credible that any large number of the members of the Audubon Society—or even the directors who voted to decline the donation from the manufacturers to be used for game protection—wish to limit the field of the Audubon Society's work as they are reported to have announced. Yet they seem to have declared a policy which later may prove most embarrassing.

THE COMMON GROUND.

FROM the time—now nearly forty years ago—when FOREST AND STREAM first began to be published, the relations existing between the paper and its readers and between the readers themselves have been peculiarly intimate. It is for this reason that contributors constantly speak of the FOREST AND STREAM family, and have the feeling that in FOREST AND STREAM they have rights and interests far more close than those which usually subsist between a newspaper and those who subscribe to it. In other words, between the readers and the paper in which they had a common interest, there has always been a close personal touch.

Who among the older readers of the paper has not felt a warm personal affection for Rowland E. Robinson, Nessmuk, Fred Mather, Manly Hardy, and to speak of a living man, C. H. Ames.

In FOREST AND STREAM each man has always had the opportunity to tell of the joys and sorrows that have befallen him, of the odd experiences that he had met with in shooting and fishing, of the curious natural history observations that he has made; and to the great FOREST AND STREAM family he has appealed for information on a great variety of matters which were obscure to him.

In the years that have passed, vast changes have taken place in American life and in American methods. To-day we are perhaps less frank and less simple than we were forty years ago; but in the sports of the field, in shooting and fishing and natural history and yachting, the possession of a kindred feeling makes men wondrous kind to one another, and tends to break down the various artificial barriers which wealth or education or social position often seem to build up between man and man.

On the common ground of FOREST AND STREAM we can all meet on the level of our common interest, and letting the cares of daily life roll off into temporary oblivion, can become again the simple men of the woods.

IT was partly business policy which prompted the Fish and Game Board to allow one-day visitors to fish free in Newfoundland, and is proving a real convenience to one class of visitors while not injuring the fishing at all. That no one goes to Newfoundland for one day's fishing is conceded. At the same time many tourists, not anglers, who stop there for one or two days, take advantage of the board's courtesy without being compelled first to secure a season's license in order to enjoy a day's trout fishing. On the island these tourists are known as trippers. They come from all over America. Many pass their vacations in swinging around a great circle, through the Canadian Provinces and the New England States, or vice versa, including a brief sea voyage to Newfoundland. To many tourists a journey to the island without a brief try for trout would be like Egypt without the pyramids. It is not the casual angler that depletes game fish waters, and these visitors of a day pay enough as it is for their brief sojourn in the rock-bound island.

So far the widely heralded seventeen-year locusts have made their appearance in large numbers in certain portions of the East. In a locality where they are working, the trunks and limbs of the trees are thickly dotted with them, and the noise they make is exceedingly trying to human ears. It may be described as at times a continuous roar which drowns other noises, while merging into the low roar is a high-pitched discordant note irritating to the nerves. Bird songs are drowned by it, and even the drumming of the ruffed grouse can hardly be heard at a distance. The hole left by the locust when it emerges from the ground is a trifle larger than a lead pencil. In places several of these holes may be covered by one's hand, while the insects are seen in every tree, inert or moving slowly about. On the wing they are clumsy and feeble. At present they infest certain localities, while a few miles away they are scarce or absent.

A BILL has been presented by the Government of Uruguay having for its object the increasing of the forestry acreage in that South American Republic. Bonuses will be given, taxation reduced and seeds gratuitously supplied. To those proprietors who refuse to extend their tree-growing areas an increase of taxation will be made. Millions of trees from all parts of the world have been planted on lands otherwise of little value which are now sources of timber supply, the area being increased each succeeding year, the Government paying large sums to those having great areas of artificially planted trees.

GOVERNOR DIX has appointed James W. Fleming, of Troy, to be Forest, Fish and Game Commissioner of New York, to succeed Thomas Mott Osborne, who recently resigned. Sportsmen generally are disappointed at the Governor's action, for they had hoped that he would select as the head of the commission John B. Burnham, now deputy commissioner. The conservation commission bill favored by Governor Dix is being considered by the Legislature, and it is said that if it becomes law, Mr. Fleming will be made one of the three commissioners provided for in the bill.

IN November and December next an international exhibition will be held in Paris. It will be devoted to fishing and fish culture, oyster culture and manufactures relating to these subjects, navigation, hydraulics, water sports, and to the conservation and use of water for every purpose. It will be under the patronage of the French Government, and will be held in the Grand Palais. Among those on the committee of arrangements is the Prince of Monaco, who has devoted so much time and money to the study of oceanography.

Japan is to listen to and admire the sonorous voice of the American bullfrog; that is, if the plans of one of her citizens attain maturity. One of the graduates of the Connecticut Agricultural College is reported to be on his way home with a crate of bullfrogs, which he hopes will thrive in the marshes of Japan.

SEA AND RIVER FISHING

A Liberal Concession.

ST. JOHNS, N. F., June 14.—*Editor Forest and Stream:* The first batch of American anglers has arrived on the west coast, and as the weather conditions just now are ideal and the fish running well, the sport opens auspiciously.

There are now eighty salmon rivers wardened and well protected for the coming season. This number does not include several fine, but not easily accessible, rivers on the northeast coast, and excepting one river on the Labrador, it does not take note at all of the rivers on that coast which equal, and in some cases excel, the best streams in Newfoundland.

The Fish and Game Commission has issued orders to all wardens, guides and other officials of the board not to fish in any stream or pool while any visiting angler is in their territory. A warden or guide may fish for food if necessary, but not to the extent complained of by some visiting anglers when the guides monopolized the best places in the pools to the exclusion of the party they were conducting.

A trouter's license, allowing a visitor to fish in lakes and ponds for trout only, has been issued by the board for the nominal sum of $1. During the summer many parties of round trippers come from cities in the United States, and they only stay for a day or two. Up to last season this class used to avail of the time at their disposal and take a run to the nearby ponds which are numerous in the vicinity of St. Johns and enjoy an evening's fishing. The $10 license put a stop last season to the enjoyment of that class of visitors.

An influentially signed petition was lately presented to the board, pointing out that a day's trouting was a great attraction to many of those visitors, and that the few trout caught did not matter as much as the day in the country with congenial companions.

Many local business men were in the habit of taking out visitors who happened to be in the city on the weekly half holiday—each Wednesday in the summer is set aside for a commercial half holiday—and giving them a pleasant evening, but owing to the $10 license fee exacted this practice was stopped. Now with only a nominal fee charged, people who do not want to angle for salmon may spend a pleasant day or so catching trout, and if a business man wants to take out a guest or so, he will not have to pay an exorbitant price for the privilege.

Some of the reports already beginning to come in are sufficient to "make your mouth water," as the saying is. I send you some clippings from last night's papers:

"Seven dozen mud trout were taken at the Narrows, Terra Nova, weighing forty pounds; no salmon."

"G. W. Beal caught one ten-pound salmon in Rendell's pool, South Branch. Peter O'Quinn caught one dozen trout weighing from one-quarter to one pound each."

"M. F. Murphy and John Barron, who were trouting at Petty Harbor Ponds, returned to the city with ten dozen trout."

We had about 210 American visitors last year and they caught about 3,500 salmon.

With the protection afforded the rivers last year and the increased vigilance provided for the coming season, we have room for one hundred times that number of anglers with a corresponding increase in the catch of fish. Last year the salmon in the Humber were in incredible numbers and very few were caught. Mr. Blakney, an American angler, estimated that the number jumping at the Big Falls totaled 250 fish a minute. W. J. CARROLL.

What Killed the Fish?

NEW YORK CITY, June 16.—*Editor Forest and Stream:* An absorbing topic was under discussion at Craig-e-Clare.

My suggestion that the stream had been dynamited met with rigorous dissent from my fishing companion, Mr. W., while our host was inclined to side with me, as in no other way could he account for the many dead trout.

The fishing had been unusually poor. Very low water, extremely clear, abundance of natural food, and a bottom foul with vegetation because the spring had been open with no freshets or ice jams. And now in the stream the dead brown trout began to appear in numbers. One day my friend counted seven in one pool, all fine large brown trout, and apparently most of them had not been dead over a day or two.

We had run up on May 20 to enjoy a few weeks' fishing in the Beaverkill, and at Craig-e-Clare had encountered these conditions.

Every day for nearly two weeks we found numbers of dead fish, some lying on the bottom of still pools, others floating down stream in the swift water, and not one native trout among them. They were invariably brown trout, and generally large. We found none under eight inches, while many of them weighed from 1¼ to 1¾ pounds.

While we were discussing the cause of the trouble, Mr. B. came up from the stream and his creel contained just one beautiful brown trout weighing 1¾ pounds, fresh and brilliant, which he had picked up dead. Our host dissected that trout while we all looked on. Not a blemish could be found anywhere. The gills were perfect and blood red, and all the organs appeared normal. No solution of the mystery was found in that fish.

Two smaller ones, brought to the house the following day, showed two punctures on each fish, one on each side about one-third up from the tail, about the size of a No. 8 shot. The holes were little more than skin-deep, and absolutely clean. There was no perceptible evidence of a parasitic character and we decided that the punctures were not a cause but a result of death.

Up and down the stream from Lew Beach to Roscoe numerous explanations of the trouble were attempted. The dead fish were found over this entire stretch. The destruction was undoubtedly the effect of one of three causes—epidemic, dynamite or poison.

It is difficult to conceive that it could be either of the last two, since the fish were found fresh, having died each day, over a period of two weeks, and some were seen at the dying point, as they flopped around on the surface and sank to the bottom.

Had it been dynamite or poison, the native trout and the chubs would have been affected, which was not the case.

What caused it? This is an important question, and I hope that some of the clubs on the celebrated stream have laid the matter before the fish commission for investigation.

It would be interesting to hear from anglers who were on the stream from May 20 to June 5 and who must have encountered this sad condition of things, so unprecedented on the Beaverkill. HERBERT JANES.

Tuna Club.

THE winter tournament of this club of Avalon, Cal., closed May 1, and the list of prizes awarded has just been announced, as follows:

Yellowtail*—For largest of season, Eddy cup, Francis medal, club medallion: Won by Mrs. Evelyn Garrett, of Los Angeles; weight of fish, 45 pounds. Second, club medallion, Colonel John E. Stearns, of Los Angeles; 44 pounds. Third, W. H. Chase, Wolfville, N. S.; 42¾ pounds.

White Sea Bass*—Largest, club medallion, A. E. Eaton, of Avalon; 38 pounds. Second, medallion, H. W. Mataline, of New York city; 26½ pounds.

Albacore*—For largest of season, Banning cup, Streeter medal, Club medallion (gold): C. R. Guertler, New York city; 51¾ pounds. For second largest, club medallion (silver), W. D. Flagg, Boston, Mass.; 47½ pounds. For third largest, club medallion (bronze), Mrs. Meade Goodloe, Susco, Ariz.; 47 pounds.

Three-Six Class—Potter prize for largest yellowtail of season, Chubb Three-Six rod, Gustave Pabst, Milwaukee, Wis.; 24½ pounds.

*Light tackle class tackle specifications.

Boatmen's Prizes, Yellowtail—For boatman to angler taking largest of season, Dyas-Cline prize, Three-Six rod, Captain Newberry.

Albacore—For boatman to angler taking largest of season, W. H. Hoegee Co. prize, nine-ounce rod, Captain Nichols.

Bonita—For boatman to angler taking largest of season, Western Hardware & Arms Co. prize, 900 feet nine-thread line, Captain Goulding.

Buttons Issued—Bronze, 20; silver, 2; gold, 3.

His Best Brown Trout.

BERLIN, N. Y., June 16.—*Editor Forest and Stream:* Tuesday afternoon I took the largest brown trout which has been captured in this town thus far this season. It weighed 2 pounds 6 ounces. The water was very high and roily from a severe shower in the forenoon. I was baiting with angleworms and had light tackle, my hook being a No. 8 with a single snell. Fishing from a bridge, it was necessary to climb a fence in order to reach the brookside. The heavy strain which I kept on the fish finally tired him to such an extent that I was able to draw him up to the bank and insert my fingers in his gills. He was my record trout and his strength was a revelation to me. Just how long I was fighting him I do not know. SANDY.

Fishing in California.

BERKELEY, Cal., June 17.—*Editor Forest and Stream:* The season for black bass opened June 1 in all of the fish and game districts of the State and will extend until Jan. 1, except in places where local ordinances cut down its length. The limit catch of this fish is fifty a day. On the opening day a number of San Francisco anglers went to Prospect Slough, but the results secured were disappointing. All the streams with headwaters in the sierras are still high, and this is probably the reason that black bass are not to be found in great numbers in their usual haunts. The waters of the San Joaquin and the Sacramento rivers are now spread out over the lowlands and the bass are in the shallows in search of food. When the waters recede, the bass will again be found in the deep stretches of the river and in the favorite pools. Black bass are being rapidly introduced into lakes and streams that are not now stocked. The black bass here are not quite as large as in the Eastern States, but they are very gamy. Most of these taken here are caught with minnows and other live bait by casting and trolling.

Trout fishing is steadily improving, but it will be the first of July, or even later, before it is at its best. There is still much snow in the mountains, and most of the streams are high, although clear water is the rule. In many localities where the best fishing is usually to be had about the first of May, anglers are just now commencing to find the fish plentiful, indicating how late the season is. The mountain streams are well filled with fish and the present season should be successful. The excellent work of the State commission in stocking streams is commencing to have its effect, and good fishing is now to be had in streams that were without fish. A fine lot of fry are now on hand for distribution.

The fish distributing car of the commission is now being made ready, and the active work of planting trout fry in the streams of the State will begin this month. The take of eggs at the various hatcheries has been very successful and all the fry desired have been hatched out. At the Sisson hatchery 1,200,000 Loch Leven eggs have been taken, 1,000,000 rainbow trout eggs and about 900,000 Eastern brook trout. At the Klamath River station 1,500,000 wild rainbow trout eggs were taken and on Shovel Creek about 1,000,000 of the same. The Eel River station will furnish about 1,900,000 steelhead fry, the Scott Creek station in Santa Cruz county 1,300,000 steelhead fry, and the Price Creek station about 130,000 of the same. The catch at the latter station was light, owing to high water. At Tallac about 2,000,000 eggs have been taken to date. It is intended to take four or five million this season. A station is to be opened at Wawona, but no eggs will be gathered there, this to be a hatching station and distributing point for the Yosemite district.

A number of complaints have come to the Fish and Game Commission in regard to conditions at the Empire Weir in Kings River below Kingsburg, and this matter has been looked into by A. D. Ferguson, who has the San Joaquin district in charge and who was in San Francisco recently filling a place in the local office during the absence of one of the assistants. The complaints allege that the weirs keep the fish from coming up stream and state that a difference in level in the river is maintained here of fully eleven feet, and that the boards in the weir are in place, making the height that would have to be cleared by a fish fully twenty feet. The fish are gathered below the weirs in great numbers coming up from Tulare Lake and are being caught by the sackful by market fishermen, catfish being the most abundant. Dip nets are being used extensively, and the fish caught but not desired are allowed to rot in the vicinity. The local officials state that the fish ladders are in place, but that conditions are so ideal at the foot of these weirs that the catfish do not care to use them. Visitors have noted the fish ladders and have watched them to see fish pass over, but seeing none have concluded that they are ineffective. As Chief Deputy Babcock has remarked, the average person does not understand the construction of a fish ladder and does not know that the fish is supposed to make his ascent through the opening provided below the overflow.

William Ehrich, of New York, with Sam Wells, of San Francisco, has gone to the Big Meadow country. From reports sent down by them the sport in that section has been all that could be desired and some fine large fish have been taken. These anglers have been using flies exclusively. No fish are taken weighing less than a half pound, and five-pounders are not infrequently landed.

Mrs. M. L. Church and Mrs. Winnie Patterson, of Berkeley, have been about the first women to make the trip into the trout regions of the sierras and are spending a month fishing on the Feather River between Sloat and Portola. While the river has been rather high, they have made fair catches and have secured many large fish. Before their return they plan to visit Gold Lakes in the vicinity of Johnsville and try lake fishing.

The California Anglers' Association has been showing in its club rooms in the Dunne Building a set line recently found in a favorite striped bass fishing grounds by one of its members, Emil Medeau. The line was anchored beneath the water and had almost fifty freshly baited hooks on it.

Twenty-five prominent sportsmen of San Francisco and Stockton have formed a new country club and have secured a preserve of about 7,000 acres in the Sierra Nevadas north of Truckee. The tract includes in its confines Webber Lake and several small streams which will be stocked with trout. Among the members of the new club are: George McNear, R. M. Davis, W. B. Tubbs, F. S. Moody, J. D. McKee, J. A. Chanslor, E. A. Stent, W. O. Wayman, J. R. Howell, W. C. Murdock, W. A. Bissell, A. S. Hodgkins, W. C. Neumiller, Edgar Painter, James Irvine, A. D. King, F. H. Buck, C. O. Hooker and J. C. Wilson.

GOLDEN GATE.

A Satisfied Party.

CHICAGO, Ill., June 14.—*Editor Forest and Stream:* Our party, consisting of William Wolfarth, Geo. A. Murrell and myself, all old members of the Chicago Fly-Casting Club, who annually visit the northern streams of Wisconsin, and regularly obtain our non-resident hook-and-line license in that State, where some of the best game and fish laws apply, finds the streams and lakes of that State are being constantly replenished from the large license fund yearly obtained by a wisely enacted law, to the discredit of the State of Michigan and her poor fish laws.

We again spent seven days among the speckled brook trout (*Fontinalis*) where joy meets the angler's heart, and where the waters are so bountifully supplied that we, "Billy," George and I, naturally curtailed our zeal to what we normally consume with a big appetite, and to bring home the lawful number. It was not difficult on any reasonably good day to take the limit and of lawful size, if one was so disposed.

We found the gray Palmer, professor, grizzly king and queen of the waters in the order named the most efficient; in fact, we did not angle with or cast but with the artificial fly.

H. A. NEWKIRK.

Chicago Fly-Casting Club.

CHICAGO, Ill., June 11.—*Editor Forest and Stream:* The following scores of the Chicago Fly-Casting Club were made to-day:

Half-ounce accuracy, bait:

H. W. Perce	99.3	H. P. Anderson	95.6
O. J. Loomis	98.3	Dr. Spruce	94.3
H. Lindauer	98.8	W. S. Robinson	94.7

Big 'Gator.

NEW ORLEANS, La., June 16.—*Editor Forest and Stream:* Albert Heitzman during the week captured an eight-foot alligator near Dunbar's canning factory in Bay St. Louis and shipped the saurian to New Orleans. It had evidently come from the marshes nearby and was on the roadside when Heitzman, with the aid of a companion, captured it. A dealer in New Orleans paid a handsome price for the alligator, as it was one of the largest taken alive in some time. Large alligators are becoming very scarce and a number of sportsmen are advocating the passage of a law by the next Legislature forbidding the hunting or trapping of alligators in Louisiana for a period of years. It is believed such a bill will meet with favor by the general public.

The closing of the various schools and colleges here during the week for the summer vacation of three months has served to increase the number of fishermen at the several resorts on the gulf coast and elsewhere in this State. The college and school boys are very fond as a rule of the sport, and many of them have gone over to Chef Menteur, the Rigolets, Lake Catherine, Bay St. Louis, Waveland, Gulfport and Pass Christian and other places, and they are now enjoying the sport. Many of the college boys are expert fishermen. The fresh water streams in the center and northern portion of this State are just now yielding some fine trout, catfish and other species.

Splendid luck is reported by all the fishermen.

Several of the fishing clubs are entertaining visitors who are spending a short time in New Orleans. The resorts are more generally patronized this summer than for several years. The season was somewhat later than usual in opening this year. F. G. G.

Green River Trout.

HENDERSONVILLE, N. C., June 4.—*Editor Forest and Stream:* So far this season the fishing near here has been rather poor. I have been several times to Green River for rainbow trout and have always killed a few, but the spring was rather cold, and since warm weather began, the water, where I have been, was only once what it should be for fly-fishing.

One day in May I had fairly good sport, but it was Saturday, and the mill hands and many others were also fishing and kept the stream disturbed. On that day I had an interesting little experience with my largest trout of the season, one of a pound and a half. I had almost reached the head of the deadwater nearly two miles above the power plant. Just here there is a shelving rock and a small stretch of good water. I had fished it going up and was fishing over the same water on my return down stream. There is a bank fringed with laurel and ferns and a large spruce with plenty of shade there, and from this bank a log lies one end in the bushes and the other thrust well down in the middle of the deepest part into the sand bottom of the river. When about thirty-five or forty feet above this log I cast over and beyond it. I was using three flies attached to a six-foot leader, the tail fly a royal coachman, the middle fly a silver doctor and the upper dropper a Cahill. My trout selected the silver doctor, and when he had done so, instead of promptly leaping from the water as the rainbow trout so often does, he rushed under the log toward me, and then turned and fled down stream, but not till he had first gotten over the log. Of course the upper fly caught on the log and there we were fast.

There was but one thing to be done and that was to secure that trout. To do so I took in my line, walking down till I was waist deep. I then took my landing net and dipping down deep till I was almost to my shoulder I succeeded in getting the net under the trout, and lifting it nearly to the surface of the water, was able to get the fingers of my left hand in the fish's gills. My trout was soon safely in my creel.

Then to save leader and flies I turned the reel down against the line following it to the leader, and the line parted only a few inches from the end of the leader, leaving the leader still attached to the log. I then went to the bank and leaving the rod, creel and net, I cut a stick five or six feet long and about four inches of a limb at one end for a hook, and with this I returned to the water. I used this hook stick, feeling along the log until I succeeded in securing my leader with the three flies intact.

Going down to a stretch of good water below the power plant dam, I again began fishing a pretty bit of water with a big log lying in mid stream straight down its middle. At the first cast on the right I secured a trout of eleven inches. A cast to the left and a better one joined it in my creel, but even as I killed this trout before putting it in the creel, I heard voices above me, and looking up I saw a mill hand and a small boy with "poles." I knew that every trout there had seen these fishers and gone into hiding, and so it proved.

I moved on down stream for a last effort, when just as I began a number of little fishers, children from the mill village, ran down a trail to the bank overlooking my flies. The little fellows were also out for "fish and fun," and I had some, so without a word I quietly reeled up my line and quit. I hope they did as well as I.

ERNEST L. EWBANK.

North Shore Casting Club.

CHICAGO, Ill., June 12.—*Editor Forest and Stream:* The scores for June 10 follow:

	½oz. Bait.	Accuracy.
Bellows	98.0	99.3
Hinterleitner	98.0	96.13
Liddell	97.3	96.5
Dorchester	98.0	98.4

Moeng	92.0	....
Forsyth	97.7	97.11
Luthy	97.1	....
Goodwin	95.3	98.3

The captain finds the present method of providing judges and scorers very unsatisfactory. He thinks it unwise to fail to provide the same in advance of an event. It is of much importance to the participants that the judging and scoring should be correct. As the active members are particularly interested, the captain has decided to call upon them to serve in the capacity of judges and scorers. Scorers of bait events will be chosen (also judges) from the bait-casters; fly judges and scorers from the fly-casters.

As a member will not be asked to serve a second time in any event, and as a member can re-enter for an event on any day on which a similar event is cast, and as there are three special re-entry days, it will be seen that this service will not be a hardship on anyone.

In case it should not be convenient to serve on the day appointed, it will be an easy matter to find a willing substitute. The captain makes the following appointments:

June 24.—Bait, Goodwin, Benns; fly, Bellows, Luthy.

July 1.—Bait, Adams, Lambert; fly, Hinterleitner, Hall.

July 8.—Bait, Dorchester, Lyon; fly, Goodwin, Liddell.

C. O. DORCHESTER, Sec'y-Treas.

Asbury Park Fishing Club.

THE eighth annual announcement of the club's fishing season from April 1 to Oct. 31 has been received.

The rules affecting the award of prizes follow:

Prizes awarded shall be subject to the following conditions and rules:

1. Winners must be members in good standing in the club at the time the prize fish is taken.

2. Fish must be taken with the usual angler's outfit (rod and reel).

3. Fish must be caught from shore or some structure directly connected with the shore, unless otherwise stated.

4. All fish must be caught within the territory bounded on the north by Sandy Hook, and on the south by the north side of Little Egg Harbor Inlet.

5. Fish must be weighed at the club house, or at John F. Seger's store, 703 Cookman avenue, and the weight must be attested by at least one witness, who must be a club member.

6. A prize winner is entitled to but one club prize. If in line for two he must choose one.

7. Prize fish must be caught between April 1 and October 31, inclusive, unless otherwise stated.

8. In order to be a prize winner the fisherman must cast his line, hook and land his fish without assistance, except in beaching the fish.

9. In case of a tie for any prize, slips must be drawn. No. 1 slip to take the prize, and No. 2 slip to take the next prize, and so on, until the tie is run out.

10. The prize for the first striped bass, kingfish, bluefish or flounder taken is to be awarded at once, rule six being eliminated in this case.

11. Special prizes to be subject to same rules, unless otherwise specified by donor.

12. Off shore fishing—fish must be brought to gaff with rod and reel unassisted.

STRIPED BASS.

First Prize—Largest, reel. Second choice, split bamboo rod.

Second Prize—Second largest, reel. Second choice, greenhart rod.

Third Prize—Third largest, reel. Second choice, greenheart rod.

Fourth Prize—Largest number taken, casting reel.

Fifth Prize—Largest number of pounds taken, casting reel.

Sixth Prize—First taken, tackle and tackle book.

24. Winthrop Y. C., club.
25. Squantum Y. C., moonlight sail.
29. Indian Harbor Y. C., race to New London.

Some News and a Little Gossip.

ELENA has sailed her first race. She attracted much attention in the regatta of the Larchmont Y. C. and a large fleet of steamers and motor craft followed the racers over the course. She looked well and did well under the conditions, but she had to beat only Irolita, formerly Queen, a yacht now in her fourth year. The wind was light and the course twice around a triangle 15½ miles in length, had 12 miles of windward work. On this leg the tide was fair. Elena was very fast reaching and at the end of 6 miles, with the wind over her quarter, she led Irolita by 7½m. On the wind, however, Irolita reduced this lead somewhat. On the second round Elena did not make such a big gain, but Irolita was helped by a freshening wind at the finish. Irolita was handicapped through having trouble with her board. It dropped through the trunk and Mr. Clark feared it was lost. It will be very interesting to see what the new yacht will do against Westward and Queen in a fresh breeze. Elena should, however, hold Irolita safe in spite of the time she has to allow.

In the P Class Joyant again defeated Corinthian by 1m. 2s. in 11 miles. Joyant seems to be steadily improving and now has beaten Corinthian three times out of four. All these races have been sailed in light winds and yachtsmen are anxious to see the yachts tried in a fresh wind. In eastern waters Italia has been defeated again, this time by Timandra, but this race was sailed in light fluky winds.

In the hard blow of Saturday, June 10, Grayjacket, champion of the Q class last season, and Suelew, the new Mower boat, owned by Commodore Luckenback, of the Crescent A. C., were badly damaged. A coasting schooner dragged her anchor and fouled the two yachts, driving them on the beach. Suelew had a big hole stove in her side, and it took a week to make repairs. Grayjacket had her side stove in, frames broken and deck split. She was taken to City Island and it is hoped that she will be put back in as good condition as she originally was.

Ocean races are on the program for next week. The sixth annual race from Greenwich to New London of the Indian Harbor Y. C. will be sailed on Thursday, June 29. This race is for all classes, including the New York Y. C. 30-footers over 25 rating enrolled in any recognized yacht club. Suitable trophies are offered by the flag officers of the club and others as first prizes in each class. There will be second prizes in each class in which four yachts start. All yachts will sail in cruising trim except that club topsails may be carried. The start will be made from a line between a stake boat anchored one-half mile south of Great Captain Island light and a white flag on the committee boat, and the finish line will be between the foremast of Bartlett Reef light vessel and a white flag of the committee boat. Distance, 72 miles.

On July 1 two races will be started from New London. The Seawanhaka-Corinthian Y. C. has arranged a cruising race for yachts of the Harvard and Yale yacht clubs which will take the yachts to Oyster Bay. There will be quite a large fleet of these boats. The Eastern Y. C. will start its race from New London to Marblehead and for fifteen days this club will have lots of racing. The most important prize in the long race from New London is the $1,000 gold cup offered by Commodore Clark for first division schooners. This is to be won three times by one owner, but a silver replica will be awarded to each yacht winning a race. The race for this valuable cup is an ocean event from New London to Marblehead, which will be started from the former port Saturday, July 1. The race is open to schooners over 55 feet rating. In addition a cup has been offered by Capt. C. C. Rumrill for the second division schooners, all not over 65 feet rating; a club cup for sloops and yawls, over 46 feet rating, and a cup by Capt. L. H. Armour for auxiliary yawls, over 55 feet rating. Including the above, prizes will be awarded in each class thus: A first prize, if two or more start in a class; a second if four or more start; a third if seven or more start.

On the same day that the New London-Marblehead race is started, the club will hold races off Marblehead.

Independence Day will be celebrated by the Eastern Y. C. with the club's annual open regatta for 1911. For the race among the first division schooners, all over 70 feet, the club has offered a $500 cup, which, with the ocean race around the cape, it is hoped will bring to Marblehead the majority of the big racing schooners.

The Puritan cup will be awarded for the year to the yacht of the Eastern Y. C. making the best corrected time over the course sailed by the larger yachts.

Starting from Marblehead Friday morning, July 7, with the first run to Portland lightship, the fleet of the Eastern Y. C. will continue along the Maine coast on the annual cruise until July 15.

The cruise will disband at Bar Harbor, Saturday, July 15, where the annual dinner will be held that evening. On the following Monday morning the yachts will race back from Bar Harbor to Marblehead for the Norman cups.

In order to make the passage of the Eastern 31-raters interesting when they come around the Cape to try and capture the Manhasset Bay challenge cup, a race has been suggested. These boats, Amoret, Italia, Sayonara and Timandra are, to come here to race on July 10. They will meet Cara Mia, Joyant, Corinthian and Windward. The cup is now held by the American Y. C., and seven clubs will endeavor to win it away. The Manhasset Bay Y. C. has offered a cup for a race between the Eastern boats from Marblehead to Manhasset Bay, which is to be under the joint management of the Corinthian and Manhasset Bay clubs. It is stipulated that there shall be three or more starters. This prize will be an incentive to the yachtsmen to do their best on the long voyage. It is not at all unlikely that when the New York boats go to Marblehead for the inter-city match in August another cup will be offered for a race from Newport.

The model committee of the New York Y. C. has recently added to the club's collection a full rigged model of the famous Scotch cutter Madge, which came to this country more than thirty years ago and raced so successfully against American yachts. She was built from designs by the late George L. Watson and sailed by the late Capt. John Barr. James D. Sparkman is chairman of the model committee and he has helped much to add to the famous models in the club. The model of the Madge was made by G. L. Watson & Co., and is made on a scale of three-eights of an inch to the foot. The model was presented to the club by James B. Ford, owner of the schooner Katrina, who previously presented models of the Genesta and Galatea, two cup challengers.

The race for sailing yachts from Boston to Bermuda has been declared off. H. S. Vanderbilt was ready with his schooner Vagrant, but Sunshine, the other schooner entered, could not be got ready and was withdrawn. This left only the sloop Arab to race against Vagrant and Mr. Vanderbilt declined to start with only two yachts in the race. The city of Boston had appropriated $500 for first prize for this race and a cup has been made. Boston now has a piece of useless silverware on its hands.

The motor boat race, which was to have been started last Saturday from New York, has been postponed until the fall. The new boats, it was announced, are not ready and the committee hopes to be able to start the racers early in September.

Long distance racing over ocean courses is not popular with yachtsmen this year, or perhaps it is because those who are responsible for the races arranged have not selected popular courses.

Yachtsmen seem to have tired of visiting Bermuda early each year. It takes too much of their time to take part in the race. First there is the time and cost of fitting the yachts for a long ocean journey, then comes the race itself. There is usually a week spent at Hamilton and then there is the journey home. This means in all at least four weeks taken out of the yachting season, and it is not every one who can spare so much time.

If these ocean races are to be continued it would be better if different courses were selected each year, so that those yachtsmen who favor these races may have some variety. There are many places that will make the end of a good course, and if Halifax, Old Point Comfort, Portland, Jamaica for a long distance race, or some other place was chosen the races might still be as popular as they ever were. What seems to please yachtsmen best is a race over a course that will not take more than two or three days to sail. The Block Island race is popular because it is only 100 miles in length and it does not take much time to take part in it. For the same reason the Marblehead and Albany races of the power boat men have become popular, and this year they will in all probability attract more entries than ever before.

Beverly Y. C.

THE Beverly Y. C. opened its season on Buzzard's Bay last Saturday with a club race off Wing's Neck. The yachts had wholesail breeze.

The old racing crafts that sailed in the regattas last year showed up well, and some of them give promise of repeating their good work of last season. In the 21-foot class "Dave" Whittemore's new racer, Foraminifer, showed her heels to the rest of the fleet with ease.

Scallop, which is suited for the kind of rough weather the boats had to-day, was just 50s. behind the Whittemore boat. Saracen, sailed by Robert Winsor, Jr., made a good showing, coming in third. The 21-footers and the Sonder class were sent over a 11¾-mile course.

In the Sonder class Seacoon, one of the fast boats last year, carried off the honors to-day. Picotte, in this class, met with mishap down the bay and had to pull out of the race.

21-Foot Class—Foraminifer, 2.05.09; Scallop, 2.05.59; Saracen, 2.06.59; Terrapin, 2.08.22; Makabaro, 2.08.41; Lethe, 2.14.55; Phantom, 2.18.01; Polliwog, 2.28.40.

Sonder Class—Seacoon, 2.11.41; Sally VIII., 2.14.07; Joyette, 2.15.07; Picotte, disabled.

15-Foot Class—Rebekah, 1.38.45; Yalu, 1.41.07; Bantam, 1.42.50; Pronto, 1.42.51; Pheasant, 1.43.45; Polly, 1.43.46; Endeavor, 1.46.02.

Larchmont Y. C.

ELENA, Morton F. Plant's new schooner, made her first appearance in a race at the regatta of the Larchmont Y. C. last Saturday. She sailed against Irolita, formerly Queen, owned by E. Walter Clark, and as was expected, she won easily. Elena rates 89.6 and Irolita 85.1, so that the new yacht had to allow some time, to be exact, 3m. 6s. over the course of 30.5 nautical miles. This was somewhat of a surprised, as it has been generally thought that Elena would rate in class B and not in class A. The yacht made a fine appearance and did well in the light wind. The course was twice around a triangle going to the eastward first. The wind was light from S. by W. It strengthened a little and hauled to S.W. before the finish. Reaching, Elena drew away from Irolita, but on the wind Irolita made a decided gain. This may, however, have been due to different winds, and it will take a good thrash to windward to determine which is the better yacht. At the end of the first round Elena led by 7m. 13s., and at the end of the second round the difference was 12m. 10s., so that Elena did not make as big a gain on the second round as on the first. Irolita was, however, helped by a freshening wind.

In class M of sloops there were Gardenia, Adventuress and Irondequoit. These yachts sailed twice around a triangle of 11.5 miles, 23 miles in all. At the end of the first round Gardenia had the race well in hand, but on the second round she made the mistake of carrying too big a jib topsail and held in too far to the Long Island shore getting out of wind and tide. Adventuress finished first with Irondequoit second. On corrected time Irondequoit won the race.

In class P, Joyant, Corinthian and Windward met and sailed twice around a triangle of 5.5 miles, rather a short course for such boats. This, however, was a mistake which will be remedied in future races. Joyant took the lead at the start and held it to the finish with Corinthian second.

From a class of eleven starters, Ralph N. Ellis won with his 30-footer Caprice. This is his first victory of the season. Alera was second and Phryne third. The regatta was the largest of the season so far, and was a good one. Horace E. Boucher, Rutledge Schmidt and Butler Whiting were members of the committee in charge and handled the boats well. The times follow:

Schooners—Classes A and C—Course, 3.05 Miles.

Elena	3 32 40	Irolita	3 44 50

Corrected times: Elena, 3.32.40; Irolita, 3.41.44.

Schooners—Class E—Course, 23 Miles.

Miladi	4 15 12	Eclipse	4 48 00

Corrected times: Miladi, 4.03.08; Eclipse, 4.48.00.

Sloops—Class M—Course, 23 Miles.

Adventuress	3 53 26	Gardenia	4 01 29
Irondequoit	3 57 43		

Corrected times: Irondequoit, 3.50.39; Adventuress, 3.53.26; Gardenia, 3.55.12.

NewYork Y. C. 30-footers—Course, 15¼ Miles.

Caprice	2 40 17	Ibis	2 45 07
Alera	2 40 37	Yolande	2 48 53
Phryne	2 40 59	Dahinda	2 49 46
Nepsi	2 41 41	Carlita	2 50 50
Juanita	2 43 32	Asthore	2 53 04
Rowdy	2 43 54		

Sloops—Class P—Course, 11 Miles.

Joyant	2 06 15	Windward	2 12 35
Corinthian	2 07 37		

American Y. C. Raceabouts—Course 11 Miles.

Cliphora	2 35 10	Amanita IV.,	2 49 29
Maryola	2 38 39		

Handicap Class—First Division—Course, 11 Miles.

Alert	2 23 46	Sally IX.	2 30 31
Interim	2 24 25		

Corrected times: Interim, 2.19.23; Sally IX., 2.21.53; Alert, 2.23.46.

Handicap Class—Second Division—Course 11 Miles.

Scud	2 33 44	Naiad	2 38 15
Fearless	2 34 19	Red Wing	2 39 43

Corrected times: Scud, 2.28.21; Naiad, 2.31.20; Fearless, 2.32.47; Red Wing, 2.39.43.

Handicap Class—Third Division—Course, 11 Miles.

Chinook	2 32 20	Natoma	2 32 52

Corrected times: Chinook, 2.27.00; Natoma, 2.29.49.

Handicap Class—Fourth Division—Course 11 Miles.

Dolly	2 49 20	Robin Hood	3 06 37
Grace II.	2 51 41		

WITH EVERY STITCH SET.

From the Country Gentleman.

Corrected times: Grace II., 2.41.31; Dolly, 2.43.24; Robin Hood, 2.59.51.

Inter-Club Class—Course, 11 Miles.

Salas	2 32 07	Dagmar	2 37 03

Dories—Course, 5½ Miles.

Tautog	2 13 08	Rocky	2 20 00
Alice	2 16 30		

New York C. C.

THE first championship regatta of Gravesend Bay for this season was sailed last Saturday under the auspices of the New York C. C.. As Grayjacket and Suelew, two of the class Q boats, had been badly damaged in the storm of June 10, the association, at the request of the owners of other yachts in this class, decided that the race for this class should not count for the championships. Grayjacket had not been repaired and Suelew was launched only in time to start. That yacht had some more hard luck then. She was run into by a motor boat and had a hole knocked in her side. The hole was plugged and she took part in the race.

The wind was very light from S. W., and the yachts could get around the course only once. The first leg was to Sea Gate and this was windward. W. A. Barstow's last year's boat, Soya, won in class Q, defeating Suelew 1m. 10s. in a course of 6 miles. In the other classes the new boats were also beaten. The class S race was won by Gunda with M. and F. second, while the craft built this year finished third and fourth respectively. On both corrected and actual time Joy won the percentage class and Mouse was the winner among the X boats. Once more Aries led home the dinghies of the New York Canoe Club.

The race was managed by John R. Brophy, chairman of the regatta committee. His assistants were Commodore L. M. Pultz, Fred Speidel, Louis S. Tiemann and former Commodore D. D. Allerton. The committee boat was Carrie M. Potter. The times:

Sloops—Class Q—6 Miles.

Soya	1 18 55	Spider	1 20 49
Suelew	1 20 05	Alice	1 21 39

Handicap Class—6 Miles.

Joy	1 21 03	Careless	1 33 07
Miana	1 31 05	Wahken II.	1 38 09
La Cubana	1 33 18		

Corrected times: Joy, 1.31.03; Careless, 1.23.48; La Cubana, 1.26.20; Wahken II., 1.28.25; Miana, 1.29.03.

Sloops—Class S—6 Miles.

Gunda	1 36 54	Wink	1 42 20
M. and F.	1 42 12	Cyric	1 43 08

Sloops—Class X—4 Miles.

Mouse	1 06 15	Scud	1 09 32
Slow Poke	1 06 35	Pike	1 11 39
Suffragette	1 07 38	Chico	1 13 09
Skylark	1 08 39	Lassie	1 14 25

Sloops—Class Y—Course, 4 Miles.

Aries	1 07 25	Viva	1 13 44
Bullfinch	1 08 57	North Star	1 16 06
Skeets	1 09 07		

Rhode Island Y. C.

LIGHT paltry winds coming from all directions spoiled the regatta of the Rhode Island Y. C. last Saturday. Those who kept down the middle of the bay came back winners and those who went toward the west shore looking for a breeze from that direction were either becalmed or had to do some lively work to get around the Nayatt stake in time to keep in sight of their more fortunate rivals on the way back.

Isuelo carried off her fourth consecutive win in the Q class. E. L. Arnold and his friends tried to convince themselves that they were dubious as to the outcome when she went off in the light breeze, but every puff seemed to increase her lead. She was nearly 8m. ahead of Gazelle at the finish mark, with Idler, Molly and Paloma trailing along behind.

The big class D cats crossed the finish line with hardly a minute between each boat, Marguerite winning on the corrected time by less than a minute.

The class E cats crossed the line a minute apart in the following order: Gilt Edge, Trinket, Bother and Netor.

In the 18-foot class Wanderer VI. went down toward the cove behind Conimicut Point looking for a westerly breeze and found a dead calm, where she flapped around until the others had got a nice lead in the middle of the bay by floating along with the tide and using what little breeze there was. After they turned the Nayatt Point buoy the westerly breeze made things interesting, and Arrow came up to the finish a winner among a big fleet, with Dorothy, Wanderer VI., Answer, Mouse and Bat all within close range.

In the second division of the 18-footers Bonito had a mile lead after passing Greene's Island, until Grayling and Mystery struck a breeze that sent them along at a great rate under full sail, while Bonito was tacking. Grayling took the lead by setting her spinnaker, and kept it throughout the race, but was disqualified on a protest from Bonito afterward for passing inside the Greene's Island buoy. Bonito rounded the Nayatt Point buoy the last of the trio, but passed Mystery on the way back. She could not catch Grayling, however, although she got the first honors through the latter's disqualification.

In a hotly contested race in the Z class, Little Mother walked away from Rube and Bud. The six boats in class X were well strung out, Alma coming in with a 2m. lead.

Boston Y. C.

RACING off the Hull station of the Boston Y. C. opened last Saturday. There were forty-four yachts in the regatta and all but the Cape catboats finished. Much of the interest in the race was centered around the match between the 46-footers Altair and Acushla II., which was sailed over an outside course. In the light to drifting breeze Acushla gave Altair a decisive beating.

These boats were started off the club house, sent out through Hull gut and then over a triangular course back to a finish inside. Outside the gut the two sloops found even less air than in Hingham Bay.

The other racers had a course inside. The 31-raters and Flirt of the first special rating class had the southeasterly breeze they started with. The other racers finished in a rather smart northerly air.

Every boat in class P, except Amoret, led at some time during the race. The start went to Italia, then came Timandra, Amoret and Wianno in order. At the first turn the Italia was leading, but before she got by Bumpkin Island on the run to Quincy Great Hill mark, both Timandra and Wianno passed her. At the finish Timandra led Italia by nearly 5m., which goes to show that the Fallon 31-rater is a wonder in light airs. The times:

Special, 46-footers—Achushla II., 2.38.40; Altair, 2.51.47.

Class P, 31-raters—Timandra, 1.42.39; Italia, 1.47.21; Wianno, 1.49 43; Amoret, 1.51.08.

Class L, 18-footers—Arrow, 2.10.07; Mirage II., 2.11.10; Moslem II., 2.11.20; Cheroot, 2.11.24; Kittewake V., 2.11.40; Aurora, 2.11.52; Bonitwo, 2.11.33; Aspinquid II., 2.12.40; Acanthus, 2.14.00; Dorchen II., Disabled.

Class X, Dories—Bessie A., 2.08.24; Teaser, 2.11.25; Sunny Jim, 2.12.15; Spray, 2.12.39; Naiad, 2.13.03; Elizabeth, 2.15.20; Terror, 2.15.50; Anemone, 2.22.23; Question, 2.24.38; Pioneer, 2.29.28.

Hull One-Design—Knick Knack II., 2.06.10; Bonifor, 2.06.12; Eagle, 2.06.59; Kid, 2.07.12; Meave, 2.09.40; Wa Wa, 2 13.20; Beta, 2.14.15; Toogles, 2.19.15; Hoopoo, did not finish.

First Special Rating—Flirt, 1.51.55; Nutmeg, 2.18.01; Novice, 2.18.34; Virginia, 2.18.47; Perhaps, 2.22.55.

Second Special Rating Class—Plover, 2.15.49; Gringo, 2.15.59; Idol, 2.17.34; Hobomack, not measured.

Seawanhaka Corinthian Y. C.

T. B. BLEECKER'S 15-footer won the weekly race for boats owned in the club sailed off the Seawanhaka-Corinthian Y. C. house at Oyster Bay. The wind was light from the southwest. The times, start 3:15: Sabrina, 1 28.50; Iris, 1.29.02; Thelma, 1.30.02.

American Sonders Win.

THE first race of the series between the German and American Sonders at Kiel was sailed last Monday. The American boats finished first, second and third in the race. The times were: Beaver, 2.49.15; Cima, 2.49.18; Bibelot, 2.49.30; Tilly XIV., 2.52,58; Seehund III., 2.56.16; Wannsee, 2.56.31. The wind was brisk at the start, but later moderated, and a smooth sea favored the Americans.

The victory which inaugurated Kiel Week was a brilliant one. After the first leg the race became a double contest, the Americans fighting nip and tuck for first honors, and the German racers see-sawing by themselves in a second group. The race was over a triangular course, twice around, and with the first leg a thrash to windward, the second a reach followed by a spinnaker run.

This is the first time that American Sonders have won in German waters. In their visits to this country the German yachtsmen won a race each time. The series is continued until one yacht has won three races, but after the third race only those having scored a victory can compete. The prize is the German Emperor's cup, and the second prize the Prince Henry of Prussia cup.

New York Y. C. Yearbook.

THE New York Y. C. year book for 1911 has just been issued. It is much smaller in size than those heretofore issued and is thus much more convenient because more easily handled. It contains all the necessary information for the use of its members and others. The size of the book is 5x7 and it weighs 16 ounces.

Inspectors Hold Up Races.

UNITED STATES government inspectors are responsible for bringing to a close the opening races of the Jubilee Y. C. at Beverly, Mass., last Saturday, in the power boat events. The inspectors stopped boat after boat as they were speeding toward the mark in the opening event of the season to make an inspection to see if the boats were properly equipped according to law.

Each racing boat displayed a club flag and a number. So many boats were held up and the holdups coming at a time when seconds were valuable, the judges, after a conference with the various entrants, decided to call the race off. The action of the inspectors aroused a wave of indignation among the members of the club and protest is to be sent to Washington. Members think that boats could have been inspected before the race. President William H. Taft is a member of the club and also Secretary of Navy George Von L. Meyer and Congressman A. P. Gardner, and personal letters are to be sent to them in regard to the action of the inspectors.

National Y. C.

THROUGH the disqualification of Edgar F. Luckenback's Empire in the power boat race of the National Y. C. the other day, the first prize in the contest was won by Kitsix, the recently built Marblehead racer of F. D. Gheen. The Empire was disqualified for not passing the Southwest Spit buoys. The summaries:

Power Boats—Start, 2:30—Course, 29¾ Miles.

Empire, E. F. Luckenbach	2 46 21	Disqualified.
Kitsix, F. D. Gheer	2 31 43	2 31 43
Suis Moi, R. Heinke	3 10 23	2 43 21

New Rochelle Y. C.

THE New Rochelle Y. C. had a most successful regatta for motor boats owned by members of the club last Saturday. These boats were divided into three classes and went over a course 19½ miles in length. They were handicap events, and each boat was started on its handicap, so that the first to finish in each class was the winner. This is a good way to start motor boat races, and it increases the interest very much. In the first class L. D. Huntington, Jr.'s, Elizabeth, the smallest, finished first and won. In the second class F. Brainin's Vincent was the winner and in the third G. W. Quintard's Milwin, the scratch boat, finished first. The times:

Motor Boats—First Division—Course, 19½ Miles.

	Start.	Finish.
Elizabeth, L. D. Huntington, Jr...	3 00 00	5 27 32
Albina, G. A. Fisher.....	3 01 46	5 38 10
Wontrela, W. P. Taylor.....	3 23 13	5 53 14
Knobuze, E. Chouinard	3 26 59	5 55 18
Millie O. J. T. Lewis.....	3 13 42	Withdrew.
Elmo II., F. D. Giles, Jr.....	3 20 55	Withdrew.
Second Division—Course, 19½ Miles.		
Vincent, F. Brainin	3 40 55	5 45 46
Eileen, W. S. Creevey.....	3 45 59	5 46 09
Muskegat, C. W. Voltz.....	3 45 46	5 47 18
Psyche II., M. F. Bantham.....	3 45 19	5 48 53
Hopalong, W. King, Jr.....	3 51 48	5 57 42
Gypsy, F. M. Miller.....	3 32 34	5 59 45
Carolina, C. W. Mead.....	3 46 51	6 02 48
Alice II., L. R. Smith.....	3 49 36	6 24 42
Wangan, E. T. Cunningham.....	3 32 53	Withdrew.
Third Division—Course, 19½ Miles.		
Milwin, G. W. Quintard.....4	10 29	5 50 48
Triune, M. W. & C. C. Houck.....	3 58 21	5 52 02

Uonda, H. F. Bullock.....	3 52 46	5 59 24
Florella II., A. H. Bullard.....	4 06 18	6 10 34
Apache II., G. A. McGill.....	3 56 48	6 14 58

Larchmont Y. C. Races.

THE Larchmont Y. C. had some races for motor boats last Saturday. Edmee, owned by Rear-Commodore R. J. Schaefer, and Avis, owned by F. C. Havens, had a match race over a course of 43 miles. Edmee was built in 1905 by the Gas Engine Company, and is 76 feet long. Avis was built in 1903 and is 65 feet long. Avis is from H. J. Gielow designs. They raced on even terms, although Edmee has the most power. At the start Edmee started off so fast that it looked as if she would win with lots to spare, but Avis caught her, and as they passed the Larchmont Breakwater coming back from Green's Ledge, only 10s. separated the two. Then it was nip and tuck and near the finish Edmee crowded Avis so that she fouled the buoy and had to turn out of the course. In spite of this, Edmee finished only 10s. in the lead.

Ten yachts started in the other race and Lady Jane finished first with Blue Peter IV. second. These boats have to be measured before the winner is determined. The summary:

Motor Boats—Course, 43 Miles—Start, 10:05.

	Finish.	Elapsed.
Lady Jane, J. F. O'Rourke.....	1 59 36	3 54 36
Blue Peter IV., J. H. Brookfield...	2 12 34	4 07 34
San Toy II., W. L. Marshall.....	2 31 27	4 26 27
Dorothy B., H. B. Stokes.....	2 31 31	4 26 31
Caroline, M. F. Dennis.....	2 37 16	4 32 16
Raeo, R. S. Townsend	2 51 06	4 46 06
Santee, F. L. Field.....	2 51 39	4 46 39
Eronel, S. Cochrane	3 12 57	5 07 57
Thistle, J. H. Wallace.....	3 31 41	5 26 41
Gloriosa, G. B. Stearin.....	3 34 07	5 29 07
Match Race—Course, 43 Miles—Start, 10:20.		
Edmee, R. J. Schaefer.....	1 54 04	3 34 04
Avis, F. C. Havens.....	1 54 14	3 34 14

Motor B. C. of New York.

THE Motor Boat Club of New York had a race from off its club house at the foot of West 147th street to Tarrytown on June 18, in which eleven yachts started. Ten finished, Nala being the only absentee at the end. The distance was 32 nautical miles. Rex, owned by H. J. Allen, which started at 11:10:40 was the first boat sent away and she was the first to finish. She crossed the line at 4:41:30, beating Monreve, owned by E. E. Barney, by just 30s. The third boat to finish was the Arlington, owned by J. Klipper. The handicapping was done on the past performances of the boats and as an indication of how well it was figured five of the boats finished within 10m. of one another. The tide was against the boats on the trip down the river and fair for them going up. There was a light breeze from the southwest all day. The summary:

	Start.	Finish.
Rex, H. J. Allen.....	11 10 40	4 41 30
Monreve, E. E. Barney.....	12 40 08	4 42 00
Arlington, J. Klipper.....	12 20 00	4 42 38
Seafox, C. J. Breck.....	11 45 20	4 49 23
Respite, Dr. Y. C. Pendersen.....	1 12 16	4 51 23
Bunk III., Meakins & Firth.....	12 45 05	4 59 58
Edith M., W. G. Madison.....	12 05 36	5 02 12
Genevieve, A. J. Adams.....	11 25 36	5 02 34
Kid II., C. H. Dugliss.....	12 08 16	5 05 08
Peggy, J. Selden.....	12 39 44	6 04 20
Nais, W. Sanford	2 01 20	d.n.f.

Elapsed times: Rex, 5.30.50; Monreve, 3.55.52; Arlington, 4.22.38; Seafox, 5.04.03; Respite, 3.39.07; Bunk III., 4.14.54; Rex won from Monreve by 30 seconds.

The Danger of Fire on Motor Yachts.

TAKING into account the large number of petrol motors annually in use afloat in boats, launches, and auxiliary yachts, it can hardly be said that the number of accidents occurring therein from fire or explosion shows that the risk is really great; but at the same time it must always be acknowledged that wherever petrol is stored or used, either ashore or afloat, a certain combination of circumstances may produce these undesirable results, for it is only because of the fact that a mixture of petrolic vapor and air can be ignited in a cylinder by an electric spark that this spirit has, so to speak, created the modern motor, whose marvelous influences on civilized life are so apparent, and whose future influences in this direction are beyond the scope of conjecture. Unfortunately, the ignition, which within the cylinder of the motor is turned to so useful an account, can equally easily take place outside the cylinder, where its effects may be disastrous.

The ideal fuel for motor use would be some sort of spirit which, without any preliminary heating, could only be ignited under compression, for with such a fuel the ignition within the cylinder would take place just as easily as it does with petrol, but all outside ignitions would be impossible, as the mixture would not be under compression. No doubt some day our chemists will give us such a fuel, perhaps something of the nature of a modified or diluted alcohol; but until this happy era arrives we must make the best use of petrol, and endeavor to minimize the risks inherent in its use.

A fire or explosion can only take place in a vessel if either liquid or vaporized petrol (gasolene) be allowed to escape into the hull, and a study of the causes of the various accidents recorded, as far as they can be traced, shows that this escape has always happened either from what may be termed gross personal carlessness on the part of some one, or from a mechanical defect either in the motor or some part of its installation. Thus tanks may leak through corrosion or mechanical damage, or they may overflow with liquid or vapor from careless filling; joints may leak through defective construction or material, or from want of tightening up, and carburettors may leak from similar causes; but if the motor has been properly installed on board in strict accordance with modern principles, all the foregoing possible causes of accident may practically be ignored, except those due to personal carelessness, which human failings seems to be always with us. So it comes to this, that if we wish to avoid all possibility of risks afloat, it will be better to use paraffin as a fuel instead of petrol, for if a proper brand of the former fuel be selected, with a suitable flash point according to the weather, risk of fire need be no more anticipated than in the case of an ordinary motorless yacht using paraffin for its lighting and heating lamps.

Unfortunately, the use of paraffin in a motor entails certain disadvantages, such as dirt and smell, for if any of the liquid gets spilt it will soak into wood, and it is apt to creep about the surface of anything it comes in contact with; and another point is that it will take anything from eight to fifteen minutes to start the motor from all cold; and yet a further objection is often urged against it for choking up pipes, strainers, etc., owing to some material of a glutinous nature which appears to be often left in it after refining. Against these disadvantages must be set the cheapness of the fuel, and also the ease of obtaining it in out-of-the-way places.

Petrol possesses so many advantages as a motor fuel, such as its general cleanliness and freedom from smell, the possibility of obtaining an instantaneous start, whenever the propeller is required, and the absence of all such things in the engine room as heating lamps, etc., that most owners prefer to take the risk of using it in their launches and yachts. Generally speaking, the risks attendant on its use in open boats and launches are not great, as, even should there be any leak, the vapor can so easily escape into the open air that it is not likely to form an explosive mixture. When we come, however, to decked vessels, it is a different thing, for in such craft any vapor from leakage would tend to accumulate beneath the platforms, owing to its being considerably heavier than air, and here it may remain until the proximity of a light causes it to indicate its presence by an explosion or conflagration.

When an owner of a yacht has been unfortunate enough to witness one or two such accidents with petrol, as would appear to have been the case of a correspondent in a recent issue of the Field, it is only natural that he should feel very doubtful about fitting his yacht with auxiliary power: but the very many advantages which such an addition offers for cruising have been so thoroughly proved by now that it is of great importance it should be generally known that they can be enjoyed without undue risk. One great point about the use of a motor as auxiliary power is not generally known among yachting men, and that is that its benefits are not confined, as many suppose, to calms and light breezes, but its greatest services may be rendered in the heaviest weather, such as when lying to in a gale, in order to bring the course of the vessel's drift nearer to the wind, and also to enable a yacht in this position to get round on the other tack without having to set more canvas, when, owing to the wind shifting, it is clear that she will take the seas easier by so doing.

Where an owner is desirous of using petrol for a motor below decks, the best plan is to utilize one of the special safety systems which were introduced by me in the pioneer days of marine motors, a study of which will show that

YACHT and BOAT SAILING
By the late Dixon Kemp
Tenth edition. Published 1904. We have a copy in fairly good condition, published at $12, which we will sell for $9.00.
FOREST AND STREAM PUBLISHING CO.

when they are used an escape of liquid or vaporized petrol below decks should be practically impossible.

Another system which has been brought to a practical stage by the Ailsa Craig Motor Company is that in which the motor, together with its fuel tank, ignition, etc., complete, is fitted in a stout teak box, firmly secured on deck. The propeller is fitted on to the end of a spar, which carries the shaft, and is held along outside the yacht, its end dipping down under water, so as to immerse the propeller, and the shafting is driven by bevel gear from the motor. When sailing, this spar, with its propeller and shaft, are triced up level just outside the bulwarks so as to be free of the water. Of course, an additional advantage of this system is that the whole of the accommodation is available for the owner, as none of it is used by the machinery.—E. Du Boulay, in the Field.

The Scripps Cruise.

THE different cities where the Scripps cruise will visit this coming August are making great preparations in order to entertain the members of the cruise, and the different boats which will accompany them, and it promises to be one of the most enjoyable vacations which has ever been undertaken by the cruiser, as the different members will get a chance to meet a large number of their fellow yachtsmen from the different cities.

In addition to this it will give the people at the different ports where these boats visit an excellent opportunity to see just what kind of boats are being turned out by the different companies in order to secure the highest grade of efficiency, and it will, no doubt, do a great deal to boom the power boating game throughout the country and dispel from the minds of many the idea that a power boat is not absolutely reliable in all its equipment.

H. H. Boggs, of Detroit, Mich., Secretary of the Great Lakes Power Boat League, reports a large number of inquiries and a number of entries for the cruise. Copies of the rules may be had by anyone interested by addressing him at Detroit, Mich.

Canoeing

Eastern Division Regatta.

THE annual regatta of the Eastern Division, A. C. A., was held on Lake Quinsigamond, Worcester, Mass., May 27, 28, 29 and 30. The 175 canoeists present declared it was the most successful meet in the history of the association. All had unstinted praise for the Tatassit Club and for the lake. The racing was most successful, and the big program was carried through without a hitch.

There was a close competition for the club honors. With one event still to be decided, Dedham Boat Club had 21 points as against 18 points for Lawrence Boat Club. Lawrence got first place in the final number on the program, but Dedham annexed the other two places, and so fell behind only one point on the event. The official records then showed that Dedham had tucked away the championship with a total of 25 points. Lawrence had 23 points, and Medford Boat Club, which received third honors, had nine.

Vice-Commodore John B. Howard, of the association, and Arthur G. Mather, a clubmate in the Medford Boat Club, have attended every regatta of the Eastern Association for fifteen years. Both declared with enthusiasm that in all their experience they had never encountered such ideal racing conditions.

The officials in charge of the racing were: William W. Crosby, Innitou Canoe Club, Woburn, starter; William Heath, Swastika Canoe Club Providence, referee; Fred E. Leathe, Innitou Canoe Club, clerk of course, and William Jaegers, Capt. Jenks, Dr. Lambert, Tatassit Canoe Club, and Arthur G. Mather, judges. Starter Crosby and Mr. Mather also held the watches.

One of the disappointments of the racing was the poor showing of the Swastika canoeists. The Providence paddlers managed to annex only one third. As has been anticipated, William French had little difficulty in winning the single singles. The Pawtuxet paddler assumed the lead early in the race and easily fought off Simpson, Lawrence and Walking, Medford, who had a great fight for second honors. French won by two open lengths from a field of ten starters. He was nowhere near the record of Mather of 4m. 27½s.

The race between the war canoes was a pretty contest. Dedham went into the lead after the first few strokes, with the two Medford crews and Swastika trailing close behind. As the race progressed the boats separated somewhat, but maintained the same order throughout. Dedham won by one and one-half lengths. The time of 6m. 26s. does not compare with the record of 6m. flat, made by Medford Boat Club, stroked by Jack Howard, at Lawrence, in 1907.

There was a great finish in the tandem single blades. Though Daniels and Wardle, Dedham, were in front most of the way, they had to put in their best licks to stay there. Merritt and Ames, also of Dedham, just managed to point their bow in front of Ritchie and Wiswall, Lawrence, in the final spurt.

In the single doubles, Daniels, Dedham, went into the lead, but soon was passed by Horn, Lawrence, who kept increasing his lead until he had opened up a gap of six open lengths. Ericson, Medford, who was the only one of the seven starters to sit down in his canoe, rowed steadily and crept up on Horn, but was four lengths behind at the finish. Ericson never departed from an even, steady stroke, and was not there with the spurt, and Cummings, Lawrence, all but beat him out for second place.

The tandem doubles was all Lawrence. Horn and Woodcock, the winning pair from that club, had the center of the course, and after getting into the lead, managed to keep it. Nearing the finish line, however, Ericson and Walking, Medford, came up within striking distance, but their effort failed, and Ritchie and Simpson, Lawrence, with an heroic effort, came from behind and beat them to the finish line by inches only.

Both the events for club fours were interesting. In the single blades one of the Medford crews was forced out early by a broken paddle. Swastika assumed a slight lead, just nosing its bow out in front of the two Dedham crews on either quarter. This race furnished the most thrilling finish of the day.

As they neared the finish line, all the canoes practically were abreast, with Swastika slightly in the lead. Then Daniels started a snappier stroke for Dedham No. 1 crew that carried their canoe into the lead by about two feet. Swastika spurted and came up on even terms. Meanwhile Dedham No. 2 was being stroked at its fastest clip by Merritte, with the bow right on Swastika's quarter. Dedham No. 1 made one final spurt and half a dozen strokes of the paddle sent the canoe across the line with a lead of perhaps three yards. Swastika was all in and was nosed out by inches only by Dedham No. 2, right at the line.

Better stroking won the club four doubles for Lawrence. Though they led all the way, they never were more than half a boat's length to the good. Cartwright hit up the stroke on the Dedham No. 1 canoe in the last stages, but he gained only slightly. Dedham No. 2 was hugging the others right along, and it was a close finish, in the order named.

The Dedham club received the Schaefer cup for winning the most points. Perpetual trophies and special cups went to the winners of all the events. Summary:

War Canoe Race—Won by Dedham Boat Club, G. Merritt, stroke, C. Houghton 2, R. Bishop 3, E. Cartwright 4, R. Wardle 5, S. Merritt 6, G. Louden 7, G. Ames 8, C. Daniels stern; Medford Boat Club first crew, Dan Daly, stroke, Waldo S. Manson 2, Ralph Day 3, Albert C. Walking 4, Walter Manton 5, Richard Saville 6, Edward I. Ericson 7, Richard C. Smith 8, William J. Hyde stern, 2d; Medford Boat Club second crew, Charles Smith stroke, Chester J. Pike 2, John Keegan 3, Henry Perrin 4, Ralph Mappleback 5, Walter Leavitt 6, Ralph Keay 7, Frank Gerlach (Winchester Boat Club) 8, Eugene Cummings stern, 3d; Swastika Canoe Club, Providence, 4th. Time, 6m. 26s.

Single, Single Blades—Won by William L. E. French, Pawtuxet Canoe Club, Providence; J. R. Simpson, Lawrence Boat Club, 2d; Albert C. Walking, Medford Boat Club, 3d. Time, 4m. 43s.

Tandem, Single Blade—Won by C. Daniels and R. Wardle, Dedham Boat Club; S. Merritt and G. Ames, Dedham Boat Club, 2d; Ritchie and Wiswall, Lawrence Boat Club, 3d. Time, 4m. 17s.

Single, Double Blades—Won by Horn, Lawrence Boat Club; E. I. Ericson, Medford Boat Club, 2d; Eugene Cummings, Lawrence Boat Club, 3d. Time, 4m. 32s.

Club Fours, Single Blades—Won by Dedham Boat Club first crew (Daniels, Ames, Wardle, S. Merritt); Dedham Boat Club second crew (G. Merritt, Holt, Clapp, Shaughnessey), 2d; Swastika Canoe Club, Providence (Bruce, Taylor, Berry, Welch), 3d. Time, 3m. 55s.

Tandem, Double Blades—Won by Horn and Woodcock, Lawrence Boat Club; Ritchie and Simpson, Lawrence Boat Club, 2d; Ericson and Walking, Medford Boat Club, 3d. Time, 4m. 16s.

Club Fours, Double Blades—Won by Lawrence Boat club (Ritchie, Woodcock, Simpson, Horn); Dedham Boat Club first crew (Cartwright, G. Merritt, Clapp, Holt), 2d; Dedham Boat Club second crew (Wardle, Ames, Lenihan, Smith), 3d. Time, 3m. 47s.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—Ira B. Thomson, 312 Belleville avenue, Bloomfield, N. J., by E. H. Weidman; James Elmer Gailey, 2420 No. Sixth street, Philadelphia, Pa., by George G. Richards.

Central Division.—Arthur W. Durr, 410 Todd street, Wilkinsburg, Pa.; Carl W. Dickinson, 1036 Rebecca street, Wilkinsburg, Pa., both by W. H. D. James. Louis Walter Heinmiller, 7524 Bennett street, Pittsburg, Pa.; John W. Sheedy, 5323 Broad street, Pittsburg, Pa.; William J. Hart, 257 Dunlap street, Pittsburg, Pa., and Charles A. Heckman, 2919 Webster avenue, Pittsburg, Pa., all by J. E. Clune; Harry A. Logan, 202 Gray Apartments, Wilkinsburg, Pa., by F. D. Newbury.

Eastern Division.—Frank A. Smith, 203 Summer street, Worcester, Mass., by J. B. Howard.

NEW MEMBERS ELECTED.

Eastern Division.—6231, Frederick Coulson, 12 Lenox street, Worcester, Mass.

Atlantic Division Meet.

THE annual meet and camp of the Atlantic Division, A. C. A., will be held at Hermit Point, Interstate Palisades Park, Hudson River, June 30 to July 4, inclusive. The executive committee investigated several sites but found none as good as Hermit Point. The camp can be reached from Riverdale by launch, and a launch carrying the A. C. A. flag will run on schedule during the meet.

On July 1 the election of officers will be held. The regatta committee has arranged an interesting program of events. Among the trophies to be raced for are the Elliott, decked canoes; Lady Bug, open canoes, and Maclister, paddling. Twelve events are on the program.

B. F. Cromwell, Jr., 224 Church street, New York city, is chairman of the camp site committee and will furnish all particulars to canoeists who wish to take part in the camp.

Oct. 25-26.—Kansas City, Mo.—Big Four League's tournament. Dave Elliott, Sec'y.
Nov. 28-29.—Rising Sun (Md.) G. C. H. L. Worthington, Vice-Pres.

DRIVERS AND TWISTERS.

The tournament scheduled for Denver, Colo., Aug. 14 to 19, which carried with it an announcement of $5,000 added money, has been postponed until 1912.

The tournament scheduled for Victor, Colo., Aug. 21-23, is to be the State tournament given under the auspices of the Rocky Mountain Interstate Sportsmen's Association.

The Du Pont Gun Club was organized in November of last year. The club house and grounds are delightfully arranged with a view to the comfort of the members. The grounds are reached by two trolley lines along cool, shady streets. The membership of the club is 400.

The Squier money-back system proved eminently successful at the New York State shoot on June 13-15. The net purse created under the system, including $300 added by the Interstate Association, amounted to $831.05; Losses paid in full, $364.45; surplus to 30 high guns, $466.60.

Five men tied for the amateur championship of Ohio on June 15, at Columbus—Edwards, Volk, Burns, Kistler and Doolittle, each breaking 48 out of 50. Kistler won the shoot-off with 25 straight breaks. R. O. Heikes, of Dayton, did some remarkable shooting with a run of 180 straight breaks in two days.

The Interstate Association has issued a very comprehensive program of the sixth Eastern Handicap tournament, to be held July 11-13, under the auspices and on the grounds of the Du Pont Gun Club. It will be well for every contestant to read carefully the program, as some very radical changes from the usual program are incorporated therein.

The regular meeting of the New York State Sportsmen's Association was held on the 14th inst. Many prominent members of the Association were present, and President H. W. Smith was instructed to appoint a secretary from each of the thirty-seven counties of New York State, who in turn, is to keep in close touch with the shooters of his county and to advance all game protection bills under instruction of the State Association. It is confidently expected that through the efforts of these secretaries, a very owerful game protective association will be formed.

Paul T. Evans, Secretary Thornburg (Pa.) Gun Club, writes: "In mailing the scores of our club shoot, held 10th inst., I failed to mention an item of interest to shooters in this neighborhood. The Du Pont trophy was won by Judge F. W. Hughey. The Judge won the first leg on Good Friday, and on account of business pressure, was not able to shoot again for same until last Saturday. Besides holding the office of President of the Thornburg Gun Club, he is an ardent sportsman, and we all congratulate him, especially so because he still sticks to his old hammer gun and catches them on down grade, about as good as the best."

Big Four League Tournament.

COLUMBUS, Neb., June 10.—The two-day registered tournament of the Big Four League, under the auspices of the Columbus Gun Club, ended this afternoon. C. C. Tappan was high amateur for the two days on a score of 270 out of 300, closely followed by S. A. Gates with 269. Geo. W. Maxwell led the professionals with 280. Forty-two men attended the tournament. All hut three shot in every event. Scores:

	1st Day.	2d Day.	Total.

Chicago Gun Club.

CHICAGO, Ill., June 10.—The extreme heat of the past few days and quite a number of our members attending shoots at Milwaukee and the South Shore, combined to cut our attendance down considerably. Several are beginners at the traps, while a few showed lack of practice, not having been here for some time. Scores:

Events:	1	2	3	4	5	6
Targets:	25	50	50	25	25	12p
C B Barnes	21	31	28	19	23	15

Dr W A Bruetti	8	..	..	10	14	..
J V Hall	10	..	..	10	19	..
Miss Walker	5	..	..	..	..	..

June 11.—The cool wind from the west again came as a relief to the hot spell, and quite a number took advantage of it for the afternoon. Thomas was at the head of the line most of the time, tying with Schultz in the practice events at 25 targets, each breaking 24. In the club event, No. 2, at 50 targets, 16yds. rise, Thomas scored 48, Eck and Fetherston making him hustle to keep the lead, as they each broke 47. In the 50-target handicap event, Thomas, Eck and Riley tied for first place with scores of 42, Thomas breaking his from 20yds., while Eck and Riley both shot from the 19yd. line. Tucker and Oliver each broke 23 out of 25 in the next event at 25 targets, Thwaite, Kumpfer and Schultz each scoring 22.

Several handicap races were shot between Thomas, Fetherston and Taggart, one of 50 targets from 20yds., in which Fetherston broke 46, Thomas 45 and Taggart 41. At 23yds., Thomas and Fetherston tied on 23 breaks, while Taggart scored 21. At 19yds. Fetherston broke 24, Thomas 23, Harry Dare 21, while Thwaite and Oliver each scored 20.

Tucker is a visiting shooter from Rockford, Ill., and he thoroughly enjoys trapshooting, and he grinds the targets to dust in fine shape.

Mrs. Cutler's scores are gradually going higher, one of 19 to-day being her highest up to date. Mrs. Fetherston also landed one 19 and an 18.

Events	1	2	3	4	5	6	7	8

Maine State Shoot.

THE Maine State tournament was held at Haines Landing, June 8, 9 and 10, under the auspices of the Mooselucmaguntic Gun Club.

On the first day the guides' and game wardens' event was won by E. Godwin with 88. The Rangeley Lakes preliminary was won by E. A. Randall, after a shoot-off with Fred Hodgeman, of New York, both broke 96 and in shoot-off Randall went straight, Hodgeman dropping four birds. E. A. Randall ran 80 straight in the last four events of the day and added 20 in the shoot-off, making a straight run of 100 without a miss.

High average for the day was tied between C. W. Billings, Fred Hodgeman and C. S. Randall with 188 each.

The five-man team championship of the State was the feature of the second day and was won by Mooselucmaguntic Gun Club.

Mooselucmaguntic	G.	C.	Portland	G.	C.
G A Hobart		94	C S Randall		92
H L Welch		91	W N Taylor		91
R L Spotts		91	S B Adams		88
E Godwin		90	A Dow		89
W D Hinds		84—450	E A Randall		88—448

The Rangeley Lakes championship was a tie between F. Hall, E. A. Randall and G. R. Steele, all with 95. The shoot-off was won by G. R. Steele with 19.

On the third day the inter-city 5-man team match was shot with these scores: First, New York City, first team, 456; second, Portland, first team, 446; third, Haines' Landing, 443; fourth, Portland, second team, 437; fifth, Boston, 433; sixth, New York, second team, 414.

In the State of Maine individual championship there were five ties—A. H. Waldron, S. B. Adams, A. Dow, G. R. Steele and F. A. Hodgeman. Steele and Hodgeman were eligible to shoot for the purse only and did not go into the shoot-off as the five divided. In the shoot for the diamond and gold medal that went with the championship, A. H. Waldron broke 25 straight, Adams and Dow each dropping one bird. This makes two years in succession that Waldron has won the State championship, and last year he and Adams were tied with 98 each, Waldron winning out in the shoot-off.

A. Dow won the leg on the Elm House cup, breaking 24 out of 25 from the 20yds. mark.

E. A. Randall won the gold medal for high amateur for the three days with 559 out of 600, and the silver cup for the longest continuous run, having 80 straight to his credit.

Complete scores follow:

St. Paul, Minn., June 11.

THE weekly shoot of the St. Paul Gun Club was largely attended, and with charming weather and no wind, the conditions were beyond complaint. A point on the Murphy trophy was won by J. L. D. Morrison, with 90 out of 100; he also was high man in the doubles, breaking 20 out of 24. Dr. Murphy scored another point on the Thorp cup, while Sarles gained a point on the Wood trophy.

High professional score was made by Rintel, 95 out of 100.

The next shoot will be held on the 25th, at 100 targets—one 10-target and six 15-target events.

New York State Championship

WON BY FRANK S. WRIGHT,

Score 488 x 510, with

WINCHESTER

Repeating Shotgun and "Leader" Shells

Mr. Wright also made High General Average score of 432 x 450, and won the Merchandise Handicap from 20 yards with a score of 49 x 50. Second prize in this event was won by Mort Mayhew with "Leader" Shells.

A CLEAN SWEEP FOR THE W BRAND

OHIO STATE CHAMPIONSHIP

WON BY GEO. KISTLER, With

WINCHESTER REPEATING SHOTGUN and "LEADER" SHELLS

High Amateur Average won by C. G. Westcott with Winchester "Leader" Shells. Score, 432 x 450.

WINCHESTER GUNS AND SHELLS NEVER FAIL TO HOLD THEIR PRESTIGE IN A RACE.

GRAND MISSOURI HANDICAP

WON BY E. S. COLLIER, With a

WINCHESTER REPEATING SHOTGUN Score 91 x 100

The trap shooting event in Missouri carried off by the responsible and responsive Winchester. :: :: ::

AGAIN CONFIRMING THE ENDORSEMENT OF THE U. S. ORDNANCE BOARD.

Hudson Gun Club.

JERSEY CITY, N. J., June 18.—We had an attendance of twenty-one shooters at the bi-monthly club shoot of the Hudsons this morning. The Western Cartridge Co.'s trophy and the trophy donated by the Du Pont Powder Co., which the club members have been competing for in the past several shoots, were decided and returned W. Emmons the winner of the Western Cartridge trophy and Tom Kelley the lucky shooter that will wear the Du Pont fob.

In the club prize event there were several ties for 6 points, which brings all the contestants very close.

High gun this morning was Carl von Lengerke, scoring 89 per cent. R. Higgs was the runner-up with 85, while D. D. Engel, who was shooting a strange gun, was third with 84 per cent.

At our next shoot, Sunday, July 2, Harry Ruffer, who has only lately taken up trapshooting, will shoot a match at 100 targets with Clarence Durkee, the loser to pay for dinners for five of their friends. There is also a very suitable purse for the winner.

Everybody is welcome to shoot with us. The Turnpike car from Pennsylvania Ferry at Jersey City, to the Hackensack River Bridge, will reach us. So there you are. Lots of targets and lots of shells always on hand.

T. H. KELLEY, Sec'y.

New York State Tournament.

TEN squads of professional and amateur gunners constituted the advance guard of shooters that participated in the fifty-third annual shoot of the New York State Sportsman's Association, held in Syracuse on the 13th, 14th and 15th inst. They shot for two hours at the Lakeside range on the 12th in a practice event until compelled to give way by the drenching rain. Considering the poor light and the interruptions of Jupiter Pluvius, many good scores were registered. Vanderhoof brought down 112, and was high gunner of the afternoon. Other high amateurs of the day were Kahler with 111, and Lamphere 110.

The officers and a number of shooters met in the assembly hall at the Yates Hotel on the 12th, at 8 P. M., and threshed out a number of rules on the program. The $300 which were donated to the tournament by the Interstate Association, as a part of the Squier money-back system, was thrown open to all.

First Day, June 13.

M. E. Barker, of Gloversville, proved to be the star of the afternoon, shooting through all events, with a record of 203 breaks out of 210 targets. George Brown, of Seneca Falls, ranked second among the amateurs with a score of 201 shot out of 210, and was trailed closely by H. Schlicher, of Allentown, Pa., and F. S. Wright, of South Wales, who scored 200 each. J. Martin, of Brooklyn, was next, with 197 to his credit, while G. N. Fish, of Lyndonville; G. H. Hendrickson, of Jamaica; F. G. Wilcox, of Rome, and J. D. Green, of Avon, followed with 196. J. H. Lamphere, of Seneca Falls; H. W. Walker, of Auburn, and F. B. Stephenson, of Brooklyn, made scores of 195. H. S. Welles, of New York city, a manufacturers' agent, was high among the professionals with the splendid score of 205 targets. Wells' shooting was a feature of the card. He broke 120 targets without a miss. Sim Glover broke 145 out of 150, tying Welles.

At the annual meeting of the Association, held last evening, Hurlbut W. Smith, of Syracuse, was elected President for the ensuing year; J. L. Talcott, of Buffalo, Vice-President, and L. H. Schortemeier, of New York city, Secretary and Treasurer.

Most of the evening was devoted to the discussion of game laws and new gun clubs. Although the sweepstakes were thrown open to shooters of the world for the first time in the history of the State shoot, the attendance at the opening day's events was a dissappointment. Only eighty faced the traps. Many amateurs would not come to a shoot, it was freely said, if they thought they would have to shoot against cracks of the world. Many expressed regret that with the ideal conditions at the traps, the attendance should have been so low. Scores, ten events at 15 targets, and three extra 20-target events:

Second Day, June 14.

To-day the attendance was increased by four or five squads, owing to the merchandise event. F. S. Wright, handicapped to the limit—shooting from the 20yd. mark—broke 49 out of 50 targets and won first prize, which was a $350 piano, donated by the Onondaga Gun Club. Mort. Mayhew, of Marcy, drew the $125 L. C. Smith gun, with a score of 48. Five shooters tied for third prize with scores of 47 each. They were G. N. Fish, George Brown, C. J. Dalley, E. W. Brown and M. E. Barker. In the 46 class were five shooters—James Montgomery, G. H. Pumpelly, of Oswego; W. E. Corfield, of Utica; J. H. Lamphere, and Chas. W. Marvin. Pumpelly won on the shoot-off, miss-and-out, with 15 targets from the 19yd. mark. In the ten regular 15-target money events, H. Schlicher, who was third high in the opening day shoot, came out in front to-day and led the amateurs with 145 out of 150. He made six straight strings of 15. A. E. Conley, of Cohocton, and Harry Kahler, of Philadelphia, Pa., tied for second with 144 out of 150. Honors among the manufacturers' agents went to H. H. Stevens with 145 out of 150, while J. A. R. Elliott, of New York, and Sim Glover, of Rochester, tied for second with 144 each. To-day's scores are as follows, ten 15-target events and the merchandise event, 50 targets, handicap:

Third Day, June 15.

In the regular events to-day Harry Kahler led the entire field with 146 targets out of 150, until, in a later squad, F. S. Wright, the State champion, succeeded in tying him. George Brown, of Seneca Falls, was second with 145, and John Martin third with 144.

High averages for the entire shoot were as follows, out of 450 targets: F. S. Wright 432, H. W. Kahler 431, H. H. Schlicher 428, George Brown 426, John Martin 426, J. H. Lamphere 421, J. D. Green 420, F. G. Wilcox 419, G. N. Fish 418, M. E. Barker 417, E. C. Hilliker 416, John Hendrickson 416, E. V. Covert 415, T. E. Clay 415, Jerome De Bee 413, F. D. Kelsey 412, O. E. Carpenter 411, J. L. Talcott 411, A. E. Conley 410, C. G. Blandford 410, F. B. Stephenson 410, Dr. Guenther 410, C. L. Franz 410—all of whom participated in the general division of average money.

Sim Glover was high professional with 432, tying the high amateur. H. H. Stevens was second with 430, Neaf Apgar and H. S. Welles, of New York, tied for third average with 424.

In the double events the first prize, which was an L. C. Smith single-trigger gun, Harry Kahler, using a strange gun, broke 43 out of 50 on his first trial, which record remains high. G. N. Fish, of Lyndonville, and B. V. Covert, of Lockport, tied for second and divided second and third prizes.

The efficient manner in which the tournament was conducted, the speed with which the events were run off and the courtesy of the tournament officers call for nothing but praise from those who shot through. The grounds were the best on which the State shoot has ever been held. The targets were thrown over Onondaga Lake, against a sky background, which accounts for the high class of scores made, in spite of the strong wind that prevailed during the shoot. Third day's scores at ten events of 15 targets each:

Soo Gun Club Tournament.

INTEREST in trapshooting in Iowa is evidenced by the large attendance at the shoot of the Soo Gun Club, held at Soo City, Iowa on June 6, 7 and 8. Seventy-six guns faced the traps and the scores indicate a very high average of breaks.

The Interstate cup was won by C. A. Thurston, of Onawa, Ia., with 38 straight.

Nebraska City Gun Club.

THE first annual shoot of the Nebraska City Gun Club, held in Nebraska City, Neb., June 14-15, proved successful beyond expectation. There were twenty-seven entries and several good scores. W. D. Townsend, of Omaha, broke 119 without a miss. High average was taken by L. A. Gates, 286 out of 300; W. D. Townsend second, 280; F. C. Nicholson third, 279. Scores:

Vermont State Tournament.

MONTPELIER, Vt., June 15.—For the eighth time, Dr. Burr, of this city, won the State championship, winning the Montpelier Board of Trade individual cup with 92 out of 100. G. H. Chapin, of the Winchester Repeating Arms Co., made a new record for the grounds with 98 out of 100. W. G. Hill made the highest professional average, breaking 376 out of 400.

The high amateur average, 362 out of 400, was scored by Douglass Barclay, of Barre. Scores, 200 targets each day:

Gulfport, Miss., June 8, 9, 10.

THE Gulfport Gun Club was the scene of the most successful meet of the Mississippi State Association. W. T. Laslie, Tuskegee, Ala., was high gun with 429 out of 450. The team championship of Mississippi was carried off by S. P. North, George Northrop and Ed. Brady, breaking 266 out of 300.

The Individual championship was won by V. W. Johnson, with 24 out of 25, after a shoot-off with S. P. North and C. C. Hawkins. The original tie was 92 out of 100.

High professional score was made by Homer Clark, of Alton, Ill., with 443 out of 450. In the third day's shoot, Mr. Clark had a clean score, 150 straight. H. D. Freeman, of Atlanta, Ga., made 150 straight in the first day's shoot:

Audubon Gun Club.

BUFFALO, N. Y., June 17.—The first shoot of the Audubon Gun Club for the possession of the class badges for the first half of the season of 1911 was held at the grounds to-day, and Class A still remains in doubt, as there is a tie between C. F. Lambert, W. H. Hoffer and W. H. Smith, all having two wins each. W. P. Imhoff repeated in Class B once more, and Dr. J. M. Burke won out in Class C with six wins to his credit, beating Charlie Rogers, who had four wins.

The Reed handicap trophy was also decided, and C. F. Lambert was the best shot in the event, as he had fine wins to his credit, winning the last three points from the 21yd. mark.

After the shoot, the members adjourned to Jack Reed's place, where in a few well-chosen remarks Mr. Reed presented the handsome cup to Mr. Lambert, who responded, thanking Mr. Reed for the interest he has taken in presenting such a cup to the members of the Audubons to contest for. The donor promised that he would put up a similar cup to be shot for under conditions to be framed by Messrs. Cox and Reinecke, the first contest to take place at the regular July shoot.

The Audubons were honored with the presence of H. C. Kirkwood, a manufacturers' agent, and life-long friend of Mr. Lambert, and just because Mr. Lambert used to be able to beat Mr. Kirkwood in times gone by, some special events at 25 targets were added. After three strings were shot it was found that Mr. Kirkwood had a chance to beat the standing record of 100, so another 25 was ordered, and it looked as if the mark might be broken, as Kirkwood went straight until he missed his twenty-third target, which gave him 97, tying the old mark.

The Audubons will have an all-day shoot on Saturday, June 24, for the Woodmen, open to all.

Bay View Gun Club.

SAN FRANCISCO, Cal., June 4.—The Bay View Gun Club trap shots did not turn out in full force at the Alameda shooting grounds to-day. During the forenoon weather conditions were favorable, a high wind making the afternoon shooting extremely difficult.

The total scores follow: Event 1, club medal shoot, 25 targets; event 2, "grub" shoot, 25 targets; event 3, 10 pairs, 20 targets; event, 4, Du Pont-Selby match, 50 targets in two 25 sections:

Events:	1	2	3	4	Events:	1	2	3	4

*Back scores.

The forenoon 25-bird practice matches show better results: Jacobsen 17, 17, 18, 16, 20, 16, 15; Adams 21; Fox 14, 17; Vosburgh 19, 13, 19; Welch 10; Swailes 19, 24; Riehl 12, 9, Killam 12, 14; W. J. Lancaster 21; C. A. Lancaster 21, 20; Speetzen 13; Holbrook 17, 11; McGill 3, 5, 10; Dorcey 14, 11, 9; Jacobsen, 10 double rises, 12, 14.

Chenango Co. Fish, Game and Gun Club.

NORWICH, N. Y., June 10.—The annual registered shoot of the Chenango County Fish, Game and Gun Club was held on June 7. Fine weather prevailed and some fine scores were made. Three professionals were with us—J. A. R. Elliott, S. Glover and H. H. Stevens. Elliott was high with 143 out of 150. Glover and Stevens tied for second place with 141. W. E. Corfield, of Utica, was high amateur, breaking 139 out of 150. Frantz, of Syracuse, and Wheeler, of Manlius, tied for second with 137.

Among the home shooters, J. C. Brooks was high with 131. About thirty shooters were in attendance.

The merchandise event was headed with a Winchester repeating shotgun, and was won by Mr. Wheeler with 24 out of 25 from 20yds. W. E. Race was second with 23 at 16yds. E. D. Borden was third with 22 at 19yds.

E. D. BORDEN.

Wilmington Gun Club.

THREATENING weather kept down the attendance, but had no depressing effect on the scores of the weekly shoot of the Wilmington Gun Club on the 17th. A monster merchandise shoot will be held this afternoon. Sixty-five articles are already on hand for prizes. All shooters are invited. No entrance fee will be charged. Scores: C. M. Buckmaster (75) 56, R. Whitworth (50) 30, L. D. Willis (155) 143, W. W. Cahall (50) 35, H. G. Buckmaster (125) 97, J. Parker (25) 14, I. Turner (25) 22, J. N. Turner (25) 18, F. G. Tinmar (50) 20.

Baltimore, Md., June 14.

TRACEY was first and Malone second in Class A at the Baltimore Shooting Association tournament. In Class B Denkus was first and Clifton second. Class C showed Galloway and A. C. Chase in order named.

The DuPont Gun Club.

WILMINGTON, Del., June 17.—Remarkable shooting was done by Eugene du Pont and William Foord at the regular shoot of the Du Pont Gun Club to-day, each shooter breaking 97 out of 100. They followed this by tieing with 25 straight for the T. Coleman du Pont merchandise. Henry Winchester won class No. 2 with 23 out of 25. J. W. Anderson won class No. 3 and won a tie of class No. 2 from the shoot of June 10. All scores were good, while the attendance was enthusiastic.

There were thirty entrants in the mid-week shoot of the Du Pont Gun Club, and out of this number, five guns made beter than 90 out of 100 birds. Edward Banks 96, Frank Mathewson 93, J. T. Roberson 92, Henry Winchester and J. A. McKelvey 91. Weather conditions were ideal.

The hourse-warming handicap of the Du Pont Gun Club at New Bridge, on July 1, coming as it does just after the Interstate State shoot, and just preceding the Sixth Eastern Handicap at Wilmington, bids fair to be a record event. Every one is invited to inspect the handsome new house and to compete in the tournament.

Several local amateurs, together with about 100 Philadelphia marksmen will compete for the valuable prizes offered by the gun club.

The shoot will be governed by the Interstate Association rules. Entries close at 1:30 P. M. on the day of the shoot and will be received up to that time at the cashier's office.

If those who intend to enter in any of the handicaps will notify the secretary prior to July 1, it will greatly facilitate the work of the handicap committee, composed of W. B. Severn, H. W. Bush, T. E. Doremus, Secretary.

The shooting will start promptly at 11 o'clock.

Analostan Gun Club.

WASHINGTON, D. C., June 18.—The rain interfered with the shoot of the Analostan Gun Club on Saturday, the 17th. The downfall commenced early in the afternoon and kept up for several hours. Those who participated in the various events were soaked when they left for home.

Eastlake Gun Club.

J. SPRING was high man with a score of 85 out of 100 at the regular Saturday shoot of the Eastlake Gun Club yesterday afternoon. The scores were: J. Spring (100) 85, K. Davis (100) 75, W. Fincher (60) 47, H. Black (50) 30, C. Haverbeck (50) 28, H. Jones (50) 26, L. Pike (25) 20, E. Hawk (25) 17.

The Hazard Double-Targets Challenge Trophy.

IN 1901 the Hazard Powder Company put up for open competition an extremely handsome silver trophy of unique and graceful design. This trophy was competed for at live birds, but owing to that branch of the sport of trapshooting falling somewhat into disfavor within but a short time after the trophy had been put

in competition, the cup's history is quite brief. The trophy has been held by W. R. Crosby, of O'Fallon, Ill., for a number of years without a single challenge for it having been registered.

The massive silver pitcher is a typical example of the Martele or hand-wrought silver which is recognized as a distinct artistic achievement. The piece is eighteen inches in height and of massive weight. It is entitled, "The Wave," the motive and feeling of which are most successfully expressed in outline and decoration.

The first contest for the trophy was held at Kansas City on Dec. 21, 1902, at Elliott's Blue River Shooting Park. There were thirty-three entries and C. W. Budd, of Des Moines, Ia., whose handicap was 29yds., tied for the trophy with Frank Parmalee, whose handicap was 31yds., both scored 25 straight, but in the shoot-off at 5 birds, Mr. Budd won with 5 straight, Mr. Parmalee losing his 4th bird dead out of bounds.

When donating the trophy, the Hazard Powder Company in the conditions governing contests for the trophy, reserved the privilege of changing the conditions at any time when in its opinion circumstances required such a change.

Quite recently the Du Pont Company, into whose possession the rights of ownership of the trophy passed, decided that as there was no likelihood of any further challenges or contests for the cup under the old conditions, changed these conditions, calling the cup in and putting it up for competition in a distinctly new line. It will hereafter be known as the "Hazard Double-Targets Challenge Trophy," and will be shot for in contests, either open or challenge, at 100 pairs per man. Instead of starting off the new contests for the trophy in open competition, the company had arranged to have the first contest shot on the grounds of the Du Pont Gun Club in the morning of the day prior to the opening of the Eastern Handicap tournament, the contestants being Fred Gilbert, of Spirit Lake, Ia., and Lester German, of Aberdeen, Maryland.

Milton, Pa.

WHILE the scores did not run high, there was no lack of enthusiasm at the shoot of the Milton Rod and Gun Club, on June 15. Rishel won with 135 out of 150. J. M. Hawkins took the professional event with 144.

San Francisco.

The Family Club, Claremont, covered the Family Club, of San Francisco, with bluerock dust at the Claremont Country Club grounds last Saturday. The original proposition was 100 birds per man, but it was finally agreed that 50 birds would answer. The score was 636 to 517.

It is rumored that the Families are teaching their offspring to shoot in time for the next meeting.

ONLY THREE WORKING PARTS.

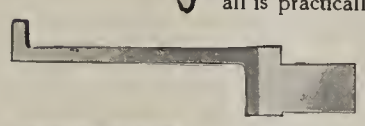
The Lock Mechanism in the A. H. Fox Guns is the simplest known. Each part is constructed on strictly scientific principles. Analyze the three working parts—Hammer, Sear, Main Spring—then compare with parts in other makes. The superiority of the Fox will then be fully appreciated.

CONSTRUCTED ON SCIENTIFIC PRINCIPLES.

Fox Rotary Taper Bolt—A glance at this bolt is sufficient to convince anyone that the Fox guarantee "to stay tight forever" is well founded.

Every gun is subjected to the most rigid test and inspection. Every part is gauged. Each gun is shot with enormous overcharge as required by all European Governments.

Fox Hammer—Heaviest where the greatest strain comes. Strikes primer direct. Gives quickest possible blow. Eliminates all delicate and troublesome firing pins. Is a positive gas check and above all is practically unbreakable.



Fox Sears—Will stand long, continuous service and always give uniform results. Made from drop forging of special tool steel.

Fox Springs—Are all non-breakable, spiral type. Constructed of finest piano wire; carefully tempered and tested. All spring troubles are eliminated in the A. H. Fox Guns.

A·H·Fox Gun
FOX PROOF
"The Finest Gun in the World"

The Fox Proof Tag attached to each gun is your guarantee.

This cut shows the F. E. Grade, $362.00 net "The Finest Gun In The World." Fox Guns cost no more than other guns. When you buy a Fox you get the best in material and workmanship. A gun built on beautiful lines and perfect in balance. We guarantee all parts and will at all times replace any defective part free of cost.

Fox Sterlingworth

The Fox Sterlingworth Grade, $25.00 net, was made possible on account of the perfect equipment of the Fox plant. Fox tools and fixtures are the finest ever constructed for the manufacture of shotguns. The cocking slide and other working parts are made of Chrome-Nickel Steel. Ten times as strong as ordinary gun parts and every Sterlingworth gun is as fully and liberally guaranteed as our other grades.

Write today for catalogue describing all grades. Prices range from $25.00 net for the Fox Sterlingworth to $362.00 net for the F. E. Grade.

THE A·H·FOX GUN CO. 4670 North 18th Street, Philadelphia, Pa., U. S. A.

Indianapolis Gun Club.

FAVORABLE conditions contributed to high scores at the Gun Club, June 17. Martin and Smoke each broke the first 50 shot at. In practice the former led with a clean score, while the latter missed one. Fayette and George were but a fraction of one per cent. behind them with Moller, Lewis and White close up.

Hymer, at 20yds., looked like the final winner of the president's cup, with his good score of 47, but Smoke nosed him out with 48. They each had a straight 25.

Practice: Edmonson (100) 84, Moller (100) 93, Lewis (100) 93, Dixon, (80) 70, Parry (80) 77, Smoke (40) 40, Britton (60) 59, Neighbors (60) 41, George (50) 49, Hymer (40) 32, White (80) 76.

President's cup, 50 targets handicap: Edmonson (16yds.) 45, Moller (18) 42, Lewis (21) 46, Dixon (20) 46, Parry (20) 46, Smoke (16) 48, Britton (16) 40, Neighbors (16) 22, George (16yds. and not eligible) 48, Hymer (20) 47, White (20) 20.

Stillwater Gun Club.

STILLWATER, Okla., June 16.—The first weekly shoot of the Stillwater Gun Club was held at the Fair Grounds this afternoon. As there is much room for improvement, I feel justified in saying: Watch us improve. The scores were as follows: Rose 17, Miller 5, Merry 10, Cleverdon 10, E. Selph 9, Shideler 11, Kolhurn 8, Lewis 9. This newly organized club has an excellent shooting range, and we hope to make rapid progress.

L. H. ROSE, Sec'y.

Smith Gun Club.

NEWARK, N. J., June 17.—At the Smith Gun Club shoot to-day, B. M. Shanley, Jr., was the winner with 177 out of 200. In the match on 25 birds, R. Bercaugh beat Shanley with a break of 25 straight, against the latter's 20. Following is a list of the scores: B. M. Shanley 23, 24, 18, 23, 23, 23, 20; H. von Longerpel 21, 21, 19; R. Bercaugh 23, 24, 13, 25; W. Patrick 16, 15, 17; Dr. Lockwood 24, 23, 20, 22; A. L. Perkins 20, 20, 19, 24, 20; H. Higgs 19, 17, 18, 16; E. W. Davis 19, 21, 18.

Newmanstown Gun Club.

SHERIDAN, Pa., June 17.—Despite unfavorable weather conditions, a number of high scores were made at the annual tournament of the Newmanstown Gun Club, held to-day. H. S. Buckwalter made high amateur average with 144 out of 150; Heil was second with 143; Schlicher third with 142, and Coleman fourth, 141.

J. M. Hawkins, of Baltimore, was high professional with 146 out of 150; Ossika, second, 140; Lester German third, 139.

Rifle and Revolver

Providence, R. I., June 10.

INCLEMENT weather somewhat interfered with high score shooting at the meeting of the South Providence Rifle and Revolver Club, at its Norwood range. A. J. Perry was high man at 500yds., with a 47 string. At 200yds., A. Wales took high with 46.

Two hundred yard range:											
A Wales	5	5	5	4	4—23	5	4	4	5	5—23—46

Dayton (Ohio) Sharpshooters.

THE club held its annual spring shoot for the 49th time on June 14, and quite a number of riflemen from adjoining towns were present to help out the local's. Gus Sander, Jr., won the club's monthly cup contest after shooting off a tie on 102 out of a possible 120, with G. R. Decker. The free for all match was won by G. R. Decker with 71 out of a possible 72. In this match C. W. Sander, C. W. Matthews and Adolph Schwind were second with 69 each. C. W. Matthews won the off-hand contest with 69 out of a possible 75. The membership match was won by G. R. Decker on a score of 106 out of a possible 120. The weather conditions were favorable for good work.

Membership match, German ring targets, 200yds., 5 shots muzzle rest, possible 120: G. R. Decker, 106; C. W. Sander, 102; Adolph Schwind, 100; G. W. Sander, Jr., 97; J. Boehner, 95; G. H. Sander, 94; A. Haas, 90; D. D. Bergk, 86; Julius Weinstein, 81; C. A. Hanes, 66; F. H. Duke, 65; C. C. Harmon, 63; W. H. Wagner, 57; John Kender, 53; Chas Lang, 50; Frank Wentzel, 47; H. K. Schwind, 43.

Cup match, 5 shots, muzzle rest, 200yds., possible 120: Gus Sander, Jr., 102; G. R. Decker, 102; J. Boehner, 99.

Free for all, 200yds., 3 shots, possible 72, muzzle rest: G. R. Decker, 71; C. W. Sander, 67; C. W. Matthews, 67; A. Schwind, 67; I. A. Vore, 65; D. D. Bergk, 65; John Boehner, 64; E. Arbogast, 64; D. W. Macy, 61; C. C. Harmon, 61.

Off-hand, 200yds., 3 shots, possible 75: C. W. Matthews, 69; J. W. Spitler, 66; H. Croft, 62; D. M. Cuchman, 62; H. Arnett, 61.

Death of William Hayes.

WILLIAM HAYES, one of the world's greatest marksmen, who had won many championship trophies, died on June 17, unexpectedly, in his home, No. 739 High street, Newark, N. J. Hayes was a manufacturing jeweller in Newark with his brother. He sustained his reputation as a marksman for more than thirty years. He was repeatedly crowned "King" of German-American shooting organizations of this country. He repeatedly defeated the best shots of Europe.

Several years ago he went to Germany as a member of the German-American Schuetzenbund's team. His shooting not only won for him a world's championship, hut contributed much toward bringing a world's team trophy to America. He was sixty-three years old and left a widow, two daughters and a son.

DuPont Gun Club, Rifle Dept.

ON the rifle range of the Du Pont Gun Club on the 17th, the following scores were recorded:

Rifle practice, 50yds.: L. S. Dorsey, 67; C. J. Rider, 13; W. Wood, 27, 18; W. S. K. Wells, 46, 53, 45; D. R. Rutter, 28.

Revolver and pistol practice, 50yds.: S. W. Long, 38, 11, 19, 21, 45; H. England, 69, 72, 70, 70, 68.

Revolver and pistol qualification scores, 50yds.: D. Appleby, 89, 83, 88, 89, 88, 89, 88, 85, 82, 88, 84, 87, 89, 84.

Rifle, .22 caliber, qualification scores, 50yds.: W. S. Weedon, 60, 51, 61.

PUBLISHERS' DEPARTMENT.

TESTS by the Board of Experts, appointed by the Assistant Secretary of War, to select the best rifle cartridges for use in the national matches the coming summer, were held at Sea Girt, N. J., recently. Various makes of cartridges were presented at the trials, and after exhaustive tests, those made by the Winchester Repeating Arms Company were officially selected.

The mean radius of the 64 targets made with Winchester cartridges, 32 made at 600yds., and a like number at 1,000yds., was 7.122 inches. Winchester cartridges also won the test last year, the mean radius of the targets made being 7.316 inches. The figures made last year were considered wonderful, but they were bettered at the tests held this year.

YOU know mallards—wisest and wariest of all ducks—Solomons of the air. You can't knock down mallards with a paddle nor can you get them with a gun that plasters its shots all over the face of creation.

A mallard shot is generally a long shot, and long shots require a hard-shooting, close-shooting gun.

That's why the long-headed man who goes to a mallard country takes a Lefever. When he swings it on a towering pair of mallards he does not question the result. He know it—

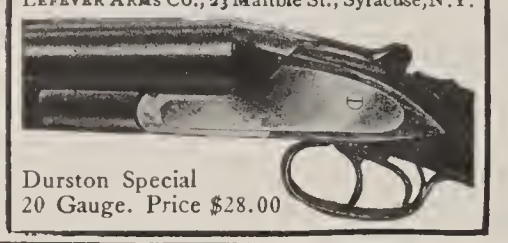
TWO CLEAN KILLS

The reason a Lefever kills clean and sure and far is **Lefever Taper Boring.**

But if you buy a Lefever for the taper boring alone, you will get more than your money's worth. For instance, you will never be handicapped with looseness at the hinge joint. The exclusive Lefever screw compensates for a year's wear by a trifling turn that you make yourself with a screwdriver.

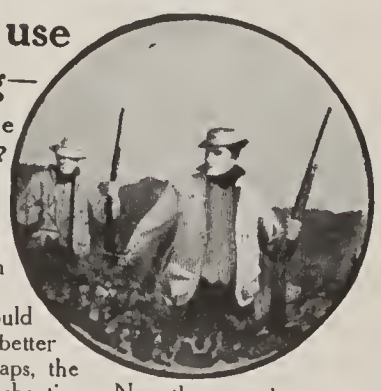
LEFEVER
SHOT GUNS

Sixteen other exclusive Lefever features and Lefever simplicity and strength make the $28 gun the peer of any $50 gun on the market. Upwards to $1,000. Send for free catalog and get Lefever wise.
LEFEVER ARMS CO., 23 Maltbie St., Syracuse, N.Y.



Durston Special
20 Gauge. Price $28.00

What's the use of shooting—
unless you have the best to shoot with?



What would be the use of pitting your skill against some one who is better equipped than you?

Neither he nor you would know which was the better shot — which is, perhaps, the chief reason you are shooting. Now there can be no reasonable doubt that **Dead Shot** is the best made powder. Recorded results in every section of the country prove it.

Dead Shot is always the same unvarying quality. You can always depend upon it at all times and places under all conditions.

Use **Dead Shot** and your powder will be sure, persistent and a considerable factor in your best success.

All loading companies use it. Be sure to get it.

A BRITON ON GUIDES.

THE Gillie of America (wherein I include Canada), says F. G. A. in the Field, is an American citizen, or a Canadian (whatever his color), and he does not let you forget it. For his greater assumption of independence, he calls himself a "guide." Between "guide" and "gillie" (the meaning of which I know not, unless it have any connection with the gills of the salmon) the difference may not seem great; in practice it is immense; for your gillie of the New World is not content to be a guide. He regards himself as also your philosopher and friend, and, above all things, your equal—where he is not, indeed, your superior. I have known guides of Scotch descent in New Brunswick indignant if a sportsman refused to sleep under the same blanket with them! Now, in a Canadian winter, there may, on freezing nights, be something attractive in close companionship, but in a New Brunswick summer I can answer for it, a separate blanket, if not, indeed, a separate tent, is to be preferred. To add that they invariably address you by name, without the superfluous prefix, is stating what every one probably knows. Yet, for all their outward crudeness of manner, many of them are sterling fellows enough, and, if well paid and treated as equals (and, after all, out there in the backwoods they are less our equals than our superiors), they work like slaves and do their best to show sport with rod or gun. They are happiest when, round the camp-fire of an evening, they can tell their amazing stories of every beast, from moose to skunk, and the sportsman will do well to take it all in without a murmur, for his complaisance is a small reward for all their toil in camp or canoe.

More interesting to me than these was a lean and silent Chippewa Indian, with whom I camped out in Ontario, a curious gloomy fellow, who would paddle the canoe for hours together and who cooked for me, and, humanized by a good meal and a cigar, would endeavor to teach me fragments of the dying Algonquin tongue. Madwayosh was a fine type of a vanishing race—lithe, keen of eye, quiet as his native forest, and able to swing an ax and light a fire in less time than it takes to write of him. Yet he was no Fenimore Cooper Indian of superhuman instincts and dramatic woodcraft. His qualities were negative, but endearing, and he served me well, this Red Man. We parted the best of friends.

Another lake, lovelier far than Georgian Bay, whereon we fished together, comes before me as I recall "Jerry," a fair-haired, blue-eyed exile from Bavaria, and the lake is Tahoe, way up in the California sierras,

> The greenest of things blue,
> The bluest of things grey. * * *

Jerry was no unwilling truant from the Fatherland, for exile gave him freedom from the petty authority of *Unteroffiziere* and from the iron routine of barracks and drill ground. The Kaiser might carry fire and sword over the length and breadth of Europe, but Jerry would never shoulder a rifle or serve a gun. He preferred the pine-clad shores of Tahoe. The witchery of its waters had entered the soul of even this unromantic peasant. Sometimes, he owned, when there were no sportsmen to pay dollars for good trout, the silence of the sierras would oppress him, but—*Aber sehen Sie mal, Herr*—could he not then take train to Truckee or Reno, and drink beer with Czechs, Lithuanians, and other Balkan and Carpathian rabble from the mines?

Elsewhere in California are the gleaming bays of Santa Catalina, where the leaping tuna and great swordfish are taken on the rod, and there C. F. Holder and I would drift over the beautiful sea gardens in the company of "Mexican Joe," the half-cast *doyen* of the Catalina guides. With him was invariably a mascot in the shape of a hairless dog, appropriately named the "Tuna Hound" by Gifford Pinchot, then of the Forestry Department. Joe was equipped with an inexhaustible fund of fishing yarns, which he retailed as autobiography, and his revelations more than compensated for an occasional blank day. He had been the greatest of guides, but, knowing something of his wonderful imagination, few took serious blame as Jonahs when he calmly vowed that never before had he come back without a fish. The wages of all these American guides are high. A sovereign is not considered excessive for a half-day's fishing at Catalina, but this, of course, includes the petrol used on the launch.

Perhaps the least satisfactory guides in that continent are the *habitants*, or French-Canadians. My experience of them is not extensive, but I recollect fishing with one for some days on a lake not far from Montreal, where the boatmen might have stepped right out of the pages of Drummond. Louis was my guide, and he devoted most of the time (for which I was paying) to long rallies of mordant repartee with his brother Alphonse, who sat in a neighboring boat and slung it back. They quarreled in a curious *patois*, half French, half English, and they blasphemed with a freedom not to be equaled in the Paris *halles*.

A thousand miles nearer the sunset there is yet another lake of very different aspect from those of Quebec, a beautiful basin of clear water, deep and blue, framed in the crags of the Rockies. "Devil's Lake," as they call it, is within easy ride of Banff, and here I was rowed out to the fish by an old Trinity man. Out of luck at home, and with just capital enough to start in a small way in the new country, he had built a little inn and assembled a modest flotilla of punts, and here, fishing in summer and duck shooting in winter, making a livelihood by sharing his sport with those willing to pay for the privilege, he led a simple life almost ideal for any one of unambitious temperament.

The Canadian lake dissolves in the steam of a Florida back-water on a golden day of May, with grotesque pelicans wheeling heavily over the low shore of the Gulf of Mexico and giant rays leaping in the sunlight. Half a dozen of us are after tarpon, and my own guide is Underhill, a lean and sallow "cracker." When there is nothing doing, Underhill will smoke my cigars, crossing one long leg over the other in an attitude of *dolce far niente* that would be the making of a poster of the "idle rich." Yet, when there is work on hand, when a great tarpon, exhausted by its leaps, has to be dragged by main force to the beach, then does Underhill row for dear life, as if he were winning the diamonds at Henley, and, when the moment arrives, he jumps out in the shallows with the long-handled gaff and strikes it home in the great herring that he may drag it high and dry.

And so they pass across the screen of retrospect, the comrades of my fishing days, the men who shared with me the happy summers, the days that are no more and never can be. In earlier holidays, catching fish was all of fishing; but maturity brings wider interest, and the personal equation of the guide counts for more each year. He is the product of his climate and environment, and it seems inconceivable that, even if I outlive the ninety years of Walton, the future should bring a more varied fallowing than those who have been—the lazy Spaniard, the Mohammedan fatalist, the lethargic southerner, the vivacious Basque, the volatile nigger, the mercurial Italian, or the morose Algonquin. Peace to their memory!

HE DISTURBED THE SALMON.

SOME queer charges are brought from time to time in the police courts in connection with game and fish preservation, but that brought against a collier at Cockermouth seems to be unique. The man was charged with disturbing salmon on their spawning beds by walking up and down the river banks.

It was stated in evidence that the fish were so numerous that some of them had been driven right into the side to spawn, and that they ceased if anybody stood on the bank and looked at them. This sounds rather like a scientific fairy tale, but the magistrates believed it and fined the collier 15s. for prying into the domestic affairs of the *Salmonidæ*.—Truth.

INDIANS AND INDIAN DOGS.

THE population of Horse Island, in Lake Manitoba, says a writer in the Evening Post, consisted of one white man and two white boys, a hundred or so Indians, and several hundred Indian dogs summering on the island and living on the offal of the fisheries after it had been carted to the interior and dumped in heaps. The dogs looked so like coyotes, or most of them did, that you would not have hesitated to shoot them if you met them masterless on the prairie. Here, however, being well fed, they were fat and friendly—too friendly, in fact, for if you spoke to one of them, he immediately adopted you as a companion and invited his friends to come along. As their diet was entirely the cast out material from the fisheries and most of them were covered with fleas, we soon ceased to make encouraging advances.

I spent my nights in a little shack adjoining the main store. We did not get back from the fishing trip until long after dark, and I was just going to turn in when my friend and host, the manager of the fishing company, asked me if I would like some supper. When one has been living in the open air for a time, he is generally ready to eat at odd hours. I accepted his invitation. He led me down to a long, barn-like building.

The scene inside was theatrical in its unreality. There were tables running the whole length of the building, and seated at them were all the male Indians on the island. They looked grotesque as they sat there, dressed as deep-sea fishermen, in high boots, rough guernseys, and oil-skins. Somehow one never dreams of an Indian as a sea fisherman. Fancy an Indian in a sou'wester!

The room was lit up by oil lamps, dim and rather smoky, placed at intervals along the tables. The waitresses were squaws, padding noiselessly up and down with moccasined feet. Between the lamps were old tomato and meat cans containing bunches of tiger lilies and other vivid prairie flowers.

It was midnight before I went to bed. There was a window, curtainless and blindless, close alongside me, through which the moonlight poured, making the room almost as bright as day. Just as I was settling down to sleep, one of the Indian dogs set up a long-drawn howl outside. The solo continued for half a minute, and then, as if their conductor had waved his baton, all the dogs on the island joined in a chorus. But just as suddenly as it had begun, the noise stopped. I looked out and saw every dog rise to his feet. For another three or four minutes they threaded in and out among one another, single file, in lines of anywhere from three to a dozen dogs or more. Afterward I learned they went through the same performance at intervals in that night, and later I read a description of the same habit among the dogs of the Yukon.

The cause of it bothers me. It must be an ancestral trait derived from the time the dogs hunted in packs. But why? Is it to warn off possible enemies?

From the island I went to the mouth of the Saskatchewan, to shoot the rapids in a canoe. On my return the steamboat stopped at Horse Island again. We left just about midnight, and again that weird dog chorus echoed through the night-air. A mile away you would have sworn that children were singing, so human was the sound. When the dogs had ceased their howling, two pealed out a long, shrieking laugh of derision from the little crescent-shaped harbor of the island behind us. They say the interior of the island used to be the dwelling place of Wendigoes, and banshees, and wizards; but even a Wendigo could not stand these noises.

THE CANNY SCOT.

Two ministers were crossing a lake in a storm. When matters became most critical, someone cried out: "The two ministers must pray!" "Na, na," said the boatman, "the little ane can pray if he likes, but the big ane maun tak' an oar!"—Fishing Gazette.

Some Good Reasons Why You Should Shoot

THE PARKER GUN

Be high man at the traps.
Shoot the finest brush gun made.
Mechanical construction perfect.

Send today for illustrated catalogue.

PARKER BROS.

New York Salesrooms: 32 Warren St. **Meriden, Conn.**

The ***Marlin*** *Model 20*

REPEATING RIFLE

You can buy no better gun for target work and all small game up to 200 yards. Without change of mechanism it handles .22 short, long or long-rifle cartridges, perfectly. The deep Ballard rifling develops maximum power and accuracy and adds years to the life of rifles.

The solid top is protection from defective cartridges—prevents powder and gases from being blown back. The side ejection never lets ejected shells spoil your bead and allows quick, accurate repeat shots. With simple take-down construction, removable action parts—least parts of any .22—it is the quickest and easiest to clean. A great vacation rifle. Ask any gun dealer.

The 136 page *Marlin* catalog will help you decide what rifle best suits your individual desires. Send 3 stamps for it today.

Rhymes of The Stream and Forest

FRANK MERTON BUCKLAND

One of the freshest, most delightful collections of outdoor verse offered for many a day. They are the outpourings of a spirit which loves nature, the woods and streams and growing things, and appreciates its charms.

Mr. Buckland's verse has a charm that is at once rare and delightful. This book will appeal to every outdoor man or woman, and particularly to the "Brethren of the Angle."

Its form is as attractive as its pages, closely simulating the appearance of the standard fly-book, printed on heavy laid paper with ornamental border designs of trout flies, pocket for clippings, and blank pages for copying or individual composition. It is just the thing for the den, for the pocket, or for a gift to the friend who loves the big world out of doors.

Postpaid, $1.25

PIGEON'S LEG MENDED.

If the pigeon patient whose left leg has been in a plaster cast at the Relief Hospital for eleven days were able to talk probably the first thing it would do after its discharge from the hospital would be to fly to Pemberton Square, the general meeting place of the pigeons, and tell the others what a wonderful thing surgery is.

The pigeon at the Relief Hospital had the plaster cast taken from its leg by Dr. Shedd this morning. There were many surgeons present and they manifested no little interest in the work of Dr. Shedd, who has taken considerable interest in the case of the helpless pigeon, which a week ago Sunday tapped its bill repeatedly against a window of the hospital until an attendant came to its assistance.

The pigeon was admitted, and Dr. Shedd, after setting the injured leg, placed it in a cast, also placing the right leg in a cast.

The bird has been given much attention and has been an ideal patient. This morning the bird was taken to a private room and Dr. Shedd and Mr. Hartigan, the attendant, placed it on an operating table and removed the cast. When the cast was removed it was evident that the pigeon had forgotton all about flying. The bird flapped its wings once, but made no attempt to fly out of Dr. Shedd's hand. The injured leg has mended well, and in another week the patient will be discharged.

The injured pigeon has become a mascot at the Relief Hospital. The attendants would like to keep the bird there. Several persons have promised to give the bird a home should the attachés of the hospital wish to give it up. The managers of the poultry show made an effort to get the bird for exhibition purposes, but Dr. Shedd felt that the patient was not strong enough for show purposes.

In the accident the pigeon lost its tail, some plumage and broke its leg. It was a wise old bird, the doctor said, when it dragged itself to the window of the hospital. Dr. Shedd said that the pigeon seemed to take an interest in his operation and blinked its eyes approvingly when the cast was removed.— Boston Globe.

WATERSNAKE AND PICKEREL.

Up at Rock Ridge Lake, near Denville, Charles Jay spent half an hour at the dam last Sunday watching a most interesting fight between a three-foot watersnake and a sixteen-inch pickerel. The snake had seized the pickerel by the tail and the lively fish caught the snake's tail in its mouth. It was a case of "circulate," and for a few minutes the reptile and the fish looked like a "pinwheel." Charles yelled for a camera, but his companions were out of hearing, staking out building lots on the tract. Dr. Runge ran down from his bungalow just as Charles raked the combatants ashore. The snake had swallowed about one-third of the pickerel and the fish had engulfed nearly one-fourth of the snake. They were both provided with incurved teeth, and were not separated without considerable difficulty. The pickerel was returned to the lake minus a few scales and the snake was scotched. Then came a downpour of rain and the "subsequent proceedings interested them no more."—Newark Call.

SLIGHTLY MYSTERIOUS.

A Boston girl who was watching a Sedgwick county farmer milk a cow adjusted her glasses and said: "It is all very plain except that I don't understand how you turn it off."—Kansas City Journal.

ANANIAS PROFESSION.

"Open your mouth; I shall not hurt you—you feel no pain," said a dentist to a patient.

"Doctor," exclaimed the latter, after the operation had been performed, "now I know what Ananias did for a living!"—Fishing Gazette.

ASBURY PARK FISHING CLUB.

Continued from page 981.

Seventh Prize—Largest, 50 pounds or over, diamond club button.

Eighth Prize—Largest, silver cup.

Ninth Prize—Fourth largest, tackle book and tackle, rod rest and sand spike.

Tenth Prize—A split bamboo rod.

Eleventh Prize—Fifth largest, 600 feet line.

Twelfth Prize—Largest taken in October, 60 pound scale.

Thirteenth Prize—The last one taken during the year, reel.

Fourteenth Prize—Largest taken, between sundown and sunrise, fishing coat.

Fifteenth Prize—Sixth largest, gaff.

Sixteenth Prize—For the largest taken by a member who has failed to catch one since joining club, greenheart rod.

Seventeenth Prize—Greatest aggregate weight taken in June, casting reel.

Eighteenth Prize—For largest taken in June, one dozen hose.

Nineteenth Prize—For largest in July, one dozen hose.

Twentieth Prize—For largest in August, one dozen hose.

Twenty-first Prize—For largest in September, one dozen hose.

Twenty-second Prize (special)—For largest, over 41½ pounds (club record), reel.

CHANNEL BASS.

First Prize—Largest, reel.

Second Prize—Second largest, greenheart rod.

Third Prize—Largest, silver cup.

Fourth Prize—Greatest aggregate weight taken in September, reel.

Fifth Prize—Third largest, cigar lighter with club monogram.

Sixth Prize—Fourth largest, sweater.

Seventh Prize—Fifth largest, a German silver bait box.

Eighth Prize—Sixth largest, 600 feet of line.

Ninth Prize—Seventh largest, 600 feet of line.

Tenth Prize—For largest taken during month of September, one dozen hose.

Eleventh Prize—For largest in October, one dozen hose.

Twelfth Prize (special)—For largest over record of 49 pounds, reel.

TUNA.

1. Taken over 136 pounds, reel.
2. Taken over 100 pounds, split bamboo rod.
3. Largest taken, tackle book and tackle.
4. Second largest taken, 600 feet of line.

BLUEFISH.

1. Largest taken from the beach, 600 feet of line.
2. First taken from the beach. Tackle book and tackle.
3. Largest taken from the beach, tackle book and tackle.
4. Largest aggregate weight of five fish from the beach for the season, sweater.
5. Largest taken off shore, steel rod.
6. Largest aggregate weight of two taken off shore, refrigerator basket.

KINGFISH.

First Prize—Largest, German silver bait box.

Second Prize—First taken, leather rod rest.

Third Prize—Largest, 2½ dozen assorted hooks.

SAUER MAUSER RIFLES

AMERICAN BIG GAME IN ITS HAUNTS

Boone and Crockett Club Series

Edited by GEORGE BIRD GRINNELL

An invaluable work not alone for the sportsman, but for the student and lover of wild life. Treats of big game preservation and protection in the broader sense; tells of the habits, habitat and life history of the larger wild animals; touches upon the problem of the public forest domain, and is rounded out by interesting hunting reminiscences by such leaders in the fraternity of big-game hunters as Madison Grant, Paul J. Dashiell, George Bird Grinnell, Jas. H. Kidder and W. Lord Smith. Bound in cloth, library edition, heavy paper, richly illustrated, 497 pages.

Postpaid, $2.50

Nursing *vs.* Dosing

A Treatise on the Care of Dogs in Health and Disease. By S. T. Hammond ("Shadow"), Author of "Training vs. Breaking." 161 pages. Cloth. Price, $1.00.

Mr. Hammond believes that more dogs are killed by injudicious doctoring than by disease, and the present work is a protest against the too free use of medicine when dogs are sick. The author has given special attention to many of the troubles which especially afflict small dogs kept in the house, and likely to suffer from lack of exercise and from over-feeding; and boys and girls owning dogs—as well as children of larger growth—may profitably study and ponder this volume.

Contents: Importance of Nursing. Cleanliness Out-of-Sorts Dam. Puppies. Diet. Other Food. Kennel and Exercise. Common Ailments. Teething Diarrhea. Convulsions. Epilepsy. Distemper. Eczema. Need of Proper Care. Sour Stomach. Vermin Canker of the Ear. Mange. The Nervous System. Abscesses. Colic. Worms.

Canvas Canoes and How to Build Them

By PARKER B. FIELD

The book gives very precise instructions by which a man with ordinary mechanical bent may build a serviceable canoe at slight cost—a plan and all working directions. Paper, 50 cents.

FOREST AND STREAM PUBLISHING CO.

The Angler's Workshop

RODMAKING FOR BEGINNERS

By PERRY D. FRAZER

A unique work, bringing the science of rodmaking up to the very moment and epitomizing the knowledge and the experience of experts for the guidance of the average man. The evolution of bait-casting principles has made Mr. Frazer's book supersede all previous publications on the subject.

Every angler—young or old—who is fond of adapting his rods and tackle to his own ideas of what they should be, will find in this book a large fund of information gathered by the author in years of study, experiment and practical experience in fishing, tournament casting and at the work bench. He theorizes and speculates not at all. He tells "the how" of everything connected with rodmaking in a way that makes results certain. All explanations are simple and easily followed.

Separate chapters are devoted to each of a half dozen types of bait-casting rods; to tarpon, surf and light salt water rods; bass and trout, salmon and tournament fly-rods. Complete specifications of well known types are given, and the chapter on split bamboo rodmaking is the most comprehensive treatise on the subject ever published. Indispensable in the angler's library.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid, $1.

FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK CITY

The Game Book

STANDARD BIG GAME MEASUREMENTS

Every man wants to compare his trophy with those of other big-game hunters. But comparisons are useless unless there is a fixed standard.

The game book of the Boone and Crockett Club, the foremost organization of hunters of American big-game supplies this. Compiled by J. H. Kidder, it provides directions for standard measurements of the large game animals of America, with spaces carefully arranged for complete data regarding the kill, locality, time, conditions, etc.

It is handsomely and durably bound pocket size. It is an invaluable record for every man who goes into the wild for sport with the rifle, a handy book, a camp companion, and a library reminder of days afield. Leather.

Postpaid, $1.50

FOREST AND STREAM PUBLISHING COMPANY, 127 Franklin Street, NEW YORK

Fourth Prize—Largest, sand spike.
Fifth Prize—Largest, 600 feet of line.

WEAKFISH.

1. Largest taken from the beach, rod belt rest.

2. Largest striped bass, a knit woolen jacket.
3. Largest channel bass, fishing knife.
4. First kingfish, a Japanese bracelet.

CROCODILES AND SLEEPING SICKNESS

MANY a writer in FORST AND STREAM, describing his hunting adventures in Africa, has expressed his dislike and disgust for the crocodiles, so abundant in many of the rivers there. A new indictment—followed by a saving perhaps—is brought against the crocodile by a London correspondent of the Asian, who quotes the German investigator Koch, as follows:

"How the hippopotamus combats sleeping sickness," suggests one of Lewis Carroll's nonsense rhymes rather than a fact in sober science, but it is much on a par with Darwins' famous Cats and Honey. At a recent meeting of the Society of Arts, Dr. Ofenheim delivered a lecture on living micro-organisms, devoting attention to the organism which induces sleeping sickness. In a fly whose bite causes this disease in man, Koch found crocodile's blood, and his experiments showed that the fly could not exist without the blood of the crocodile; therefore, if "crocs" were exterminated, the extinction of the fly must follow and with its extinction, sleeping sickness must disappear. The hippo, unconsciously ally of humanity, is a ruthless destroyer of crocodiles' eggs; therefore a valuable agent in keeping down the saurian population and a beast to be cherished. The learned Professor's discovery should inaugurate a new era for the hippo and gain for him at least immunity from "things that burst inside" as a Punch poet has it. But let us not go too fast. Improbable, as it appears, the unattractive crocodile may, in his own unlovely fashion be rendering service to humanity, and if his extinction should be followed by the discovery that he is less black than he is painted, where should we be? Perhaps we need not concern ourselves on that score; the crocodile has no friends, but up till now he has shown enviable ability for taking care of himself, hippo and man notwithstanding.

For Sale.

Small-Mouth Black Bass

We have the only establishment dealing in young small-mouth black bass commercially in the United States. Vigorous young bass in various sizes, ranging from advanced fry to 3 and 4 inch fingerlings for stocking purposes.

Waramaus Small-Mouth Black Bass Hatchery.

HITTING *vs.* MISSING

By S. T. Hammond ("Shadow").
Cloth. Price, $1.00.

Mr. Hammond enjoys among his field companions the repute of being an unusually good shot, and one who is particularly successful in that most difficult branch of upland shooting, the pursuit of the ruffed grouse, or partridge. This prompted the suggestion that he should write down for others an exposition of the methods by which his skill was acquired. The result is this original manual of "Hitting vs. Missing." We term it original, because, as the chapters will show, the author was self-taught; the expedients and devices adopted and the forms of practice followed were his own. This then may be termed the Hammond system of shooting; and as it was successful in his own experience, being here set forth simply and intelligently, it will prove not less effective with others.

FOREST AND STREAM PUBLISHING COMPANY

A Problem's Solution

LOG CABINS & COTTAGES;

How to Build and Furnish Them.

A seasonable book when all minds are bent on the problem of getting close to nature. Mr. Wicks in this delightful book offers timely advice to every one who wants to build a simple summer home at one with its surroundings of wood or stream or shore.

This is a thoroughly practical work, treating of the how, the where, and the with what of camp building and furnishing. It is helpful, too, in regard to furnishing, and withal a most beautiful work.

Cloth profusely illustrated, $1.50 postpaid.

GUNNER GUMPTION'S
LANTERN LECTURETTES ON

GREENER GUNS

The Greener Treble Wedge Fast Action.—Many methods of uniting the top of the standing Breech and upper portion of the gun barrels have been introduced, but none are so strong and thorough as the Greener Treble Wedge Fast Cross Bolt, which has been proved by actual experiment to add enormously to the safety and wear of a gun.

At the famous London *Field* explosive trials of 1878, a special experimental gun was prepared by the editor of the *Field*, and the following extracts from his report are a remarkable testimony to the strength and efficiency of this device.

"to this action we had a little apparatus fixed as shown in this sketch, by this arrangement a piece of silver paper can be strained between the hook and the screw clip, attached to the barrels so that when any separation takes place during an explosion the paper breaks. We found that in Mr Greener's action no breakage occurred, using any charge of powder which the cartridge case could be made to hold with the bolt in position the paper remained intact up to the last"

In these experiments a charge of 65 grams of Schultze powder and 2 ounces of shot was used without causing the breech to "give" in the slightest degree

See that your new gun carries the Greener guarantee—Life-long satisfaction.
Our free catalog will interest you, we hold a large stock of guns in New York and Montreal.

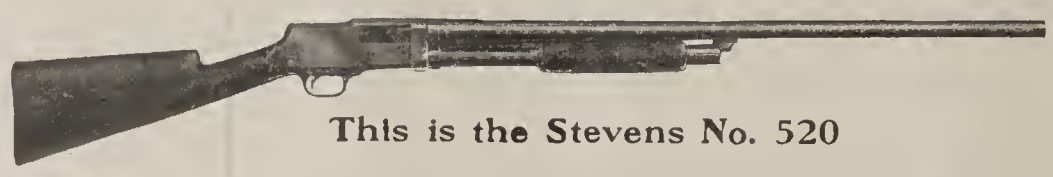
A LIGHTNING TRY-OUT

This is the story of Mr. N. E. Buckwalter who proved two interesting points at Royersford, Pa., on the third day of June in the year of our Lord nineteen hundred and eleven.
By making a score of 92% from the 20 yard line (targets being thrown 60 yards) he proved that he was a mighty good shot.
And in making this remarkable score while **trying out** a new Stevens Repeating Shotgun he proved the Natural Pointing qualities of this perfect Repeater.



This is the Stevens No. 520

Then he tried his hand at the 12 pairs of doubles—and broke 21. To break 21 out of 24 targets shot at in pairs would certainly indicate that the Stevens Repeating Shotgun is designed with a repeating mechanism that is second only to fork lightning.
Mr. Buckwalter must be pretty quick at pumping the gun. But neither he nor anyone else can pump the Stevens so fast that they can balk it. It is Non-balkable, Non-cloggable and Natural Pointing. What more can you ask?
